In this morning's press also the American Federation of Labor calls for a $600,000,000 housing program for workers in defense industries. This figure may be exaggerated somewhat, but we all know that these vast new factories now being constructed must include housing for the workers. This task will demand all in the way of money and of labor and of materials that we can spare from actual armament work.

In the matter also of providing the needed additional power to make these war industries move, we must spend billions in money and employ hundreds of thousands of workers.

First things must come first. Our supreme task now is to make America so powerful, to extend such overwhelming aid to the nations fighting against Hitlerism, that Hitler shall be stopped the other side of the Atlantic and the Mikado be prevented from realizing his dream of dominating the Pacific.

After those jobs have been done it will be time to consider the big problem of modernizing our highway system.

As I said, the veto message saves at least $150,000,000. I shall vote to sustain the President.

My Solution for Drought in the Dairy Country

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1941

RADIO ADDRESS OF HON. EDWIN ARTHUR HALL, OF NEW YORK

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address which I made recently over station WAGE, Syracuse, N. Y.

Men and women of up-State New York, tonight I am going to talk in particular to the farmers of this great State. That does not mean, however, that the problems of the dairy farmer should not be considered by the many thousands of city folk listening in at this time. Therefore, I feel sure that both rural and urban audiences will give ear to this message.

The last few years of flood and drought and economic barrenness of the New York State dairymen have appeared to me like the 7 lean years which visited Pharaoh's people in the land of Egypt. Just as those ancients were besieged by pestilence and famine, so today are we in this section of the country continually handicapped by year after year of scarcity. The New York milkshed should be the most prosperous dairy country in the world, but unfortunately a chain of circumstances has appeared which deny us this distinction.

If I were to go into some of these matters and discuss them thoroughly, the short time allotted to me tonight would be insufficient to cover more than a few points in the whole milk problem of today. Then, too, by making statements of opinion I would be stepping on the toes of individuals and groups who by their close contact with the dairy industry are in a position to know much more about the whole affair than I am. Therefore, I will refrain from becoming involved in any questions such as debating the existing prices of milk except to say that they are inadequate. Nor could I do justice in a few short sentences to the subject of the milk-marketing order and amendments. Just about every factor in the present scheme of things seems to have some bearing on the situation the farmer finds himself in.

For the first 2 years of the last 7 our part of the country has been ravaged by floods. Since then, in rapid succession, there has followed a series of droughts which have dried up the good earth and devastated the crops on nearly every farm. Coming this year with a serious shortage of farm labor and an increase in wages to that labor, the drought has well-nigh prostrated the dairymen of up-State New York.

Perhaps the most basic crop which we have in this section is hay. For the past 3 years the average price per ton in nearly every instance has reached $20 and over. In most areas there has been a dearth of this subsistence feeding, and it has been found necessary to make great financial sacrifices to purchase enough fodder to sustain life in the dairy herds throughout the State.

Everyone knows it takes years to build up a good dairy herd. It takes a lot of time and patience and hard work. It requires plenty of care and an abundance of good feed. But when a drought comes along, the dairyman must choose one of two alternatives. He must either provide for adequate feeding, or at least from the standpoint of subsistence, if he is going to keep his stock; or he must dispose of that herd which he has taken years to build up. For the past 3 years our farmers have had to face these alternatives; in some cases they have had to borrow money in order to purchase inferior grade hay at abominably high prices. You can readily see that if they chose this course they had to go into debt hundreds—yes, even thousands—of dollars. The tragedy was and is not that they borrowed the money, but that they have been forced to take that borrowed money and put it into an economically unsound proposition.

I mentioned the second group, namely, those who were forced to dispose of their dairy herds. They did so because they had mortgaged their farms, their buildings, and their livestock to the point that no one could safely lend them money. They had arrived at that unfortunate economic situation as a result of years of misfortune. They had a lot of company, so they were forced to abandon and to surrender the only stock investment which could possibly bring in any income.

Ladies and gentlemen, I wish to discuss briefly tonight a plan which I offered last year in the Seventy-sixth Congress, and which I believe, if adopted, would mean the end once and for all to any problem which the dairymen of New York State, or of any part of the country, would ever have to face. I propose that in the event of drought, flood, or fire the farmers of a given area present a certificate of necessity through their farm bureaus, their granges, and their various organizations to the Secretary of Agriculture. In this certificate of necessity they must show that a serious shortage of hay exists within that area. I further propose that when the Secretary of Agriculture receives this complaint he immediately take steps to have hay made available and shipped in from the nearest locality or localities having a definite surplus of subsistence feeding. My plan also calls upon the Department of Agriculture to establish a normal and reasonable price per ton for the hay which is shipped in. And it also authorizes the Government to pay for the

transportation costs of such hay as can be disposed of in the area where the shortage exists.

As a result, with my plan in operation, there would be no danger of any farmer being forced to borrow money, either from a Government agency or a private financial institution forcing him to buy the hay at outrageous prices. Instead of that I further propose that the Farm Security Administration make available to that farmer money sufficient to purchase what he may need at the reasonable price which has been decided upon. I am not criticizing the present policy of the Department of Agriculture, as far as actually making the loan available. My quarrel is with the idea of lending that money to the dairyman when it is economically unsound for him to utilize it to purchase hay at $20 a ton and over.

There are those who deplore the policy which has recently been introduced of deliberately letting the bars down so that feeds of all kinds and descriptions can be brought in from Canada and from the Argentine and other foreign countries. My plan has no place for such procedure. It simplifies the whole process of the distribution of subsistence feed because it simply takes from the area of plenty and makes a market available to an area of want. It is my fervent hope that before very many more months or years go by that some method such as the one I have suggested can be put into practice. We can theorize and we can expound upon what we think the farmer ought to do to better his lot, but until some definite step is taken to correct what has become the No. 1 problem of the dairy farmer of the East, namely, the drought, there can be no escape for the farmer from chill penury and economic extinction.

A few weeks ago the crop-insurance bill came before Congress and a long debate ensued over the proposition of including new basic crops for study and participation in the insurance program. At that time I offered an amendment to add hay as a basic crop to this act. I will read my remarks from the CONGRESSIONAL RECORD of June 11.

(Mr. HALL then quotes from the RECORD of June 11, 1941. His remarks can be found on pp. 5040-5041.)

Whereabouts Unknown and Destination Unknown

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1941

Mr. WOODRUFF of Michigan. Mr. Speaker, at the time of these comments President Roosevelt is somewhere on the high seas, whereabouts unknown and destination unknown. According to press reports, Mr. Churchill, head of the British Government, is supposed to be somewhere on the high seas, whereabouts unknown, destination unknown. Harry Hopkins, super-super-super Presidential confidant, counselor, minister plenipotentiary, envoy extraordinary, and ambassador without portfolio, is somewhere on the high seas with Mr. Churchill, whereabouts unknown, destination unknown. At this time this is all press speculation based upon information coming out of the usual sources of intelligence which are most accurate as to American foreign policy—and American purposes—the House of Commons in London.

These press reports arose from remarks in the House of Commons by Maj. Clement Attlee, Labor Party spokesman, member of the British War Cabinet, and Prime Minister Churchill's deputy in the House of Commons.

These reports came on the heels of a secret trip by the President, following the secret trip abroad by Harry Hopkins.

Harry Hopkins was in London, had conferred with Prime Minister Churchill, was out of London and in Moscow, and was shaking the bloody hand of that great humanitarian, liberator, and friend of democracy, Joe Stalin, and assuring him that his Government also came within the all-enveloping folds of the Lease-Lend-Give Act, before the American people even knew that Harry had hopped across the sea at all.

Earnest requests by administration officials that the press not try to follow the President's yacht, ascertain the purposes of his mission, or even speculate as to his destination or objectives, were respected by the American press. Apparently the administration spokesmen forgot to mention the matter to Maj. Clement Attlee and other British officials.

It is becoming somewhat difficult for Members of Congress and other Washington observers to determine just when American policy is being determined at Washington, D. C., and when it is being determined at No. 10 Downing Street, London. Mr. Hopkins, while in London, assured the British people, and, through the British people, the American people, that—Congress and the overwhelming will of the American people to the contrary notwithstanding—American naval boats were patrolling "alongside" or "parallel with" British war boats. On the heels of this announcement, Prime Minister Churchill advised the American people by radio that they had risen in wrath and were advancing to the "verge of war" with the Axis Powers.

It is little wonder indeed that the American people are addled by these kaleidoscopic changes in American policy. A little while ago we were condemning the brutal and ruthless assault on brave little Finland by the hordes of Stalin as a blot on the pages of the history of civilization. Today we are bedfellows with the ruthless rapists of the Kremlin, and Britain is preparing to invade brave little Finland which was the only nation to meet her honorable obligations and indebtedness to this country. It is little wonder indeed that even Members of Congress cannot tell who is making American policy or what American policy is or may be next week.

There is a rising sentiment throughout the United States, as reflected in letters coming to Members of Congress, that the Representatives of the American people ought to have something to say about whether the United States shall be taken into a shooting war.

Meanwhile the war propaganda has reached the point where the United States and Great Britain are exchanging official celebrities and members of royalty in order more securely to bind the United States to a sense of responsibility to pay for Europe's wars and fight them, too.

This rising resentment of the people against the secret moves of high American officials, which are so obvious as to leave no doubt that the administration believes it has taken the Nation into war already, will bear fruit sooner or later—and not so much later—in the Congress. It is now seen by those who are most closely following developments that unless the Congress interferes with a firm hand the administration will carry out its plain intention of building up another A. E. F.

It has been charged several times within the last week that if, as, and when the President gets an extension of the draft approved by the Congress he will promptly come back with a demand that he be allowed to send the men anywhere in the world he believes necessary for the national defense.

The bitter fight which will take place in Congress over the draft-extension proposal will be mild compared to that which will ensue when a demand comes up from the White House for authority to send these men to other parts of the world outside the Western Hemisphere to fight.

Meanwhile, the whereabouts of the President of the United States is unknown; his destination is unknown. The whereabouts of Prime Minister Churchill is unknown; his destination is unknown. The whereabouts of Harry Hopkins is unknown; his destination is unknown. The people may possibly know what is transpiring if they will but carefully listen to what the wild waves are saying.

The Great Lakes-St. Lawrence Waterway Project in Relation to the Iron-Ore Industry of the Lake Superior Region

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1941

STATEMENT BY ALEXANDER C. BROWN

Mr. BENDER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement by Alexander C. Brown, vice president, the Cleveland-Cliffs Iron Co.:

The proposed St. Lawrence waterway by opening the Great Lakes to ocean-going vessels of the world is certain to have an important effect upon the commerce and industry of the entire Great Lakes region. Since the tonnage of iron ore transported on the Great Lakes is far greater than that of any other commodity, the proposal is of vital interest to the iron-ore industry and to the vast population whose welfare is dependent upon it.

The iron-ore industry is of such importance that any harm to it would jeopardize not only

the country's prosperity, but what would be even more important, the future national defense of this country. In order to more fully understand the important place of the iron-ore industry in the national economy, it seems necessary to briefly review some of the more pertinent facts.

This industry, operating on six iron ranges in Minnesota, Michigan, and Wisconsin, supplies nearly 85 percent of the total iron-ore requirements of all United States furnaces. From the six ranges upon which this industry operates in the United States, 63,949,000 gross tons of iron ore were shipped in 1940. Since the opening of these ranges a total of about 1,850,000,000 gross tons of iron ore has been shipped.

This year 295 ore vessels of United States registry, all especially constructed for iron-ore service, are expected to transport approximately 75,000,000 gross tons of iron ore—which is about 10,000,000 tons greater than has ever been brought down the Lakes before. These vessels have a total capacity per trip of about 2,681,000 gross tons. To the above must be added about 100 more vessels carrying other materials for the steel industry.

The importance of the industry to the prosperity of the country is far greater than is indicated simply by the employment of those in mining and transporting iron ore to lower lake ports. Besides being the direct support of about 75 cities and towns on the iron ranges, and contributing indirectly to the support of many other communities, iron ore is the basic raw material required by the iron and steel industry for both peacetime and wartime needs.

If the prosperity of these basic industries is seriously impaired by the St. Lawrence waterway development, this would soon be reflected in loss of employment and income to many thousands of working people. Clearly the welfare of a large section of our country is tied to the Lake Superior iron-ore industry.

If the iron-ore industry is allowed to maintain its natural frontier, it will continue to grow in importance for the iron-ore reserves of the Lake Superior district are estimated at between two and two and one-half billion gross tons of high-grade iron ore—an amount materially greater than the total shipments since the first Lake Superior iron ore was discovered in 1854.

Further, in addition to the remaining tonnage of so-called high-grade ores, there are in the Lake Superior district almost unlimited quantities—billions of tons—of lower-grade iron-bearing material which can be beneficiated by various means to produce highly satisfactory and desirable blast-furnace ore. It is estimated that there is available in Minnesota alone, to a depth of only 400 feet, over 57,000,000,000 tons of concentrate which could be produced from such iron-bearing material.

Each year increasing tonnages of low-grade material are being made merchantable through beneficiation due to advances in the development of suitable processes of treatment. The growing use of these processes continually increases employment on the iron ranges and clearly points the way to the distant future when, with the exhaustion of high-grade ores, the bulk of furnace requirements may be supplied by mining and concentrating ores containing less than 40 percent of iron.

This industry is confident in its ability to supply high-grade iron ore to lower-Lakes blast furnaces for an unlimited time, provided it is not hampered by unjustifiable subsidies to foreign suppliers of iron ore and iron and steel. Foreign ores will not be needed in the Middle West to supplement Lake Superior district ores, unless the Lake Superior iron-ore industry is forced to discontinue its progressive development for the future because of bringing in to the Middle West foreign ores and foreign steel products produced with cheap foreign labor, transported in foreign boats in effect subsidized by American money spent to construct and maintain the St. Lawrence waterway for their use.

If industry and transportation of other countries is to be subsidized by the construction of this waterway, a foreign invasion of midwestern markets is inevitable, since the region tributary to the Great Lakes constitutes one of the most alluring markets in the world. It is also America's own best market, made so by the purchasing power of its vast population accruing from its own industrial and agricultural activities. It is a domestic market, now largely protected from competition with ocean-borne products of ill-paid labor of foreign lands, where for the most part living and working conditions would not be tolerated by the American workman. The St. Lawrence waterway would eliminate this protection to American labor, American products, and lake transportation.

Lake shipping, now largely protected by the natural barriers of the St. Lawrence River, has never had any Government subsidy, which has been enjoyed by such a large portion of the United States merchant marine. This self-supporting enterprise constitutes a vital link in the largely self-contained economy of the populous Middle West—the Great Lakes region.

A picture of Great Lakes cities converted into salt-water seaports has been painted in lurid colors by the proponents of the waterway to tempt the Middle West into a foreign-trade experiment. Those who have fallen for this temptation have done so in the illusive hope of an outlet for American products in the markets of the world. These foreign markets are, of course, inviting, but if they can be obtained only at the cost of a substantial portion of present home markets, this wishful thinking can result only in tragic losses. The waterway should be of much greater concern to Americans lest it be an inlet for dumping cheap goods from the rest of the world than as an outlet for ours.

A newspaper editor in a small midwestern town avoided the pitfalls of this wishful thinking when he wrote:

"Just why we should want to leave our most valuable part exposed to the sharp-shooting merchants across the ocean, and let foreign trade unload their starvation-wage production in the back door of every middle-western home is quite beyond imagination. You can't trade a dollar-an-hour product for a 20-cents-per-hour one and buy many shoes for Johnny."

When the present war is ended and the people of Europe return to peacetime production with their enormously expanded industrial plant capacity, an era of competition for world markets, the like of which has never been seen before, will have commenced. The United States, with its high wage and living standards, will find this competition difficult if not impossible to meet. American iron ore and iron and steel products will be vitally affected by this competition. American labor will be the first to suffer.

An additional factor contributing to the seriousness of this problem is the present protected position of these inland waterway ports. Industries have been established here which could not possibly have been justified had they not been protected from foreign competition. If this geographic protection is suddenly removed, it would invite disastrous results by upsetting this delicate balance.

Where, then, is this threatened foreign competition coming from so far as it relates to the importation of iron ore?

Estimates of foreign iron-ore reserves have been made showing over 45,000,000,000 tons available in Europe, Asia, and South America alone, not including reserves which geologists would classify as probable or possible and which would increase these tonnages many times over.

There is no question as to the suitability of foreign ores for American blast furnaces, since they are being brought into our eastern ports right along, and even without the St. Lawrence waterway, Sweden was able to export some of its high-grade ore into Lake Erie as recently as 1939.

Foreign boats using the present 14-foot channel with cargoes such as this have been paying their sailors about $24 a month in contrast to a minimum of $96 per month now paid ordinary deck hands on the bulk freighters of the United States lake fleet. The labor rate in Brazil, which has extremely rich iron ores, is only 5 cents an hour, whereas the minimum rate in the Lake Superior mines is 72½ cents an hour. What chance has American labor to compete with seamen paid $24 per month and Brazil mine labor paid 5 cents an hour?

Taking the steel industry as an example of the possibilities of competition by American labor with foreign labor and comparing the purchasing value of wages, it has been shown that in 1937 American steel workers could buy a market basket full of food for only 1½ hours' wages while foreign workers must work 3½ to 23 hours to buy the same amount of food in their respective countries.

This low-cost labor is, of course, reflected in the price at which foreign competitors can sell. Before the present war, Belgian and German steel was exported to New York at delivered prices approximately $5 per ton less than domestic base prices. Since that time wages of steelworkers have increased 16½ percent in this country. If this proposed waterway were constructed, foreign steel could be shipped to every port on the Great Lakes at prices still further undercutting domestic producers.

There is no doubt that foreign countries can produce iron and steel cheaper than we can because of their low labor rates. The pay for common labor in England is a shilling (i. e., 20 cents) an hour compared with our 72½ cents. Yet English labor is the highest paid of all foreign countries. France has already shipped cast-iron pipe into the Great Lakes considerably below domestic prices. During the past 30 years India, with 4-cents-per-hour labor, has increased its pig-iron production eightfold by the construction of modern furnaces, each producing 1,000 tons daily. Labor costs are so low that they can make pig iron for $5 a ton, and were shipping it into Philadelphia at $10 a ton and less, tariff paid. Brazil is now building modern American plants, so that with 5-cent labor, their costs of pig iron will be exceptionally low.

Since about 2 tons of iron ore are required to produce a ton of pig iron, any material increase in the importation of not only iron ore but of iron and steel as well, into the Great Lakes region, would inevitably result in serious loss of tonnage and consequent decrease in employment on the Lake Superior iron ranges.

If cheap foreign labor is allowed to compete, it will mean that the millions of dollars which we are at the present time spending on new steel capacity will be wasted, jeopardizing the jobs of thousands of workers who are now employed in these mills. Our present annual steel capacity is about 4,000,000 tons greater than 3 years ago. In the interest of national defense, additional capacity is now being built.

But this country is not the only one that is expanding steel production. The capacity of the European steel industry has been tremendously increased, just as ours has, and when this war is ended, these countries will be hungry for markets to keep their mills running. How can we justify opening this great inland waterway to the unrestricted competition of foreigners? Do we want to spend millions to make it easier for them to invade our markets?

Yet invasion will be forthcoming if the geographic advantage is removed by the construction of the St. Lawrence waterway, unless tariff protection is provided. But why

install the artificial barrier of a tariff after spending huge sums of money to remove an existing natural one?

Accordingly, construction of the St. Lawrence waterway as a transportation project cannot be justified for one or the other of the following reasons:

If foreign ships, subsidized with American money, use the canal to import foreign goods and materials in large volume, irreparable harm will be done to American labor and to our American industries; or

If this cheap foreign competition is excluded to a large extent by a tariff wall, the tonnage transported will be insufficient to warrant the enormous expenditure for construction and maintenance.

Nor can the waterway be justified as a defense project. Instead of aiding defense it would deter it. It would obstruct national defense by diverting men, money, and materials from immediate needs, not only for its construction but also for its defense.

The vulnerability of its lock gates to sabotage or bombing would make completely useless the proposed inland shipbuilding program after the first successful act of sabotage or the first lucky (or unlucky) hit from the air.

How can it be claimed that sea coast shipbuilding facilities are inadequate or could not be built when we have 12,000 miles of ocean shore line to use?

Which is less vulnerable to enemy attack—a fleet of ships under construction on shipways scattered along 12,000 miles of coast line, or the same fleet on Great Lakes shipways dependent on the defense of the locks in the St. Lawrence River?

Of what use would large naval vessels or ocean freighters be if they could not get down the St. Lawrence River any farther than Cornwall because Canada had not completed its construction, which it is not obligated to complete until at least December 1948?

Where would our defense program be today if the waterway had been built prior to 1930 and lake transportation and the iron-ore industry had been faced with ruthless foreign competition during all the depression years?

Would the Lake Superior district mines be ready, as they now are, to take on this peak load, so vital to the steel production of the country?

They would not.

The development of old mines, the opening of new ones, the exploration for additional reserves, and the experiments with new methods and processes would have been made so unprofitable as to result in abandonment in place of development, and ghost towns in place of thriving mining communities.

And would our great fleet of lake carriers be prepared to meet this emergency obligation by exceeding all previous records by about 10,000,000 tons?

It would not.

Eight or ten years of discouraging competition with foreigners would have left this great fleet a mere skeleton of its former self, incapable of performing even a mediocre defense job.

Are we going to permit foreign ships, with un-American working conditions and wages, to ruin our own lake shipping system so essential in supplying the steel industry with its raw materials for national defense?

Assuredly we should not and we will not if this issue is decided on the basis of what is and what is not in the interest of national defense.

It is not the waterway that is required for national defense but the maintenance of our own domestic source of raw materials and our great inland lake fleet, both of which the waterways threatens to curtail, if not to ruin.

Industrial strength resides basically in coordinated mineral industries. Iron ore is its foundation and nations dependent on its importation exist precariously in a world at war.

The iron and steel industry has been the greatest single factor in the rise of this country to its present position of industrial strength. It is necessary to the maintenance of that strength. It was indispensable in the last World War. It is necessary to success in any similar struggle in which this country may again be involved. It was at maximum service during that war because it was not dependent on sea-borne ore. The security of the Nation demands that it remain independent of foreign importation of this basic raw material.

In the face of the present emergency is it conceivable that the American people are willing to subsidize foreign competition so that, when a future emergency arises, this country would be left dependent on some foreign power?

National Defense and Economic Reconstruction

EXTENSION OF REMARKS

OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Thursday, August 7 (legislative day of Monday, July 28), 1941

ADDRESS BY VIRGIL JORDAN

Mr. TAFT. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a speech by Mr. Virgil Jordan on national defense and economic reconstruction.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This is an occasion which might excuse some ceremonial eloquence and stimulate some personal expression of emotion on the part of one to whom the days of these years of the conference board's life include so many of the best of his own, spent in pursuit of its purpose and devoted to its task. But I shall pass the opportunity of the one and resist the temptation of the other. Tonight there are more important things to be said by any American who speaks in complete candor and utter detachment to fellow citizens associated for many years in a common effort of public service. The conference board does not matter. All that matters is the cause of truth, integrity, and trust which in its humble way it has sought to serve.

In the innermost minds of millions of Americans today there moves the shapeless shadow of a nameless fear which darkens their spirits and paralyzes their efforts. They sense that they now stand in the same profound peril as the people of the French Republic 2 years ago, and the people of the British Empire today. The roots of that peril reach deep into the same dark morass of indifference, delusion, deception, and moral disintegration in which the people of France wandered till they were destroyed. We know that by that defeat and those which have followed it, vast satanic forces of evil, festering for centuries in the poisonous swamps of political perfidy and exploitation in Europe and Asia, have been let loose to range the world, infecting the spirits of men everywhere, corrupting their integrity, crippling their creative power, crushing their bodies, and shattering their civilized life. We know that by the blindness and indolence of their leaders toward this peril in their time and place, the people of Britain may soon be beaten or absorbed into submission and their Empire broken. We know that when this is done we must stand alone in a world laid waste, to face in utter isolation these powers of darkness which have destroyed it, and bear the solitary burden of battle with them, or become their final victim, as all others did who failed to defend themselves in time because their leadership was too false, too feeble, or too faithless. Though few among them can even imagine its meaning, many Americans are beginning to be dimly aware that we, too, have been outtooled, outarmed, outwitted, and outstripped, as these others were, and that by unseen disintegration and dissipation of the community resources we may suddenly find ourselves, like them, silently and insensibly absorbed by the enemy, and subjected to its power, though we never see the invader's uniform, his airplanes, or his fleet.

The peril and the fear which so many Americans sense today lie deeper in their hearts than any prospect of destruction and death by the battleships or bombers of any enemy abroad. They could face a foreign foe with confidence and courage, and find leadership for such a struggle, if they did not feel that even in victory they still must face for an indefinite future the same enemy among and within themselves. The grim juggernaut of supreme personal government in Germany, Japan, Italy, and Soviet Russia seems to many of them merely a magnified image of their own—its steel-plated insect society in human form a mere reflection of themselves in the mirror of modern life. Millions of Americans today already feel like refugees in their own land, much more than those who have fled to it from others. They are beginning to believe that the America they have known and loved has already disappeared, its essential spirit of expansive faith in human freedom and integrity long since surrendered and submerged in the spirit of the ancient world, the normal world of those Asiatic hordes and European masses of humanity who for untold centuries have been concerned solely with bare subsistence and sheer survival.

They feel that long before this war began, or their Government invoked their aid in it, the democracy they are asked to deliver to the oppressed peoples of this ancient world had died or been destroyed in every nation involved in it, and their own as well. They fear that by blind pursuit of absolute personal and group power in their political life, and their passive and complacent acceptance of its bribes for their ballots, the great American experiment in human freedom may have ended. They have seen the control of their Government pass out of their hands and become a private personal and group interest, as it has been and is everywhere else in the world, an entity separate from themselves, to which their life, their labor, and their resources are henceforth dedicated, and for whose sustenance and nourishment they must live, work, and die. By their self-centered indifference, indolence, and failure of foresight they have seen the initiative in voluntary creative effort for security and for productive cooperation of labor, management, and tool-providers in the community pass to the sterile hands of the state, to be exploited for purposes of personal power. They have seen that indispensable copartner of all democracy, their productive enterprise, subtly undermined and destroyed, the consumers it serves absorbed into the single stomach of the absolute state, and its management and labor transformed into mere camp followers or kitchen police of a political commissariat. They have seen the willingness and the strength of great masses of their fellowmen, and of themselves, to assume the risks and make the sacrifices of life and labor wane and weaken to be replaced by a persistent search for passive security and ease at any price, which they ex-

pect someone else to pay. They have seen one group after another among them recklessly destroy, for some immediate imagined advantage to themselves, those constitutional and institutional defenses of freedom and justice upon which these groups and all the rest of us must one day depend for our very survival, forgetting that those who take the sword of the supreme state into their own hands for purposes of personal or group power shall perish by that sword.

They have been told, by those who ought to know, that in all these things they are seeing beaten out before their eyes on the anvil of experience, in blood and bitterness, by shattering bombs and subtle brains, a new world, not so brave as the old but more orderly and less dangerous and hard, in which the gods of some omniscient management or some providential political power will give them their daily groceries and gadgets without risk, sacrifice, responsibility, or cost.

Seeing everywhere the violent and reckless struggle for personal and group advantage and gain, the devious evasion, the contemptuous flippancy, the complacement arrogance toward the American community on the part of government, labor, and business management which accompany the conduct of this holy crusade for the rescue of democracy, they wonder whether this war for which their sacrifices are demanded is not indeed a mere incident in the domestic framework of American life—a mere incident of the same divine mission of permanent power to which its protagonists in Europe and Asia consider themselves called by God. If this be true, they know that long after the struggle to bring liberty to other nations shall have ended, whether in success or failure, the struggle to find it for themselves will only have begun again, and must go on for generations still unborn.

Sensing these things, they wonder where and what is the freedom they are to defend. Where then, and what, the dower of democracy with which they are to endow the world? If these things be blessings, why did these peoples of Europe and their leaders not fight for them to the bitter end, and if they did not, how can we deliver them who are in bondage to the same master in ourselves, and like them have sold our birthright for the same mess of pottage?

So, when we search our hearts for the source of that pervasive fear which cripples and confuses our efforts in this crisis, whether we see our danger at home or abroad, we find that these powers of darkness which dismay us rise in the end out of those deep-seated weaknesses of spirit which have developed in the past quarter-century in the people of our own and other countries and which are expressed in the personalities and purposes of their leaders today. The collapse of European civilization and our own peril are rooted in the failure, both among the community of men and its leadership, of those essential qualities of integrity, independence, self-discipline, and responsibility upon which any enduring civilization depends. To re-create and revitalize them throughout the community and its leaders is the colossal task, not only of the future, but of today. It is necessary not only for reconstruction, but for survival.

It is the disintegration of these qualities which is reflected in the destruction, conflict, and chaos of our time. The world we have known and lived in has crumbled to ruins around us, but the rubble of the bomb-shattered cities of Britain is but a symbol of a catastrophe far more profound which has overtaken us in the past quarter-century. This world was the most abnormal world the human record has ever known, a world of unparalleled progress and unimagined plenty, of unprecedented stability and sustained peace born of the momentous discovery that truth, integrity, and responsibility, embodied and applied in the political and economic institutions and the public and private life of the community, could make men free, prosperous, and secure. It was the most revolutionary discovery ever made by the mind of man, but the world it built lasted only a little more than a century, a mere moment in human history. That normal world to which we sometimes dream today of returning, the world in which men had lived for unnumbered centuries before, was a world of treachery, terror, ignorance, and enslavement. This is the world to which the leaders of our time have once more turned the spirits and the immense productive powers of men which a mere century of human freedom and faith enabled them to command.

But today the time for post mortems is past. Whatever the sources of the peril and the fear that confuse and cripple us, we cannot now escape the task to which by fate we have been committed for the future, the most colossal task that has confronted any community of men in human history—the task of saving ourselves from the destructive power of the dogma of the supreme state which has subdued the world, so that by grace of God we may help to restore, among as many communities of men as may have the aspiration and the strength to sustain it elsewhere that essential structure of truth, integrity, and responsibility upon which the possibility of a humane civilization and human progress depends.

What any of us here may do or say cannot much matter to ourselves, for our lives are largely spent, but it will matter to the Americans who come after us and the world in which they live. We cannot give them, or any other people, integrity or liberty; they will have to attain and preserve it for themselves; but we can at least transmit to them the aspiration and the opportunity which were entrusted to us by our ancestors who won it for themselves.

Despite all that I have said about the doubts and dangers that burden them today, the impulses, purposes, and aspirations of the American people in this crisis are noble in spirit and worthy of their character and of the traditions of their country, a deep expression of that love of liberty, that hatred of tyranny, that generosity and sympathy toward the unfortunate and oppressed which have always marked America. We should be deeply proud to be part of a people who can impulsively present such a spirit to an unhappy and a tortured world, and implement it even to the point of folly.

But I submit that it would be a tragedy too brutal and too humiliating to be borne by the broken heart of mankind today if the spirit of such a people were to be betrayed or exploited by anyone, whether for a few pieces of silver or for the scepter of political power. In this dark hour of their great adventure America surely deserves and as surely desperately needs the utmost candor, competence, courage, and integrity which she can command or which a merciful providence can grant in the leadership of her Government, her business management, and her labor.

We have a right to ask whether those who urge and lead us to this colossal task understand what it means, and whether they mean it themselves. Are they clearly conscious of the suffering, the sacrifice, to which they ask the American people to commit themselves, and are they willing to commit themselves to it? Are they ready to accept for themselves the stern and uncompromising self-discipline which it implies? Are they aware that it will require the sacrifice of numberless lives, and the resignation of all hopes of peace, prosperity, security, comfort, and social or political gains for an indefinite period? Are they willing to tell the American people that, in utter honesty and complete candor?

This is too great a Nation to need or deserve to be driven to defend itself or to fight for a great cause by any synthetic circumstance or political trick, by having its Government range the world begging for a bomb or praying for a politically appropriate provocation. The true America does not move to its battles or its ballot boxes on its belly. It has something more to fight or vote for than its public corncribs, its political swill-barrels, or its silver pigsties.

Despite the doubt, confusion, conflict, and fear which afflict them today, I am sure that the American people are willing to follow with unquestioning unity and allegiance any leader or any group among them who they can feel with complete confidence is utterly committed to the same cause as that for which they are called to make their sacrifices and endure their endless burdens and sufferings, and who is as prepared as they are expected to be to put aside all private purpose or aspiration of personal power, position, privilege, or pleasure in every aspect of life or work. They will make these sacrifices freely and unflinchingly and serve to the bitter end any who commands them in the name of this supreme cause, whenever they know in their hearts that he has won the right as man to man to command them by his unqualified acceptance of them.

Desperately as they may need, and nobly as they deserve such leadership today, whether or not they get it, the American people should remember that the rescue or wreckage of their country does not rest in the hands of those walking shadows, those poor players of political power, who strut and fret their brief hour on this world's stage and are heard no more. It rests in the end in the hearts and minds and muscles of the nameless millions of men and women in America who must and will carry through whatever task and pay the price of whatever waste and suffering the weakness of their leaders has committed them to. No matter how supreme its power, or how complete its competence, the State can create nothing that does not already live and grow, nor destroy anything that is not already dead in the spirit of its people. It is at best but the scavenger of time and human aspiration.

They should remember that liberty is not granted us by grace of governments, constitutions, courts, or congresses, nor can we depend upon these permanently to preserve and protect it for us. It does not prevail or persist by the power of political traditions, parties, personalities, or laws. Liberty springs solely from the spirit of those common citizens who have the will and courage to create it for themselves, the strength and integrity to accept its responsibilities and pay its price, the valor, vigilance, fortitude, and fidelity to defend it with their life against its unseen, incessant, and insidious enemies—indifference, ignorance, indolence, and injustice. Save as it is more precious to us than prosperity, peace, comfort, or security, it will never exist or long endure among us. Every man in each generation must renew and replenish its spirit in himself, and none can demand it for himself and deny it to others without destroying it for all.

The civilization by which we live is a vast, invisible web ever woven anew by countless acts of sacrifice, fortitude, faith, and foresight by unnumbered nameless men. Thread by thread these unseen strands of individual aspiration, effort, adventure, and accomplishment are spun into those indestructible cords of endurance, industry, independence, and integrity of spirit which bind society together. This frail fabric from the ceaseless loom of generations of unremembered lives is the strongest and most precious substance in the world, for by it alone we hang suspended above the abyss of savagery.

Save for these things, the story of the great adventure upon which America embarked a bare century ago must be but as a tale told by an idiot, full of sound and fury, signifying nothing, and all her yesterdays will have only lighted fools the way to dusty death.

We shall win prosperity only if we have the strength to suffer poverty; we shall win leisure only if we have the will to labor endlessly; we shall win security only if we have the cour-

age to risk all; and we shall find peace only if we have the pride to die fighting for freedom, truth, and honor.

Inflation Storm Warnings

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1941

EXCERPTS FROM HEARINGS ON THE 1941 TAX BILL

Mr. ROBERTSON of Virginia. Mr. Speaker, the following excerpts are taken from the printed hearings of the Ways and Means Committee on the 1941 tax bill:

Hon. HENRY MORGENTHAU, Jr., Secretary of the Treasury. And finally, it (the 1941 tax bill) is designed to prevent a general rise in prices by keeping the total volume of monetary purchasing power from outrunning production (p. 4).

Hon. JOHN L. SULLIVAN, Assistant Secretary of the Treasury. The dangers of inflationary price movements are real, and must be avoided. Excessive reliance on borrowing, together with increased purchasing power, would exert a strong and dangerous upward influence on prices. To avoid this, the tax program is essential (p. 47).

Dr. ALBERT G. HART, associate professor of economics, Iowa State College, Ames, Iowa. We do feel that if the defense expenditures go high as it is reasonable to expect from the projects already outlined, and if there is a continued expansion of the defense program as apparently indicated by the aid-to-Britain program, it is necessary that steps be taken to shield the country from inflationary dangers arising out of the huge Government spending. It is very probable that the continuation of only the present tax system will involve considerable inflationary dangers. And to avoid inflationary dangers we urge the enactment of a special national-defense tax upon individual net incomes in excess of modest exemptions (p. 326).

We do reckon that if you get to the point, and when you get to the point where expenditures begin to outrun the flow of consumer goods, taxes are the natural remedy. If this remedy is not used, and you let the people spend without restraint, it results in putting living costs up; that kind of spending leads to inflation. When you get to the point where that takes place, spending must be limited. Taxation should then be used to keep spending in line with amount of goods available (p. 327).

What has happened, gentlemen, is that fate has dropped into your laps the problem of taking care of the soundness of the American monetary system. In a sense, it is not your business; but the existence of this defense crisis has made it your business. I gather from the policy pronouncements I have seen, that you have realized that fact, that taxation does have to take care of the danger of inflationary situations arising in the United States, and I am talking here of means of meeting it. If it is to be met, it has to be met by forging a really adequate revenue system, which will not be too grossly unfair and which will, therefore, have to be some sort of tax on incomes (pp. 334–335).

Mr. ROBERTSON of Virginia (to Dr. Hart). Just what do you mean by the phrase, "our explosive monetary system"? (p. 353).

Dr. HART. I am thinking, in the first place, of the idle bank balances in the hands of the public. We have about $10,000,000,000 more of bank deposits in this country now than we had in 1929, and we are not doing any more business, in dollars. * * * I am thinking also of the excess reserves of the member banks of the Federal Reserve System, and of the nonmember banks which give them a colossal unused lending power.

And beyond that, of course, but even though that part of the explosives are well in the hands of the Government, behind that is the Federal Reserve's unused lending power, and the Treasury's unused power to issue gold certificates and greenbacks, and the Treasury's unused power to issue silver certificates. There is a whole chain of possibilities there of increasing the circulating medium in the hands of the public. With our present monetary laws, we could increase the total several-fold (p. 353).

Mr. ROBERTSON. It is liable to explode in the direction of inflation.

Dr. HART. If we get an inflationary movement under way which begins to gather speed, there is the danger, it seems to me, that some of these loose funds may come out and start to roll and make a really formidable avalanche. The Treasury's borrowing program is calculated to nail down a good deal of this spending power that might break loose a few months or years from now. Treasury borrowing along the lines recently announced is not solving our more immediate problems, but it may be easing the monetary problems we are due to run into a few years hence (p. 353).

Excerpt from prepared statement signed by 176 economists in the United States (presented by Dr. Hart, of Iowa State College):

"Inflation dangers in defense spending: The increased rate of Government spending resulting from defense means that if heavy additional taxes are not levied there will be a very great rise over the next 2 or 3 years in the prices paid by consumers. Defense spending will produce a continuous increase in consumers' money incomes for some time ahead, raising enormously the amount available for spending on consumer goods. At the same time, defense needs will greatly handicap expansion of facilities for making such goods, and in many fields will actually lower the physical ceiling of production. The impact of increased spending on a constant or possibly declining output of consumer goods clearly spells rising prices. In addition to the direct effect of rising incomes on spending, we must reckon on the likelihood of much spending out of the swollen bank accounts which now exist, and out of bank loans" (p. 364).

Mr. ROBERTSON (examining Livingston W. Houston, chairman, Committee on Government Finance of the National Association of Manufacturers). Do you think that our distinguished Government economist, Mr. Leon Henderson, is going to have success in setting aside the law of supply and demand with respect to prices for consumer goods if we cling to a 40-hour week, under which 72 percent of our industries are operating on a single shift? (p. 572).

Mr. HOUSTON. It will be very difficult to do.

Mr. ROBERTSON. In other words, when production with respect to demand falls, or purchasing power increases faster than production, he will have what David Lawrence said last week was the most difficult and most unpopular task of anybody in the Government, to hold those prices down; is that true? (p. 572).

Mr. HOUSTON. I think so.

Mr. ROBERTSON. And yet, in connection with our tax program we have been giving consideration to draining off, so to speak, a portion of the increased earnings that arise from defense spending to try to hold down the possibility of price inflation; it is a very definitely related problem. Is not that true? (p. 572).

Mr. HOUSTON. We agree that a control of prices to prevent a rapid increase, which we call, or a great many of us call, inflation, is one of the problems that faces the financial administration of our Government (p. 573).

LEON HENDERSON, Administrator, Office of Price Administration and Civilian Supply. Mr. Chairman and members of the committee, my job, first and foremost, is to try to prevent rapid and unmanageable price rises in the country during the defense emergency—to stave off inflation which, as you know, hampered our preparedness efforts during the World War and would destroy us this time (p. 636).

I take it that all of you see eye to eye with me on this matter of inflation. During the World War wholesale prices doubled. The cost of arming was at least $15,000,000,000 higher than necessary, according to Mr. Baruch, Chairman of the War Industries Board.

The securities market reflected the inflation. Many corporations and individuals had unjustifiably large profits; many other corporations were crippled in production because speculators were hoarding goods. Wages never could seem to catch up to the rising spiral of prices. Above all, the collapse of prices which followed just about paralyzed the economy (p. 636).

In my job I have to estimate the effect of the defense program on economic activity, so that I can estimate the size of our tasks in establishing price ceilings, allocating residual supplies, protecting consumers, and increasing total supplies (p. 637).

As regards taxation: Keeping in mind the necessity for getting every man to producing, I feel that the principles of a fiscal program for the year 1941–42 which would be in consonance with our defense needs and which at the same time will not interfere with a successful fight against inflation—always the first consideration with me after the brutal needs of getting the essential defense material—can be set forth in a few paragraphs (p. 642):

First. We ought to finance our total defense expenditures in such a way that they result in the maximum possible increase of both armaments production and total real national income. Expansion of supplies, and particularly of productive facilities, along all possible lines, therefore, must be our watchword and the tax system ought to be so modeled that it promotes this goal (p. 642).

Second. After total production has expanded so that we are using substantially all of our resources, we will have to hold down consumption generally in order to prevent inflation. When that time comes I will be in favor of further stiffening of income taxes or of adopting some form of the Keynes plan, some features of which have just been adopted in Britain.

Third. We must see that the burdens of the defense program are distributed as equitably as possible. This means that we must tax according to ability to pay. This principle is just as valid when we have to tax to prevent inflation as it is in normal times. I have heard it said that this principle will have to be abandoned when we get to the stage of restricting consumption. That argument confuses taxing consumers' income with taxing consumers' goods. What England is now aiming to do is to tax consumers' incomes. As to effectiveness in preventing inflation, excise taxes, which are regressive and inequitable, are no more effective than are income taxes based on ability to pay (p. 643).

One last thing. I have been spelling out some of the ways by which the tax program

might assist in the fight against inflation. I hope you are studying means of making the revenue system more flexible. The time lag between decisions to raise taxes and their collection dates makes the present system sluggish as an inflation control. When we reach a state of reasonably full use of resources, the tax system can be a most effective weapon in helping to control inflation, as it is in Canada and Great Britain (p. 647).

Mr. ROBERTSON. Mr. Henderson, if Mr. Baruch's statements are correct that uncontrolled prices in World War No. 1 added an unnecessary $15,000,000,000 to the cost of our armament, what did those prices add to all the purchases of consumers in the country (p. 648)?

Mr. HENDERSON. I would say at least twice as much a year.

Mr. ROBERTSON. That would be, in cost to the taxpayers and to the people generally, many times the emergency taxes that are now proposed partly to finance our defense program; and partly, as you say, to be used in connection with other things in preventing runaway prices.

Mr. HENDERSON. That is right.

Mr. ROBERTSON. There should be no doubt in the mind of anyone that the lack of price control in World War No. 1 was a very costly error for our Government, and the necessity for it now should be quite apparent. But did we not attempt price control during World War No. 1?

Mr. HENDERSON. Yes; but a lot of damage had been done. The war broke, as you know, in August 1914, and it was 3 years later before we got into it. And it was in that period, as I recall it, that the wholesale price level went up about 75 percent. Then in the period of control, they only controlled certain items. There was another 10 to 12 percent advance, and then when these controls were taken off at the conclusion of the war, we had another 20 percent. So that the highest part of the price rise in the last war was really before and after we used the controls.

Mr. ROBERTSON. I recall quite distinctly that the Government indicted a lot of coal operators for selling coal at $15 to $20 a ton, which was about three times the Government price, and then abandoned the prosecution because they reached the conclusion that they had no adequate law to sustain the program. Have you got enough law now to sustain this necessary program that has been loaded on you (p. 649)?

Mr. HENDERSON. Yes. At the present time, we have got everything that the War Industries Board had and even more, as far as the ways in which you secure compliance are concerned, leaving out the principal thing, which is the general support of the community for price ceilings.

Let me point out that where the Lever Act fell down was on a constitutional matter of the application, and it was not due to the general powers that had been exercised. The Lever Act tried to control exactly the margins which retailers would be permitted to charge, and I think it failed on a technical point there.

Mr. ROBERTSON. You have all the law that you want to handle this?

Mr. HENDERSON. We have got all the law that we need at this present time. We have had only a 4-point rise in the index since this defense program started. I do not know how long that will continue.

Mr. ROBERTSON. Well, let us see what this present time is and what may lie immediately before us. You probably heard the radio address last night by the Secretary of War?

Mr. HENDERSON. No, Mr. ROBERTSON; I was working on my statement.

Mr. ROBERTSON. I think he said in effect that we have got to do whatever is necessary at the present time to get our supplies to Great Britain.

Mr. HENDERSON. Well, I agree with that.

Mr. ROBERTSON. That is a big order, is it not?

Mr. HENDERSON. That is a big order.

Mr. ROBERTSON. You probably noticed in the press this morning that after sending up a budget in January, estimating defense appropriations at $28,500,000,000, it was then raised to approximately $40,000,000,000, and now it is proposed to increase that greatly.

Mr. HENDERSON. I do not think it is big enough yet. I think it should have been bigger, and it should have come earlier.

Mr. ROBERTSON. I believe you told us that if we spent the money that is necessary to be spent to get the production that is necessary to be had, we will have to add four or five million workers in industry alone.

Mr. HENDERSON. What I said was, if we can get that much, we can put that many people to work.

Mr. ROBERTSON. You mean get that much money?

Mr. HENDERSON. No; it is not marked to the credit of the Treasury, such as flow out of an appropriation. What I mean is, get the actual pig-iron capacity built, the blast furnaces, things like that. You can appropriate money, but that will not get 10,000,000 more tons of iron ore down from the Mesabi Range. You can appropriate money, but that will not get 5,000,000 more tons of scrap. The demand is already there, Mr. ROBERTSON, and I am saying if we can find, by working with the steel industry, how we can get additional capacity, we will get $4,000,000,000 more of income, and we will get more people back to work. I said if we had no bottlenecks at all, if we could get next year's production the way we got last year's production, by merely taking up idle capacity, we would put four or five million people back to work.

Mr. ROBERTSON. I was struck with your statement to us, because it defines our experience in agriculture; that it is very difficult to set aside the laws of supply and demand. When we have too much cotton and too much wheat and too much tobacco a Government stabilization program does not get us very far because everybody sees the visible supply, and if the demand is not there the price will not be there I believe you applied that to consumer goods.

Mr. HENDERSON. That is correct.

Mr. ROBERTSON. That one means of keeping down too-rapid advance in consumer goods would be to produce more goods to equalize this income which you say may go to $108,000,000,000.

Mr. HENDERSON. I said I thought it would go around $95,000,000,000.

Mr. ROBERTSON. In which year?

Mr. HENDERSON. In the coming year; that it might go to $108,000,000,000, if we had no bottlenecks.

Mr. ROBERTSON. That is an unparalleled income.

Mr. HENDERSON. That is correct.

Mr. ROBERTSON. I was wondering if other forces are not going to be at work that may make your task more difficult. For instance, you said that the machine-tool workers have found a way to step up production—to meet the stepped-up demand; and is not the way they have found to do that a two-shift program, working one shift 50 hours a week and another shift 55 hours a week?

Mr. HENDERSON. Let me go back I did not say the machine-tool people had found enough. I meant to imply that they had always found some way, even when they felt they had reached their limit, of going further. They have done it in many ways. They have done it sometimes by financing their own plant expansion. They have done it by financial expansion with Government funds. They have done it by reorganization of their own efficiency methods. They have done it by more shifts. Even at that, there is still quite a bit of lag. Some of the machine-tool industry is on a 2½-shift basis, but on the average they are only working about 65 or 70 percent even of that basis.

Mr. ROBERTSON. I do not know whether I have been correctly informed or not, that the machine-tool industry is working 50 to 55 hours a week.

Mr. HENDERSON. I cannot answer that specific question.

Mr. ROBERTSON. I got it from high Government source.

Mr. HENDERSON. I presume it is correct.

Mr. ROBERTSON. Then I went to a machine-tool manufacturer and I said, "What are you paying in overtime per week?" And he said, "An average of 12 hours" And I said, "Who pays for that?" Now, what is your guess as to who pays for that?

Mr. HENDERSON. I think, since the Government directly or indirectly is taking most of the machine tools, the Government is.

Mr. ROBERTSON. That was his answer; and he said, "Not only does the Government pay for that overtime but we have an escalator clause in our contract—if wages go up still further, the Government pays still more."

Mr. HENDERSON. That is correct.

Mr. ROBERTSON. That is true, is it not?

Mr. HENDERSON. That is true.

Mr. ROBERTSON. I saw in the paper this morning * * * that the workers in the shoe industry had notified you that they wanted a 20-percent increase in wages, but that you must not let the price of shoes go up.

Mr. HENDERSON. That is correct. I might say that is the first time I ever knew a union to make a move toward helping control prices; usually it is the other way. The union and the employers get together and they say, "We will give you a wage increase," and "we will let the price go up." So this was refreshing. And you have got to keep in mind that I was at the N. R. A.

Mr. ROBERTSON. I have not forgotten that.

Mr. HENDERSON. And I have not.

Mr. ROBERTSON. Can you do that?

Mr. HENDERSON. Do what?

Mr. ROBERTSON. Give them a raise in wages and still hold the price where it is.

Mr. HENDERSON. In many industries, yes. In many industries sometimes wage increases can come, as they always have come, out of increased productivity of the industry working at a high level of activity.

Mr. ROBERTSON. It is estimated by the operators that an increase to a dollar an hour, 7 hours a day, for 5 days a week in coal would probably add $200,000,000 to the cost of coal. And I believe you finally eased off a little bit on the question of the price on coal.

Mr. HENDERSON. I did not ease off. It went back under the aegis of the Bituminous Coal Commission.

Mr. ROBERTSON. A few days ago the chairman of the board of the steel corporation observed that the recent increase in wages paid by the steel corporation would add $60,000,000 a year to the costs of the United States Steel Corporation. They do not know yet what the added cost to the coke will be in the production of steel, but they estimate that it would probably be $1.25 a ton.

Mr. HENDERSON. Did you take a pencil and their statement and do a little arithmetic and see how much they would still have left, after they paid that increase?

Mr. ROBERTSON. Yes. I saw that in 1940 they had a net income of approximately $100,000,000. But I also saw that on substantially the same amount of business in 1929 they had a net income of $190,000,000.

Mr. HENDERSON. That year, 1929, is a sport as far as the earnings of the steel corporation is concerned. Between 1922 and 1928, the period of their greatest activity, the average was around $90,000,000, and I do not know of a statistician yet who works with figures that does not throw out 1929 in the steel corporation's earnings.

Mr. ROBERTSON. Well, I am neither an economist nor an expert, but I saw a chart prepared by Mr. David Lawrence's experts; they are supposed to be economists. And you will see in that chart that between 1929 earnings and 1941 estimated earnings, the earnings of all these big companies would be about $600,000,000 more, while the wage shows an increase of some two billion. Do you think that chart is correct?

Mr. HENDERSON. If it is in the United States News, I would assume that it was.

Mr. ROBERTSON. Yes.

Mr. HENDERSON. But, Mr. Robertson, I do not want to leave the impression that I agree or approve of the distribution of income as between profits and wages in 1929.

Mr. ROBERTSON. Well, I am not referring to that, but the point I am coming to is this: When you fix prices, you have got to take into consideration the cost of production.

Mr. HENDERSON. That is correct.

Mr. ROBERTSON. And wages are a part of the cost of production.

Mr. HENDERSON. That is correct.

Mr. ROBERTSON. At the present time, in industry in 1941, what percentage of the value of the manufactured product is represented by the wages?

Mr. HENDERSON. On a national-income basis I think it would be somewhere around 63 percent for wages and salaries.

Mr. ROBERTSON. Sixty-three percent of the value of the product is represented by wages and salaries?

Mr. HENDERSON. No; I said that as a percentage of the national income, salaries and wages——

Mr. ROBERTSON. I am trying to get a breakdown, if I can, as to the cost of production, showing what percentage of the cost of the manufactured product is represented by wages and salaries.

Mr. HENDERSON. It varies from a very low percentage in the chemical industry and the cigarette industry to a very high percentage in the coal industry.

Mr. ROBERTSON. What would the average be? I am sure that you have some averages.

Mr. HENDERSON. Well, I know the disadvantage of an average like that, using the average between the cigarette manufacturer and the coal industry. I can give you the average if you want it, but I do not think it is useful. I would rather go to the cost of production in a particular industry that we had put a price ceiling on.

Mr. ROBERTSON. When you appeared before the Joint Committee on Labor of the House and Senate on behalf of the 40-hour week did you not give an average in making your point as to what would be the result if you put a limitation on the hours of work to 40?

Mr. HENDERSON. Well, I presented five pages of industries.

Mr. ROBERTSON. What is the general average cost of labor given by you in your statement that if you put a high-enough penalty for working more than 40 hours industry could not afford to do it?

Mr. HENDERSON. I do not recall my testimony before the committee, but I will say that I will stand back of it.

Mr. ROBERTSON. Here is your testimony before the joint committee of the House and Senate at that time, in which you state that, based on 1936 production, the wages and labor represented 38 percent of the manufacturers' cost.

Mr. HENDERSON. I would say that I had made a calculation by taking a weighted average of all the industries that had reported to the Department of Commerce, and made a very careful estimate upon it.

Mr. ROBERTSON. There have been many increases in wages since 1936, have there not?

Mr. HENDERSON. Yes.

Mr. ROBERTSON. Therefore the percentage now would be greater?

Mr. HENDERSON. Not necessarily, because we have got higher productivity from workers.

Mr. ROBERTSON. Well, some, but not as much higher as the increase in many industries in wages; is that not true? You may have some increase in individual production since 1936, but the increase in most plants has not kept pace with the increase in wages.

Mr. HENDERSON. No; no; it has not in the durable-goods industries. It has in the nondurable; and even in the durable-goods industries it has since 1937.

Mr. ROBERTSON. All right. If we go ahead with our defense program, as you have indicated, and I favor it, and most Members of Congress favor it, and also increase the production of consumer goods that do not compete with it, do you think we will reach maximum employment of labor; that is, of those who are ready, able, and willing to have a job?

Mr. HENDERSON. That depends on how well we plan our expansion. If we let things run for awhile there can be a few months of inflation when we would have. I suspect, nearly full employment.

Mr. ROBERTSON. I believe in 1937 you estimated unemployment at 7,900,000.

Mr. HENDERSON. That is about correct.

Mr. ROBERTSON. And in order to put people to work I believe you recommended a high penalty for working anybody engaged in any interstate-commerce activity—of course, since that date all distinction has been wiped out, as you well know—a heavy penalty of 50 percent for working a man more than 40 hours, and if you work on holidays or some other such occasions, 100 percent. Is that not correct?

Mr. HENDERSON. I do not recall that I made that specific recommendation, but at times of low employment that is not a bad idea. At a time of low employment, when naturally we require a great number of people to be employed, I would be in favor of any kind of reasonable strategem that would put more people on the pay roll.

Mr. ROBERTSON. At the time of that hearing you quoted with approval the study by Mr. Witt Bowden, of the Bureau of Labor Statistics, that you said was published in January 1937, studying the employment of 2,200,000 workers, and you said the wage reduction following the N. R. A. of so much gave a cost average which was reflected in lower prices.

Mr. HENDERSON. That is correct.

Mr. ROBERTSON. Well, if wage reduction would result in a lower cost average, high wages would operate just in the reverse, would it not?

Mr. HENDERSON. Not in the same ratio; depending on how large your operation was. I have got some figures, the best I could possibly get, of the unit labor costs. You can get those by calling on the Department of Labor, Bureau of Labor Statistics.

Now, let me see, that was 1936 or 1937, was it not?

Mr. ROBERTSON. Yes; 1937.

Mr. HENDERSON. In 1936 hourly earnings on durable goods were about 91 in the index, based on the 1935 to 1939 average. They are now 112, but output per man-hour was only 98 and now it is 113.

The unit labor cost was 93; it went up to 104 in 1937; 108 in 1938; but then it went down to 99 in 1939; and 99 in 1940.

That is, while hourly earnings are going up, the output per man was going up, too. Labor costs are lower than in 1937.

The index of production in that time on the same goods went up from 108 to 135.

Mr. ROBERTSON. I want to read you a sentence from your testimony in June 1937, which is found on page 158 of the printed hearings, in which you stated: "Many lessons are to be learned from the N. R. A. experience, many of which relate to administration. Certainly it was learned that penalizing overtime needs to be stiff to force reemployment."

Mr. HENDERSON. That is correct.

Mr. ROBERTSON. The 50-percent overtime was presented by you at that time, not as a fair wage, but as a penalty to spread employment. Are you still of that same opinion?

Mr. HENDERSON. If we are in a low level of employment, yes.

Mr. ROBERTSON. That is the very point I am trying to come to. And, it has been bothering me all through these hearings about stepping up production of consumer goods and keeping the price down for the manufacturers who must increase production, but if they work their men more than 40 hours a week we will penalize them up to 50 percent for holidays, Sundays, and Saturdays; but we are asking them for 100-percent production and yet we penalize them for meeting the requirements. Now would not the reasons that you advanced in 1937 for the penalty apply with reverse English for taking off or relaxing the restrictions which in 1937, on the basis of employment in 1936 you said would apply to 12,000,000 men?

Mr HENDERSON, Mr. ROBERTSON, I stand on that testimony, and I think it was good. I think at the present time that those in charge of the Wage and Hour Division—and I notice in the press this morning the statement that there were cases where wages and hours interfered—would consider relaxation.

Mr. ROBERTSON. It seems to me that the production problem is already sufficiently acute for some action, and do you think they have got the power, in interstate commerce, to relax the 40-hour week?

Mr. HENDERSON. Well, I think there have been many modifications, and there have been a number in the defense industry.

Mr. ROBERTSON. I don't think they could do it.

Mr. HENDERSON. I think he could do it—that is my impression—and I think he said he would.

Mr. ROBERTSON. Do you not really think, with this program confronting us, it is vitally necessary to keep down these prices not only for defense articles but in order that we should give people work, and that it is advisable not to penalize an employer who works a man more than 40 hours a week, since, when you are putting that on, you are penalizing the expansion of employment?

Mr. HENDERSON. I think that ought to be given serious consideration if he can't increase the number of shifts.

Mr. ROBERTSON. Thank you very much. That is a better answer than I got from an economist last week when I asked if the economists had endorsed his supplemental statement, and he said they did not endorse his statement but they endorsed the general atmosphere (p. 655).

Mr. HENDERSON. We do not want the kind of wild inflation such as Italy is facing, and perhaps Japan. The only way, in my opinion, to keep down inflation is to have expansion and a full use of our resources.

You can have an inflation in any item that is badly needed by people who are going to have to pay for bread or anything else, when they have got to pay in order to get it. There is no kind of price control short of what the Germans have ever devised that will take care of a situation in a necessity (p. 663).

Mr. ROBERTSON. I have just one matter, and it won't take me but half a minute. When the labor shortage occurs that the gentleman from Michigan referred to shall we relax the restraint upon production of a 40-hour week if we want to carry out your program with the fullest production possible (p. 678)?

Mr. HENDERSON. In the arsenals, Mr. ROBERTSON, when they have run smack up against

that, there has been relaxation. I think that Hillman has found time and time again that there is a lot of complaint where there is no real difficulty, and where they won't take on skilled workers. However, I think on every legitimate case we ought to. I think that that is what the purpose of flexibility act is for.

Mr. ROBERTSON. You and I will have to get together on an amendment to the law because since you have testified this morning General Fleming advised me that no matter how acute the shortage might become he has no power to relax the 40-hour requirement in interstate commerce (p. 678).

Hon. MARRINER S. ECCLES, Chairman of the Board of Governors of the Federal Reserve System. I am opposed to a general sales tax, or to an increase or imposition of excise taxes except where it is necessary to curtail civilian demand for products needed in defense, thus preventing inflation (p. 681).

In order to prevent an inflationary spiral of price and wage increases, labor should be willing to moderate its demands for increased wages, but labor cannot be expected to follow such a course if employers are permitted to retain excessive profits (p. 682).

Prof. IRVING FISHER, Yale University, New Haven, Conn. I know of no economic boon, except the prevention of inflation and deflation, as great as that which our people could enjoy, both rich and poor, from removing the stunting influence of taxes on capital accumulation. Moreover, removal would tend to prevent the inflation now threatening us (p. 1056).

Mr. JENKINS of Ohio. I would like to ask you a question or two if I may.

Dr. FISHER. Yes.

Mr. JENKINS of Ohio. In the very last sentence of your statement you state: "Moreover, removal would tend to prevent the inflation now affecting us."

Dr. FISHER. Yes.

Mr. JENKINS of Ohio. I have recognized you as a great tax authority for many years, and naturally I recognize that you know what you are talking about. What is the present danger of inflation?

Dr. FISHER. The danger of inflation now—and we are really having it—for my index number this last week went up, and has gone up each week now for the last 8 weeks except one, so I think you might say that we have inflation already; it comes about primarily through the Government selling the bonds to banks in return for newly created bank credit, which becomes circulating medium.

Insofar as he can do so Secretary Morgenthau has also properly advocated selling bonds to the public in return for savings; any newly created circulating medium inflation would be prevented, and the more savings you have the more that could be done. That is what I meant by that statement; when you stimulate savings you will avoid that method of inflation to a certain extent, which is now being used.

Mr. JENKINS. Would not the ultimate result be then that there would be a tendency on the part of everybody to save money so as to purchase Government bonds?

Dr. FISHER. It would help the Government's revenue in that way.

Mr. JENKINS. I did not quite make myself clear. I thought you said Mr. Morgenthau's plan was a good plan because it induced the people who have savings to lend their money to the Government.

Dr. FISHER. Yes.

Mr. JENKINS. And the result would be you would never get people to put their money in industry.

Dr. FISHER. Well, of course, it would do so if you carried it to the extent that the Government got all the savings.

Mr. JENKINS. Well, nearly all of those who have testified here—at least many have testified—to the effect we are facing inflation because of rise in prices.

Dr. FISHER. Yes.

Mr. JENKINS. If that is the case, when you take the illustration with reference to using savings to buy Government bonds—and I think I understand how with rising prices that will eventually result in inflation, and that what most of these men have testified is that we must be on the lookout for inflation and must prevent prices from rising. What have you to say about how to do that, if it can be done properly?

Dr. FISHER. Well, the method Mr. Morgenthau has advocated is not a method for preventing the creation of new circulation medium which make prices rise; generally the increase in circulating medium is what makes inflation; and in Germany, where they used the printing press, they were indirectly doing the same thing as we did here in selling bonds to banks.

Mr. JENKINS. It has been argued here, sort of cautiously at times, that the rise in prices has been due to the rise in wages.

Dr. FISHER. Well, that merely means one affects the other, that wages and prices go up, prices go along together, but that does not explain it.

Mr. ROBERTSON. Dr. Fisher, for how many weeks did you say the index price has risen? (P. 1062.)

Dr. FISHER. About 8.

Mr. ROBERTSON. I think you said because the Government has been selling bonds to banks.

Dr. FISHER. Largely; yes.

Mr. ROBERTSON. I saw a statement recently that wages represented 40 percent of the cost of steel and that in the United States Steel Corporation the advance granted, amounting to $60,000,000, would add from $2 to $5 a ton to the cost of steel, so there are other items besides selling bonds to banks.

Dr. FISHER. There are other items; yes. I was merely picking out one, and I picked it out particularly for two reasons: One, I believed it the more important item; and the other, because it related to the subject that I am talking about (p. 1063).

Mr. ROBERTSON. Great Britain recently launched a new battleship of 35,000 tons, with 16-inch guns, at a cost of $38,000,000. The next week we launched a 35,000-ton battleship with the same armament, at a cost of almost 100 percent more than what it cost Great Britain. Now, was that because we had been selling bonds to banks, or because of higher wages and things of that character?

Dr. FISHER. Well, there has been inflation in England, too; she has been selling bonds, too.

Mr. ROBERTSON. Why should our battleships cost twice as much as Britain's battleships?

Dr. FISHER. We have a higher level of wages—that is what you are thinking of—that is undoubtedly correct.

Mr. ROBERTSON. You have seen in the press the account of strikes of machinists in the shipyards that are now getting a dollar an hour, and they are asking a minimum wage of $1.15 an hour and $2.30 an hour for each hour worked over 40 hours a week, and they have tied up $500,000,000 worth of shipping, and if the Government yards and the private yards have to pay a minimum wage of $2.30 an hour for overtime the shipyards will have to increase the price over the margin they have fixed for building ships.

Dr. FISHER. I think it would tend to.

Mr. ROBERTSON. Well, it is a fact, is it not, Doctor, that the sale of Government bonds to banks is just one of the factors, but not the major factor in these price rises to which you have referred?

Dr. FISHER. It depends on whether you are speaking of a special price rise or the general level. I think it is the major factor in the effect on the general level of prices. But there are individual cases of price rises that are new and related to the defense program.

Mr. ROBERTSON. How do you account for the fact that wages are now from 150 to 200 percent higher than parity, and farm prices are about 70 percent of parity; if selling bonds to banks is going to make for inflation, why has it not inflated farm prices as you say it has labor prices?

Dr. FISHER. Selling bonds to banks in order to create new credit would have in part no effect on the relative price of farm products and industrial products; it would be merely the two together as a part of the general level.

Mr. ROBERTSON. Well, Dr. Fisher, in 1917 and 1918 we sold about $20,000,000,000 of bonds to the banks; that is in World War No. 1.

Dr. FISHER. Yes.

Mr. ROBERTSON. In raising money.

Dr. FISHER. That is what raised prices; prices doubled.

Mr. ROBERTSON. Well, let us see some of the wage scales. In 1919, which was the peak of wage scales, in World War No. 1, plumbers were earning $33.99 per week; in 1940 they were earning $58.10 per week, and have been since advanced; and plumbers working on our camps for soldiers got about $13 a day, and $26 a day for Saturdays, Sundays, and holidays. In 1919 electricians were getting $32.99 per week; in 1940 they were getting $58.04, and if they were getting what is called parity in farm income the scale of wage in 1940 would have been $33.42; it is now $58.04.

And $58, $59, right down the line, in 1940 for all these skilled workers. Since 1940 they have been advanced all along the line, and according to a statement put out a few days ago by the C. I. O. they have gotten a wage increase in 1941 amounting to $380,000,000, and the program, according to that statement, is just getting well under way.

Do you agree with me that this rapid increase in wage is bound to be reflected in increased prices?

Dr. FISHER. Yes; I agree with that. And I think that is, to some extent, self-defeating because of prices per hour, that is, wages per hour and wages per week and per year is a very different thing.

Mr. ROBERTSON. What should we do about it? Should we try to bring prices of farm commodities up to 200 percent, or should we try, through some relaxation of the 40-hour program, to keep some reasonable limit upon the advances of wages?

Dr. FISHER. Well, that is on another subject, and I do not like to get too far away from the subject I have been speaking on.

Extension of Military Service

EXTENSION OF REMARKS

OF

HON. C. WAYLAND BROOKS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, August 7 (legislative day of Monday, July 28), 1941

ADDRESS OF HON. C. WAYLAND BROOKS, OF ILLINOIS

Mr. BROOKS. Mr. President, I ask unanimous consent to include in the Appendix of the CONGRESSIONAL RECORD a radio address delivered by me in Washington on Tuesday night, August 5, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, the measure that is up for consideration before the Congress to extend the time of service of men who have been drafted into the military forces of the United States, beyond the period of 1 year, has far greater significance than most of our people realize. The demand to extend the service of these men is cloaked in that same gown used to cover every other step taken by the administration in the last year, namely, national defense. But, to many of us who have watched this steady march with constant deadly tread, this is but another step toward war. We are now so close to all-out shooting participation in the wars of the world that each step from now on becomes vastly more important.

Our future prospect for staying out of the war is constantly darkened by the progressive and provocative acts by our Government. Bold and belligerent steps are moving us toward the hideous shadow of war with its poisonous fruits of human suffering, misery, poverty, and unbearable taxation, followed by hatreds and moral disintegrations, and, then, the natural consequence of becoming inescapably interwoven with international intrigue for centuries to come.

The steps that we have taken have been rapid toward our all-out participation, notwithstanding the fact that constantly a vast majority of our people have expressed themselves in every possible and in every conceivable way as opposed to our becoming involved as a shooting participant. And, the question now is: "Shall America move on to her destiny, or shall we detour back to the wars of the Old World and there meet our fate?"

In the span of a little more than a century and a half under our American form of Government of divided authority, distributed opportunity, and limitations of power, America, by the constant flow of the strong and sturdy men and women of all the nationalities, creeds, and colors of the world, have built on this continent the greatest civilization that has ever been known to man—a civilization built on faith and confidence in the word of our leaders, tolerance, and respect for each other; a civilization based upon the dignity and rights of the individual citizen; a Government designed for all time to prevent the establishment of a royal house, a reigning family, a dictator, or a clique, class, or clan of men, ever gaining dominant and dictatorial control. Keeping those things constantly in our mind and observing the limitations of power and the restriction of authority, we became the happiest and freest Nation on earth, and we became the richest people in the world. Rich because of the creative genius that comes only from the freedom of the soul and the mind, and the freedom of action that is thus inspired.

Out of our abundance we have constantly contributed to the distressed people of the world scattered to the four corners of the earth.

A quarter of a century ago we halted our own march of progress to go back into the old world to participate in her constant struggle of power politics, bitter hatreds, changing boundary lines which have resulted in constant mass murder through the ages. We were told at that time that we were to participate in a war that would end all wars. We were to make the world safe for our kind of understanding. And we made a tremendous contribution. And the aftermath was shocking to us. The lack of appreciation on the part of the nations whom we defended, their failure to make equitable adjustments among the European nations at the conclusion of the war, their repudiation not only of the debts they owed us but their constant belittling of our efforts to save them convinced the American people that we should never do that thing again.

And we passed a law called the neutrality law. That was to prevent our getting into their next war. And, in the short span of a few months, all under the promise that we would stay out of the war and the pretext of building our own national defense, we have quickened our step until we stand almost at a fateful hour today.

We changed our neutrality law to sell goods to those people fighting for liberty. But to obtain that change in the law both the Executive branch and Members of the Congress pledged that all sales would be for cash-and-carry, and that it would keep war away from our shore.

Then came the original conscription bill. They said it was only for our own defense. The administration and Members of Congress pledged that these men would be taken only for 1 year, and that they would not be taken beyond the limits of the Western Hemisphere. Who could be so unpatriotic as not to be willing to serve 1 year to prepare himself to protect our home and our shore?

It was a pledge and it was a promise. It was another step.

Then we were told that Britain needed our airplanes and tanks, and that we must sell them to them even though we didn't have enough to train the men we were calling into service. But that was done.

The law forbade our selling these war implements, but we got around the law by calling them obsolete even though they were of our latest design and the best we had. Still they found a way to sell them. They said it was to keep war away from our shore.

Then Britain said she needed our destroyers. The law forbade it. But we called them obsolete, too. And we were told that we were trading them for bases. Britain got our ships. We got the right to negotiate for and to purchase bases, and to pay for them with cash.

Then came the lease-lend bill. They said it was needed to prevent our becoming involved in the war. Some of us who opposed it said that if one man, namely, the President, was given all the power to distribute our military and naval equipment throughout the world, that it was bound to involve us because he would naturally ask them what they needed it for, and sit in and advise them in the conduct of the war, which naturally would involve us. We were assured that this would not happen. But a little more than a week ago Mr. Harry Hopkins, the personal representative of the President, sat in with the British War Cabinet, if you please, in secret meeting, and Viscount Elibank said that it was fitting that America should have a seat in the British War Cabinet because America would "very soon be nearer to us in the war than they are already."

The lease-lend bill was to give the President authority for what he had already done—the trading of our destroyers. The lease-lend bill provided that the President could give any country in the world whose defense he thought essential to our defense, part of our existing defense equipment, whether it be guns, cannon, tanks, planes, or ships, with the only limitation that he could not give them more than $1,300,000,000 worth combined. Then, when the administration asked for an appropriation to aid Britain, the Congress appropriated $7,000,000,000 more. That was more than we ever appropriated at any one time in our history for the care of our own people.

Then came the problem of production, and a priority system was established. Certain strategic materials were curtailed, and our factories throughout the country began even then to feel that they would soon be faced with shortages that might result in losses or even closing down of their plants completely. But they were told it was to keep us out of the war.

Then the Chief Executive ordered ships of the countries of the world who were fighting those we chose to aid seized in our harbors. Then Congress was again asked to pass a law to give authority for that which had already been done.

Another step. But, of course, they said, to keep us out of the war.

The United States Army moved in on men who were striking for a living wage in a factory that produced airplanes, 90 percent of which were being sent across the sea. There was no authority to move the Army with fixed bayonets into an industrial plant, but after the deed was done Congress was asked to pass a "seizure bill," and in the Senate it was intimated that we were not backing up our President when we wrote in an amendment which merely required that the management and labor be given ample time to conduct negotiations before the Army was used to seize the plant.

The House the other day rejected this right to seize plants in that way. But it was another step toward all-out power for all-out production for all-out participation in the war to which the people have constantly expressed their opposition.

Then we find suddenly that our troops are in Iceland—outside of the Western Hemisphere. Although we were told we were to take over Iceland and protect its people, we find that our soldiers are participating with the British troops there—outside the Western Hemisphere. They say again it is for national defense and to keep us out of war.

Then we find that boys who were drafted from their homes, from their work, under the promise in the law for only 1 year's service, have been sent, some of them, to the bases where those in authority knew at the time they were sending them that they could not keep faith with these boys and return them within the year

Another bold step.

Then they came to Congress again and asked for authority for things that had already been done. What authority did they ask for? To remove the restrictions of the law so that men could be sent anywhere the Commander in Chief wished to send them beyond the Western Hemisphere. And, more—they asked to have every restriction removed as to the number that could be drafted, and they asked to have the restriction also removed as to the limit of time of their service. Yet, when these men wished to protest to their Representatives in Congress against removing these restrictions they were told by their commanding officers that they could not communicate with Members of the Congress.

What conclusion can be drawn from these bold steps and from these bold demands?

The administration will soon ask for an appropriation for critical equipment sufficient to provide an Army of 3,230,000 men. With the President's personal representative sitting in with the British War Cabinet, and sitting in with Joe Stalin, with the British generals, Sir Archibald Wavell and Sir Claude Auchinleck, calling for an American expeditionary force, and with our own Chief of Staff asking for the right to draft as many men as they choose, and to send them where they choose, and to keep them as long as they choose so long as the President will say that it is for national defense and during emergency. What can we think of these demands? When we build a base in Newfoundland to protect our eastern shore, and then move troops to Greenland to protect Newfoundland, and then send troops to Iceland to protect Greenland, and then hear constant rumors that we are building bases in Ireland to protect Iceland, what can we think?

In the face of a demand for an unlimited Army for an unlimited time to be sent anywhere, there can be but one conclusion, and that is that in violation of the pledges made by the Congress to the boys that were drafted, and in violation of the promises made before election to the people that we would

stay out of the war, we are moving steadily toward that fateful hour. Then, add to that the words of the Acting Secretary of State, Mr. Sumner Welles, who states that there can come no peace until the Hitlerite government of Germany has been finally and utterly destroyed, and, suggesting that after this war some international "instrumentality" must be brought about to force the various nations of the earth to keep peace, one with the other.

We know from the results of every poll that has been taken that over 75 percent of our American people do not want to become a shooting participant in Europe's war. We know from polls taken in England that 72 percent of the people of Great Britain think America will become a shooting participant in the war.

The question today is plain and crystal clear. Shall Congress represent the will of over 75 percent of the American people, or yield to the propaganda and demand of 72 percent of the people of Great Britain?

If this is a Government by the American people and for the American people, it is the duty of the American people to speak now more forcefully than ever before, and let their Representatives in both Houses of the Congress know that they expect them to represent the American viewpoint, and stop taking further belligerent steps that are in violation of the pledges made to the American people.

This fight to keep us out of war can still be won.

They may silence our citizens who have been drafted for military service, but the people who remain at home must not be silenced. If the people speak, and they must speak now, if those elected to public responsibility keep their pledge to the people, America will move on—America will move on to her destiny, and not be dragged to Europe to meet her fate.

The War on Inflation

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, August 7 (legislative day of Monday, July 28), 1941

EDITORIAL FROM NEW YORK HERALD TRIBUNE

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the RECORD an editorial from the New York Herald Tribune of today entitled "The War on Inflation."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of August 7, 1941]

THE WAR ON INFLATION

Testifying before the House Banking and Currency Committee on Tuesday, Price Administrator Leon Henderson declared that the country was headed into serious inflation unless something was done about the situation without delay.

It is interesting to note that Mr. Henderson, in urging enactment of price-control legislation, stresses two aspects of the situation which are deliberately soft-pedaled in the pending bill, namely, farm prices and wages. He did not specifically urge the inclusion of these in the measure. But he pointed out that farm prices, along with food prices, are conspicuous for the fact that they have already advanced further than at the corresponding stage of the World War inflation, while wages constitute "the most volatile and dynamic element" in the price picture. Pay rolls, he showed, have risen to the highest point in the Nation's history at a time when, because of defense demands, "there is less and less to buy." He defined this situation—increasing purchasing power coinciding with stationary or declining production of goods to buy—as itself inflation.

If this is the heart of the inflation problem—and there can be little doubt that it is—then we face the question as to whether the whole attack on inflation does not call for thoroughgoing reorganization and consolidation. If the problem is one of purchasing power running away from production, it certainly is not going to be solved simply by granting someone the authority to fix prices. The first and main task, obviously, is to concert all the measures affecting the adjustment of purchasing power to available production.

No one would expect to wage a successful war if the air force was not notified as to what the main objective was; if the movements of the infantry and the artillery were so poorly synchronized that the latter found itself shelling its own troops instead of the enemy; if the tanks had to retire from the engagement because no one had thought to see to it that they had a sufficient supply of fuel, and if the support aviation decided to take time off for a 3-hour lunch and a short nap at the most crucial stage of the attack.

Yet this is a roughly accurate picture of the anti-inflation campaign as it has been waged in the United States thus far. The Federal Reserve Board filed an urgent appeal with the Congress and the President as far back as last January 1, asking legislation to prevent undue credit expansion, but that request was pigeonholed, presumably because the Secretary of the Treasury feared it might increase the cost of Treasury borrowing. Congress, in spite of the admitted importance of reducing nondefense spending, actually voted to increase such expenditures in the 1942 Budget by nearly $100,000,000. At the very time the administration was considering curtailment of installment selling as an anti-inflation move it was liberalizing the terms of its own F. H. A. loans.

Although it has been repeatedly pointed out that the crying need at the present time is for a tax bill which would recapture the excess purchasing power being created by the defense program, Congress, with the support of the Treasury, has placed its greatest tax emphasis on a policy of "soaking the rich." Although the administration admits that farm prices have advanced out of all proportion to other prices, and that wages—now at their historic highs—are the most important single element in prices, it is now sponsoring a price-control bill under which both of these price areas are exempted. Although cotton prices are the highest in 11 years, the farm bloc in Congress is at this moment proposing to "freeze" the 7,000,000 bales of Government-held surplus, lest the liquidation of any part of these stocks prevent the further inflation of prices.

One could go on almost by the hour with such examples of confusion, of working at cross-purposes, and of placing self-interest above the national welfare. These should suffice to show that the present problem transcends mere price fixing. The war against inflation will not be won until a general staff is set up with the acumen and the farsightedness to coordinate a genuine major offensive and with the authority to make its policies effective.

Propaganda Is Pulling Us Toward War

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, August 7 (legislative day of Monday, July 28), 1941

ARTICLE BY WILLIAM RANDOLPH HEARST

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article entitled "Propaganda Is Pulling Us Toward War." This is a daily feature under the heading "In the news." This particular article was published in the Washington Times-Herald in its issue of August 6, 1941. It is by the pen of a great patriot and a great American, Mr. William Randolph Hearst, who is doing all he can to keep us out of this war.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Times-Herald of August 6, 1941]

IN THE NEWS

PROPAGANDA IS PULLING US TOWARD WAR

According to dispatches from Buenos Aires, Argentina has told both the German and British Governments to abate their propaganda.

Otherwise, Argentina would have to take steps to prevent the circulation of foreign propaganda and to close all propaganda bureaus and shut off all propaganda sources.

Said the Foreign Minister in notes to both the German and British Governments:

"The material published in Buenos Aires, 'more or less,' under the auspices of the British and German Governments" has been found to contain "statements injurious or offensive to one side or the other" in the European war.

These publications, the Foreign Minister declares, "constitute propaganda which affects deeply the tranquillity and order of this neutral country" and must be discontinued.

In fact, the Foreign Minister hints at drastic measures in case the "distribution of these publications" is not discontinued.

Apparently Argentina takes its declaration of neutrality seriously and is determined not to have the "tranquillity and order" of its people disturbed by propaganda in alien interests.

Why cannot the United States be as sincere, as honest, as independent, as American as Argentina?

Why do the tranquillity and order of our people have to be disturbed by British and German and Russian propaganda which seeks to involve our Nation in every conflict which arises in every part of the world?

Why has not the United States got a truly democratic Government, a truly American Government to protect us from such propaganda instead of to encourage it to our definite and desperate detriment?

Our whole country is torn with contending fascism and communism—with propaganda for British interests or German interests or Russian interests.

No thought is given to American interests.

Propaganda influences us as a people to give away billions of dollars to warring foreign nations when we have come to the very verge of bankruptcy ourselves.

Propaganda impels us to surrender a considerable part of our naval equipment and almost our entire airplane production for the benefit of alien interests.

Propaganda blinds us to the inevitable results of our folly and makes us forget the proven consequences of our former follies committed under similar circumstances and incentives.

Propaganda destroys our unity and undermines our loyalty.

It infects and contaminates our conception of nationality.

Propaganda transforms our America from a melting pot, fusing various races to a harmonious and homogeneous whole, into a separator—dividing our people into their original racial and national elements and arraying them in conflict with each other, reviving the hatreds and antagonisms of their former fatherlands, and the age-old prejudices and hostilities of Europe and Asia.

Propagandists are abusing the liberties of our free country and running amock in our hospitable land.

Foreign ambassadors and foreign statesmen parade across our country exhorting our people to take part in foreign wars.

Our theaters have degenerated into mere media for propaganda.

The screen reeks with propaganda, the radio smells to high heaven with it.

Propaganda will eventually land us in this alien conflict—propaganda plus the partisanship and alien-mindedness of our own Government.

It is truly unfortunate that we citizens of the United States have not a government with the firmness and independence of Argentina's Government to tell these selfish foreign nations, which are disturbing our peace and unity, our "order and tranquillity," to desist before we close up their propaganda mills and expel their propaganda agents for the protection of our own people.

Quo Tai-Chi, Chinese Foreign Minister, said Saturday that Thailand is coming more and more under the domination of Japan and has granted recognition to Manchukuo as an independent state.

Furthermore, "the influential Chinese newspaper" Takungpao "sharply criticized the United States and Britain for failing to forestall Japanese domination in Thailand."

This "hen track" newspaper assumed to say:

"All our previous appeals for the United States and Britain to protect Thailand and prevent her coming into Japan's orbit have fallen on deaf ears.

"The United States and Britain lagged behind again—always behind."

Now, is not that too bad?

Why and how must it be the business of the United States whether Thailand recognizes Manchukuo or not, or inclines toward the Japanese orbit or the Chinese orbit?

Must the United States interfere to decide the internal affairs and international sympathies of every peewee country in the world?

Must we meddle in the troubles of all of Europe and all of Asia?

And if we must meddle why, when we meddle, do we not stay meddled in one spot and on one side?

First we are meddling to free Finland.

Then we are meddling to enslave her.

First we were interfering to prevent the absorption of the free Republics of Estonia, Latvia, and Lithuania.

Now we are interfering to restore them to the sway of Bolshevist brutality.

First we want to fight for that dear France, our beloved ally—"Lafayette, we are here."

And now we want to war against her.

Consistency is a rank imitation jewel as far as we are concerned.

We occupy Greenland.

We occupy Iceland.

We secure British bases by agreement in various British possessions, but offer frantic if futile objections when Japan does a little occupying by agreement on its own account.

We are led into innumerable and unbelievable mazes and messes by our persistent effort to run the universe.

Why not mind our own business and make foreign propagandists go home and mind their own business?

What America needs is unity—and not only unity but sanity.

The Farmers' Interests in the St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. CLYDE T. ELLIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1941

STATEMENT OF HON. CLAUDE R. WICKARD, SECRETARY OF AGRICULTURE

Mr. ELLIS. Mr. Speaker, one of the best statements I have heard with regard not only to the St. Lawrence proposal but with regard to the situation generally in this country was made on August 4 to the Committee on Rivers and Harbors by the Secretary of Agriculture the Honorable Claude R. Wickard. I quote his statement in full, together with certain excerpts from the questions propounded to him and his answers:

Mr. Chairman and members of the committee, the farmers of this country have two main interests in the Great Lakes-St. Lawrence seaway and power project. Farmers need more adequate and cheaper transportation, and farmers are vitally concerned with national security.

The testimony of Secretary Stimson, Secretary Knox, and others, who have preceded me here, has made it clear that the St. Lawrence project would measurably advance our defense efforts. They have testified that the transportation facilities, the electric power, and the shipbuilding facilities which would be made available by construction of this project are badly needed and that these facilities would make it possible for us to expand our production of defense materials. I accept their judgment on this point, and I am sure that American farmers do likewise.

We are facing at this time a serious prospect of insufficient transportation capacity to meet all the needs of agriculture. Without increased transportation facilities we are not going to be able to move our increased defense production of both industrial and farm goods without delay and difficulty. The burden on the railroads has been further increased by the shift of ships in coastal and intercoastal runs to trans-Atlantic runs. Intercoastal shipping by way of the Panama Canal has been materially reduced, and this means an added demand on transcontinental freight carriers.

All of this adds up to a very real danger that we may soon be unable to meet the transportation needs of agriculture. The Department of Agriculture is taking steps to minimize the effects of such shipping shortages. Ever-normal granary supplies of wheat and corn are being moved into the East for future use. As supplies are used for feeding, eastern storage stocks will be replenished to maintain available reserves. Such measures cannot be regarded, however, as substitutes for needed expansion of transportation capacity to meet the needs of the years to come.

Farmers don't want any such paralysis in transportation as took place in 1916 and 1917. The farmer is one of those who suffers most from a situation of that kind. Preference is given, as of course it has to be, to the transportation of munitions and iron, steel, and other basic materials for industrial defense production. But agricu'tural products are also essential to defense.

In my opinion, construction of the St. Lawrence seaway is one important method of relieving the pressure on railroad and other transport services in the future. The seaway would be a useful auxiliary form of transportation in time of crisis, and linking our whole inland-waterway system, embracing the Mississippi, the Ohio, the Illinois, the Tennessee, and other rivers, and the Louisiana-Texas Intracoastal Waterway, will bring the benefit of cheaper transportation to practically all American farmers.

I would like to point out to the committee that the maximum season for operation on the seaway would be from early May to late November. I understand that opposition groups contend that this seasonal factor would make the proposed seaway of little use. As you know, the months of August through October are the months when the farmers of the Middle West are making their heaviest shipments of crops to market and when demands for transportation facilities are greatest. The peak demand for transport services comes in September and October. For this reason, the seaway would dovetail into our national transportation pattern, providing additional facilities when they are most needed.

The Middle West, and its farmers especially, suffer transportation disadvantages as compared with the Atlantic, Gulf, and Pacific seaboard areas. I think it is an accepted fact that the construction of the Panama Canal seriously weakened the competitive position of the midcontinental area. It cut the distance from the Pacific to the Atlantic in terms of transportation costs. Because of the low water rates in effect after the Canal was built, the producers in the Middle West and the Great Plains States were farther away from their eastern markets in terms of freight charges than they had been before. This competitive disadvantage has increased with the long-term upward trend of rail freight rates.

Construction of the seaway would give the States in the Great Lakes Basin transportation advantages comparable with those now enjoyed by coastal regions and would overcome inequalities that now exist.

Substantial savings on the cost of shipping agricultural commodities, such as dairy products from Minnesota, Wisconsin, and Michigan to the Atlantic coastal area and citrus fruits from Florida back to the Middle West, could be expected with the construction of the proposed seaway. Savings could also be expected on the transportation costs of goods and commodities shipped into the Great Lakes Basin, thus reducing the prices of the products that farmers buy. Lumber and clothing and many of the manufactured items farmers need could be delivered cheaper in the Middle West. This makes for a better situation for both agriculture and industry on a sound, economic, and permanent basis.

The seaway would serve a vast area of the Middle West which normally produces enormous quantities of farm products for export. Right now, as bad as the export market situation is, the Middle West is producing large amounts of pork and cheese and evaporated and dried milk, and beans for export to Britain.

We cannot see the shape of things to come as clearly as we would like to be able to see them, but some things we can see. We can see, for example, that as the German war machine has moved through Europe it has

left a path of famine behind it. The Germans are living fairly well now, but they are robbing other nations to do it. Foundation herds on the Continent are being destroyed to feed the conquerors and the British are sacrificing their foundation herds, too. This destruction is taking away the very ability to produce for a long time to come.

Even if the war should stop soon, it will be a long time before Europe will be on a self-sufficing basis in livestock products. After the war, a large part of the world will be looking to the United States for food. The products of the farms of the Middle West will be needed abroad, and the proposed marine highway through the Great Lakes and the St. Lawrence River to the Atlantic will provide an effective means of moving those products to a distressed Europe.

Some people, while admitting that the St. Lawrence seaway would reduce the cost of shipping farm products abroad, have said that our farm export market is gone forever. The truth is that what will happen to the farmers' export market after the war depends on who wins the war. In any event, we should be prepared to compete for world markets when the war is over. All of us are determined to do everything practical to hold and regain our foreign customers on a permanently sound basis. Certainly reductions in transportation costs would increase the ability of American farmers to compete in the world market.

Farmers in the Northeastern States will share in the benefits of cheaper and more available electricity from the seaway project. Studies show that thousands of farmers in the areas bordering the project cannot now afford electricity for economic farm operations.

The St. Lawrence seaway will benefit American agriculture as a whole by lowering transportation charges on the things farmers sell and the things they buy. It will aid in the restoration of our foreign markets after the war. It will increase our national security in times of crisis.

The Mississippi and its tributaries, particularly the Ohio, the Missouri, and the Illinois, have been brought to a high state of development, and they are now a bulwark of our national defense. These inland waterways link up with the seaway, and its completion is therefore the logical and essential capstone for this great development of our internal economy and its adequate defense.

I urge that your committee take prompt and favorable action on H. R. 4927.

EXCERPTS OF QUESTIONS ASKED SECRETARY WICKARD

Mr. ELLIS. Mr. Secretary, most of your statements to the effect that this project would be of great benefit to the farmers have dealt with the farmers of what we term the Middle West. We, west of the Mississippi, feel that you are not in the Middle West. I live in Arkansas, and most of the things outside of cotton and sugar, practically all of the things that we purchase, come from that area around the Great Lakes, and most of the things we have to sell move in that direction; that is, cheese, milk, butter, eggs, poultry, rice, cattle, and fruit move northward into those markets that have been developed. Whether that is the best course to the sea, I do not know, but even for world transportation that is the way they go to the world markets. Now, if this project, because of the lowering of freight rates for short distances inland, will help that area, will it not to the same extent help us as far inland as Arkansas?

Secretary WICKARD. Why, I should think so.

Mr. ELLIS. In the same proportion?

Secretary WICKARD. Yes, sir.

Mr. RANKIN. May I ask the Secretary one question?

Mr. ELLIS. Yes, sir.

Mr. RANKIN. Will the gentleman yield?

Mr. ELLIS. Yes.

Mr. RANKIN. It has been brought out here that this would reduce the cost of transporting wheat to the Atlantic seaboard about 8 or 10 cents a bushel. Now, when that is done, that will mean a rise in the price of wheat to the extent of 10 cents a bushel on the Chicago market, will it not?

Secretary WICKARD. Yes; the tendency would be that way. It will surely put the Chicago wheat price nearer the Atlantic coast price.

Mr. RANKIN. When you raise the price of a commodity on the market in its general market it reflects back to every farmer in the country that produces that commodity, does it not?

Secretary WICKARD. Yes, sir.

Mr. RANKIN. So it would raise the price of wheat throughout the country 8 to 10 cents a bushel, would it not?

Secretary WICKARD. Yes.

Mr. ELLIS. Mr. Secretary, I am very much interested in your statements regarding cheaper power that might be obtained for the farmers from this project. Now, your feeling with regard to this project applies, likewise, to all such other projects constructed and proposed.

Secretary WICKARD. On the whole; yes, sir; that is correct. That is a pretty blanket statement, but I am greatly in favor of increasing power development for opening the field to all American citizens, and particularly that available to farmers.

Mr. ELLIS. You would then be in favor of the proposed Arkansas Valley Authority that is pending here in the Congress and before this committee?

Secretary WICKARD. Yes, sir.

An Efficient Army

EXTENSION OF REMARKS

OF

HON. ANDREW J. MAY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1941

ARTICLE OF MR. PAUL MALLON AND AN EDITORIAL FROM THE INFANTRY JOURNAL FOR AUGUST

Mr. MAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Paul Mallon, and an editorial from the Infantry Journal entitled "The Infantry Mind":

[From the Philadelphia Inquirer of August 5, 1941]

FIGHTING SPIRIT STILL COUNTS MOST IN WARS

(By Paul Mallon)

Fighting spirit of soldiers still counts most in wars. Machines only are implements for it.

This is what the Army is trying to say in justification of its mass Army policies against its critics like Representative Ross COLLINS who want machines, machines, machines.

The new fighting creed of this Nation's Army (which is likely to be pinned to the wall at the bedhead of every soldier) may well be a leading editorial in this month's Infantry Journal, answering accusations that the General Staff has an infantry mind. Its gist:

"The infantry mind is a mind which thinks men are the essence of fighting, that the hearts, guts, and blood of soldiers win wars, that bombers, tanks, and jeeps; howitzers, guns, and mortars; grenades, pursuit planes, and rifles—are tools in the hands of men, of fighting men, and can never win wars by themselves.

"The infantry mind is the same mind as the air-force mind, the armored force, the quartermaster, the field artillery, and ordnance mind—one single mind with one single, hard-driving aim—the defeat, the crushing defeat of the enemy."

[From the Infantry Journal of August 1941]

THE INFANTRY MIND

Somebody mentioned "the infantry mind" to us a few days ago, and since then we've been doing some thinking as to just what "the infantry mind" is.

The infantry mind is a mind that thinks men are the essence of fighting power—that the tougher and harder and keener and abler the soldier, the better the army. It thinks that it is men who win wars, and that those who think armies can get along mainly on brains and mechanical ability are already defeated. It thinks that the iron fighting will of men in the mass is the heart of an army, whether they do their fighting in planes or in tanks, or gain their ground by the yard by the use of the ground. It thinks that "men in the mass" means every fighting man and every man who helps him fight.

The infantry mind is a mind that wants every weapon and gadget sought for and adopted that will add strength and power and speed and sureness to the whole fighting force. It is a mind that thinks an army must have such weapons in the numbers it appears to require and a few more still. For it wants to be sure there are enough. And it wants no time to be wasted on argument about what shall be done with new weapons. It wants them to get into the hands of any partner in the fighting team in the shortest possible time so that new power can add to the strength of the team.

The infantry mind is a mind that thinks only in terms of a strong, ready, all-out support. If it's infantry doing the supporting, then the infantry mind is constantly ready to add to the fight every ounce it has of drive, speed, and technical ability expressed in fire power and maneuver, to help the troops it is supporting. If it's infantry that is getting the support, then the infantry mind looks for this same kind of help—for cooperation without thought of collar ornaments from every supporting man and his weapon of ground or air.

The infantry mind doesn't care how it gets to the battle so long as it gets there in time. In time to surprise and in strength to match and outfight the enemy. It is eager to use the plane, the truck, and the jeep to cover the ground and get its men and their weapons wherever their attack can hit hardest and go farthest. It thinks that the fighter in the tank and the plane must have this same unalterable thought of striking where their powerful blows will do most good.

The infantry mind is a crafty mind, not merely a charging, fighting, assaulting mind. For it knows that a stroke that strikes weakness is a stroke that tells heavily, and that every particle of driving power must then be applied. But if it knows that the enemy's weaknesses must be sought; it likewise knows that the enemy's strength must often be overcome first to create a weakness. And it knows that when there is a job like this, it takes more than ever the fighting heart of the soldier himself, of the single man and of men in the mass—of men on the ground, in planes, and in tanks.

For the infantry mind is a mind that thinks men are the essence of fighting, that the heart and the guts and blood of soldiers

win wars, and that bombers and tanks and jeeps; howitzers, guns, and mortars; grenades and pursuit planes and rifles—are tools in the hands of men, of fighting men, and can never win wars by themselves.

The infantry mind, so the infantryman thinks, must be the same mind as the air force mind, the armored force mind, the quartermaster mind, the field artillery mind, the ordnance mind, the coast artillery mind, the finance mind, the cavalry mind, the chemical warfare mind, the Signal Corps mind, the engineer mind, the Medical Corps mind, the morale branch mind, and the minds of chaplains and inspectors and adjutants general. One mind there must be—one single mind, with one single, hard-driving aim—the defeat, the crushing defeat, of the enemy.

Wheat Marketing Quotas

EXTENSION OF REMARKS

OF

HON. WALTER M. PIERCE

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1941

EDITORIAL FROM THE WASHINGTON POST

Mr. PIERCE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from today's Washington Post:

[From the Washington Post of August 7, 1941]

ALAS, MR. WICKARD!

Between the Department of Agriculture trying to enforce our farm legislation and the farm bloc in Congress trying to scuttle it, the outlook for agriculture is not a pleasant thing to contemplate. Secretary Wickard has announced that wheat farmers will be asked to vote again next spring on the question of marketing quotas. After the hullabaloo raised by the heavy penalties exacted for marketing wheat in excess of current quotas, the Department of Agriculture may well have hesitated to make this announcement. However, the law provides that quotas shall be proclaimed in any year if it appears that the wheat supply will exceed a normal year's domestic consumption and exports by more than 35 percent. With a bumper crop in prospect and export outlets cut down, the head of the A. A. A. says that the wheat carryover will be the largest on record by next July. So it is a foregone conclusion that the law in regard to marketing quotas will have to be invoked.

As storage facilities are already filled to overflowing with wheat held against Government loans, a good many farmers no doubt are beginning to realize the wisdom of drastic restrictions upon production and sales at present artificially high levels. But the farm bloc in Congress apparently is not convinced of the necessity of curtailing supply under such circumstances. The House and Senate have passed and sent to conference a bill which would permit wheat farmers who had planted excess acreage to market up to normal production without paying a penalty. In other words, the farmer whose crop was below normal in his allotted acreage, would not, as now, be penalized for every bushel sold off the excess acreage. A Senate amendment to this bill, furthermore, would "freeze" Government-held wheat stocks, and another Senate amendment would remove marketing penalties for excess wheat used to feed livestock or kept by the farmer for home use. This perpetual legislative sniping at the production controls which are such necessary safeguards against financial collapse of the farm program is thoroughly disheartening, for it implies either complete ignorance of the nature of economic law or profound indifference to the consequences of defying it.

Federal Gasoline Tax

EXTENSION OF REMARKS

OF

HON. JARED Y. SANDERS, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1941

RESOLUTION OF LOUISIANA HIGHWAY USERS CONFERENCE

Mr. SANDERS. Mr. Speaker, under leave to extend my remarks, I wish to have printed in the RECORD a resolution adopted by the Louisiana Highway Users Conference at Baton Rouge, La., on July 25, 1941.

I have always believed that the question of gasoline taxes is one that should be reserved to the several States, and this resolution expresses the appreciation of the people of my district to the Ways and Means Committee of the House for rejecting any further Federal tax on gasoline.

The resolution in question is as follows:

Whereas the highway users of this State, consisting of farmers, merchants, motorists, truckers, and others, have contributed what might be termed the first line of defense in the form of a network of highways reaching into every section of the State and built with the millions of dollars contributed by motor-vehicle owners; and

Whereas the highway users of this State, since 1932, have been contributing an additional 1 cent a gallon "emergency" tax on gasoline to the Federal Government, over and above a tax of 7 cents a gallon on gasoline paid to the State of Louisiana; and

Whereas the Federal gasoline tax was increased from 1 cent to 1½ cents on July 1, 1940 to provide additional funds for national defense; and

Whereas it is noted that the House Ways and Means Committee of Congress has recently rejected the proposal to further increase the Federal gasoline tax from 1½ cents to 2½ cents per gallon: Now, therefore, be it

Resolved, That the Louisiana Highway Users Conference, assembled at a meeting held at the Heidelberg Hotel, Baton Rouge, La., on this the 25th day of July 1941, go on record as commending the action of the Ways and Means Committee of the House for rejecting this unfair and inequitable proposal, and respectfully requesting and urging all Louisiana Members of the House and Senate in Washington to support the recommendations of the Ways and Means Committee, and to oppose any effort to include a further tax on gasoline in the new revenue bill; be it further

Resolved, That a copy of this resolution be made a part of the minutes of this meeting and that the secretary is hereby instructed to mail a copy to each Member of the Louisiana congressional delegation in Washington.

Rivers at Work

EXTENSION OF REMARKS

OF

HON. JARED Y. SANDERS, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1941

EDITORIAL FROM THE NEW ORLEANS TIMES-PICAYUNE

Mr. SANDERS. Mr. Speaker, under leave to extend my remarks, I desire to place in the record an editorial from the New Orleans Times-Picayune of August 1, 1941, in connection with the development of the Mississippi inland waterway system and a comparison with the St. Lawrence seaway. This editorial contains some very pertinent information. The editorial in question is as follows:

[From the New Orleans Times-Picayune of August 1, 1941]

RIVERS AT WORK

St. Louis advices confirm earlier reports that the Mississippi inland waterway system is carrying a huge and growing share of the Nation's transportation load in this emergency. Tows handling the equivalent of hundreds of carloads are carrying essential materials over the 7,000-mile system to points where those materials are needed. If the rail carriers are having to take over considerable part of the burden normally carried by coastwise and ocean shipping due to the requisitioning of merchant craft for other tasks, the Mississippi Valley's linked and canalized waterways are proving their immediate value in the domestic transportation field.

The Federal barge system according to the St. Louis report is handling 50 percent more traffic than it did last year, while June proved the best month in its history. Between fifty and sixty other companies, we read further, are operating on the Mississippi, Ohio, and other rivers of the linked system. Wheat, corn, sulfur, scrap iron, ore, fabricated steel, oil, gasoline, cotton, chemicals are among the commodities moving in vast volume by the barges.

Among the units registering marked tonnage gain is the Illinois waterway, connecting the Mississippi system with the Great Lakes. Some days ago we summarized in this column, a survey-report urging use of the Lakes-to-Gulf waterway for economical delivery of oceangoing ships built in Great Lakes yards to the sea. The cost of equipping the existing waterways for this service was estimated at a few millions—a tiny fraction of the estimated cost of the St. Lawrence seaway scheme whose construction is advocated for that service. Under the terms of the original St. Lawrence treaty, beaten in the middle thirties by the Senate, the right of the United States to divert from Lake Michigan additional waters when and as needed to maintain navigable depths in the Lakes-to-Gulf channel was surrendered to veto by Canada. One of the conclusions and warnings driven home by the great emergency service now being rendered by the Mississippi system runs to the effect that this great inland waterway facility's capacity for

national usefulness must never be destroyed or impaired by any treaty or other international agreement sacrificing American rights and the national interest.

Is Churchill Over Here?

EXTENSION OF REMARKS

OF

HON. BENJAMIN JARRETT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1941

EDITORIAL FROM OIL CITY (PA.) DERRICK

Mr. JARRETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial taken from the Oil City Derrick, Oil City, Pa., entitled "Is Churchill Over Here?":

[From the Oil City (Pa.) Derrick of August 6, 1941]

IS CHURCHILL OVER HERE?

If it be true that President Roosevelt has gone to meet Winston Churchill somewhere on this side the conclusion is obvious. Churchill is going to add his plea to those of other big Britishers that the time has come for us to get into this war as we got into the last one.

That such a meeting is arranged has been deduced from two facts. One is that Churchill is missing from Parliament, and may be away for some days. The other is that Mr. Roosevelt left under great secrecy and gave orders, contrary to the usual custom, that he was not to be accompanied by news correspondents.

The President faces the greatest dilemma of his career. He has ignored promises to balance the Budget, but he cannot ignore the definite and emphatic promises he made to the fathers and mothers of America in his campaign last year that their sons would not be sent to fight in foreign countries.

This promise was repeated. Once it was made under such great emotional stress that there were tears in the President's voice. Now Mr. Roosevelt is being besought to break that promise—not by Americans so much as by the British high command. The new commander in the Near East and his predecessor, Wavell, have stated boldly that American soldiers are needed on the European, African, and Asiatic fronts if Britain is to be saved.

In a thundering address in London on July 29 Mr. Churchill told the British people that the United States "is giving us aid on a gigantic scale and is advancing in rising wrath and conviction to the very verge of war" on Germany. But he warned Britain that she must count on her own strength to repel any invasion gamble by Germany in September.

We hope the President does not misjudge the temper of the American people. Do we have any more reason to go to war today than we had when Candidate Roosevelt promised the fathers and mothers of America that their sons would not be sent to fight abroad? When Mr. Roosevelt uttered these words Germany had smashed Poland. She had taken Norway, Denmark, Holland, and Belgium and she had forced France to surrender. She had begun her bombardment of London, and the world was waiting daily for news of a German invasion of England, promised first for August and then for September.

Since that time the situation has improved. Britain has had a year in which to fortify herself and mobilize her forces. Hitler has his hands full in Russia. The British have wiped out the Italian forces in Africa. The Germans have lost the *Bismarck*. Her two other pocket battleships of the *Graf Spee* class have been bombed repeatedly in French harbors. Nazi sinkings of British supply ships have declined. American planes are being used to batter German channel and Atlantic bases as well as German cities and munitions plants.

A year ago Mr. Churchill said: "Give us the tools and we will finish the job." We are giving him the tools in greater abundance. We are using our own flyers to ferry planes across the Atlantic. We have passed the lend-lease bill providing Britain with credits of $7,000,000,000. The North Atlantic is being patrolled by our Navy. We have taken over Iceland and relieved a British garrison of 50,000 men.

But we have hesitated to send an army abroad for the very good reason that Mr. Roosevelt promised that we would not do so unless we were attacked. Outside of the sinking of the *Robin Moor*, we have not been attacked. Germany has occupied no bases which threaten our security or that of this hemisphere. The *Robin Moor* incident is closed.

If the Roosevelt-Churchill meeting be a fact, the reasons behind it can only be surmised. Is the Nazi conquest of Russia imminent? Is the full Nazi strength to be thrown against Britain and America afterward? Or has the Hitler plan to conquer the world run through itself, and the United States is asked to get in now to bring the war to a quicker end? This is anybody's guess except the few on the inside.

Nor do we presume to say that the defeat of Hitler and the obliteration of Hitlerism are not worth any sacrifice we can make. We believe the defeat of Hitler is the one great job facing the world. We know that if Hitler wins, he will be a constant threat to the peace and security of this country and this hemisphere. But we object to being wooed into this war. If our entry is inevitable now, it was inevitable when Mr. Roosevelt promised the fathers and mothers of America that we would stay out.

The American people are not cowards. British resistance has elicited their intense admiration and their profound sympathy. Britain, Poland, and Greece have suffered cruelly in what Hitler has called his blood bath. We believe the American people will fight Hitler any time and anywhere if the provocation be sufficient, but we ask that we be told plainly why we have to fight.

In this situation there is nothing paramount to the truth. When our leaders make solemn promises, we ask that these promises be kept or be told why they cannot be kept.

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. FRANK C. OSMERS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1941

EDITORIAL FROM THE BERGEN (N. J.) EVENING RECORD

Mr. OSMERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bergen Evening Record of August 1, 1941:

[From the Bergen (N. J.) Evening Record of August 1, 1941]

THE ST. LAWRENCE WHITE ELEPHANT

Walter P. Heddon, commerce expert of the Port of New York Authority, must have opened the eyes of the congressional Committee on Rivers and Harbors with his very temperate but devastatingly logical presentation of the case against the administration's pet St. Lawrence seaway project. Because gubernatorial vetoes prevented Heddon's official appearance, he had to appear as a private citizen, but that myth deluded nobody. Actually he presented the result of studies of the Port Authority, which Governors Lehman and Edison tried to block because they said it came in conflict with their States' policy.

Lehman's explanatory statement was true, because his State's legislative body had approved the seaway project; but Edison's cover-up statement withdrawing his veto was glaringly untrue, because his State's legislative body had not only opposed the project but also instructed New Jersey's attorney general to attend the hearings to oppose it. Thus the Governor of New York was truly executing his State's legislative policy, while the Governor of New Jersey was boldly defying and defeating his State's legislative policy. As in executive Washington, so in Trenton legislative bodies are patiently tolerated as governmental nuisances comprised of immature minds unworthy of serious consideration by executive big shots.

Although Heddon pointed out that the commerce of the Port of New York provides employment for 250,000 people, who in turn support a million residents of the port district, and that a billion dollars are invested in the port's shipping facilities, in which Newark, Elizabeth, Jersey City, and New York taxpayers have a $3,000,000,000 public investment, many of whom and much of which would be affected adversely and perhaps disastrously by the St. Lawrence project, he devoted much of his summation to the project's national aspects and its fallacies.

He did, however, point out that the port's annual import-export volume approximates 22,000,000 tons and that the proponents of the seaway expect that project to increase the St. Lawrence traffic by 16,000,000 tons, of which 6,000,000 tons are expected to be of Canadian origin or destination. The remaining 10,000,000 tons would be of American origin or destination now going through our American Atlantic seaboard ports. If only 60 percent of that diverted Atlantic seaboard tonnage is lost by the port of New York—and it is likely to be—local revenues, employment, and port values are likely to suffer correspondingly. That potential reduction of 27 percent in ocean-borne traffic might therefore throw 67,000 commerce workers out of their jobs and cost the private and public investors in the facilities of the port district perhaps $300,000,000.

Another illuminating disclosure is that existing St. Lawrence waterway facilities (Canadian) handle 9,000,000 tons annually, of which 7,000,000 are of Canadian origin or destination. With the completion of the projected seaway the total volume (including the present) would be 25,000,000 tons, of which 13,000,000 would be of Canadian origin or destination. The anticipated cost of the proposed seaway is about $500,000,000, all furnished by the United States, while Canada, which pays nothing, gets 52 percent of the traffic benefits and none of the liabilities resulting from traffic diversions from its other ports.

Proponents who claimed that the seaway would reduce freight rates from the Midwest to New York were confronted by the Heddon figures which show an existing rate of $7.50 per ton via the Great Lakes, New

York State Canal, and Hudson River compared with a probable rate of twice that sum over a seaway route almost three times as long. Using heavily industrialized Detroit as a key point, the present inland-waterway distance to New York is 750 miles, whereas the proposed St. Lawrence seaway route between those cities is 2,230 miles long. Aside from the possible double freight costs involved, there is a probable triple elapsed-time factor in transit, with its sequential necessity of providing two or three times the present number of ships to handle the traffic.

In the light of those figures it, therefore, seems obvious that New York and other Atlantic seaboard ports will not receive much freight through the proposed seaway route. But a glance at the map will show who the main beneficiary of the $500,000,000 project would be. When and if that expenditure opens a channel for deep-water navigation from Montreal to Detroit (and beyond), the marine distance from Detroit to Liverpool via Montreal will be 3,700 miles, compared with the present inland-waterway distance of 4,323 miles from Detroit to Liverpool via New York.

To believe that such competition would not divert millions of tons of Midwest freight and strike a devastating blow against the economics, the finances, and the employment opportunities of New York and practically every other American port on the Atlantic seaboard is a delusion that verges on governmental insanity. And as to the seaway's value for national defense during the current Armageddon, its construction would directly and indirectly divert 60,000 men from our present all-out industrial mobilization during the next 6 years. But perhaps its proponents are thinking of defense in a third World War. If they are, they ought to tell us about it.

A Republican Blast

EXTENSION OF REMARKS

OF

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1941

EXCERPT FROM THE WASHINGTON MERRY-GO-ROUND

Mr. HOUSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpt from the Washington Daily Merry-Go-Round which appeared in the Washington Times-Herald of August 5, 1941:

[From the Washington Times-Herald of August 5, 1941]

A REPUBLICAN BLAST

Such G. O. P. antics drew a withering blast from one of the most revered figures in the party—William Allen White, the crusading sage of Kansas.

In an editorial in his Emporia Gazette, titled "To Kansas Congressmen," Mr. White read his fellow Republicans a scorching lecture on patriotism and concluded with the blunt warning that if they didn't mend their ways the voters will do it for them. The following are some of Mr. White's pointed remarks:

"DEAR BOYS: You have been playing the game, the partisan Republican game, on the foreign policy of this country now for 3 or 4 years. Nearly every vote you have voted has been a minority vote. Come to your senses! * * * You have gone as far as you can on the Quisling route. Watch out for a record vote which you can never explain if this country is in war in 1942 and particularly if this country is losing ground in the war because you have torn our armed forces to pieces by your vote when war was threatened.

"It is all right to be good Republicans and it is all right to hold your job, but, boy, take an old man's advice: When the folks know that you want your jobs worse than you love your country, you'll lose your jobs.

"Yours in affection,

"W. A. W."

There was no affection in the reception of the Kansas G. O. P. Congressmen to Bill White's advice. The boys were burned up. They sputtered all over the Republican lobby in sizzling wrath.

But their ire was really funny, because while fuming in the private recesses of the cloakroom, not one of them dared give public voice to his anger. To a man they were afraid to reply to Editor White's scorching castigation.

NOTE.—Only Member of the Kansas Congressmen to whom White's blast did not apply is Representative JACK HOUSTON, Democrat, from Wichita, a militant nonisolationist.

Prevention May Be the Cure

EXTENSION OF REMARKS

OF

HON. HERMAN P. KOPPLEMANN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1941

AN ADDRESS BY GOV. ROBERT A. HURLEY, OF CONNECTICUT

Mr. KOPPLEMANN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address given by Gov. Robert A. Hurley before the annual convention, American Legion, Department of Connecticut, in Waterbury, on July 26, 1941:

I welcome this opportunity to address you all the more because I have just returned from a visit to Camp Blanding, in Florida. As you know, thousands of young Connecticut citizens are now in training down there in preparation for the crisis that our country is facing. Let me tell you something of what I heard and saw there. Let me tell you something, also, of what it made me feel, think, decide, and determine.

I saw our young men in uniform. I talked with many of them. I examined their equipment. I came to feel the spirit of bold determination in which they are doing their necessary work. I found that their morale is high and their purpose solemn. Among them, at least, there is no doubt as to why they are there. Among them there is no ignorance of the terrible danger in which our country now stands. Among them there is no defiance of their leaders and no grumbling at the commands those leaders give. Therefore they are happy men. I do not say that they are comfortable in all ways and at all times. Good soldiers, good citizens, do not expect or ask for that. I only say that they are happy, because they have found their job and are doing it like men, because they are united, because their young hearts and minds are uplifted to the level of their great task. Whoever else may be shirking his duty, these young men are doing theirs. Whoever else may be thinking solely of himself and his own private concerns while the rest of the world is on fire, these young men are thinking of their country. There is no need, therefore, to pity them. Many of us might well envy them, rather. And we had better cease at once from our sentimental nonsense about their lives being broken. Many of them have found a noble purpose in life which, without this experience, they might never have known. And that is why they are happy. That is why they are doing so fine a job. When we back home begin to do our job one-half as well as they, then we too shall be a united people, we too shall be happy, and our country will then be safe.

I am not speaking of the Regular Army alone or of the National Guard, but especially of our thousands of young selectees. So recently we thought of them as boys. Now they are men, of the fine high-spirited American breed, fire-true and blade-straight, that has made our country what she is. Already they are skilled in the handling of complicated mechanical arms. Their bodies have been hardened, their minds have been sharpened, their hearts have been fired by a great resolve. They are better soldiers now than you and I were 22 years ago.

We have all heard rumors that the men in these camps are badly equipped. This is not so. We have heard that they are grumbling at the duty to which the country has called them. This is false. I say again that I have seen these men. I have no reason whatever for saying anything about them but the truth. If they were not doing their job well it would be my present duty to say so. I say they are doing it well. I say again that when we back home do our duty half as well as they are doing theirs we shall be a united, a happy, and a safe people.

But now we are a disunited, a bewildered people, and a people, therefore, in terrible danger. I use these words calmly, carefully, and with full knowledge of their meaning. We are in terrible danger because we are disunited. And we are disunited primarily because we have been systematically deceived, and have not yet found it out. We Americans, we Yankees, who pride ourselves so much upon our quickness of wit, have been fooled by a band of false prophets who attempt to deceive us by propaganda which should not deceive a child. During the last 2 year our "fifth columns" and our "fifth wheelers" have been telling us, yelling at us, that this country is in no danger. Every honest person among us knows that this is damnably false. In the sense that war has been declared against the principles of liberty on which our Nation rests, war may be said to have been declared against us.

Therefore, I now call upon you veterans, I now call upon the people of Connecticut, always first in the ranks of free men and first in the production of arms for the defense of freedom, to be first also in achieving that unity of mind and spirit which the country must at once achieve.

I call upon the Connecticut people to do this not for my sake, not for the sake of the fair name of this State, not for the sake of any political party, for their own sakes. I ask them only to be hard-headed, realistic, sensible, and to face the cold and dreadful facts.

This matter, about which there has been so much spouting from platforms and spurting of ink, is really quite simple. We all desire to be happy, and to be happy we must be free. We Americans have had no experience at being slaves, and we do not intend to set the stage for it now. Are there any of us who could be happy if the Bill of Rights were destroyed? Are there any American parents who could be happy if their children were taken from home, schooled in lies, drilled with guns, and taught to goose-step from their infancy? Is there an American editor who would be happy in having his editorial

policy dictated by a Goebbels? Is there an American businessman—even of those few who long for business as usual—who would be happy under a tyrant who most assuredly would run his plant? Is there a workman who could be happy if his trade-union were forcibly dissolved and its funds confiscated? Is there a student who could be happy within a system in which books are burned, opinion is dictated, and speech is muzzled? Is there anyone to be called an American who would be happy in goose-stepping to a plebiscite which is only a hollow mockery of a free election?

The "fifth columnists" and the "fifth wheelers" are saying that it is too soon for us to act now. Their hope is that we shall soon be saying that it is too late to act. They are asking us all to write to the papers and to the Congress, saying that "America doesn't want war." Whoever supposed that she does? America hates and loathes war, as every decent people must. But America loves and must have, America is determined to keep, certain things no matter what the cost may be.

Frightful as war is there are some things that are worse. One of these is the loss of freedom. When Germany invaded Russia it was made certain at last that she was out for world conquest. America will stand across her path. And we ought not to hesitate because we do not hold the highest opinion of some of these who are now standing in her way. If a thug comes at me for my money and my life, I welcome the appearance of any man who carries even a club which he can use to help me. I do not stop to ask about the character of this man with a club, or about the rectitude of his conduct in years gone by. I am glad to have him on my side, no matter how wicked a man I may think him to be.

What, then, is the program of the "fifth columnists" and the "fifth wheelers"? Do they want us to wait until all of South America is solidly a part of Nazidom? Do they want us to wait until the F. B. I. has rounded up not merely seven self-confessed Nazi spies in New York but several thousand? Are they asking us to wait until their propaganda has completely befuddled and bewildered the national mind? Are they asking us to wait until one of their leaders has received a few more decorations from Hitler? Well, then, gentlemen, let me tell you we will then have waited too long.

We others must save American freedom without their help—and with God's help we will save it!

American liberty was saved 165 years ago in spite of a host of Tories.

American liberty was saved 80 years ago in spite of a loathsome mass of copperheads.

American liberty was saved 25 years ago in spite of pacifists and pro-Germans.

But it will be no easy thing to save American liberty now. This is no work for what Tom Paine once called the "summer soldier and the sunshine patriot." We are facing a foe that is united, that is convinced, that has a faith, that follows a leader thoroughly trusted and obeyed. That foe is united like the demons of hell about their master. That foe is convinced to the point of monomania. The faith of the Nazi world is insane and evil, but it is a faith, and the people of Germany are fighting now in the strength of it.

And what have we to match this dreadful force? We have a leader wise and tried, a lover of peace, a man of great heart and noble brain and deep experience. Ah, but he is reviled as Washington was by the Tories of his day; he is distrusted as Jefferson was by the Federalists; he is hated in many places with almost the same virulence that was displayed against Abraham Lincoln; and the things that are said of him and that we allow others to say of him are like the things that some people used to say against Woodrow Wilson within the memory of us all. This is not, of course, remarkable. It is the usual thing that the saviors of men should be reviled in their own times. But just now the attack upon our leader, inspired as it is by our enemies, is important. It is important because it is dangerous. Every slur and sneer at our leader that is spoken from platforms is leveled not solely at him but at your happiness and mine, at our safety, at America.

And then what faith have we to pit against that of the Nazis? Why, we have the faith of the complacent, of the timid, and of the wishful thinkers. We have a faith in the Atlantic Ocean, which is very like that which was felt by France in her Maginot line.

All this may perhaps be called a faith, but it is a wild one. And you will observe that all it asks of us is that we go on sleeping. People used to say that those whom the gods would destroy they first make mad. Nowadays those whom the gods are planning to destroy they first make stupid—and keep them so. Those whom the gods are tired of they first make prosperous, comfortable, easygoing, and therefore dull of wit. They make them fat-hearted first of all, and then soupy-brained. They make them selfish and greedy. They make them prefer almost any comfortable lie to the rigorous, painful truth. They make them sentimental and soft and sleek, as we are now.

And what are we to do about it? If America means to save her soul and body alive she must awake to the deadly peril in which she stands—not next year, not next month, not tomorrow, but now. She must give up, instantly, all that weak and sentimental chatter about defending herself only when we have seen the whites of Hitler's eyes. Our own life is now at stake. We too, just as truly as England, are standing now with our backs against the wall. Already the battle of public morale is being fought, and we must not lose that battle. Today, at this hour and moment it is being decided whether we are to be a united people. Already it is being decided whether we are to follow our leader to victory or whether we are going to follow the paid or the unthinking Pied Pipers who seek to lead us like children not to death but to a life that will be worse than death.

I have just returned from Camp Blanding, where 60,000 young Americans are being prepared to save their country alive. They are devoted utterly to their high task. They are united. They follow the commands of their leaders without question and without grumbling. I say again that when we back home begin to do our task half as well as they are now doing theirs this country will be united, happy, and safe.

Authors and Scientists Pledge Their Efforts Against Hitlerism

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1941

STATEMENT BY OUTSTANDING AUTHORS AND SCIENTISTS

Mr. SABATH. Mr. Speaker, under the leave granted me, I desire to insert a very interesting and patriotic statement on the part of some of the most outstanding authors, scientists, educators, musicians, and artists of the United States in the hope that it will be reprinted and given the publicity that it deserves. I congratulate the signers for their patriotic spirit.

The statement follows:

A PUBLIC STATEMENT

For nearly 10 years we have watched the steady destruction of the cultural life of nation after nation. Science and the arts, literature, and education have either been wiped out entirely or twisted to barbaric and inhuman ends wherever fascism has laid its hands.

Today the people of three countries—England, the Soviet Union, and China—are engaged in a struggle which must have but one outcome, the emancipation of all mankind from the curse of Hitlerism. We, men and women whose service to society lies within the cultural spheres, dare not sit back quietly with our books and our test tubes while the fate of our country and of the world hangs in the balance. We hereby pledge our utmost efforts to secure the fullest possible aid to these heroic opponents of Hitlerism which the productive capacity of our land will permit.

We must speak out all the more firmly now because of the involvement of the Soviet Union in the war. With profound dismay we have seen the emergence into the full light of day of the internal enemies of American democracy; those who have seized upon the new turn of events to raise false issues in order to mislead our people away from the one fundamental threat to our existence as a free nation—Hitlerism. We say to these Quislings, who secretly desire and even work for the victory of fascism: The American people will not be misled. The American people stand unshakably behind the people of England, of the Soviet Union, and of China in their struggle.

We say further that there can be no victory over Hitlerism abroad if democracy is destroyed at home. The protection of civil liberties and the rights of labor, the maintenance of adequate living standards, the elimination of all forms of racial and religious discrimination from our public and private life—these are an integral part of the world-wide defense of human liberty.

Never before in history has man had the technical potentialities and resources available to him today. Even outside the Fascist countries there is need for much improvement in the functioning of human society. Final victory of the forces of freedom will release men everywhere from their present bondage to war and tyranny so that they may fully exploit their knowledge and resources in the service of humanity. That final victory must be won. To that end, we call for a Nation-wide popular expression of firm solidarity and for the utmost material assistance by our Government to England, the Soviet Union, and China.

Tolan's Fine Work

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 8, 1941

EDITORIAL FROM SAN FRANCISCO NEWS

Mr. SPARKMAN. Mr. Speaker, under leave to extend my remarks, I am including an editorial from the San Francisco News of July 22, 1941, in praise of the fine work done by the gentleman from California [Mr. TOLAN] as chairman of a special committee investigating defense migration. This is a well-deserved tribute to a man who has shown great interest and understanding in this work. He has worked diligently but without fanfare, to learn the effect of the defense program upon the economic life of our country as reflected by the shifting of population from one section to another, and to arrive at some plan to make easier the terrific impact that may be expected when the emergency is over. His work has been tireless, courageous, and faithful. I am glad to see it so well recognized in the editorial which follows:

[From the San Francisco News of July 22, 1941]

JOHN TOLAN'S FINE WORK

JOHN H. TOLAN, Congressman from Alameda County, never set the world on fire with his eloquence, seldom raises his voice on the floor of the House, doesn't wave the flag or spread the eagle, but he is doing one of the most hopeful and constructive jobs for postwar economic stability that is being done in Washington.

In fact, JOHN TOLAN for months has been doing a job for which hundreds of thousands of Americans would acknowledge a debt of gratitude if they knew he was responsible for bettering their lot. But they'll never find it out from him.

Representative TOLAN is chairman of the House Committee on Migration. It was created originally to study the vast population shifts following the Dust Bowl and other agricultural dislocations in the Middle West. Because he was a Californian and the first great movement of migrants had been to this State, he was selected as chairman of the committee. It was supposed to be a sectional problem.

TOLAN soon discovered it was not confined to one State, but was Nation-wide in scope. Quietly and without fanfare he broadened his committee's study to include the whole country. Its interim reports already issued form the most searching and illuminating revelations of agrarian insecurity ever presented to Congress and have resulted in frank admission that the wanderings of masses of agricultural workers is a matter of Federal rather than solely of State concern.

Now the Tolan committee has been assigned a new task—the study of defense migration. And from that it already is looking even further into the future to discover, if possible, what will be the problems of post-defense migration. They bid fair to overshadow all others.

If, when the economic readjustments come after the defense crisis has passed, there is a way to keep workers occupied in their own communities instead of embarking on futile hegiras from one part of the country to the other in search of work, John Tolan and his committee are likely to find that way. They know why the American worker leaves home. They know what is necessary to keep him from leaving.

Through the months of committee hearings, through the present sessions during which administrative heads of the Government are being questioned, Chairman TOLAN has guided his committee's work with rare skill. He seldom says much, asks few questions himself, but sees to it that committee members search out the truth.

When and if Congress gets ready to act upon constructive legislation to stabilize the Nation's working population it will have, in the record this unpretentious Alamedan and his conferees have accumulated, the irrefutable facts upon which to base intelligent decision. Bound up in that decision may be the happiness of American men and women for generations to come.

The Beauty of Missouri

EXTENSION OF REMARKS

OF

HON. WILLIAM L. NELSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, August 8, 1941

RADIO ADDRESS OF HON. WILLIAM L. NELSON, OF MISSOURI

Mr. NELSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech which I made over radio station WINX, Washington, in connection with Missouri Society program on August 7:

Missouri is a State of surpassing beauty. Nature made it so. Happily, while making this beauty accessible to the many, to the millions who seek the excitement of its crystal-clear and swiftly flowing streams, the solace of its wooded hills, the charm of its immense mountain-rimmed lakes, among the mightiest of such man-made sources of power and pleasure, or revel in satisfying pictures of plenty as portrayed in farms of fabulous fatness, the beauty which God in his goodness gave has not been destroyed.

An unsurpassed system of highways makes accessible every section, while providing speed and travel comfort. At the same time the lure of quiet ways, of the out-of-doors, has not been lost. Great trees still beckon, providing shade for the visitor who has time enough and sense sufficient to enjoy life in its full and who really wants to be free.

Ours is not an "overstuffed" State. About it there is nothing to suggest the ill-chosen parlor furniture of the suddenly-got-rich. No effort has been made to improve upon Nature, here at her best in every season.

Truly it is matchless Missouri. Here in springtime are bursting buds and fragrant flowers—yes, fragrant as are wild crab-apple blossoms, not odorless as is the overexploited Japanese cherry, now commercialized in our Nation's Capital. Here, too, at planting time plows with polished shares made round upon round on ever-lessening lands while into the sweet-scented soil go magical multiplying nuggets of "silver" and "gold," which with sun and shower, and finally frost, to follow, men in this great corn State mint into money and measure in millions. Here, too, bluegrass, greatest of all grasses, grows best.

In midsummer, as ripens the golden grain,

"Painted binders, fleet upon fleet
Careen through fields of waving wheat."

When the Ozark hills are colorful with redbud, and snow banked, as it seems, with dogwood and when acres of orchard are pink with promises of apples and peaches in plenty, spring passes as in a pageant.

Following satisfying summer, with wheat in shock and hay in stack, roadsides once beautiful with wild roses are bordered by goldenrod and purple aster, symbols of victory and royalty, the only such symbols as are loved by a people free and unfettered. Frost follows. Forests are aflame with color as oak, sassafras, hard maple, and other trees become bouquets of red, gold, and brilliant browns. Then it is that through the ghost-gray midst of matchless Missouri mornings comes the cheery covey call of bob white. Welcomed then is the beauty of winter in this scenic State. Wondrous is the white of a Missouri winter as it lulls into peace the prairies and crowns with heavenly whiteness the hills.

The best was hers when this central State, located midway between the geographical and population centers, was made. It is—

"Neither north nor south, nor east nor west,
But part of each, of each the best."

Missouri, far enough north for hustle and far enough south for hospitality, is as diversified as it is different. Here one may witness cotton pickers at work in fields far to the southeast, for ours is a State not only of diversity of resources but of magnificent distances, while in the extreme northwest, many miles away, ice harvesters are cutting and storing a crop of comfort to come.

The southern section of Missouri is one of swiftly flowing streams, of magnificent forests, of great springs, of immense caverns, and valleys as fair and fertile as are anywhere to be found. The daily flow of several of the larger springs is from 300,000,000 to 500,000,000 gallons.

No camera can catch or pen portray the beauty of the Ozark country. Only when one has paused, as in prayer, at the silent sunset hour when all is still, all save the waters of the rivers and the smaller streams as they go singing to the sea; only when he has watched the purple haze and deeper shadows climb slowly up the heights as the last rays of the sun kiss the far hills; only when he has lingered, loath to leave, until the harvest moon has topped the mountains and made more silvery still the waters of lake and stream—only then can he understand.

Foremost among the beautiful sections of our State is the Lake of the Ozarks country, the central feature of which is a lake 120 miles long and having 1,400 miles of shore line. Instead of being surrounded by mud flats, as are many bodies of water, this lovely lake, to which thousands of visitors annually come for health and happiness, is bordered by beautiful tree-covered hills.

While Missouri fully keeps pace with progress, it discards not the old for that which has no further claim than newness. Old landmarks have not been destroyed. Old houses, set in groves of great trees, for in Missouri trees find their happy habitat, beckon and invite. Here may be found most interesting examples of early architecture. In fact, nowhere in all the Central West are there more old houses which seem to have souls, houses from which have come influences such as are so sorely needed to save our Nation in the hour of storm. So, if you love scenery, if you love—

"Old houses with vines running over,
Houses set in a riot of roses and clover"—

come to Missouri, "old Missouri, fair Missouri."

Three Thousand Americans Petition Congress for House Concurrent Resolution No. 20, the Peace Resolution

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 5, 1941

Mr. LUDLOW. Mr. Speaker, the revolting sense of humanity, aroused by the butchery that is going on in many parts of the world, is leading the people of America more and more to examine the resolution I introduced on February 27 last—House Concurrent Resolution No. 20—which proposes that the Western Hemisphere shall be made an arsenal of world peace, and that the Congress shall request the President "to invite the American republics to send delegates to a conference to be held at the earliest practicable date in the city of Washington to offer to the nations now at war the services of the Western Hemisphere as a mediator, to the end that the blessings of peace may be brought to a distraught world."

I have today introduced in the House of Representatives a mass of petitions, signed by 3,000 American citizens, most of whom are mothers, approving my resolution and urging the Committee on Foreign Affairs to give a hearing on it.

Two splendid women, whose lives have been consecrated to the cause of peace, took upon themselves the task of circulating these petitions throughout the Union. It was a labor of love which made a heavy drain on their vitality and involved expenses which they themselves paid. The Nation owes a debt of gratitude to them for their noble purpose and fine Christian service. I wish here and now to acknowledge my own deep personal obligation to Mrs. Charles H. Clark, of Los Angeles, Calif., and Mrs. Edna L. Moriarty, of Washington, D. C., the ladies to whom I refer.

In transmitting the signed petitions to me for introduction, Mrs. Moriarty sent a covering letter, which I quote as follows:

WASHINGTON, D. C., *July 30, 1941.*

Hon. LOUIS LUDLOW,
House of Representatives.

DEAR MR. LUDLOW: On April 6 a group of American mothers decided to form a Ludlow Peace Group for the purpose of circulating a petition to urge passage of House Concurrent Resolution No. 20, which you introduced in this session of Congress. Within a few weeks the signatures of almost 3,000 American citizens in every part of the country had been obtained. As a member of the organizing group I now have the pleasure of presenting these signed petitions to you.

The international events which have occurred since February 27, 1941, when you introduced this resolution, have made the hope of an immediate peace seem more remote. It is clear, however, that the signers of these petitions have clearly declared themselves in favor of peace rather than war. They expect and demand that the Members of Congress who were elected on a peace, and not a war, platform will devote their time and energies to the realization of a peaceful world order. For when this war comes to an end, as it eventually must, we feel that the United States will be the Nation best qualified to assume the responsibility for establishing the new world order necessary for a lasting peace. This contribution, we believe, can only be made if the United States refrains from entering the present conflict.

Very truly yours,
(MRS.) EDNA L. MORIARTY.

These petitions, numerously signed as they are, represent only a small part of the evidence which is piling up indicating that the people of America, while they are in favor of strong and adequate national defense, would be pleased if this peace resolution were adopted. Many are the persons who agree with the organization known as Women United, headquarters in New York City, which adopted this resolution:

The time has now come when, under the leadership of our President, a decisive step should be made for peace; therefore we suggest that Congress pass the Ludlow peace resolution, requesting the President to call a peace conference in Washington of delegates from all the American countries.

I have received enough telegrams, letters, and postal cards approving my resolution to fill an entire issue of the CONGRESSIONAL RECORD. These missives are an outpouring of the Nation's hope that our great Christian Nation may take the lead in rescuing civilization from the horrors and destruction of war. Space limitations only make it possible for me to quote briefly from some of these communications, as follows:

Cardinal William H. O'Connell, Brighton, Mass.:

There is no doubt in my mind that the American people desire a cessation of this stupid and brutal war and I may add that no one can doubt their desire to keep out of the conflict.

Rev. Harry Emerson Fosdick, pastor of Riverside Church, New York City:

I strongly commend your resolution to promote peace by calling a conference of the American republics to offer the nations now at war the services of the Western Hemisphere as a mediator. This is the only hopeful and constructive way I see out of the present crisis.

Dr. Francis H. Rowley, president, Massachusetts Society for Prevention of Cruelty to Animals and American Humane Education Society, Boston, Mass.:

I am simply writing this to say that I am in hearty sympathy with Harry Emerson Fosdick in what he wrote you on May 26. Surely it would be one of the greatest things, as you say, if the moving hand of history were to write into the record of civilization the words upon the statue erected by the Argentines and Chileans.

Mrs. W. H. O'Toole, secretary of Parents of America, 2176 Caroll Avenue, St. Paul, Minn.:

Thank you for your great effort to bring about peace for all mankind.

Miss Pauline Adams, 511 New Hyde Park Road, New Hyde Park, N. Y.:

Peace could be made if the people could vote their choice. I pray that your peace proposal is put on the floor.

Mrs. Frank H. Lutz, secretary, and many other members of the Friday Afternoon Literary Club, of Indianapolis, Ind.:

We, the members of the Friday Afternoon Literary Club, most heartily endorse your peace resolution of 1941.

As mothers of these boys, who are now facing the prospects of war, we pray with all our hearts that America's sons should not be sent to this war We agree that the United States is the only country that could assume the role as peacemaker.

God grant that we may faithfully perform our duties as a good neighbor to serve humanity and to bring a voice to the peace table free of hate and intolerance. It is our sincere hope that Congress will not delay in adopting this resolution.

May God bless you in your effort to bring peace and tranquillity to a distraught world.

Miss M. Sattler, 3650 North Capitol Avenue, Indianapolis, Ind.:

I think your resolution is wonderful. Just wonderful.

Ronald A. Foster, manager, United States Fidelity & Guaranty Co., Indianapolis, Ind.:

I think it is one of the most truly noble gestures that have been considered in this country for a long time. No one can predict what can come of it, but it seems awful to watch this beautiful country drift into the horrors of war and a mortgage upon the lives and efforts of several generations, without making every effort to prevent it, and enough people may feel as we do that this will be the beginning of a really important achievement.

Miss Eva Holder, 735 Southeast Thirty-second Avenue, Portland, Oreg.:

Your ideas and plans expressed in this bill at once appealed to me as being very worthy and also very practical, very sound, and the only truly peace effort made recently.

William B. Noelke, 4423 Park Avenue, Indianapolis, Ind.:

It is one of the few proposals made in Congress that are based on a practical view

and understanding of world conditions. The common people have suffered enough from wars not of their own making in recent years. Thousands who do not write you are with you in your worthy efforts.

Mr. Arthur Graves Granfield, 2033 Park Avenue, Detroit, Mich.:

That is the most statesmanlike proposal I have read in some time. Congratulations.

Dr. William C. Dennis, president of Earlham College, Richmond, Ind.:

I believe that the effect of this resolution will be altogether good and if I were a Member of Congress I would vote for its passage.

F. Wertgen, Garden Home, Oreg.:

Your resolution certainly takes the only sane position in the prevailing madness.

O. D. Hill, 1580 Lee Street, Charleston, W. Va.:

Every true follower of the teachings of the Prince of Peace is with you, not only in America but throughout the world.

Mrs. Avery H. Clisbee, 4 Everett Street, Malden, Mass.:

I am highly in accord with your resolution to arrange for a peace mediation and have written the President commending your proposal.

Mrs. Lillian Deinbrow, 3102 Derbyshire Road, Cleveland, Ohio:

I am proud of your good work for human betterment. I am 100 percent with your resolution.

Rev. Frank D. Campbell, Dawson, Ill.:

I congratulate you upon your efforts for peace.

Hon. Frederick E. Schortemeier, former secretary of state of Indiana, Indianapolis, Ind.:

I believe you are on exactly the right track.

Mrs. D. M. Coppock, 68 West Third Street, Peru, Ind.:

I brought your resolution up before the League of Women Voters. We passed support of it in a group of twenty-some people with only one dissenting vote. I think your plan is the best one offered. The United States is now in a strong enough position as to production to make Hitler listen to reason, also to make England willing to negotiate.

Harry L. Pfeiffer, 334 Richland Avenue, San Francisco, Calif.:

I hope you will continue to fight for this idea of yours, as it is a good one, and also see that we do not meddle in this mess, but mind our own business.

Mrs. Elizabeth Wysor Klingberg, 945 Manning Avenue, Los Angeles, Calif.:

Your resolution is the most constructive suggestion made by any statesman in this country or abroad.

Daniel J. Downing, 140 State Street, Albany, N. Y.:

I think your resolution is splendid, and I am strongly in favor of its adoption by both Houses of Congress without delay.

Mrs. E. Louis Preston, 1646 Kemble Street, Utica, N. Y.:

In reading your peace resolution of 1941 in the CONGRESSIONAL RECORD, you are to be commended for your historic remarks. May God grant that the sense of America can be directed along these lines, and may He give men like you courage to fight the good fight.

C. Hanneman, 336 Parkville Avenue, Brooklyn, N. Y.:

I want to commend you for the splendid efforts you are making to prevent our Government from becoming embroiled in this terrible mess in Europe.

Mary M. O'Brien, 3564 Eighty-first Street, Jackson Heights, Long Island:

Keep up the good work. The majority of Americans are behind you.

P. A. Hartman, 1658 Eleventh Avenue, San Francisco, Calif.:

Never in world history has been presented such an opportunity to save mundane inhabitants from self-destruction. Please carry on the good work.

Miss Frances Etten, 402 North Curtis Avenue, Alhambra, Calif.:

Many of us think one of the best things the present administration has done is to foster the friendship between the various states in this hemisphere and your resolution offers a magnificent opportunity to make this solidarity work.

Rev. Harvey Daniel Hoover, Lutheran Theological Seminary, Gettysburg, Pa.:

Allow me to commend you heartily for your efforts to keep peace and bring about peace elsewhere.

Miss Lenora Craley, 1323 East Market Street, Warren, Ohio:

That is a magnificent gesture. I hope you follow so steadfastly, so unflinchingly, it becomes reality.

"Ugly Duckling"—Another Sell-Out of the American Merchant Marine

REMARKS

OF

HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 8, 1941

Mr. BRADLEY of Michigan. Mr. Speaker, in our feverish haste to aid Britain we are continually recommitting the follies of 1918.

The unfortunate part about it is that in many instances our own shortsightedness will again place us in an unfavorable economic position after this war is over.

We all remember the famous "bridge of ships" which we built in 1918 and which at the conclusion of the war were absolutely useless except for scrap iron. Today we are recommitting that same folly, and why? Is it because it all may be a part of a definite program designed to assure Britain's continued supremacy of the seas after this war is over?

Under the Lease Lend Act we have been giving Britain a number of our latest merchant cargo vessels constructed under our Merchant Marine Act of 1936, and there are no finer vessels of their kind afloat in the world today. These beautiful craft are fast, they are economical, they are safe—insuring safety for their sailors and safety for their cargo. These ships, in our hands at the end of this war, would put our merchant marine on a parity with the merchant marine of the world. But we are transferring these ships to Britain.

Mr. Speaker, the facilities of our shipyards are not only presently swamped with the building of our two-ocean Navy and in continuing to build more of this modern type of merchant vessel, but, in addition, these shipyards, and many others—for which the Government is providing the funds for their construction—are now engaged in building the "ugly duckling" which we are told will be the World War No. 2 "bridge of ships." Seven hundred and thirty-one of these "ugly ducklings" have been ordered; they will be our scrap yard of tomorrow. They are only a 9-knot-an-hour craft, are outdated by at least 30 years, and totally unsuited to the world commerce of tomorrow.

Now, Mr. Speaker, in war service there is a vast difference between the two. Your 18-knot vessel is an elusive target for submarine and aircraft alike. Your 9-knot "ugly duckling" is, as its name implies, an easy prey to the hawks of war. No convoy can travel faster than its slower component, and so why make the "ugly duckling" to cling to the tail of the swan?

And after this war is over once again we will find ourselves in the battle for world trade and will soon find that the "ugly duckling" has, indeed, been the sell-out of the American merchant marine.

This entire subject is admirably treated in an editorial written by Clarence Martin, Los Angeles Commercial News of July 18, 1941, which I include herewith as part of these remarks.

[From the Los Angeles Commercial News of July 18, 1941]

IN OUR OPINION

(By Clarence Martin)

The President has asked Congress for another huge appropriation for both naval and merchant ship construction, and according to Washington sources the bulk of the money earmarked for Maritime Commission construction will be used for the so-called emergency-type vessel.

That is to say the United States will build several hundred more ships with reciprocating engines and with a speed of about 10 knots.

Almost anyone will agree that one of the great faults of the American merchant marine of a few years ago was that almost all of our ships were of the same type built during and after the World War—slow, wasteful, and a headache to the operators.

Confidential papers published after the World War reveal that the British encouraged the construction of the so-called Hog Island ship for two reasons. The Hog Islanders were quickly built and served their purpose fairly well, but also they removed any serious threat of competition with British shipping in the post-war period.

We don't know, of course, if the British follow the same reasoning in the present war, but if they do we know they are exceedingly foolish. A 10-knot steamship is easy prey to submarines and an easy mark for bombers, while a 19-knot vessel can and has proven its ability to escape.

Moreover, the Maritime Commission itself has declared that one modern 19-knot vessel is equal to two of the obsolete type, in that it will deliver twice the cargo at considerable saving in operating expense.

The only excuse the Maritime Commission officials give for a return to the emergency

type of construction is that there might be difficulty in securing sufficient quantities of the modern turbines or Diesels.

The Maritime Commission has been more than active in encouraging the construction of new shipyards—even to the extent of providing the funds for the building of the yards and generous contracts to keep them busy.

Yet we know of no similar effort to increase the production of turbines and motors which would turn the coming fleet of "lame ducks" into a serviceable merchant-marine unit of which any nation could be proud.

In other words, in the hysterical effort to produce ships of any kind in quantity and at once, someone in Washington is at once unwilling to seek the better engine and is willing to burden this country with ships which will be a source of grief and loss for years to come.

We feel sure that in the space of a fortnight we could turn up reports on a half dozen Pacific coast plants, many of them working at half capacity, each of them able to turn our turbines or Diesels or essential parts. We feel equally sure that a canvass of eastern industrial centers would disclose a similar condition. We would like to know why these plants are not building the turbines and Diesel engines the Maritime Commission says we cannot get.

Steamship men generally are bitter and disgusted when the subject of the emergency ship is brought up, especially so on the Pacific coast where severe competition between fast modern and obsolete ships is an old story. But these same men are reluctant to protest, for many recall unpleasant experiences in expressing the desires of this area. Which is exactly the sort of attitude to be expected in the very dictatorships these new emergency ships are supposed to defeat.

We think it is time for the Maritime Commission to recognize that the United States can produce turbines and motors as needed and to change its own obsolete method of closing ship contracts and to open the door to plants willing to build modern power units.

Foreign Air Lines Get Airplanes Our Lines Need

EXTENSION OF REMARKS

OF

HON. WILLIAM G. STRATTON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 8, 1941

EDITORIAL FROM THE CHICAGO HERALD-AMERICAN

Mr. STRATTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Herald-American, entitled "Foreign Air Lines Get Airplanes Our Lines Need." This item should be of interest to every taxpaying citizen, as it gives an insight into the administration's policy of benefiting foreign nations at the expense of the American public:

[From the Chicago Herald-American]

FOREIGN AIR LINES GET AIRPLANES OUR LINES NEED

More airplanes for our American air lines has become an immediate and mandatory national requirement.

The country now has 19 domestic lines.

All are permitted to operate under the laws because all of them are deemed to be essential; in point of fact, the Federal Government itself has long fostered and assisted the development of commercial aviation as a matter of sound national policy.

With the country now engaged in mighty defense efforts, these commercial air lines are economically and strategically more important than ever before. Apart from their day and night transport service, the Army and Navy regard our civil transport planes as forming an indispensable reserve nucleus for any emergency, which is now only a fraction numerically of what it should be.

Along their regular travel routes, the lines are conveying today one-third more passengers, mail, and air express than they transported last year.

To do this, however, they have only 350 planes all told—the same number as they had nearly 2 years ago.

It is not the air lines' fault that they are in need of planes which they do not possess.

In preparation for the present increased traffic, the executives of the companies bought new planes and ordered still more constructed.

Then the British came along with a demand for transport planes, and the American companies were compelled by the Government to give up 103 of their ships.

Presumably, these transport planes were sent to England for military use, and undoubtedly some of them have been put to that use.

But it is a fact that the British are not only maintaining their own commercial air lines intact, but have even been extending them.

Likewise, the Dutch, who also are seeking American airplanes at Washington, are keeping up their commercial air services in east Asia.

In other words, American aviation has been constricted and prevented from obtaining badly needed planes, and has even been bereft of planes, for the benefit of foreign mercantile aviation.

There is, as might be surmised, a bottleneck in this unfortunate situation.

That bottleneck is the War Department.

Other governmental departments have recognized that some part of our big airplane production must go to our own air services.

But the Secretary of War remains obdurate, and continues to need to be convinced.

Undoubtedly, though, Secretary Stimson will find himself convinced as soon as Congress and the American people begin to understand the amazing circumstances.

Address Delivered by Viscount Halifax, British Ambassador

EXTENSION OF REMARKS

OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 8, 1941

SPEECH DELIVERED AT A DINNER OF THE FEDERAL BAR ASSOCIATION, WASHINGTON, D. C., JUNE 16, 1941

Mr. BLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by His Excellency the Right Honorable the Viscount Halifax, British Ambassador to the United States, at a dinner of the Federal Bar Association in Washington, D. C., June 16, 1941:

It is a great pleasure to be the guest of the Federal Bar Association, even if that pleasure has been mingled with some apprehension at meeting so many representatives of the legal profession. Lawyers as a race are people whom I have always held in considerable respect; such respect, indeed, that I have always wished to keep them at a distance. The further I was away the safer I felt.

A friend of mine high in the legal profession in England once told me that a friend of his, even higher, had said to him, "when I was young at the bar I lost a lot of cases I ought to have won. After I got older I won a lot of cases I ought to have lost. Substantial justice, therefore, has been done." That attitude of mind is typical of the legal profession as a whole and shows what broad-minded views lawyers can sometimes take.

But one special reason for pleasure at being your guest is the fact that your society so definitely represents one side in this stupendous struggle in which we are now engaged.

Those who stand for the law are today the lineal descendants of innumerable men renowned in their generation who have realized what the development of law has meant to human society.

All human progress has depended upon the conception of law between nations, between the state and the individual, and between individuals. And law has been the means by which respect has been secured for the pledged word, security has been given against injustice, and liberty has been protected.

No society, national or international, can possibly exist if no value attaches to the pledged word. Life indeed always proceeds on the basis of probability rather than of certainty, and it is by assurances and undertakings that we attempt to reinforce this basis of probability.

Without this, life speedily reverts to the jungle in which men live in perpetual fear, much as the untutored tribesmen of the northwest frontier of India used to live, and live still in some parts.

To protect liberty and to secure men against injustice has been the object of the great constitutional instruments which have made your history and ours—Magna Carta, habeas corpus, Declaration of Independence, Bill of Rights, and, in the sphere of legislation, the great reform bill in England, passed, I am glad to think, by my great-grandfather, Lord Grey, and the passing of which my own grandfather, then a member of the House of Commons, was able to announce to the crowded House had been by 1 vote—302 to 301.

We have constantly seen, therefore, three stages in this long process. First, the assertion by the state of the main principles which it deemed important; second, the development of practical machinery for giving effect to them, such as, for example, the development of trial by jury; and, thirdly, the protection of these principles by the courts.

It is interesting to observe the different methods by which you and we have sought to restrict the executive from interfering with the legislature and with the judiciary.

We have followed different plans, which I do not here discuss, but one matter may be of interest and is not perhaps generally known either here or in England. On each occasion of the opening of Parliament, after the King's speech has been formally read, each House meets again later in the day, and the Lord Chancelor and the Speaker, respectively, "having," as the phrase goes, "for the sake of greater accuracy secured a copy," read the Royal speech again. But before they do this in each House the leader rises and asks leave to introduce a bill concerning either select vestries (whatever they are) or outlaws, in order to assert the right of Parliament to

legislate apart from the permission given in the speech.

As a result of this development we have both learned that law and liberty are opposite sides of the same coin, and that neither will long exist without the other.

It has been natural therefore that we should have been led on from law to liberty, and that as the idea of liberty has grown, so law has more and more come to be the outward and visible expression of the common social thought and conscience of the Nation.

On these twin foundations the United States and the British Commonwealth of Nations have both tried to find the right balance between the individual and the state, and have both stood for the same standards between states. Both still have work to do. We, having learned the lesson that you taught us in 1776, have realized that freedom is the true foundation, not of uniformity but of unity. That process is complete in our dominions, is still in course of development in the Crown colonies, and most of all is taking shape in the great dependency of India.

I would have you keep certain broad facts in mind when people speak of India. There is a total population of 350,000,000, of which roughly one-quarter is included in the Indian states.

Of the three-quarters in British India, 177,000,000 roughly are Hindus, and nearly 70,000,000 Moslems.

British India itself is divided into 11 provinces, some the size of France, under Indian ministers, presided over by an Indian prime minister, to which are entrusted all internal affairs of the province, including justice, police, education, health, irrigation, agriculture, and so on. These ministers are responsible to the legislature and to the electorate, subject only to certain safeguards in the hands of the governor, for the maintenance of peace in grave emergency and for the protection of minorities.

The difficulty of full responsible government at the center is therefore twofold. Firstly, that it necessarily implies control by British Indian politicians of all India matters, such as tariffs, communications, and central finance, in which the Indian states are as closely interested as the British Indian provinces. Here clearly the solution must be that incorporated in the Government of India Act, 1935, namely, the federation under certain safeguards for the efficient maintenance of defense and conduct of foreign policy.

The second difficulty arising in the center is the distribution of power between Hindus and Moslems, and that problem can only be solved by agreement of the great communities, which is not yet forthcoming.

But I hope I have said enough to show that our purpose in India is to work for a United States of India, free to manage its own affairs, and based on the agreement of its several component parts, British India and the States, Hindus and Moslems. We shall do whatever we can to achieve this end, for just as the airplane is built for the air, the race horse to gallop, the cow to give milk, so the Anglo-Saxon race can work for no other end than that of liberty. Nor do either you or we understand any purpose of treatment of policy except interpreted in terms of freedom.

We have often asked ourselves what is the mental picture that we see when we think of England. Is it the white cliffs of Dover or some familiar country scene of which we have memories, green fields, hedgerows, the smell of nettles in a dusty lane? I have a picture of gulls wheeling over the Yorkshire hills on a stormy day; or, again, it may be some great industrial district such as Sheffield in the West Riding of Yorkshire, or the picture may come to us in terms of persons or long-forgotten impressions of a happier past. For some it will have meant one or all of these things. But today I venture to think that when we think of England, we think rather of the personification in one unit of the single will of 40,000,000 people for the defense of liberty—a cause for which they are ready to throw everything into the scales: Luxuries, comfort, convenience, life itself. And it is because we know that the moral values which have brought us to this conclusion are yours no less than ours, and because we know that, holding this faith, you are giving us in ever increasing volume the material means necessary to secure victory, we are supremely confident of the issue of this grim contest with which the world is now being torn.

Rule by the Minority

EXTENSION OF REMARKS

OF

HON. FRANK C. OSMERS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, August 8, 1941

EDITORIAL BY JACOB W. BINDER

Mr. OSMERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial written by my friend Jacob W. Binder, civic leader, and executive secretary of the Bergen County Chamber of Commerce, in the chamber's August bulletin:

RIGHT ANSWERS REQUIRED

A minority governs this Nation today.

This minority dictates the policies of the Government.

This minority wants us to enter the European war.

Polls taken in different sections of the Nation oppose our entry into the war by percentages ranging from 70 to 75 percent.

There is 100-percent agreement on arming the Nation for defense, no matter what the cost may be.

There is no agreement as to the imposition of our ideals—civic, economic, cultural, religious—on the peoples of the whole world.

These ideals satisfy us. They may be unacceptable to other nations. But the minority insists they must be imposed and enforced.

To do that will require great sums of money, huge armies, navies, and airplanes. The cost of them can come from only one source—the people.

To provide the money, new taxes to the extent of many billions of dollars are to be levied upon the whole people.

The people are told they must do without many things which have become part of the American standard of living.

They must buy defense bonds. These must be paid for out of the wages they have received for their labor, not by bookkeeping.

If they do not buy, it is darkly hinted that to pay for these bonds, enforced savings, through deductions from their pay envelopes, may be made.

Their purchase of new motorcars and the use of cars they now own may be rigidly restricted.

They will be told what they may buy on the deferred-payment plan—if anything.

Many small factories must close because they can get no raw material.

All must be prepared, we are told, for "blood and sweat and tears."

The things produced as a result of these sacrifices may be sold or lent or given to such nations as this minority shall choose.

At least one nation has accepted such goods and sold its own in trade in competition with our products.

When and as these conditions are sensed by the majority—75 percent—of our people, some embarrassing questions may be asked of this minority now governing the Nation.

On that day clear and unequivocal answers had better be ready.

No oil for heat? No gas for the car? Half-pound of butter per week?

One hundred and twenty million people will ask, "Who says so?"

The St. Lawrence Seaway and the Florida Ship Canal Projects

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1941

Mr. CANFIELD. Mr. Speaker, the St. Lawrence seaway and the Florida ship canal projects are coupled together in an omnibus bill. Experts will have no end of difficulty in naming the picture defense. But they will persist and may prevail.

Meanwhile, a long suffering people concerned about rising prices, threats of inflation, and tax burdens, are becoming articulate.

I present today a letter received from Dr. Andrew F. McBride, of Paterson, N. J., a gentleman of medicine, letters, and experience, one-time commissioner of labor of the State of New Jersey, generally hailed as Passaic County's dean of democracy because of his years of service to the Democratic Party. Dr. McBride's message is timely; it is food for thought.

The letter follows:

PATERSON, N. J., *August 5, 1941.*

Hon. GORDON CANFIELD,
House of Representatives,
Washington, D. C.

MY DEAR GORDON: In common with all others who are sincerely and genuinely interested in our Nation and its people, its progress and its preservation, I am deeply concerned by the ever-increasing tax burden the people in every walk of life are being called to bear.

Now, I am aware that freedom is worth paying for, even if it hurts to do so, but feeling as I do, unless we honestly try to do something about it and are able to justify every dollar that is imposed by Government on its people, then are we likely to lose even our freedom. Now, I say this justifiably because increasing discontent causes people to become disturbed and robbed of their better judgment, causing them to do things that they would not think of doing ordinarily. Discouragement begets despair; this in turn is followed by desperation. When people are discouraged things happen—anything can, and usually does, under such circumstances. Hence my fear regarding freedom.

If constructive good may result after a comprehensive study of the tax question as proposed in a bill by Congressman ANGELL in a speech delivered in the House of Representatives July 3, 1941, I would ask your kind indulgence in giving it your earnest consideration, and if you agree some real good is likely to come through its passage, then may I ask you to support it.

Very sincerely yours,

ANDREW F. MCBRIDE.

Mr. Speaker, Congressman ANGELL'S resolution calls for a commission of 14 House and Senate Members and laymen to compile, analyze, and report upon the facts in relation to the overlapping, conflict, and pyramiding of the intergovernmental structure among the tax-levying units of the Federal, State, and local governments, the commission also being directed to recommend a program to integrate and unify the entire tax structure. It should be promptly and seriously considered.

Labor's Stand on St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 8, 1941

LETTERS FROM DETROIT LABOR ORGANIZATIONS

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following letters, which state the position of labor on the St. Lawrence seaway and power project:

GREATER DETROIT AND WAYNE
COUNTY INDUSTRIAL UNION COUNCIL,
Detroit, Mich.

Hon. J. J. MANSFIELD,
Chairman, House Rivers and Harbors Committee, House Office Building, Washington, D. C.

DEAR SIR: The St. Lawrence seaway project which is being considered by your committee at the present time is of vital interest to the public, and particularly to labor, and should be of vital interest to the National Government from a defense angle at this time.

We realize that powerful lobbies of the railroads and the seaboard States may be giving you a wrongly colored picture of the situation.

The most natural shipbuilding territory in the world is certainly not on the seaboard, but across several hundred miles of territory of the Great Lakes in a position naturally defended from all enemies of the country.

Certainly a great portion of the United States will be benefited by lower freight rates caused by this inland seaway.

For labor of this territory this development, coupled with the present industrial areas of Michigan and close to the natural facilities needed in the manufacture, means the greatest and most economical industrial area of all times.

We solicit your most earnest effort to give to the people of America the St. Lawrence seaway and power project.

Respectfully yours,

TRACY M. DOLL,
President.

AUGUST 4, 1941.

Hon. J. J. MANSFIELD,
Chairman, House Rivers and Harbors Committee, Washington, D. C.:

We desire to place before your honorable committee the position of our Federation of Labor in Detroit in support of the Great Lakes-St. Lawrence seaway and power project. This most desirable development has already been too long delayed.

The section of our Nation contiguous to the Great Lakes district is one of the best industrial developed sections of the country. Its value to the Nation in times of emergency is now demonstrated by the fact that the Government has turned to the Great Lakes district as the natural arsenal.

An orderly expansion and development of this section of the United States definitely requires that it be made acceptable to ocean-going boats.

Surely the selfish opposition of the railroads and eastern manufacturers should not be permitted to continue to deprive the people of this country of the benefits that can come from the development of the Great Lakes-St. Lawrence seaway.

The ability of science to harness water power and make it the servant of man relieves the human family of the dangerous and drudgerous work in taking coal from the bowels of the earth. The potential water-power development of the Great Lakes-St. Lawrence seaway will be a great contributing factor to lightening the load from the backs of those who are now employed in drudgery and danger, and, we might add, at subnormal wages.

The Great Lakes district will need the work necessary to its development to keep its people employed, and the shipbuilding and manufacturing to be developed here after the war will provide work opportunities for men who otherwise will be thrown out on the Government for support.

We therefore urge you and your associates on the House Rivers and Harbors Committee to report this project immediately.

Very truly yours,

DETROIT AND WAYNE COUNTY
FEDERATION OF LABOR,
FRANK X. MARTEL, *President.*

Joint Income-Tax Returns for Married Couples

EXTENSION OF REMARKS

OF

HON. WILLIAM H. WHEAT

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 8, 1941

Mr. WHEAT. Mr. Speaker, on August 4 I voted against the provision contained in the defense revenue bill of 1941, which was then before this House, that would have made mandatory joint income-tax returns for married couples. I opposed this provision of the tax bill for three reasons: First, it is unconstitutional; second, it is a tax on marriage; and third, it destroys the equality of men and women.

Relative to the first point, I wish to call to your attention the fact that the Supreme Court of the United States in 1931 held that an identical provision in the Wisconsin income-tax act was unconstitutional as constituting a deprivation of property without due process of law. In the decision of the case *Hoeper v. Tax Commission of Wisconsin* (284 U. S. 206) the Supreme Court said "that which is not in fact the taxpayers' income cannot be made such by calling it income." This is essentially what such a provision as the one we had under consideration attempted to do. What the Supreme Court held was that this tax on the income of one person as measured in part by the income of another person was a denial of property without due process of law under the fourteenth amendment.

On numerous occasions the Supreme Court has held that the guaranty against the denial of property without due process of law under the fifth amendment prohibiting such action by the United States is identical with the guaranty contained in the fourteenth amendment against such action by the State. Consequently, it is very likely that the decision in this case relative to the Wisconsin statute would be followed by the Supreme Court in any case relative to the constitutionality of such a provision in a Federal income-tax law. Therefore it would have been very undesirable to have adopted this provision.

In the second place this is a tax on marriage. It would be a direct reversal of the normal and accepted policy toward marriage on the part of the Federal Government as exemplified in the income-tax law for more than 25 years. We have always granted larger personal exemptions to married persons than to single persons. In addition, we have always allowed exemptions for children and for other dependents. But now these allowances and exemptions will be made meaningless because the added tax burden on a husband and wife in all likelihood will be much greater than the tax savings that would result from the personal-income exemptions for married persons and the allowances for dependents.

Under the plea of a national-defense emergency the Treasury is urging us to abandon a long-established principle of our normal tax law without giving any consideration to the merits upon which that principle has been established. I really do not believe that there are any couples contemplating matrimony that would fail to marry if this added tax burden should be imposed upon them under this provision, but it certainly does seem illogical to place upon such couples an added burden because they do marry.

In the third place, I strongly opposed this provision of the bill because I believe that it tends to destroy the equality between men and women and the independence of married women from the domination of their husbands. Such equality and independence on the part of women has been won only as a consequence of a long struggle. It is unnecessary for me to point out that under the common law a wife had no effective property rights apart from her husband. She was placed in a state of subjugation under the domination and control of her husband. Now, for more than a century women in this country have been struggling to secure equality of treatment so far as their property rights were concerned. As early as 1839 Mississippi passed legislation to free married women from the tutelage and control of their husbands relative to their property. Nine years later Pennsylvania, Indiana, and New York followed this fine example; and in 1850 California and Wisconsin took similar steps. Before the end of the last century in at least three-fourths of the States a wife could own and control all of her property apart from her husband, and in more than two-thirds of the States she had the right and title to her own earnings.

During the past 40 years much additional legislation has been passed by the States removing discriminations and burdens on the property rights of married women. Let us not forget that one of the major reasons why women were so desirous of obtaining the right of the franchise under the Federal Constitution was because they were so anxious to terminate the discriminations against them that existed in the laws of the several States. And after the adoption of the nineteenth amendment by the United States, women have devoted additional energies toward securing its enactment of State legislation granting them equality with men.

It would appear obvious that if a joint return is required of the husband and wife upon which the taxes of husband and the wife are assessed on the basis of their joint income, the equality and independence of women are destroyed thereby, since there would be imposed upon the property or income of the wife a tax that is not solely based upon her property or income, but which is based upon the property or income of the husband and wife considered together. I declare that the effect of such a provision would be to endanger the position and rights of married women that have been won after a long and hard struggle. A woman because she was married will thereby have to pay a higher income tax as also would her husband.

It is obvious that the enactment of a law requiring compulsory joint returns is a backward step toward the old and discredited view of women as chattels. By slow and painful steps women have gained certain significant rights, including the right to earn her own living, the right to dispose of her own income, and the right to pay her own taxes. If this provision of the bill becomes law, it would deprive women of the right to pay their own taxes. This, then, would constitute a step toward the subjugation of women and away from their equality.

It seems to me to be clear that the arguments against the establishment of the compulsory joint return for a husband and wife are strong—in fact, they greatly outweigh whatever arguments may be made in favor of compulsory joint returns. After carefully considering these arguments and after giving them due weight I voted against compulsory joint returns and I do believe that such a vote is in the best interests of the country as a whole.

The Cloakroom

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1941

Mr. LAMBERTSON. Mr. Speaker, why did William Allen White ever resign from that war committee?

In "Union Now" with Britain there is a weakness that destroys our own Union.

The majority leader of the Senate, on Tuesday, praised the Soviet for her fine accomplishments.

National daylight saving time would add another hour for grim reflection, while shortening the nightmare period.

The father of Greenbelt becomes the Governor of Puerto Rico. Rexford, in the name of dear old Russia, do your stuff.

Three-quarters of all our defense contracts have gone to 56 big corporations. All the rest will sweat to pay the bills.

If a President goes to meet an English premier in the Atlantic it is not for the purpose of planning a joint Sunday school moonlight boat cruise.

Lowden, Hoover, and Landon ask that Congress put a stop to step-by-step projection of the United States into undeclared war. So do 80 percent of the people.

California redwood for benches in the camp chapels and imported Mexican ponderosa pine for kitchen cupboards do not go well with broomsticks for guns.

White House Cleaners: Worn-out and discarded political platforms, remade like new. Political linens cleaned and starched. Quick service. Phone: Franklin 0000. (Advertisement.)

A college-graduate draftee told Senator TUNNELL that "the boys in camps feel very much discouraged because they do not understand whether the Nation is actually imperiled or not."

The lease-lend policy was presented to the American people as a measure short of war. We insist that it be administered as a short-of-war measure—so speaks the militant House minority.

Discovered: The National Guard was called into service before the Army was ready for them in order to help pass the Selective Service Act in Congress. This was the first political maneuver on the war front.

Michigan Newspapers Expose the St. Lawrence Project as Untimely and Unwarranted

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1941

EDITORIALS FROM VARIOUS MICHIGAN NEWSPAPERS

Mr. VAN ZANDT. Mr. Speaker, while we are being asked to believe that the people of the great State of Michigan welcome the proposed St. Lawrence project, we cannot help perusing the editorials appearing in widely read Michigan newspapers and pointing out our inability to agree with the advocates of the St. Lawrence seaway.

As one editor aptly describes the situation, there will be too much financial "digging" to do in meeting only a part of the requirement for national defense to justify any digging of ditches not necessary at this time.

When you are prone to regard the citizens of the great State of Michigan as being in perfect accord with the St. Lawrence project, it may prove enlightening to read the following viewpoints on the subject from the pens of various Michigan editors. The editorials are as follows:

[From the Battle Creek (Mich.) Enquirer-News of April 30, 1941]

THERE'LL BE "DIGGING"

Some excitement prevails at Detroit over the fact that Michigan is quoted as being against the St. Lawrence waterway, and that the senate at Lansing has refused to send Congress a clarion call to get busy on the matter at once.

An attempt is being made to send out a summons to Michigan public opinion to rise and rally and assert itself.

This newspaper hopes that such messages as are sent by an aroused Michigan populace to Washington or to Lansing, either one, will be in the form of a demand to cut out the needless spending, so that we can get at least somewhere with the terrifically heavy spending for necessary defense.

The billions will go out and are going out almost endlessly for things that we have to have.

Gradually, and painfully, and with still more pain in prospect, we are learning that Treasury money isn't fancy money and isn't magic money and that it isn't made available when some smiling magician waves a wand.

The realization is coming home now, and it will come more fully and painfully from now on, that public money, Treasury money, good-time pump-priming money, is tax money—and that taxes are paid, as a statesman once very earnestly said, "in the sweat of all who labor."

We do not have to have a St. Lawrence waterway now. Perhaps in the regular order of business we should have it. But it is not naturally in this present regular order of business, and an attempt to put it there—an attempt to yank it back into prominence and popularity by calling it "defense"—is tricky business and would deserve condemnation because of its trickiness, irrespective of its threatened diversion of money and effort needed for defense that is defense.

There's too much necessary financial "digging" to do, in meeting only a part of the requirement for defense, to justify any digging of ditches and other landscape changes not necessary at this time.

[From the Sturgis (Mich.) Journal of April 19, 1941]

NO AID TO PREPAREDNESS

Speakers at the Philadelphia conference of organizations opposed to the St. Lawrence seaway project were wholly warranted in emphasizing its futility so far as the national-defense emergency is concerned. This is shown by an admission in the pending agreement that the enterprise could not be completed before 1948.

It is estimated that the cost of this undertaking would defray the construction of fourteen 35,000-ton battleships, or of thirty 10,000-ton cruisers, or of 125 1,800-ton destroyers. Airplanes and tanks, so sorely needed for our all-out defense program, can be turned out much more quickly than big warships, and a lot could be built with the billion the St. Lawrence waterway, a vulnerable target for bombers or sabotage, would cost.

[From the Lansing (Mich.) State Journal of March 21, 1941]

THE INOPPORTUNE WATERWAY

So the United States and Canada have signed a pact to jointly build the St. Lawrence deep waterway, connecting the Great Lakes and the Atlantic?

It would be interesting to know the mind of the President in the matter. He says the project is urgently necessary to the work of preparedness. Well, maybe, maybe. But the present war is likely to be won or lost before the proposed undertaking is well under way.

The cost of the undertaking is placed at $266,000,000. Probably that sum merely indicates the place at which the talk starts. The scheme is more likely to cost a billion dollars. Great public works of the kind are never let off easily when done by the Government.

When the matter of contributing to preparedness is so highly questionable, and when expenses are running so unconscionably high, reflecting sharply in the taxes of people in limited circumstances, why press the matter of the waterway now?

It has to be confessed that the announcement of the project pushes the State Journal out on a limb. We have always advocated the subject on the ground that it has long been naturally indicated. On that basis and on the basis that the project should not embarrass the national budget, we are still for the waterway. But looking at the project realistically, assuming that the waterway will not contribute two cents' worth to present world problems, why put the undertaking through now?

Our Great White Father at Washington is "hepped," as the expression is, on vast electrical power developments. Possibly, he would like one that had some shadow of justification. Spokane has just voted, something like 4 to 1, not to have anything to do with the power from Grand Coulee Dam, now sitting majestically alone out in the desert. The vast Tennessee Valley project has amounted to nothing more than forcing some private enterprises out of business. So, perhaps the President would like to experiment near a market for power.

It will be interesting to observe whether the President will leave the Senate out of the picture because of his new power under the new lend-lease law. As commonly understood he now has full power in the matter.

Oh, well, we may as well be resigned. The President's mania for spending will be satiated perhaps for a little. And while prudence would say that the present, with a war on our hands, is no time for the vast new outlay, yet the scheme has fundamental justification in the long view. As one of our great merchandising concerns puts its position, "Satisfaction remains long after the price is forgotten."

[From the Grand Rapids (Mich.) Herald of March 28, 1941]

ANOTHER STEP AWAY FROM CONSTITUTION

This section of the United States quite generally favors the construction of the St. Lawrence waterway. Seven years ago President Roosevelt submitted a treaty between the United States and Canada to provide for this work. Ratification of a treaty, under the Constitution, requires a two-thirds vote of the Senate. At that time the Senate refused to give that two-thirds vote and the treaty failed.

Now the President has reached an agreement with Canada. It already has been signed at Ottawa. An agreement such as this requires only a majority vote of the Senate. All the President now is asking is an appropriation to start the work. Thus he has found a way to dodge the Constitution, to get around its provisions, to evade, and, in a measure, to nullify the fundamental law of the land. The question is, Does this section of the country, which approves the St. Lawrence waterway, want it badly enough to thus set aside the Constitution of the United States?

Of course, the basis for this agreement is the national defense. Yet that is one of the silliest of all the silly claims with which the defense back has been burdened. The President himself says the waterway under the best of auspices cannot be completed before 1945. The prayer of the world is that the war may not last that long. If it is power that is so sadly needed for defense, that power can be obtained quickly by the establishment of steam plants or by the use of the many other water-power developments of this administration which seem likely not to find many other customers.

Again the President is crying loudly for steel, for ships, for tanks, for guns, for planes, for workers, for railroad cars. Why divert such huge amounts of these materials and these railroad cars and these workers to a project which cannot be completed before the war probably is ended? The question is without answer to date. Certain it is the St. Lawrence waterway will be a fine contribution in time of peace to our industrial development, but in order to get it, should we thus evade the Constitution and block real defense work in order to get it by agreement now?

We think not.

[From the Jackson (Mich.) Citizen Patriot of March 29, 1941]

CONFUSION

When the resolution urging Congress to get busy on the Great Lakes-St. Lawrence seaway was before the State legislature, its author pointed out, "We have always voted for this resolution."

In other words, Michigan is in favor of the St. Lawrence waterway as a general proposition and is in the habit of giving support to the general plan of joining its Lakes with the high seas by whatever means the engineers say is the most practical.

But this session things are different. The St. Lawrence plan is presented in a time when emergency spending places a heavy burden on the taxpayer. New millions have been made available for its promotion in the form of money voted for national defense.

Even its present advocates admit it will take 5 years to complete the project, and other egnineers say it will be nearer to 7 or 10 years. There is also some doubt expressed as to the need of the power that will be developed by the St. Lawrence project for defense industries as steam plants can be constructed in less time and in better locations. There is confusion as to how much of the development is for power development and how much for navigation, and how the cost will be divided between Canada and the United States.

There is apparently a lot of confusion as to the details on the entire project, even though this State, on a general basis, is in favor of it. To have the plan made a part of the rush national-defense program, which must be at its peak within less than a year, is cause for misgivings and doubt. It is possible the Great Lakes-St. Lawrence seaway project would look better to the public view if it were allowed to stand on its own merits instead of being hitched to the defense program, to which it has no present relationship.

[From the Sparta (Mich.) Sentinel Leader of April 17, 1941]

WANTED—SOMEONE TO WORRY

The public debt stood at $480 per capita, or $1,813 for the average American family, on July 1. It is higher now, and it will be much higher next year at this time.

But don't waste any time worrying over this debt, administration "planners" say. True, the Federal debt alone amounts to $326 per capita, and no one is venturing to guess what it will be when we get through financing a war to the finish with Mr. Hitler.

"Why should you worry? We aren't worrying," the planners say, in effect. Look at England. Look at France and each of the other conquered countries. For that matter, look at the totalitarian countries. The American tax burden is light compared with that borne by the people of Europe, the free and enslaved alike, and this is the richest country in the world.

Thus the refrain runs. Don't worry. Don't let the prospect of monumental public debt cramp your plans.

So the administration goes ahead with its program of spending, on nondefense projects as well as those squeezed into the category of national defense—$250,000,000 as a starter for the St. Lawrence seaway, a $1,340,000,000 farm subsidy, a 100-percent increase in the appropriation for the New Deal's propaganda bureau, the Office of Government Reports.

Revival of the Florida ship canal and the Passamaquoddy projects would occasion no surprise. An "eat your cake and have it too" psychology pervades official Washington.

But still the country is told not to worry. This is a rich country. Look at England and France, etc. It is the song the American people have been hearing since 1933.

There is a growing feeling that the Nation might be better off if someone did a little worrying over the public debt. (Reno Gazette.)

[From the Battle Creek (Mich.) Enquirer-News of June 11, 1941]

THE FACTS MAY HELP

Intense debate which is accompanying administration demands that the St. Lawrence waterway project be undertaken at this time seems in itself sufficient reason why the facts should be checked before the 4-year program is begun.

The wide diversity of opinion indicates that there is some "middle ground" in the controversy which has not been explored by either side. It is high time that this be done now. For this 1,300-mile waterway is no incidental item which may be included or left out, of the defense program with no particular harm. Instead, it is a gigantic undertaking—an undertaking which will require heavy expenditure of men, materials, and equipment over a period of years. Therefore, if charges are true that the waterway would be of no value in the defense effort, it would be a criminal waste of time and effort now that the Nation is bending all efforts to speed production of the real necessities for defense.

President Roosevelt's recently renewed insistence upon the project has finally brought some of his opponents around to the point of political "horse trading." They would develop only the hydroelectric-power portion of the program at this time Others argue that it probably wouldn't cost much more to build dams and locks for both power and navigation, than to build dams for power alone. From other quarters comes the assertion that Great Lakes shipbuilding facilities, sought as one objective of the project, now can be used by sending partially completed ships from the Great Lakes down the Mississippi for completion.

From all this confusion it is apparent that no one has made a sufficient study of the project to be able to speak with authority. Can St. Lawrence seaway power be obtained as speedily and at as low a cost as other power? Will not the construction of vast shipyards on the Great Lakes cost just as much as construction on the seaways, and once the inland shipyards are built, will not the same shortage of skilled labor exist? Would not the partial completion of ships, using what Great Lakes facilities as are now

available, help to solve the pressing problem of ship shortages? These are questions which call for facts—not guesswork. The facts should be dug up before the first shovel of earth is turned over on the project.

There remains, however, the greatest question of all. It is estimated that the project will require 4 years for completion. Is it not at least a reasonable guess that the war will be over by that time? This question, while unanswerable, throws the balances so heavily against the St. Lawrence waterway plan that one cannot escape the belief that defense motives are not the only ones impelling the administration to battle for the waterway.

[From the Niles (Mich.) Star of June 14, 1941]

DEFENSE OF WHAT?

The American public is currently being called upon to make superhuman efforts to provide national defense that is designed to furnish Army, Navy, and Air Corps with proper equipment in record-breaking time.

In order to accomplish this huge task a tax bill is about to be enacted that will dig deeply into the pocket of every citizen. In one way or another, everyone is to pay a share of the armament program that is now under way.

Under such circumstances it would seem not only logical but a duty on the part of Government agencies to cut regular operation expenses to a bare minimum. Apparently, however, there is no such thought in mind, if present indications are to be used as a weathervane.

A case in point is the St. Lawrence waterway. In this particular instance an accord was reached with Canada for joint construction, with the United States furnishing the money. The O. P. M. has recently termed the project as part of the "all-out defense effort."

Just how this ties with defense is a conundrum. To begin with, construction is estimated to take 4 years or longer. With indications pointing to a termination of the war long before 1945, the project will be of no benefit for defense.

Looking at it from another angle, the cost has been estimated roughly at one-half billion dollars. Just consider for a moment how many fighting planes that amount of money would provide, in addition to tanks, rifles, and other needed weapons.

Consider also, if you will, how much material will go into the construction of that seaway that will be needed by the industries which now are, or soon will be, slowed up on their war orders because of material shortages.

With the public's shoulders already drooping under a heavy load, and soon to be made much heavier, it seems utterly unreasonable that such a burden as the one above should be added at this time. Under no circumstances should the public be misguided into believing that the St. Lawrence waterway has any connection with defense—at least, in our present emergency.

[From the Owosso (Mich.) Argus-Press of May 2, 1941]

THE ST. LAWRENCE WATERWAY

One of the pet projects of President Roosevelt, which he has revived at the present time, is that of the proposed St. Lawrence waterway. The President brings it up now in the guise of being a defense measure, and on that basis suggests the entering into contractual arrangements with Canada whereby this waterway would be constructed with American money because it is supposedly a part of furthering the defense needs of the Nation. There has been much argument on the question of the usefulness of this waterway, if it is completed, and whether the potential value of such a waterway is worth the vast expenditure of money it will take to build it and to keep it in operation. The administration is putting considerable pressure on getting this project into being at the present time.

The State of Michigan has a varied interest in such a proposition. There are certain sections of the State, particularly those having ports on the Great Lakes, that may feel that the construction of this waterway would be of great advantage to them because of the increase in shipping that might follow through the opening up of this waterway to the ocean. On the other hand, this waterway very likely would result in distinct harm to many other elements of our population. It would be particularly harmful to the railroad interests, and it is questionable whether the advantages claimed for such a waterway would outweigh the disadvantages that would result because of the harm it would cause elsewhere. Certainly the construction of this waterway right now should not be undertaken from the standpoint that it would form any integral part of our defense program. It would take at least 4 years, and other estimates run up as high as 7 or 8 years, before such a project could be completed and put into operation.

There are people, of course, who think this war is going to last anywhere from 5 to 10 years; but in these days of mechanized and highly organized war it does not seem as though either side could stand a struggle of such a protracted length as the proponents of this waterway would have to claim if it is going to be of any aid to our present defense needs. The money and the labor that would be used in such a waterway project might better be diverted to supplying the war equipment that is so vitally needed by England today. What England needs is boats, airplanes, tanks, and other implements of war. It is not going to be difficult to get that equipment to the Atlantic seaboard. The big question is getting it manufactured first and then across the ocean. Senator Dignan has been criticized by some of the metropolitan press of the State for his attitude regarding the resolution favoring the St. Lawrence waterway, but there are many people who agree with Senator Dignan that the present is no time to seriously consider this proposition. It has been rejected in the past by the United States Senate, and there are many competent engineers who doubt the feasibility of this waterway. It is not a vital need today, and if the waterway is a necessity it should only be constructed after competent engineering commissions have established the necessity and the economic advisability of such a waterway.

[From the Jackson (Mich.) Citizen-Patriot of May 23, 1941]

THE THREAT AT HOME

There is one threat to our American way of living in this present war situation of which little is being said, but the influence is at work. There is the danger that in the name of national defense we shall become a highly socialized government, with the politicians running almost as many of the industries here as they do in Russia and with about the same effect.

Administration designs on the power industry have been common knowledge for a long time. The same administration has been threatening to take over the aluminum industry under the excuse that it is a war necessity. Secretary of the Interior Harold Ickes has talked of a national fertilizer industry to catch the farm vote, and the ground work for that is to be done under the cloak of a war emergency.

There also has been pressure to have the Government take over the steel industry, the shipbuilding industry, and industrial plants making many of the munitions of war. The administration already has the right, written into the defense bill, where the ownership of a plant is unwilling or unable to operate to step in and take over. Those who want this country to go Communist only have to stir up trouble in any of these defense plants, making it appear the private owners are unable to operate their plants; and the administration has the excuse and the instrument to take over.

The danger in this situation is that once the plant is socialized, it never goes back to private ownership and private operation in the old American way. Once they get in, the Government bureaucrats never retreat and never let go. They have the power and authority to pass the laws and make the rules to retain their hold, and they always have the desire to run as much of the country as they can for what they can get out of it. Secretary Ickes went into the rum business in Puerto Rico a long time ago on the pretense that it was an emergency measure; but he's still in the rum business; and will stay until someone with more power than he has kicks him out. He'll have the aluminum business, too, if he can get his mitts on it; and others of his group in Washington have their eyes on steel, the war industries, and possibly the railroads. A considerable start has been made on the power business, and, if the President can have his wish on the St. Lawrence waterway, they'll take another big bite of that.

There is a possibility that we still will be so busy on the defense program that when we take time out to look back of us, the totalitarian boys at home may already have taken over the country on the pretense of patriotic necessity when truthfully they are actuated only by desire to put their own "red" ideas into effect at public expense.

An Appeal to Congress To Put a Stop to Step-by-Step Projection of the United States Into Undeclared War

---

EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1941

ARTICLE FROM THE NEW YORK TIMES

Mr. FISH. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following article from the New York Times of August 6, 1941, containing a statement issued by 15 prominent Republicans urging the Congress to put a stop to step-by-step projection of the United States into undeclared war:

[From the New York Times of August 6, 1941]

FIFTEEN REPUBLICANS SCORE WAR "STEPS"—LEADERS CALL ON CONGRESS TO HALT "PROJECTION OF UNITED STATES" INTO "UNDECLARED" CONFLICT—ANGLO-SOVIET PACT IS HIT—LOWDEN, AT UP-STATE HOME, IS SPOKESMAN FOR HOOVER, COBB, LANDON, LEWIS, DAWES

ALEXANDRIA BAY, N. Y., August 5.—Fifteen Republican leaders, including Alfred M. Landon and former President Herbert C. Hoover, joined today in an appeal that "Congress put a stop to step-by-step projection of the United States into undeclared war."

A statement, declaring that "naval action" and "military occupation of bases outside the

Western Hemisphere," coupled with "promise of unauthorized aid to Russia," has undermined "fundamental principles of democratic government," was made public by Frank O. Lowden, former Governor of Illinois.

"Recent events raise doubts that this war is a clear-cut issue of liberty and democracy," the statement said. "It is not purely a world conflict between tyranny and freedom. The Anglo-Russian alliance has dissipated that illusion."

Others who signed the statement, released at Mr. Lowden's summer camp on an island in the St. Lawrence River, are:

Former Vice President Charles G. Dawes; Irvin S. Cobb and Clarence Budington Kelland, writers; John L. Lewis, president of the United Mine Workers, and former head of the C. I. O.; Robert M. Hutchins, president of the University of Chicago; Geraldine Farrar, opera singer; Reuben Clark, former United States Ambassador to Mexico; Henry P. Fletcher, former Republican national chairman; Dr. Ray Lyman Wilbur, former Secretary of the Interior; Felix Morley, editor and author; Hanford MacNider, former Minister to Canada; and J. Henry Scattergood, Philadelphia businessman.

TEXT OF STATEMENT

The statement read as follows:

"The American people should insistently demand that Congress put a stop to step-by-step projection of the United States into undeclared war. Congress has not only the sole power to declare war but also the power and responsibility to keep the country out of war unless and until both Houses have otherwise decided.

"Exceeding its expressed purpose, the lease-lend bill has been followed by naval action, by military occupation of bases outside the Western Hemisphere, by promise of unauthorized aid to Russia, and by other belligerent moves.

"Such warlike steps, in no case sanctioned by Congress, undermine its constitutional powers and the fundamental principles of democratic government. The representatives of the people, in passing the lease-lend bill, expressed the national conviction that preservation of the British Empire and China is desirable for us and for civilization.

"We hold that view, but the intent of Congress was that lease-lend material should be transferred to belligerent ownership in the United States and utilized only to protect the independence of democracies.

ANGLO-RUSSIAN ALLIANCE SCORED

"We hold that in giving generous aid to these democracies at our seaboard we have gone as far as is consistent either with law, with sentiment or with security. Recent events raise doubts that this war is a clear-cut issue of liberty and democracy. It is not purely a world conflict between tyranny and freedom. The Anglo-Russian alliance has dissipated that illusion.

"Insofar as this is a war of power politics, the American people want no part in it. American participation is far more likely to destroy democracy in this country and thus in the Western Hemisphere than to establish it in Europe. The hope of civilization now rests primarily upon the preservation of freedom and democracy in the United States.

"That will be lost for a generation if we join in this war. We maintain that American lives should be sacrificed only for American independence or to prevent the invasion of the Western Hemisphere.

"Few people honestly believe that the Axis is now, or will in the future, be in a position to threaten the independence of any part of this hemisphere if our defenses are properly prepared.

"Energies of this country should be concentrated on the defense of our own liberties. Freedom in America does not depend on the outcome of struggles for material power between other nations."

Finns State Case

EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 8, 1941

STATEMENT ISSUED BY FINNISH LEGATION AND PRINTED IN NEW YORK TIMES

Mr. KNUTSON. Mr. Speaker, it is not generally known that Finland was actually driven into the war in order to protect her freedom and sovereignty. Neither is it generally known that from the time that Finland signed the armistice with Russia she had to meet one constant succession of Russian demands, each more brutal than its predecessor. A statement recently issued by the Finnish Legation and reproduced in the New York Times states the Finnish case against Russia in an understandable manner. I feel that the American people should know the facts as they pertain to the brave little country of Finland—the one debtor nation that always paid promptly and on the barrel head. The Legation's statement follows:

[From the New York Times]

FINNS STATE CASE—CITE REPEATED SOVIET VIOLATIONS OF PEACE TREATY AND EFFORTS TO ENSLAVE TINY NATION

WASHINGTON.—Finland's efforts to stave off Soviet demands in the period before the Russo-German war began, and to preserve her independence, were set forth in a statement issued by the Finnish Legation here tonight.

Analysis of the Russo-Finnish situation in mid-June, the Legation said, revealed the following factors:

"Not content with the terms of the March 12, 1940, peace treaty with Finland, Russia has continuously made new demands on Finland. Russia has engaged in subversive "fifth column" activities in Finland, stemming from her consular agents. Before the present crisis Russia already had committed 100 violations of Finnish territory and in 804 instances Russian planes flew over Finnish territory.

"Nevertheless, Finland has continued her efforts toward collaboration with her totalitarian giant neighbor of the east, Russia. Finland, in the midst of the international turmoil, cut off from the western democracies, was nevertheless striving to maintain her freedom and independence; defending herself against the ruthless Russian aggression."

NEW DEMANDS BY RUSSIA

The text of the Legation's statement follows:

The peace treaty concluded in Moscow on the 12th of March, 1940, should have fully satisfied Russia. Finland, left alone in her fight against the aggressor, was forced to make concessions that went far beyond the Russian demands, during the negotiations in the fall of 1939.

Hardly a month after the conclusion of the peace, Russia made a demand that Finland should compensate for or return machinery and other property removed from the ceded territory during the war, a matter that was not mentioned in the peace treaty or raised during the peace negotiations. For Finland this demand was, from the economic point of view, a very heavy one, actually a war levy, which, especially with regard to Hanko, had no legal basis whatever. Russia thus sought by economic pressure to impoverish Finland and reduce the war-exhausted country to distress.

By political claims that soon followed on the trail of the economic ones, Russia aimed to establish rights that would give her a dominating influence—as, for instance, a control of Finnish foreign policy. This had not even been mentioned in the negotiations preceding the peace treaty, and no reference is to be found in the treaty itself. Finland adopted a conciliatory attitude, as far as was possible without giving up her status as an independent nation. Thus she, for instance, assented to transit of Rusisan troops over southern Finland to Hanko in spite of the dangerous character of such a concession.

WOULD DEMILITARIZE AALANDS

In June 1940 Russia presented a series of far-reaching claims. Demilitarization and control of the Aaland Islands was requested and Russia also demanded that the nickel mines of Petsamo be ceded to her.

These new demands were presented as conditions for a trade treaty in spite of the fact that the conclusion of such a treaty was clearly agreed upon in the treaty of peace.

It was pointed out in the ensuing negotiations that the treaty of Moscow contained no stipulations concerning the Aaland Islands. Mr. Molotoff, the Russian Prime Minister, in his reply stated bluntly that the Soviet Government did not want to raise the question at the time of peace negotiations, as this problem might have rendered the conclusion of peace more difficult.

The International Convention of 1921, concerning the demilitarization of the Aaland Islands, was disregarded and belittled by Russia. Being reminded of the convention, the Russian Government asked for a privileged position over the signatory powers. The Finnish Government wanted the signatories to be informed about the matter, but the Russians flatly rejected this suggestion. Russia preferred to omit from the new agreement a statement to the effect that the International Convention of 1921 is still in force.

The demilitarization of the Aaland Islands actually amounted to their abandonment to the mercy of an aggressor.

Russia was in this connection granted the right to maintain a consulate on the Aaland Islands. This right has been abused by Russia; the personnel of the consulate has been increased excessively and the consular officers and the employees of the consulate have carried on subversive and incendiary propaganda among the people of the islands.

DEMANDED NICKEL CONCESSION

The demand concerning the nickel mines of Petsamo disregarded altogether the fact that a concession for the exploiting of the mines had been granted to a British-American company, the Mond Nickel Co. In the negotiations concerning this demand, as in other matters, Russia has repeatedly taken a most threatening attitude, alluding to the use of force and pressing Finland to cancel illegally the concession. The Russian negotiators did not conceal that territorial acquisition was in their mind and that the economic interests came only in second place.

An attempt to wrench from Finland without adequate compensation the energy of the important Vallinkoski waterfalls has also been made by Russia. In this connection she has ad absurdum referred to the peace treaty, being, however, unwilling to recompense for the power to be delivered by the Finnish power station.

The diplomatic and consular representatives of Russia have been engaged in flagrant espionage. They have also in an arrogant and offensive manner urged for themselves privileges which it has been impossible to grant as they would have endangered public order.

Russia has, moreover, by her malicious radio and newspaper propaganda in a disturbing way intervened in the domestic affairs of Finland. She has supported a subversive society working under the misleading name of "The Association of Peace and Friendship With U. S. R. R.," by the help of which she has tried to weaken Finland internally. These subversive methods are well known and contributed to the total destruction of the independence of the Baltic States.

SOUGHT DOMESTIC POWER

Russia even has made official attempts to interfere with the domestic affairs of Finland. She has, moreover, striven to chain the Finnish foreign policy to her own, and, referring irrelevantly to the Moscow treaty, she prevented the conclusion of a defensive alliance by the northern countries, planned in the spring of 1940. Negotiations for such an alliance were under way after the conclusion of the peace in Moscow, and did certainly in no way constitute a threat directed against Russia.

The hidden purpose of Russia was to destroy once for all Finland's possibilities to defend herself against a new aggression.

While adopting, when presenting her new claims, a menacing and imperative attitude, Russia in no way showed willingness to develop the Russo-Finnish relations in a positive direction. Finland, on the other hand, has over and over again in word and deed proved her readiness for collaboration.

A special committee was appointed to draft a program for reciprocal cultural intercourse. The Russian Government ignored all the efforts of this committee. All Finnish attempts to establish a fruitful collaboration in the economic, cultural, and other fields have been repulsed by Russian indifference. Russia has been interested in getting contact only with the subversive elements in Finland. It is an established fact that the Russians have tried to convert into their agents all Finns, including prisoners of war, who have fallen into their hands.

RECENT INCIDENTS CITED

Before the outbreak of the war between Russia and Germany there were 109 registered cases of violation of Finnish frontiers by Russians and 804 cases of Russian airplanes flying over Finnish territory.

Even if the change that has taken place in the balance of power in eastern Europe has had a restraining effect on Russia in her politics toward Finland, she has not abandoned her claims and designs, as some recent incidents show. As late as June 17 the Russian Commissariat of Foreign Affairs, in an evident effort to create complications, asserted that Finland is not fulfilling the stipulations of the Hanko transit agreement. The same day the Commissariat insolently demanded the release of an offender sentenced to prison for espionage.

Since the Moscow treaty and up to the new aggression launched against Finland in June 1941, the attitude of Russia toward Finland made it fully clear that the Russian policy tends to the enslaving of Finland. The final aim of Russian policy has always been the destruction of Finland's independence.

Finland still stands as a bulwark of freedom and democracy against the murderous aggression of a totalitarian giant which has enslaved nearly 200,000,000 people and is not willing to let a small nation of 4,000,000 live in peace and freedom.

Strategic Highways Not "Pork"

EXTENSION OF REMARKS

OF

HON. WILBURN CARTWRIGHT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1941

Mr. CARTWRIGHT. Mr. Speaker, the charge that the authorization of $125,000,000 for correcting critical weaknesses in the strategic highway system is dipping into the pork barrel can arise only from a lack of knowledge as to what the system is, its importance in the defense program, and the nature of the work proposed to be done on it.

The strategic highway system includes 78,000 miles of the most important highways in the country. It has been selected after long study by the War Department, the Public Roads Administration, and the State highway departments. A revised system, taking into account the latest developments in the defense program was approved by the Secretary of War on May 15, 1941.

This system includes the major routes over which defense-highway traffic is moving. Already this traffic has reached an enormous volume. Trucking companies keep their vehicles rolling day and night. Already there is a shortage of trucks to handle movements essential to the defense program. Steps are now being taken to coordinate trucking movements so that the available trucks may be used to the best advantage.

Efforts to increase the efficiency of truck use will do but little good if their movement and that of army trains is slowed down by winding roads, narrow surfaces, and short-sight distances, or failure of weak bridges. The increased volume of traffic now on the strategic system is greatly increasing the delays encountered on many sections of the system in every State. These sections were definitely inadequate for traffic without the added burden of the defense movement.

Both the Roads Committee and the various Federal agencies that advised it have adopted a highly conservative policy in dealing with this problem. The bill we reported to the House did not go beyond definitely established and urgent needs from the military point of view. Great pressure has been brought upon those in charge of the selection of the strategic system to include a much greater mileage of highway. From every section of the country have come demands that this road or that road must be included in the system and built with Federal funds if the country is to be saved. Congress has not in any way interfered in the selection of the system, and the proposed authorization is available only for expenditure on the system selected by those charged with our national defense.

If the $125,000,000 is authorized, will expenditures be made on projects not of critical importance to national defense? Upon the answer to this question depends the justness of the accusation that this bill is "pork barrel" legislation.

As pointed out in the President's message to the Congress on June 2, 1941, Senate Document No. 62, it was estimated by the Public Roads Administration of the Federal Works Agency that a minimum expenditure of $458,000,000 will be required to eliminate the most serious deficiencies in the strategic network. According to a careful survey made at the direction of the President, there are 2,436 substandard bridges and approximately 19,095 miles of road that must be widened or strengthened to put the network in acceptable condition for emergency use.

To raise the entire strategic network to the standard eventually desirable for safe and convenient use by both civil and military traffic would require expenditure of several billion dollars, according to Public Roads Administration estimates.

A survey of the defense-road requirements, in which each State highway department was asked to estimate its needs, was reported in the January and February issues of the magazine Roads and Streets. The article says:

> A generalized summary of these reports indicates funds of the order of $1,500,000,000 would be required.

I know that ultimately large sums must be spent on the system, but no member of the Roads Committee thought of spending such sums now. I only cite the figures to show the wide spread between the estimates of State highway departments and the authorization proposed in this bill.

We have indeed been conservative in proposing an expenditure of only $125,000,000, an amount less than one-third of the cost of correcting critical deficiencies in the system, as estimated by the Public Roads Administration.

The Washington Post fears that "a hundred million dollars would be needlessly spent, and the Army would probably lack some of the highway and bridge improvements it so urgently needs." Evidently the Post is unfamiliar with the Army's action with regard to the system, or else it feels that the Army does not know what it needs.

Army and Navy Establishments and defense industries are spread out over the entire country but some sections of the strategic system may be rather distant from any of these concentrated defense activities. The Post appears to see little sense in improving a road one or two hundred miles away from a camp or defense plant. Yet if the men are to be fed and the plants supplied with raw materials, the worst bottlenecks on our most important highways must be removed or conditions alleviated. It is a great mistake to think that our defense activity is confined within a small circle around each camp or plant.

If it were proposed to appropriate the entire amount needed to correct the critical weaknesses in the strategic system and apportion this amount among the States according to the Federal-aid formula then there might be reason to fear that some work not urgent in character might be done. There is no reason for such fear. The careful studies that have been made show that apportionment of $125,000,000 will not give to most States half the amount needed for urgent work.

The advantage of an immediate and general attack on the weak links in the strategic system and avoidance of the rush and clamor to get allocated rather than apportioned funds seemed to dictate that the Federal-aid formulas be used. We were trying to avoid a pork barrel, not make one.

The Federal Government is asking each of the States to concentrate on the strategic network its State highway funds and remaining amounts of Federal-aid funds authorized before the defense program. During the present construction season State highway programs have been revised, many planned projects not on the strategic system have been postponed, and there has been a marked upswing in work on the strategic system. If the Federal Government does not give a moderate degree of financial support to its own recommendation, then there is little reason to hope that the States will continue to do so.

If this effort toward the removal of the worst bottlenecks on our most used highways be pork-barrel legislation, then let the Washington Post make the most of it. Federal laws do not give to any Member of Congress any voice in the selection of the projects to be improved and no Member will be able to make much of it.

Old-Age Pensions

EXTENSION OF REMARKS

OF

HON. ROBERT T. SECREST

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 8, 1941

ARTICLE BY DR. GEORGE GALLUP

Mr. SECREST. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Dr. Gallup on the subject of old-age pensions:

PUBLIC SETTING MODEST SUMS AS PENSION ISSUE LOOMS AGAIN

(By George Gallup, director, American Institute of Public Opinion)

PRINCETON, N. J., August 7.—The perennial issue of government old-age pensions may be thrown in congressional laps shortly as the result of hearings now being conducted by a special Senate committee under Senator DOWNEY, of California. Washington observers report that the committee is virtually certain to recommend a liberalization of the pension system, and predict that a bill supported by Dr. Townsend or some similar measure may reach a vote in the Senate.

In such circumstances no question is more timely than to ask: Where does the American public now stand on old-age pensions? Is the public satisfied with the amounts now granted to needy citizens at the age of 65? What sums would be paid if the general public set the scales?

As the pension question boils to the top once more, a Nation-wide survey by the American Institute of Public Opinion indicates:

1. That the vast majority of American citizens (more than 90 percent) approve of the basic principle of government-administered pensions. In the last decade the idea that old-age security is a Federal responsibility has apparently taken firm hold.

2. While the public shows dissatisfaction with the amounts now being paid to needy old people (present amounts average about $20 a month for the country as a whole), the typical American's idea of what his Government should pay is a moderate one.

Nor have the public's sums increased substantially over the past 5 years, despite rising costs of living, comparison with earlier institute studies shows.

3. Far from endorsing schemes like California's recent drive for $30 every Thursday, the average American sets a figure in the neighborhood of $42 a month for single persons and $73 for married couples. This fact in itself provides an interesting rebuttal for those critics of democracy who have sometimes forecast dire raids on the Treasury if public opinion were ever allowed to guide fiscal policy.

For the fact is that the public's minimum for a single person ($42) would mean only $500 a year. Moreover, it is very close to the top grants already available in States like California, Arizona, Oregon, Indiana, and Rhode Island—though considerably higher than the averages for some other States and for the Nation as a whole.

4. Finally, the public believes that citizens should become eligible for old-age pensions at the age of 60 instead of 65, as now provided by the Social Security Act.

SEVEN PERCENT OPPOSE PENSIONS

In the preliminary question the institute asked, Are you in favor of Government old-age pensions? From a cross section of men and women in the United States voting population came the replies:

	Percent
Favor Government pensions	91
Oppose Government pensions	7
Undecided	2

Asked at what age pensions should begin, most voters named 60 years of age:

	Percent
Should begin before 60	17
Should begin at 60	47
At 61 or later	36

The survey voters were then asked, What do you think is the smallest income per month that a single person over 60 needs for a decent living in your community? And a similar question was asked regarding married couples over 60.

Though the sums named as averages (medians) are much below what the Bureau of Home Economics and other Government agencies have estimated as necessary for a minimum standard of health and decency, the results are interesting for their contrasts when analyzed by geographic sections and by social groups.

Perhaps most interesting of all is the fact that older people themselves (over 60) set more modest sums than younger people, many of whom, of course, contribute directly to the support of parents at present.

SECTIONAL OPINIONS

Here are the sectional medians for single persons and married couples on the basis of replies from the voting population—those who can make their opinions felt at the ballot box:

	Median monthly sum for single person	Median monthly sum for married couple
National average	$42	$73
New England	50	78
Middle Atlantic		
East Central	42	74
West Central	37	59
South	32	59
West	48	76

Broken down by age levels, the medians are:

Voters aged—	Median monthly sum for single person	Median monthly sum for married couple
21 to 34	$48	$77
35 to 44	46	74
45 to 59	41	73
60 and over	40	62

Among other groups the highest medians for a single person were set in the upper income group ($49 a month) and among people living in cities of more than 100,000 population ($52). Lowest medians for single persons came from the bottom income groups and from farmers in general.

Observations From the East

EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 8, 1941

EDITORIAL FROM NORTHWEST INSURANCE

Mr. KNUTSON. Mr. Speaker, a constituent has sent me an editorial from Northwest Insurance that deals with our domestic and foreign programs in a realistic and forthright manner. It is in the hope that every Member of Congress will read this editorial that it is inserted in the CONGRESSIONAL RECORD.

The editorial follows:

[From Northwest Insurance]

OBSERVATIONS INSIDE THE EAST

We have just returned from a trip into the East. Here is the situation as we observed it:

Washington is in a state of wildest confusion. It seemed to us that radicals are everywhere inside the officialdom of the Government. Bunglers occupy many of the pivotal positions. Hundreds of political loafers with juicy salaries strut around like barnyard roosters.

National-defense statistics are largely fiction. Bottlenecks are numerous almost beyond tabulation, and incompetency is the

worst of them. Money is thrown around as though it were as plentiful as water in the oceans. What a mess will be uncovered when expenditures and procedures of the national-defense program are probed in a congressional investigation.

A manufacturer related to us that he had been 10 days in Washington in an effort to procure instructions on where to make delivery on devices he had produced for national defense. "I have been shunted from one office to another, and after 17 interviews I am still in the dark as to what I am supposed to do," he said.

Stories about extravagances in connection with national defense are many in Washington. They involve purchases of land for military purposes, construction work at Camp Meade, in Maryland, and Fort Belvoir, in Virginia, and contracts of various kinds. Some of them smell like graft on a large scale.

Under the smoke screen of emergency, economic screwballs are busy on schemes for the regimentation and regulation of business in the United States. They seem to have strong support inside the administration for their nefarious operations in the pattern of totalitarianism. Plans in process of development call for additional legislation to expand the supreme authority of the executive branch of the Government to embrace our entire economy and in dictatorial disregard of democratic principles.

The clamor for a declaration of war against Germany is hysterical in Washington. Interventionists cannot understand why the people of the country refuse to be stampeded into belligerency. Millions of dollars have been spent for propaganda to arouse the population to a frenzy that overwhelms reason in support of complete involvement in the struggles of power politics overseas. The results have been negative of late. Many interventionists now argue bitterly that President Roosevelt should ignore entirely the majority of the Nation and that like a dictator he ought to override roughshod the wishes of the people. In that connection propaganda of recent vintage centers upon the creation of public opinion strong enough to stigmatize effectively critics of the executive branch of the Government as traitors, agents of the Axis or dupes of the latter.

The fear of severe inflation is common in business circles throughout the East. Commodity prices have already outrun the efforts of the Government to control them. Here is the opinion of an astute observer: "Inflation is certain to result from a pyramided national debt expected officially to climb to $90,000,000,000. The magicians in Washington are doomed to disappointment if they follow the notion that they can stop inflation with a wand as they mumble hocus-pocus. Experience has proved that war always brings inflation. When Napoleon was on a rampage in Europe prices rose 45 percent. During the Civil War in the United States prices soared to about 120 percent, and through the period of World War No. 1 they jumped approximately 127 percent. The inflation spiral is in motion and we might as well recognize that fact realistically."

Business leaders are also disturbed over what may come in the form of taxes in that taxes are likely to be based on the need for revenue in disregard of their economic effects. Congress is inclined to determine taxes from the standpoint of politics rather than equitable distribution. Along such defective procedures the economic machinery of the country cannot escape serious dislocation.

The situation in Washington is more serious than the majority of the people realize. Wendell Willkie did the Nation a tragic disservice when he flopped back into the lap of the New Deal. Loyal opposition to the administration of President Roosevelt is vitally important in the preservation of democracy in the United States.

Efforts to silence the critics of the New Deal are indefensible except in totalitarian minds. It is folly to believe that national unity requires docile acceptance of everything in the decisions of President Roosevelt.

Congress Should Protect Independent Bankers

EXTENSION OF REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 8, 1941

Mr. HOOK. Mr. Speaker, there is pending before the House a measure of great importance to independent bankers. I refer to the Gore bill (H. R. 4636), which is now before the House Banking and Currency Committee. I am sure I speak for a majority of the House when I say this bill deserves the swift consideration and approval of the Congress.

The Gore bill is eminently fair. It is merely a step toward framing into law a banking policy already approved by the Congress. Simply stated, the Gore bill would require branch banks to publish their individual statements of condition. The branch-banking practice now is to publish a consolidated figure of their statement of condition. For example, let us suppose a parent bank has a branch in some distant city. When the statement of condition of the branch is published the consolidated figure of the entire chain is used. This gives the impression that the published figure represents the assets of the branch, whereas, in fact, the figure is the sum total of the branch bank's various units.

This practice is unfair and should be stopped immediately. It can be stopped by passage of the Gore bill. The Gore bill, as someone has observed, is the truth-in-statement bill. It merely compels branch banks to tell the public the truth of the assets of a branch bank in a particular city or town.

Through publication of the consolidated figure of assets the branch bank gives the impression that it is much stronger and better able to serve the public than the independent bank which is competing with it across the street. This is a gross injustice to the independent banker, without whom this country would not be the great Republic it is.

I believe we should at all times approve every safeguard necessary for the protection and continuance of independent banking. The Gore bill is a step in that direction. The giant branch banks are ever on the alert to expand their interests and swallow up the independent banker. There has been talk in some quarters of making every independent bank with deposits of less than $1,000,000 the branch of some chain. This is sheer nonsense and a dangerous trend.

The liquidity of a bank and its ability to give quick and efficient service in the community where it operates certainly should not be judged on that bank's amount of deposits. That is an economic fallacy, and one about which the public should be informed. There is absolutely no connection between a bank's size and its security. I think the history of the 1933 bank failures well proves that point.

The advantages of independent banking are too numerous to relate. Independent banks operate according to their income. They pay no fancy salaries. They are in an excellent position to know the needs and wants of the community they serve. Independent bankers have, furthermore, a definite social and personal interest in the development of their respective communities, which is more than can be said about branch bankers.

In view of all this, I earnestly hope the House Banking and Currency Committee soon will consider the Gore bill, and that the measure will receive the quick approval of the House and Senate.

The Case of Eire

EXTENSION OF REMARKS

OF

HON. JAMES P. McGRANERY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 8, 1941

ARTICLE BY EDWARD I. FENLON

Mr. McGRANERY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Edward I. Fenlon, Ph. D., from the Brooklyn (N. Y.) Tablet of July 19, 1941:

[From the Brooklyn (N. Y.) Tablet of July 19, 1941]

THE CASE OF EIRE

(By Edward I. Fenlon, Ph. D.)

Increasing communications relative to the neutrality of Eire have appeared in the press almost daily, including several in the Tablet. A number of these letters seem vague and one-sided, while several miss the mark, or even any mark at all, being random shots, possibly to relieve the itch of prejudice.

The official explanation for Eire's position is simple, viz: Her people overwhelmingly chose the actual status, the status of peace. Her Government, hence, is accepting the sole course consonant with the democratic ideal. The determination of the country is hardly different from that of Switzerland, for instance, or from that of America if democracy were regarded among us today as it is in Fire or was in times well within memory. Actual democracy, as opposed to lip democracy, makes the people of a nation master of its destiny. Meanwhile arguments by persons professing democracy as an ideal, as against the principle now guiding Eire, must necessarily run to sophistry.

Beyond the simple exposition aforesaid, the authorities of Eire, conservative administrators that they are, consistently refuse to go. Nor is it at all necessary that they go further. The explanation suffices; it is clear-cut and sententious; it is complete. It becomes, then, a case of take it or leave it. There is no call for Eire to be apologetic.

We who look on from a distance, however, have grounds to assume that Eire has learned

her lessons. It were irrational to suppose that she has not. Incidentally, the condition is very much more than we dare say for ourselves at the moment—that we have learned our lessons. But now, if Eire's lessons signify anything they show clearly enough that England and Eire can not abide in peace under the one roof. English religious intolerance, the root of Eire's long suffering, and English philosophy, so distasteful to the sons and daughters of Patrick, are as recurrent bomb explosions between the respective peoples, and the too-keen memories of the consequent disasters linger, perhaps never to be effaced.

BRITAIN AND THE RELIGIOUS MIND

Indeed, it were difficult for Britain, maybe impossible, at least from our poor human point of view, ever to come into the hearts of the great body of religious-minded peoples of Continental Europe and throughout the world, not to speak of the scions of Eire. We of America, inheritors of English education and of English tradition generally may, as a nation, never fully understand the religious sensibilities of Europe for Britain. Ordinarily it would be necessary to live for a time in Eire or on the Continent to come into the appreciation. The Belgians, the French, the Italians, the Spanish, the Portuguese, the Poles, great numbers of Dutch and of Germans, and many other spiritually minded Europeans are fervidly and traditionally set against Britain.

Leaving aside even the immediate effects on those people of the so-called Reformation in England, its unhallowed aftermath gave rise to a perennial flow of drab British materialism, a something that the conscience of Eire and that of the religious-minded of the Continent were, from the beginning, prepared tenaciously to resist. To those peoples Britain became a symbol of opposition to the things of the spirit. The progressive world aggrandizement of the Empire that once gloried in an Austin, in a Bede, in an Anselm, etc., etc., and boasted the patronage of St. George—so much of that aggrandizement accruing under conditions that today we are supposed to ignore—only added with the years to this almost innate disposition of distaste.

Even a passing perspective of Bacon, Hobbes, Locke, Berkeley, Hume, Bentham, the Mills, Huxley, Spencer, Schiller, etc., etc., must reveal something of what I mean. Theirs is shallow philosophy at best, as indeed befits materialism or positivism and agnosticism. Berkeley, it is true, professedly opposes materialism, but does so with such an excess of ingenuity and with such a renunciation of tradition as to illustrate the methods and the manner of the subtle propagandist, which is, undeniably, not alone characteristic of British philosophy but of British diplomacy as well, and which a fair analysis of even contemporaneous history will not fail abundantly to disclose, a characteristic that I have no hesitancy in saying is now palpable in our own American diplomacy, a diplomacy that fits the type of education that is our inheritance. It is, in effect, the diplomacy born of pragmatism, which was a practice ages before it became a theory and which, in verity, results in the end justifying the means, for pragmatism stripped of the rationalized trappings of its proponents is individual choice as opposed to objective truth. To conceal one's ends or aims, even for supposed overt, democratic matters, it becomes necessary to carry the public along, to resort to ingenious, disingenuous, and mellifluous rationalization, to engage in word-enchantment, in the protesting too much, as said Shakespeare, all of which, early or late, reveals the plethora of camouflage above the slender substance. But the British, and now we, call it diplomacy. "Mother country" takes on its peculiar significance here.

THE IRISH HAVE LEARNED

Today persons of the pragmatic mind (they call it humanistic at Oxford) are busily censuring Eire because of her determination to be no part of the actual British stew. When a man makes a treaty with a normal Irishman, the document forthwith becomes a sacred, not merely a potential, instrument. The bargain is closed and the Gael goes his way set to duty by the exactions of the case, not by its concealed exigencies. And when contracts are broken, betimes before the ink is dry, there ensue troubles and even heartbreaks, which, in the instance of the Irishman, are cataclysmic, for he has never learned this shallow philosophy called pragmatism. He is, in effect, too impatient to abide it for a moment. He is, as they say today, conditioned so, built so. His religion, above all, has made him so.

How now, then, is it possible for the Government and the people of Eire to trust Churchill or Lloyd George or any of the coterie related to one or the other? How is it now possible? Think you that the Irish and the other students of real history the world over believe Churchill when he says that Britain is fighting in the interests of the smaller nations or with any other conscious thought but one related exclusively to Britain? First, stands against Churchill what he represents to Eire, namely, a history of 700 years of suffering; and, next, the very pertinent and palpable history that every Irishman and Irishwoman of 25 years of age and over has witnessed in despair with their own simple Irish eyes. The Irish, forgiving by nature, as all of us know, have resolved to forget the past or as much of it as is possible. But, they know immediately, as distinct from report, the very men they are now dealing with as no American knows them, and fools were they not to impound the knowledge. What the Irish have witnessed, of themselves alone, stands starknakedly against both Churchill and George, for they were Britain's administrators during those awful, never-to-be-forgotten, days from 1916 to 1921.

OUT-HITLERING HITLER

A document was signed on March 8, 1921, by seven outstanding Americans, to wit: Jane Addams, Frederic Howe, James M. Maurer, Oliver P. Newman, George N. Norris (Senator), Norman Thomas (Socialist), and L. Hollingsworth Wood, a document that must disclose, but only as an instance among hundreds, why the Irish cannot and will not trust Churchill or Lloyd George, or the English Government generally. To repeat, we offer the matter as merely typical of the centuries. No; it is not a case of opening old sores; it is the fact of a death struggle from yet unhealed sores. As said, the Gael seeks to overlook the past. But is it not asking too much of even a spiritualized human nature to insist that the Irish shut their eyes to the actualities as a matter, not of revenge, but of prudence?

The Americans just mentioned constituted a commission to report of conditions in Eire—the unbelievable conditions that prevailed from 1916 to the end of 1920, conditions that, it is fair to say, out-Hitlered Hitler in the relation of his soldiers to the Jews. These Americans were delegated to make an investigation by a Committee of One Hundred, which committee included 5 State Governors, 11 United States Senators, 13 Representatives, the mayors of 15 large cities, Cardinal Gibbons, Archbishop Keane, 4 Methodist bishops, clergymen—priests and ministers—educators, editors, businessmen, and labor leaders. Thirty-six States were represented on the committee.

The committee was provided with funds ample for all expenses, including for the calling of witnesses. The British Embassy gave public assurances that its Government would refuse passports to no Irish witness. What happened? If you know the history of even some of the relations covering joint English-Irish affairs, you need hardly be told what happened. It was the same age-old double-dealing, the old, old pragmatism or opportunism, which is really the one thing. Even Irish bishops failed to secure passports. And this is the testimony of none other than the celebrated Cardinal Logue. Donal O'Callaghan, lord mayor of Cork, failing of his shipping credentials, came over as a stowaway. Peter MacSwiney arrived as a common seaman. Messrs. Morgan and Derham landed from a small trading vessel. Others were not so fortunate. Even the nymphs of subterfuge had deserted them. Mrs. MacCurtain was shot at, and her house raided and denuded of evidence shortly after receiving the invitation to testify. Her mail evidently had been tampered with, indicating that, as a witness, she had something to tell, to tell an unbelieving and unsympathetic American public, for then Britain controlled, as she now controls, the worldways of propaganda, and Britain, like Caesar's wife, was then, as now, above suspicion.

I cannot present here more than a few specimens of the testimony, and there is no attempt to cull the mere sensational portions of it.

BRITAIN AND THE COMMISSION

However, one will note at the very outset that Britain and certain of the British became obstructionists, not alone in the refusal of passports to invited Irish witnesses, but also in the sense that Britain completely ignored the commission, while selected British subjects (Englishmen) refused to testify. But let the commission speak for itself:

"It must be pointed out while the reports and documents gathered by the Commission present the case of Ireland from diverse points of view, the direct testimony available gives the case almost wholly from the Irish Republican viewpoint or from sources not unsympathetic to the application of the principle of self-determination to Ireland. In other words, the Ulster Unionist viewpoint and that of British officialdom in Ireland, in spite of every earnest effort of the Commission, were not represented among the witnesses. Diligent efforts were made to remedy this unfortunate defect.

"One of the witnesses invited by the Commission was Rev. T. T. Shields, of Toronto, Canada, who accompanied the delegation of Ulster Protestant Clergymen on their tour of the United States last year, and who, we were informed, had some valuable documentary evidence on Ireland in his possession. Mr. Shields received the advances of the Commission in a mood of unreceptivity, and the effort to secure his testimony, and that of the Ulster delegation, failed. A number of English journalists in the United States were also invited to testify, but in no case was an acceptance received."

Further on the report says: "The Commission planned * * * to send a subcommittee to England and Ireland, and it was arranged that in England this committee should consult every available source of British opinion on Ireland * * * but after passports had been secured from our State Department the British Government through the Embassy refused visas."

Respecting the witnesses who did appear, the report is thus laudatory: "We wish to commend the frank and dispassionate spirit in which the Irish witnesses presented their testimony. They came to us in many cases under conditions of great personal inconvenience, or even danger. Insofar as they represented the Irish people before the Commission, that people has cause for pride in them." Let, then, the attitude of the British Government in the case and the acknowledged sincerity of the witnesses speak for themselves.

CHURCHILL'S RESPONSIBILITY

We note here, again, that the head of the British Government at the time was Lloyd George, and his vicar, immediately responsible for the outrages perpetrated in Eire, Winston Churchill. We quote:

"We find that the Irish people are deprived of the protection of British law, to which they would be entitled as subjects of the British King. They are likewise deprived of the protection granted by international law, to which they would be entitled as belligerents. They are at the mercy of Imperial British forces which, acting contrary to all law and to all standards of human conduct, have instituted in Ireland a 'terror,' the evidence of which seems to prove that—

"(1) The Imperial British Government has created and introduced into Ireland a force of at least 78,000 men, many of them youthful and inexperienced, and some of them convicts; and has incited that force to unbridled violence.

"(2) The British Imperial forces in Ireland have indiscriminately killed innocent men, women, and children; have indiscriminately assassinated persons suspected of being Republicans; have tortured and shot prisoners while in custody, adopting the subterfuges of 'refusal to halt' and 'attempting to escape'; and have attributed to alleged 'Sinn Fein extremists' the British assassination of prominent Irish Republicans

"(3) House burning and wanton destruction of villages and cities by Imperial British forces have been countenanced, and ordered by officials of the British Government; and elaborate provision by gasoline sprays and bombs has been made in a number of instances for systematic incendiarism as part of a plan of terrorism.

"(4) A campaign for the destruction of the means of existence of the Irish people has been conducted by the burning of factories, creameries, crops, and farm implements, and the shooting of farm animals. The campaign is carried on regardless of the political views of their owners, and results in widespread and acute suffering among women and children.

"(5) Acting under a series of proclamations issued by the competent military authorities of the British Imperial forces, hostages are carried by forces exposed to the fire of the Republican army; fines are levied upon towns and villages as punishment for alleged offenses of individuals; private property is destroyed in reprisals for acts with which the owners have no connection; and the civilian population is subjected to an inquisition upon the theory that individuals are in possession of information valuable to the military forces of Great Britain. These acts of the Imperial British forces are contrary to the laws of peace or war among modern civilized nations. * * *

"TERRORISM

"It would appear that the natural fear of the Imperial British forces in Ireland is fostered by propaganda into terror under the auspices of the Imperial British Government. The bearing of this natural and artificial apprehensiveness upon the prevalence of drunkenness among the troops may be surmised if not defined.

"John Charles Clarke, an American, witnessed the shooting of a boy on the streets of Cork by two drunken Black and Tans, who, scarcely able to walk, fired into a crowd, and were then led away by their fellows. * * *

"John Tangney, a former member of the British forces, testified concerning a raid in which he participated, on a village near Ballylarby: 'This County Inspector Lowndes had the orders, and he adjourned to an adjoining saloon and had a drink, and two young military officers, who were in charge of the military party, adjourned with him and got stupidly drunk. All three were drunk. * * * We went home and the military were firing all the way back. I myself had to come to a soldier who was stupidly drunk and take a revolver out of his hand.' John Joseph Caddan, a former member of the R. I. C., testified that the men drank before going out to service, presumably as a spur to courage. He stated: 'They were up there, some of them, most of the night, drinking.'"

Frank Dempsey, chairman of the Urban Council of Mallow, testified that when that town was burned by British soldiers on September 27, 1920, most of the soldiers in the raid were drunk. He said: "The first thing they did was to fire revolver shots and rifle shots about the town. Next, they raided some of the public houses and looted them and got drunk." The witness stated that he complained to the officer, who replied that he had lost control of them: "Damn it, they are all drunk."

Individual shootings of innocent persons in raids on homes seemed to be the common order. A number of such cases are listed in the report. We take just one: "There were no lights at night on the streets of Bantry, and the Black and Tans or the R. I. C.—they were disguised so that one could not tell to which body they belonged—they knocked at the door. She (mother of a hunchback youth) answered the knock with a candle in her hand. The soldiers knocked the candle from her, using an electric light to light them up the stairs. The volunteer boy was not at home. The little hunchback boy ran from his own room into his brother's room. The mother rushed up the stairs after them, and was in sight of the tragedy when it occurred. 'My boy's hands were raised in prayer,' she said. 'They shot him through his uplifted hands.'"

AN APPRAISAL AND A HOPE

Let what we have thus extracted from the report of the commission suffice at least for the moment. We could add very much more, including the testimonies of persons of the highest order to me individually during a visit to Ireland, while De Valera and followers were yet bivouacking in the hills away from the British soldiery—the royal Irish constabulary, the military, and the auxiliaries. But the point in the end would be the same—the Irish will never trust Churchill or George or their associates—men known to be responsible for one of the very meanest recorded outrages of all time—the releasing of armed drunken convicts and irresponsible youths upon a people as the Irish. Nothing that I have thus far heard or read of the actual world catastrophe is comparable, let Churchill inveigh, as he does and may do, against Hitler and Mussolini, for whom, indeed, none of us entertain sympathies of whatsoever sort or degree. I know well how the hand of God upon Churchill, who had more or less immediately to do with the "black and tan" infamies, would be interpreted by hundreds of thousands of religious persons, even as they pray daily for him and his suffering people. Such is the nobility of the Gael.

Perhaps as never before in modern times spiritual leaders today call to England and to the world to hasten the ways of peace by renewing themselves in the things of the spirit, the sole course left to salvage or to save. To Britannia, in very particular, the Empire that has so long ruled the waves to no appreciable uplifting achievement, the appeal has special significance—the great majority of whose immediate sons and daughters follow the lead of divinely appointed religion no longer. The appeal is to recommence to rule its own spirit in and through God. The religious statistics covering England, Scotland, and Wales make discouraging study. Christ remains precisey where England left Him, centuries ago—left Him with His outstretched arms at the unfortunate, alluring crossroads. At that point there must be a renewed tryst or British leadership has likely seen its day, for history is inexorable in this, that mere material power is fated to a relatively restricted term.

If the world disaster prove thus spiritually resultant, the actual unparalleled suffering of Britain and of the nations at large will not have been in vain, and the Irish will not alone unselfishly provide and prepare the fatted calf but will rejoice and be glad as possibly no other people can.

Outline of Lake Superior Iron-Ore Industry and Its Relation to the St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1941

STATEMENT OF HON. GEORGE H. BENDER, OF OHIO

Mr. BENDER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement:

I. Effect on Lake Superior iron mines:

A. Importation of foreign ores in great quantities would have a ruinous effect upon Lake Superior iron-mine operators, rail and lake iron-ore shippers.

B. Importation of foreign ores for beneficiation of Lake Superior ores might eventually seriously impair the self-sufficiency of the steel industry of the United States and, in the event of another world crisis, jeopardize our national security.

II. Present Lake Superior ore markets:

A. Great Lakes and upper Mississippi Valley region:

B. Supplies 86 percent of iron ore consumed in the United States.

C. In 1937 shipped over 61,000,000 tons to domestic consumers.

D. Shipped over a million tons to Canadian furnaces.

III. Value of iron-ore industry—investment, labor, taxes:

A. Investment—

1. In mines, $300,000,000.

2. In 1,500 miles of railroads connecting the mines of the upper lake ports maintained by iron-ore business and lake vessels carrying that trade, $300,000,000.

3. Many more millions invested in 35 unloading docks on lower lake ports and rail facilities from these to consuming furnaces.

B. Labor, 1937—

1. Over 20,000 persons in Lake Superior iron-ore industry receiving $32,000,000 in wages.

2. Many more thousands employed in transportation of ore and on the unloading docks.

C. Taxes, etc.—

1. Lake Superior iron-ore industry pays $30,000,000 in State and local taxes.

2. The industry pays in wages and other handling charges $150,000,000, exclusive of unloading charges on lower lake ports where ore is consumed or shipped to inland furnaces.

3. Lake Superior iron-ore mining industry alone supports 74 cities, villages, and towns having a combined population of 190,000 persons.

IV. Foreign reserves:

A. Sweden, 1,500,000,000 tons very high grade close to seaports, open all year and connected by rail to mines.

B. Russia, 1,000,000,000 on the shores of the Black Sea—several billion of lower grade ore on the Black Sea but of a type easily concentrated.

C. Chile, 1,000,000,000 tons of high-grade ore near seacoast.

D. Brazil, seven to thirteen billion tons within 300 miles of seacoast.

E. Cuba, three to five billion tons located on coast.

V. Foreign imports:

A. Import of ores from these and other countries have for some years come into the Eastern and Atlantic seaport markets largely to the exclusion of Lake Superior ore—some Swedish ore is already finding its way into the Great Lakes through the existing 14-foot St. Lawrence Canal.

B. Present imports. (See table I.)

VI. Lake Superior iron-ore supplies—high-grade ores:

A. 1925 to 1938, region produced 545,000,000 tons; known reserves in that region were reduced only 129 million tons. (See tables II and III.)

B. Discovery of additional reserves—

1. Constant exploitation and discovery of new reserves accounts for small reduction in reserves as compared with production indicated under A.

2. In spite of the constant discovery of additional reserves, prospecting for these is held back—kept under control, closely watched—so as not to discover too great a quantity of valuable iron deposits too far in advance of when they will be needed. If such a policy were not pursued, the result would be extremely high taxation for a long period of time which the iron-ore industry could not afford on top of its already high tax burden.

VII. The low-grade ores—35- to 45-percent ore concentrates:

A. Almost inexhaustible supply available in Lake Superior district.

VIII. Beneficiation of low-grade ores:

A. Ores are now being beneficiated—concentrated (see table IV).

B. Further concentration practical by—

1. Crushing and screening ore to remove impurities of rock and sand.

2. Log washing to remove fine sand.

3. Jigging to remove larger particles of rock than by washing.

4. Sintering to fuse finely divided ore which would otherwise go up the flues of blast furnaces.

5. Roasting to remove sulphur, carbon dioxide, water, and to prepare for—

6. Magnetic separation, which concentrates magnetic iron oxides.

7. Flotation processes and others, which are now in development stages.

IX. Significance of scrap iron:

A. 1925 to 1936, 160,000,000 tons of scrap iron went directly into steel production.

B. Amount of scrap iron was approximately equal to the iron content of all ore mined in the United States.

C. Over 91 percent of all United States steel production is made in open-hearth furnaces—this process uses about 45 percent scrap.

D. Use of scrap varies with the market for scrap; when the price is high, more new pig iron, consequently more ore, is used. When scrap is cheap, the contrary is true.

X. Conclusions:

A. There still remains a huge quantity of known high-grade ores in the Superior regions which undoubtedly is actually much greater than the amount known because of holding back prospecting.

B. The 35- to 45-percent ores are almost unlimited in supply.

C. Superior ores can be readily concentrated, and this process is rapidly proceeding now.

D. Sweetening of Superior ores with concentrates will be unnecessary for many years to come, based on known deposits.

E. Sweetening of the unlimited supply of low-grade Superior ores in the distant future may be economically accomplished through beneficiation.

F. Sweetening of Superior ores through mixture of high-grade foreign ores would cause a lethargy in improving efficiencies of beneficiation to the point where the United States steel industry might eventually become entirely dependent upon a foreign source of iron ore.

G. In the event of the dumping of huge quantities of high-grade foreign ore—not for beneficiation but for the basic supply of ore—as at Sparrows Point, Md.—it would ruin the Superior iron-mining industry.

H. Either F or G above, or a combination of them, would seriously jeopardize the security of our country in the event of a future world conflict.

I. To suggest preventing this through the imposition of tariffs would be to suggest the incongruous policy of spending hundreds of millions of dollars for the development of a waterway and then to legislate to prevent its use.

TABLE I.—*Iron ore importations from South America and Western Hemisphere countries*

[In gross tons]

Year	From Brazil	Chile	Cuba	Canada	Newfoundland
1925	600	1,113,900	546,130	7,520	----------
1926	3,708	1,364,400	539,000	16,964	119,544
1927	8,905	1,369,200	392,113	26,079	61,080
1928	31,805	1,434,800	369,286	13,309	37,048
1929	46,050	1,699,066	641,350	3,542	76,340
1930	24,507	1,689,071	190,654	395	48,771
1931	25	750,702	89,000	1,490	22,920
1932	----------	218,492	77,000	807	----------
1933	3,600	467,650	143,150	90	----------
1934	----------	938,376	154,500	11,126	----------
1935	----------	788,725	221,010	20,453	----------
1936	6,102	1,264,130	444,500	83,911	11,300
1937	11,000	1,438,886	441,500	5,046	45,080

TABLE IV.—*Percentage of beneficiated iron ore compared to the total ore shipped from United States mines*

[In gross tons]

Year	Beneficiated	Total shipped	Percent of beneficiated to total
1925	8,735,672	63,924,763	13.7
1926	8,371,829	69,292,832	12.1
1927	8,114,673	61,232,473	13.3
1928	8,621,331	63,432,826	13.6
1929	9,424,445	75,602,737	12.5
1930	8,973,888	55,201,221	16.3
1931	4,676,364	28,516,032	16.4
1932	407,486	5,331,201	7.6
1933	3,555,892	24,624,385	14.4
1934	4,145,590	25,792,606	16.1
1935	6,066,601	33,426,486	18.1
1936	9,658,699	51,465,648	18.8
1937	12,350,136	72,347,785	17.1

These figures do not include ore crushed and screened because this is nearly a universal practice with all ores preparatory to any concentration.

Can We Follow the War Crowd?

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 8, 1941

RADIO ADDRESS OF HON. CARL T. CURTIS, OF NEBRASKA

Mr. CURTIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address by me over the Columbia network on August 6, 1941:

Ladies and gentlemen of the radio audience, in the few moments I have in which to speak to you tonight, I want to ask you, "Can we follow the war crowd?" The bitter controversy today is whether or not the United States shall become a shooting participant in the wars now going on in Europe, Africa, and Asia.

In the first place, I do not approve of any dictatorship anywhere, any time, or under any circumstances. I am convinced the great majority of the American people as a whole are loyal to the United States of America.

Secondly, I believe the defense program in America should be carried forward as rapidly as possible, that nothing should be done to hamper or interfere with the fastest possible attainment of a completely adequate national preparedness. An eminent American has said, "We must build ourselves an air force, a navy, and an army so strong that no dictator will dare to tamper with our commerce, our interests, or our rights. That is the defense program we must have." With this statement I emphatically agree.

In the third place, those people, who are opposed to the United States becoming a shooting participant in these wars, do not contend that they can live in a world by themselves; they cannot be accused of hiding their heads in the sand like ostriches. We Americans have always accepted the Monroe Doctrine, both historically and currently.

That calls for our policing a considerable portion of the earth's surface.

The question before us is, Shall we become enmeshed in the European, Asiatic, and African wars? The American people had nothing to do with starting them. The great majority of American people have expressed their desire that we do not enter these conflicts. A small but very militant minority are attempting to drive the United States into those wars. This minority group who would plunge this country into war are making their influence felt; they have assistance in some high places in Government. I have before me an editorial in the New York Herald Tribune of Friday, June 27, 1941, entitled, "The Time Is Now." It says in part: "The Nazi-Soviet war is 5 days old. The priceless opportunity it has provided for action by the United States has lain unused for 5 days. We are 5 days nearer to the moment when that opportunity may vanish. The time is now. It is imperatively the hour to release our Navy—to win the Battle of the Atlantic."

A few days later when Mr. Frank Knox, Secretary of the Navy, was addressing the Conference of Governors, he used almost the same language and urged that the United States Navy be used to clear the Atlantic. Someone has said that when the master pulls the strings the puppets jump. These men surely knew the United States Navy could not be used to clear the Atlantic and then call the job completed. It would mean only the beginning for us; we would become a full-fledged shooting participant in these foreign wars. We could not withdraw until these wars were over. None of us know how long they will last. None of us know where, to how many continents, and islands of the seas, the American boys would have to be sent to fight. Why don't these pro-war propagandists present the whole case to the American people and frankly tell us the full import of their plans.

The Communists in the United States have joined the war crowd because they want to preserve Communistic Russia. I have no sympathy for them. I hold no brief for those enemies of constitutional government who adhere to the "Union Now" doctrine, for they, too, would undermine and destroy the independence and sovereignty of the United States. As for the real Americans who may be advocates of war, I do not question their sincerity or their patriotism; I do, however, disagree with their judgment and conclusions. I do charge that the war group in America has not advised the American people of the full import of their suggestions and plans and of the far-reaching consequences of the action they propose. Whether they lack the courage to do this, or whether they do not know the ultimate results of their own acts, they, themselves, must answer.

Nothing is to be gained by the interventionists, or the war crowd, and the noninterventionists engaging in name calling. After all, we did have one thing in common, that is, we were all noninterventionists before the last election.

At a time like this when free governments are struggling for survival in the world, it is imperative that public officials remain true and steadfast to those promises and pledges they made to the people when those officials were seeking election. If campaign promises are to be dismissed as mere oratory, what merit—and what hope—is there in a system which provides for party platforms, and for elections whereby the people may choose their public servants. For public officials to violate the confidence of the American people is to strike at the heart of government of, by, and for the people. It must be borne in mind that the promises made to the American people that their boys would not be sent to fight in foreign wars was made at a time when, in the opinion of many, it was far darker than at the present hour. Those promises were made after the Lowland countries had been overrun, the Scandinavian countries taken over, France conquered, and when it was expected England might be invaded and fall any day. On September 15, 1940, the New York Times carried an article which said, in part: "It may be that the coming weeks will be the most critical in the history of the British Empire." Similar stories were running in all the American newspapers. On October 21, 1940, the New Republic carried a summary of news which said: "The press has predicted an immediate German invasion of England." That was the picture before the American people at the time these anti-war promises were repeated again, and again, and again.

Let us examine the record of this war crowd. Not so many months ago they were urging that the United States help brave little Finland in her struggle against the wanton and brutal aggressions of the bloody hand of Dictator Joe Stalin. Today this war crowd wants us to assist Godless communistic Russia. These wars make strange bedfellows from day to day. I believe I express the hope in the heart of every true American when I say that I hope that both the dictatorship of Hitler and the dictatorship of Stalin will wreck themselves completely and beyond repair in their battle with each other. God knows the world would be better off today without the menace of either.

On February 7, 1940, Representative JOHN MCCORMACK, now House majority floor leader, offered an amendment that would have removed our Ambassador from Russia. Less than 1 year later he introduced the lease-lend bill, by which military aid is now being given to Russia.

Speaking of the lease-lend bill, the writer, Frank Kent, who is a strong advocate of our present foreign policy, said on July 23, 1941, "Opponents of that measure were right in regarding it as a bill to take us into war; its proponents were wrong in saying that it would keep us out. That was a piece of false pretense, justified only by the necessity of getting it through."

Last year the war hawks were urging that we go to war with Japan. They argued that we should clear the Pacific of the Japanese menace so that the British Navy could take care of the Atlantic. This was followed by months of appeasement toward Japan, while we actually supplied war materials to that nation. Now the cry is, "Let's clear the Atlantic."

If we are going to follow the war crowd, which way we are going to follow them? Are we going east or are we going west? Will any military expert argue that there is wisdom in fighting all over the globe at the same time; in having our forces spread throughout the world? I ask you, fellow Americans, in all seriousness, can we follow the war crowd?

When the present European conflict started, it was pictured by the war crowd as being a struggle for idealism. They shouted from the housetops that we must save democracy. They talked of preserving our way of life; the British way of life, the Chinese way of life, and other cultures. Today they are engaged in an enterprise to save the Communist way of life, India's way of life, and Cuba's way of life. With open arms they have embraced the cause of Soviet Russia. Fellow Americans, there is a grave and dangerous communistic menace in this country and throughout the world. We can rely upon the findings of the congressional committee investigating un-American activities. There is an attempt upon the part of the Communists to undermine and destroy the Government of the United States.

If these things are true—and they are true—then we cannot ignore these facts in becoming a military ally of despotic Russia. The conduct of Soviet Russia in first acting as an ally of Hitler in their land grab against Finland, Poland, and other small countries, and the reversal of that conduct and their acceptance by the British Empire and the war group in this country as allies, proves but one thing—these foreign wars are not wars fought for any ideal. They are wars being fought to obtain fertile land, world trade, sea ports, rich oil fields, and other things for which the countries of Europe, Africa, and Asia have fought throughout the generations. Can we follow the war crowd in making the United States a party to those wars for conquest? It was the seasoned military expert, Gen. George Washington, who said, "Why quit your own to stand on foreign soil?"

The strongest force in this country today is American public opinion. If it had not been for the strong public opinion against our entrance into wars going on in Asia, Africa, and Europe, our boys would be there now. I urge you not to let that public opinion be silenced by the war drums of a minority. Use your letters, your postal cards, and your telegrams, today, tomorrow, and in the days to come to let your servants in Washington know whether or not you want them to follow the war crowd.

And, finally, remember that it will not be the war propagandists who will do the fighting and the bleeding and the dying. It will be your sons, your brothers, your husbands, who will have to lie mangled or dead in the stench of new no-man's lands, in dark Africa, and in far-off Russia, and mayhap in the innerlands of China.

Remember that all of the horrors, all of the penalties, all of the suffering, all of the agonies of war, if we get into it, will be yours.

Whatever of glamour, whatever of glory, whatever of the shining place in history comes of war, may come to the generals, but the privates get none of that.

I say to you in conclusion, my fellow Americans, no! We can't follow the war crowd.

A Strange Oversight

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 8, 1941

ARTICLE BY WALTER LIPPMANN

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following article by Walter Lippmann, which appeared in the Washington Post of Thursday, August 7, 1941:

[From the Washington Post of August 7, 1941]

A STRANGE OVERSIGHT

(By Walter Lippmann)

The latest statement from Mr. Hoover, Mr. Landon, and a number of other eminent men is so astounding that it can be explained only by saying that the man who wrote it and those who signed it have not taken the trouble to discuss the situation with responsible and informed persons. The whole statement is based on the notion that the question whether the United States goes to war or remains at peace depends upon how much we participate in the European conflict between the Axis on the one side and, on the other side, the British in the Atlantic and the Middle East and the Russians in European Russia.

But as a matter of fact the immediate and critical question of peace or war for the United States arises on the other side of the world, that is to say in our relations with Japan in the Pacific Ocean.

There in the Far East during the past week we have been on the very verge of war, not of the imaginary war of the isolationists in which American soldiers are supposed to be landed in Europe to fight their way to Berlin, but of a very real war in the Pacific which might begin any day. Yet in regard to this extremely urgent and dangerous threat of war, Mr. Hoover and his friends have not a word to say. Indeed they seem to be unaware of it. Thus they talk about the Axis end, which means Germany and Italy, and never even refer to the power—namely Japan—against which the main body of all our forces is mobilized.

They complain about the occupation of Iceland and the Atlantic naval patrol and other belligerent moves against Germany and Italy, but they are silent about the momentous action in freezing the Japanese assets and in establishing the machinery of an embargo against Japan. If only they had taken the precaution to examine the real situation and to inform themselves before issuing their statement, they would never find themselves in the position of seeking to prevent war in the abstract, yet ignoring the most immediate and the most likely actual war in which the United States may become directly and deeply engaged.

In fact, it is evident from their statement that they do not realize that since the Japanese occupation of Indochina, the situation in the Pacific has become so delicate and so explosive that only the most powerful diplomatic action, and some good luck besides, can prevent war. What Mr. Hoover thinks about this desperately real problem in the Pacific, he has never ventured to tell the American people.

Yet as a matter of history the present phase of the conflict between Japanese imperialist expansion and the United States began when Mr. Hoover was President, and the original and fundamental decision to oppose Japan was made by him. He was the President who decided not to recognize the first Japanese aggression in Manchuria in 1931. And he was the President who sent American representatives to Geneva to rouse the world against Japan. And he was the President who sent his Secretary of State to Mr. Roosevelt, when he was President-elect, to see to it that the Hoover-Stimson policy of opposing Japanese aggression would be maintained by his successor.

Yet today when his successor is face to face with the final consequences of that policy, and in the very week that the issue has been rising to the extreme crisis, Mr. Hoover is out with a statement which has been written by somebody who does not know that there is a crisis in the Far East.

For if you take the generalities in the statement and try to apply them to the actualities in the Far East, they do not make sense. One would have to say that Mr. Hoover now advocates the following: That we should not have frozen Japanese assets or cut off fuel and metals, for these are certainly "belligerent moves" which the statement deplores, that apart from delivering supplies to the Chinese Government in San Francisco we should do nothing for China, that we should not oppose Japan if she seizes the Netherlands Indies or Singapore, that we should stand by and let Japan obtain control of the resources of the East Indies, that we should let the British be driven out of the Pacific, that we should let Australia fall under Japanese domination, that we should let the Philippines be encircled and rendered helpless, that we should be uninterested in whether Japan conquers Siberia or becomes allied with a Russian puppet government and thus establishes herself as our nearest neighbor in Alaska.

Thus Mr. Hoover, who initiated the present policy of opposing Japanese expansion, would now, if his statement is to be taken as applying to the Far East, let the Japanese expand, let them conquer the Chinese, the British, the Dutch, and the Russians in Siberia. Thus if we ever do have to fight Japan to make good the policy Mr. Hoover inaugurated, we shall have the satisfaction of doing it all alone, uncontaminated by association with any imperfect or distasteful allies.

It is more generous to suppose that Mr. Hoover does not think these things, that in fact he accidentally overlooked the far eastern situation and forgot to think about it at all. The disservice of a statement like Mr. Hoover's is that it will be read in Japan, and the Japanese will quite naturally suppose no former President of the United States could fail to be thinking seriously and responsibly about the not inconsiderable crisis in the Orient. If they then conclude that Mr. Hoover has announced his intention of obstructing the President of the United States, the Japanese may make the enormous error of thinking it safe to take those final steps which inevitably and inexorably precipitate war.

For the chances of preserving the peace in the Pacific depend altogether upon convincing Japan before the irrevocable steps are taken that she faces a combination which is too formidable for her to challenge. The combination of China Britain, the Netherlands Indies, Russia, and the United States is a very formidable combination indeed, and if we are able to keep the peace, it will be because we have had the intelligence and the resolution to organize that combination—to aline against Japan's final bid for supremacy in the Far East everybody who has a reason for opposing Japan. And when that has been understood, when it is seen that the Russian Army and Navy and air force in Eastern Siberia are worth at the moment a whole fleet of our unbuilt warships, it becomes rather obvious why the United States Government has decided to aid Russia via Siberia.

The Experts in Democracy

EXTENSION OF REMARKS

OF

HON. ROBERT A. GRANT

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 8, 1941

ARTICLE OF PROF. WILLIAM F. ROEMER, OF THE UNIVERSITY OF NOTRE DAME

Mr. GRANT of Indiana. Mr. Speaker, an overwhelming majority of the American people oppose our entrance into this foreign war. Yet step by step we are being moved closer and closer to its brink.

The leaders of our country have a mandate to stay out of this foreign war. That mandate springs from the platforms and the promises coming from the representatives of both political parties in the elections of last November.

Under our American system of government the war-making powers were given to the representatives of the people. For perhaps the first time in human history they were taken away from the executive.

To be "waltzed" into this foreign war without the formality of action thereon by the people's representatives would constitute a reversion to autocracy. Are we to abandon that awful power that people struggled for for centuries?

It is not only the right, it is the duty of American citizens to petition their Government, to express themselves on questions that so deeply concern them and their children. Such, in fact, is one of the foundation stones upon which our Republic rests. I include herewith a most interesting and thought-provoking article from the Ave Maria entitled "The Experts in Democracy," by Prof. William F. Roemer, of the University of Notre Dame:

[From the Ave Maria of July 26, 1941]

THE EXPERTS IN DEMOCRACY

(By William F. Roemer)

As soon as you manage to publicize yourself as an expert in some line, it becomes your privilege to sit on Mount Olympus in your community with the other man-made gods, thence to prophesy. Your neighbors, who have never built a mousetrap or reported in print their impressions of a blitzkrieg, or received an assignment as a radio commentator to interpret news, are still among the hoi polloi, the multitude of the inexpert.

One advantage of the advertised expert is that people believe him to be above prejudice. They think often that it is the inexpert alone whose opinion is compounded of emotional myth mingled with unsound principles and a few facts. Perhaps that is why such a high premium is placed on glib newspapermen who have picked up along their way some tricks of propaganda. Again, it is a wonder that we continue in our adulation of political experts when we see them disagreeing violently with each other over such questions as the likely victors in foreign wars.

This worship of the expert, whom the modern scientific religionists have taught us to admire when he forgets his dinner, his siesta, and his financial ambitions, deserves a little study. For if we follow the wrong experts our direction may lead us to tragic ends. Were we as careful in awarding the degree of "expertus" in political affairs as we are in educational matters, in science, and engineering, it would not easily happen that medicine men selling hot air could lure us into "holy" wars and imperialistic expeditions.

Why are so many Americans, gifted as they are with the best educational opportunities in the world, so careless in their criticism and acceptance of the so-called expert and the amateur prophet? It seems in part due to the habit of mental laziness induced by incomplete high-school training. At least, we usually attribute to immature high-school minds that fertility which is flattered to discover opinions voiced by favorite news columnists and radio interpreters to be "expert" as soon as they agree with our hasty conclusions. Self-complacency results from the consciousness that we speedily master subjects which the highly gifted research workers acquire after laborious investigation. We adopt a few politicians as our guides and monitors in political science.

The true expert is a specialist, who knows his field thoroughly, who has an unusual facility in finishing off his handiwork. Etymologically, the word "expertus" is the perfect participle of "experior," a Latin word for the phrase "tried and trusty." It is obvious that an expert in one field should not be expected to become overnight an expert in a widely different skill.

The first test of an expert ought to include an examination into his general knowledge of the limited field in which he professes to have achieved experience and proficiency. This test many technicians can meet satisfactorily when their specialty has very narrow bounds. A skilled recorder of current facts need not have even a college education in order to establish himself as an experienced man of records.

An important test of an expert in higher fields of knowledge should include the ability to integrate harmoniously one's specialty with deeper and more fundamental principles of knowledge. In this integration of truth, one meets a hierarchy of expertness in human knowledge, whether it be speculative or practical. For example, an expert architect is expected to know the principles of engineering which underlie the rules of house or building construction. There are similar or analogous principles which serve as presuppositions in moral and political science. A moralist cannot pluck his assumptions out of thin air, beginning, for instance, with gratuitous ideas of racial superiority, one way or another. A moralist and a political philosopher must have the primary principles of humanitarian philosophy to stand on. Indeed, if he is unacquainted with theological theories he runs the risk of neglecting or contradicting pertinent truths known to the other experts. It is hardly necessary to add that one is not a reliable "expert" so long as he is unable to distinguish his own experimental knowledge from his private, wishful thought in matters contingent upon factors of which one is entirely ignorant.

All that has been said above is a prelude to what in common sense should be said about the equipment of expert leaders in the battle for the return of democracy. How can our Winchells possibly inspire us with the spirit of democracy if they do not know the meaning of democracy, advocating measures that are borrowed from totalitarian ideology? If they think that democracy is only a name for "our side" in hemisphere wars, and not a real type distinguishable from other forms of government, such as a kingdom or an aristocracy, they are blind guides in crusading to save liberty in the modern world.

Seldom do any of our leaders make an attempt to define democracy in more than the incomplete term of "majority rule" at elections. The catch comes in this counterfeit democracy after election time when the Government may deem it expedient to disregard the platform on which it rode to power and authority. Without any sort of referendum to the people on critical issues, where is the leverage in the hands of the people to restrain well meaning officials from riding roughshod over the implicit and explicit mandates of the citizenry? Are the electorate so forgetful of pledges and solemn promises made by candidates that they do not resent the repudiation of such promises as "campaign oratory"?

Democracy in its true meaning is a form of government in which the rule of the majority is limited constitutionally by the guaranteed rights of the minority. American democracy is a unique type. Let all our leaders remember this. We have a written Constitution which from the beginning (1789) has provided for the separation of executive, legislative, and judicial functions. The actual separation of powers has been the particular contribution which the United States has made to the world. We Americans did not think of such a division before our European friends did; but America first practiced it and found that this system of balance is successful in maintaining democracy.

The success of our way of life is not due solely to our use of the law borrowed from England and adapted to our needs. The credit for our system and that system's practicability is due in large part under Providence to the wisdom and understanding of the founding fathers who selected the best political methods that had proved soundest in the experience of Europe. We are not serfs of European kings because their forebears are ours too.

Within the framework of democracy it is possible to adapte our life to world conditions by paying our way if necessary in longer hours and more modest luxuries. We will not surrender to totalitarian states abroad. We will resist totalitarianism here. We will help our Government to the best of our intelligence by criticizing its impetuous and radical policies only when common sense and well-informed public opinion is able to detect clearly its dangerous trends away from the legal substance of our constitutional life. While we build an impregnable line of defense in the Western Hemisphere, we can be trusted to unite as always in common sacrifies for the attainment of those democratic conditions needed for temporal and spiritual happiness.

If Americans have a common faith, it is still in democracy here. We do not mind being deceived in minor matters by slogans and advertisements that try our intelligence, but we expect our leaders to be honest and expert in devising means calculated to serve our rightful ends. It is said of the Frenchman that "He keeps his faith in France, be her Government that of king or deputies, be she free or for a time a satellite of her neighbor to the right or the left, east or west." It is also said, and rightly, of the American, that his faith is in the destiny of democratic America. Lincoln was most probably correct in his diagnosis of the North American temper: You cannot fool us all the time. The sons of free pioneers have breathed the air of political freedom long enough to find it good and they will stake their lives on the probability of the defeat of Fascists soon or late. In our Civil War, both North and South fought for liberty as they saw its star and heard its call. Reunited, our Nation has learned many lessons, but it will not willingly submit long to tyranny. Most Yankees will bet you on that—10 to 1. We may have high-school mentality, but we like our bread buttered with liberty.

A free people is one governed by law and not by men. This means that the Constitution is the law for Government officials as for the public. Not without reason has the constitutional law of our land required that officials take a solemn oath before God and their fellow men to obey the Constitution. Among the laws which they are sworn to uphold are those that clearly forbid legislators to enact statutes which interfere with the rights that are reserved to the people. A democracy without guaranteed rights for each physical person within the nation would be a mockery. Duties, of course, go along with rights. It is not out of place for government to exact from the citizens in taxes and in many other ways their meed of duties.

When our leaders in Congress or legislature are concerned in both democracy and the general welfare, they will not neglect to offer the electorate opportunities to vote on amendments to the Constitution whenever clear-cut issues demand change in the fundamental policies of the Nation. This could be done with speed, even in a day, as it is done on general election day. Our whole theory of government is built on the premise that the majority can be trusted to refrain from mutilation of that Constitution which we all revere as a sacred palladium of human rights. We may be ignorant of certain best means to an end; but that the end of human rulership is not the ruler's good alone, we know.

The story is told of a Negro preacher in Virginia, who was urging his flock to "give and give until it hurts for the spread of the Good Word." When the collection box was passed to one old darky, he whispered audibly, "the good tidings of the gospel shall be free to all men." The parson overhead and responded, "Brother, you are right. The gospel is free, but it costs money to pipe it in."

Ideals in government, like the truths of religion, have been "piped" from European ports at considerable cost, it seems at times. To our posterity, our children and their children, we owe it to keep ever alive the principles that we have found true and important. Those guides who put on the wolf's clothing of war and make a noise like experts must not beguile us to surrender the free institutions that make our life full of dignity and pregnant with future good. Certainly the democratic way of life, the constitutional way is what we want for America; why not face the difficulties and call things by their proper names? Do people here want war?

The courses of action given by publicists to keep the freedoms alive throughout the world and especially here where we have a greater chance to achieve them, are the way of war and alternatively the way of defensive peace. If we go forth beyond our depth and succeed in bearding the leopard in his lair, there is some danger, as all will admit, that we may come home with an empty gun to find the animal in our household. The price to be paid for crusades abroad will involve economic centralization, control of oil and of other resources, of markets, businesses, property, and manpower. In war, all is subordinated to the Leviathan in the interests of maximum efficency. The cruel irony of "war to save democracy" is that democracy itself becomes something else for a long time. There comes a time, too, when Mr Hyde can no longer make the transition back to Dr. Jekyll.

On the other hand, if we follow the political dictum of Aristotle, "The government should rely on itself, and not on foreign aid" (Pol., book .v) to preserve its independence, our isolation from the battle front may, it is feared, render us too isolated for comfort, and trade after peace comes to the stricken powers abroad. Then, it is said with considerable probability, that we still face the need of extreme measures of centralization and preparation for defensive war for years to come.

Faced by this dilemma, we might cast about for an escape between its horns. Our "experts" are telling the people that there is no escape, no third choice. It is not too late to reexamine the possibility of evading both disastrous courses. At present, with all respect to our Government which is harassed by this problem and which assuredly is better informed on all the circumstances in which our world crisis is enmired, we in the Middle West have not lost hope. We are honestly and honorably suggesting that America refuse the challenge to open warfare with totalitarian powers across the sea. We believe in building an impregnable defense of our own, in planes, ships, tanks, and guns. At the same time, we would guard against the internal forces of corruption. Knowing the nature of political cancers which have prostrated France and her sister nations in Europe, we can concentrate on surgical reforms and safeguards that will make possible a fuller use of our spiritual and material strength. Of primary value is our free press. Without freedom to offer constructive criticism to the Government we as a people are lost to the totalitarian principle. Without the civil right to review the problems and their solutions for our Nation in this day of danger, democracy would have no champion but the political "expert," and that is national socialism—un-American foe of free men.

We know there is a natural law for men, and a law for nations inscribed in the intelligence of men. To dominate the world is not moral, if in doing so one nation refuses freedom to the rest in the family of nations. There is every justification for a strong nation to resist aggression of such a kind. No one in the Middle West would hesitate to work to the limit to defend from such aggression our coasts and our land. We do feel sure, however, that our Nation is not bound morally, to police the world.

There is then a way out of our dilemma. By self-restraint we can coolly invent and engineer bigger and better instruments of defense, in the air, on land and in the waters of our hemisphere. The part which the humble citizen must play is not an easy one. Each man, woman, and child is called to bend his efforts, spiritual and physical, to the task of supporting for the benefit of society the legal machinery of defense. This includes working mentally and politically. It means contacting our statesmen, our Representatives in Congress and legislature, leaving no doubt in their minds that we the people are alert to the dangers that surround us.

There is no disloyalty in petitioning the Government, in writing to our President, clearly stating our best judgment in affairs that concern every human being in the United States. There is no disloyalty in calling attention to what the common conscience of men knows without special illumination that there is a moral distinction between power and authority. That individuals and governments may not become autocratic, it is the right of citizens to assemble in committees and to advocate that measures "short of war" in aiding friendly peoples be restricted to tactics that stop short of war.

Our expert leaders in America have a mandate from the people to stay out of wars beyond our Western Hemisphere. That was implicit in the expression of support for candidates on election day. The American people have a studied will to pursue the democratic way and to seek the legitimate needs of a strong, independent America.

To Outlaw Communism

EXTENSION OF REMARKS

OF

HON. LELAND M. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 8, 1941

LETTER AND RESOLUTION FROM THE CALIFORNIA ELKS ASSOCIATION

Mr. LELAND M. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution:

CALIFORNIA ELKS ASSOCIATION,
Richmond, Calif., July 28, 1941.

Representative LELAND M. FORD,
Representative of California,
District No. 16,
House Office Building,
Washington, D. C.

DEAR SIR: The enclosed resolution, passed by the California Elks Association at its 1940 reunion in Santa Cruz, is forwarded to you for your information and pleasure.

Yours truly,

E. W. DALE, *Secretary.*

Whereas the Benevolent and Protective Order of Elks has been active in its opposition to communism and the infiltration of communism into our communities, State, and Nation; and

Whereas we believe that the Communist Party in California and in other States of this Nation does not represent a party but a form of government, whose avowed purpose is the overthrow of our Government by force and violence, and whose party objectives are contrary to and opposed to fundamental principles and laws of the Republic: Now, therefore, be it

Resolved, That the California Elks Association in convention assembled at Santa Cruz, Calif., do hereby petition the Congress of the United States of America and the Legislature of the State of California to enact such law or laws as may be necessary to outlaw the Communist Party as a political party in this State and Nation and to prohibit it from appearing upon any ballot in this State or in the United States of America; be it further

Resolved, That a copy of this resolution be forwarded forthwith to the senators and members of the Assembly of the State of California and to the United States Senators and Representatives from California, and be forwarded to the Grand Lodge of the Benevolent and Protective Order of Elks for its consideration at the next session of the grand lodge.

Canada's View of the St. Lawrence Seaway Project

EXTENSION OF REMARKS

OF

HON. ALFRED F. BEITER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 8, 1941

EDITORIAL FROM THE MONTREAL (CANADA) GAZETTE

Mr. BEITER. Mr. Speaker, as a member of the Rivers and Harbors Committee, I recently visited Canada on an inspection trip of the site for the proposed St. Lawrence seaway and power project, International Rapids section. When in Montreal I was handed copies of the Montreal Gazette, dated July 18, in which the attached article appeared.

I believe that this editorial clearly states the attitude of the Canadian people in respect to the construction of the St. Lawrence project at this time. My personal contacts and investigations of the question in Canada have convinced me of the fact that the Canadian people do not feel that they should go into such an expenditure of men, money, and materials at this time, when they are so sorely pressed for all of these in their own defense program. Therefore, I take this opportunity of calling the attention of all members of the House to this editorial:

[From the Montreal (Canada) Gazette of July 18, 1941]

OUR SEAWAY VISITORS

Members of the Rivers and Harbors Committee of the United States House of Representatives arrive from Washington today for a visit to Canada, more particularly to the site of the propose St. Lawrence Seaway development. It is expected that most of the 15 Democrats and 10 Republicans who comprise the committee will be in the party, which will also include engineers, diplomats, and newspapermen. They will all be entertained by the Canadian Government and will have, we may hope, an enjoyable visit. They are welcome to this country—and to Montreal where they will be on Monday—under any circumstances. How much better off they will be from looking at a lot of running water is not so certain. That they will be given any adequate idea of Canadian hostility toward the seaway enterprise, and the reasons for that hostility, is altogether improbable. It is in the last degree unlikely that, shepherded as they will be, they will be brought into contact with those leading Canadian engineers, transportation experts, economists, and businessmen who are convinced that the seaway cannot be made to serve it intended purpose, who regard the navigation facilities and power development as unnecessary and, therefore, unnecessarily costly, and who see in the project a very serious diversion of men and materials from this country's war effort and from the United States defense program.

They will not be told that this country has ample power resources now, actual and potential, or that existing navigation facilities have proven themselves more than equal to all the demands that have been made upon them. Nevertheless, they come here armed with some ideas that have been voiced by their own fellow citizens in recent hearings at the Capitol. They were told nearly a month ago by Brig. Gen. Thomas B. Robins, assistant to the Chief of the Corps of Engineers and senior member of the Rivers and Harbors Army Board, that 10,000 men would be employed on the development, 8,000 of them skilled or semiskilled workers, assuming that all phases were proceeded with. The New York Times reminded them that Canada would have to divert a like number of men; that lake harbors must be deepened for both merchant steamers and the warships that President Roosevelt proposes to build in the interior, and that if this deepening costs another $120,000,000 it will mean the diversion of another 5,000 men from industry, bringing the total to 25,000.

Then, said the Times, behind each worker along the St. Lawrence three more must stand in the mills; ore must be mined, coal and limestone provided, cement produced, steel shapes rolled, and the number of workers involved mounts to at least 75,000 and probably to 100,000. This is the outlook at a moment when Sidney Hillman, Associate Director of the Office of Production Management in Washington, has been charged with the responsibility of supplying 1,400,000 more skilled workmen for armament industries within the next 12 months. General Robins estimates that 4 years will be required to complete the St. Lawrence development and the United States newspapers are emphasizing the fact that during those 4 years both the United States and Canada will need all the men they can mobilize for the manufacture of every sort of war material if Britain is to be aided on the scale that these countries have promised. Doubtless the committee members will have these things in mind when they are looking at the river. They will not be informed that whatever the cost, Canada cannot afford it, because the official cicerones will not tell them.

Presumably, the committee still has a more or less open mind. It has heard a great deal of evidence in support of the President's project, but it has also heard the reasons upon which a widespread and uncompromising opposition, in the United States itself, is based. These reasons have been voiced by representative industrialists, leaders in commerce, and technical officers, the substance of the objection being that the projected undertaking is unsound, unnecessary, and will be an impediment to the defense program. It is unlikely that the committee will find itself in a better position to judge between the arguments of promoters of the waterway and those of the opponents merely by looking at the flowing water, but the splendid spectacle which the St. Lawrence affords should give

them a more accurate idea of the magnitude, and the ultimate cost, of the project than they have been able to obtain in Washington. This should be some help in determining whether the work ought to be undertaken in time of war or deferred until a period when it will not interfere with the winning of the war.

This Nonsense About Farm Greed

EXTENSION OF REMARKS

OF

HON. FRED C. GILCHRIST

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 8, 1941

EDITORIAL FROM THE DES MOINES REGISTER

Mr. GILCHRIST. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Des Moines Register of August 6, 1941:

[From the Des Moines Register of August 6, 1941]

THIS NONSENSE ABOUT FARM GREED

Every now and then we get red in the neck because of some casual remark by some nonfarmer about the supposedly pecuniary and the supposedly traditional greed of American farmers in the matter of extracting special benefits from Uncle Sam.

It isn't so much what they say that annoys us. It is rather the ridiculously biased state of mind that is demonstrated by the ease with which these critical phrases slip out.

And it is amazing how many quarters they continue to come from.

It is not particularly suprising, despite 20 years of pretty harsh education, including the great depression, when some unadulterated eastern industrialist shows that even yet he has learned nothing along this line.

It is certainly not surprising when some of the small-fry spokesmen for the old, narrow, completely industrial point of view demonstrates that he hasn't yet even caught up with the new enlightenment of a good many of his chiefs.

But it irks us rather particularly when we find some of our "intellectuals," who are not really associated in any self-interested way with the economic groups that in the past have been chronically supercilious and unfair toward agriculture, exhibiting the same bias.

When men who are fundamentally students, who know a lot about history, who have every reason to be familiar with the record of Government's relation to economic groups in this country, prove to have the same gigantic mental blind spot about agriculture, we have no explanation except the simple one that for several generations our whole national thinking was dominated by a chronic city-mindedness that really looked on the farm and farmers as at best a necessary evil.

It was a very casual and even apparently innocent crack by one of these intellectual gentlemen in (of all places) the book-review section of the Sunday New York Times that got us boiling again.

It was just a simple remark about "greedy pressure groups" that, particularly in this time of crisis, threatened to upset Uncle Sam's apple cart by refusing to subordinate their selfish group interests to the national interest and, specifically, by grabbing for more and more special benefits at the expense of Uncle Sam's Treasury and of the American consuming public.

In this gentleman's casual listing of such groups, agriculture came first.

The blunt truth is, as every scholar who will divest himself of prejudiced impressions knows, that the record of governmental economic benefits extracted by special groups through the long years has been a record of overwhelmingly greater success for the nonfarm groups than for the farm.

As a matter of fact, it was the regular, constant success of these other groups, involving steady discrimination against agriculture, that brought about eventually so glaring and disastrous an imbalance within the country as to be largely responsible for the severity of our break-down in 1929. It was that which was responsible for bringing forth, belatedly, the farm drive of the last 20 years for the restoration of economic balance—for the idea called parity.

And, because as a nation we had got so confounded used to having the flow of Government favors all run the other way, the common reaction, when American farmers for the first time since the Civil War began to get some compensation, was to say the least unusual.

It was so novel for the farm to get any kind of break at all that it was looked upon—in all sincerity, even though that was naive—as positively immoral.

When the farm "runt," which had been crowded out of the trough of Government benefits for generations, finally got a chance and rushed in for a relatively modest swig, the big swiggers were horrified.

And the spirit of that absurdly unfair indignation still exhibits itself, even in current discussions.

Now, against that background, we want to call attention to a statement made a few days ago by the head of perhaps the largest and most influential of the Nation-wide organizations of farmers—by Edward A. O'Neal, president of the American Farm Bureau Federation.

What was it that this alleged apostle of unmitigated group greed said to an assembly of farm leaders July 29 at Florence, Ala.?

Well, what do you suppose he said?

This is what he did say:

"I know of no more certain method of bringing about wild inflation than for farmers to drive prices now as high as traffic will bear.

"I counsel farmers to stick to the reasonable demands we have made for 20 years. We have won parity, therefore let us be thankful.

"Let us not make the mistake of getting greedy and insisting on getting more than parity just because we could possibly get higher prices during the emergency period.

"Our own agricultural issues are overshadowed by the issues that face us as a Nation, and to meet those issues we must pledge 'our lives, our fortunes, and our sacred honor.'"

Actually, as Mr. O'Neal implied, the aim of the organized farm drive during the last 20 years has been a deliberately limited one.

It has always had in mind the necessity of workable economic balance among our great groups. It has always had in mind "consumer" considerations.

And now what this particular national-farm-organization leader is saying to his own people is merely that they must remember and abide by their own self-imposed limitations and not be tempted to exceed them merely because there appears to be a temporary "good chance."

Farm leadership and farm organizations have not invariably been all-wise. They probably won't be in the future.

But we certainly think that until the top spokesmen of all other great economic groups declare themselves as categorically for restraint in their own policies, there is no more excuse now than there has been in the past for keeping up the old sport of throwing stones at agriculture.

The glass habitations of the habitual stone throwers dot every hill on the landscape.

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, August 8, 1941

EDITORIAL FROM THE PASSAIC (N. J.) HERALD-NEWS

Mr. CANFIELD. Mr. Speaker, that Canadians are not taking too kindly to the American efforts to force through the St. Lawrence seaway project at a time when all her resources are needed for the essential war effort is indicated by a recent editorial in the well-known Montreal Gazette.

Why Americans, determined to promote national defense and at the same time curb nondefense spending and the trend toward inflation, should pay attention, is strikingly emphasized in the following editorial in the Passaic (N. J.) Herald-News:

[From the Passaic (N. J.) Herald-News]

CANADA DOESN'T NEED SEAWAY

There have been evidences before that the much-touted St. Lawrence seaway and power development project was not regarded with any real favor in Canada, especially in Ontario and Quebec Provinces, where we might expect there would be the loudest shouting in its favor.

Proof of this is supplied by the admirable Montreal Gazette, one of the finest newspapers published in the Dominion, in an editorial in which it discusses the subject seriously and cogently.

Occasion for the editorial was John L. Lewis' testimony before the Rivers and Harbors Committee of our House of Representatives in opposition to the project. The Gazette, while it regretted the feeling expressed by Mr. Lewis that the project called for our making a "gift" to our neighbor to the north, when that neighbor does not appear to be as all-out in its efforts for the war as we are, said frankly that he had a good case against the project.

The Gazette insists that the Ottawa government take proper steps to secure authentic publicity in the United States of the full measure of Canada's formidable war effort. As for the "gift" notion, the Gazette says:

"There is nothing of the color of a 'gift' to Canada in an enterprise toward the cost of which the taxpayers of the Dominion will be liable to pay $277,090,000 of an expenditure which, according to the most authoritative statement submitted to the congressional committee will amount to $579,272,000."

The vital objection to the St. Lawrence project the Montreal newspaper insists—and its insistence must hurt the cause certainly, since its argument is so convincing—is that it cannot possibly be accepted as a war project, which is the only ground upon which it could be held justified. Says the Gazette:

"Mr. Lewis would have been on stronger ground in opposing the St. Lawrence project

had he combated the pretext that the undertaking must be considered as a war project. More hydroelectric power for essential war industries is needed, but it could not be procured through the St. Lawrence scheme until some time in 1945. In 5 years the war will have been won or lost. Were this enterprise necessary to the carrying on of the war, Canada could legitimately be urged to complete it at all costs, but as this is far from the case Canada will not be able to afford to spend upon it the vast sums involved for many years to come."

The Montreal newspaper quotes Premier King of Quebec in the House of Commons at Ottawa as holding that this great project can be "justified only on the basis of war necessity" and the evidence of the Ontario Hydro-Electric Commission that it cannot be so classed. Further Canada's power resources are adequate for all war needs, and, if any lack were found, an additional 4,120,000 horsepower could be developed quickly.

"There will be general agreement" in Canada, the Gazette declares, "that the only thing that Canada can possibly do in the actual circumstance is to tell the United States Government frankly and honestly that she cannot go forward with so costly an enterprise when all her resources are needed for the essential war effort."

The person for Canada to tell is President Roosevelt. Prime Minister Mackenzie King is the man to tell him. If Canada cannot go ahead with the project, neither can we, and for precisely the same reason.

Pitiless Publicity—"The Truth and Nothing But"

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Friday, August 8, 1941

Mr. PLUMLEY. Mr. Speaker, at Montpelier, Vt., on May 24, 1940, I said:

Our domestic and internal problems are our greatest concern. As we solve or fail to solve them, so shall we stand or fall. Our all-compelling obligation and first duty is to make America invulnerable against foes from without and enemies from within our gates. Our duties abroad will to a considerable extent solve themselves as, if, and when this program is speeded to completion.

Secondary things will take second place if we make first things first.

The very perpetuity and security of our democratic institutions depend upon a logical, sensible, definite solution of America's difficult domestic problems. * * *

Unless and until we can solve our domestic problems, you know as well, as I do, that there is no future for democracy, domestic or international, as we know it.

We have plenty of troubles at home. The "red herring" of internationalism dragged across the trail should not distract our attention from nor let us lose the scent of tremendous difficulties to be overcome along the road we will have to follow at home in order to stay there.

Then on January 22, 1941, I told the Vermont Legislature:

Whether we realize it or not, we are today in the midst of a world revolution the ultimate outcome of which is unpredictable, but bound to be more far reaching than any that history as yet records. In spite of ourselves and what we would wish might be, we are close to the climax and are being forced, in our own interest, to militarize this Nation adequately to protect ourselves against the possibility of the last place where democracy, as we know it, exists becoming a slave nation to the Axis Powers. We are threatened by dangers from within and from without. There never has been a more serious hour in the history of this country or, in fact, in the history of the world. We must assume our full responsibility, meet the challenge, surmount the dangers, save ourselves and civilization.

The fact is that this is the new day of testing and trial. As Vermonters, we are again put to the test. To those of us who believe that there can be no real progress without liberty, who know that the story the ages teach is that life is really not worth living if one must live it as a slave, without liberty; for those of us, I say, there is and can be no choice. Our duty, obligation, and responsibility to our own and to succeeding generations is clear and plain. Democracy in America has ahead of it a pitched battle with forces alien to it.

* * * * *

Our Constitution provides that the President shall be Commander in Chief of the Army and Navy, and I know you must agree with me that his hands must not be tied; but on the other hand their activities should be restrained and circumscribed by laws equally as emphatically laid down, fundamentally, as the authority given him to act as Commander in Chief, inasmuch as these United States of America are assumed to be a government of laws and not of men.

Now, despite the foregoing, and although in the main I have supported the foreign policy of the President because he is Commander in Chief, I feel more strongly than ever that his domestic policies are poisonously unsound, and I believe he has made a dreadful mess of managing the country's internal affairs.

Perhaps I would not be as aggressively bitter as Frank R. Kent is, but I am compelled to admit that he is telling the unvarnished truth when he says that those of us who are following the international policies of the President are doing so because his in this emergency is the only available leadership under the Constitution.

With respect to us and our following the leadership of the President, Kent had this to say in the Evening Star of August 5:

They (meaning we) are not happy about it—

And he tells why, when he says of us—

Because of the national crisis, they would like now to forget the assaults upon common sense which have characterized this administration. They would like to put out of mind its appeals to the lowest of human appetites. They would like not to think of its success in stirring up class hatred and fomenting discontent. They would like to cleanse their systems of the resentment bred of 8 years of cheap demagogery and get behind the President in his effort to help the British beat Hitler and to equip this Nation to defend itself.

HEADLESS SET-UP

But Mr. Roosevelt is making that kind of support impossible. He is making it impossible by an exhibition of complacent incompetency unsurpassed in the history of American Government. It is so glaring that one of the administration's most consistent journalistic friends recently felt impelled to protest against what he called "the shameful climax of what has gone on ever since the defense effort began." The immediate cause of this outburst was the clash between the O. P. M. and O. P. A. C. S. over automobile reductions, which has left this great industry in a high state of helplessness and shown again the incredible silliness of a defense set-up without a head.

This is only one example. From the start the organization has been tainted by politics, filled with factions, feuds, bitterness, and bad feeling, all of which are the inevitable consequences of its headlessness and all of which have been attested not only by critics of the President but by his friends. Not long ago that highly respected Democrat of the House, Representative SUMNERS of Texas, declared that it was ridiculous to be excited over the threat to our system from the outside when it is being so tragically torn to pieces inside. And from a Democratic House committee there recently came a blistering indictment of the waste, ineptitude, and confusion of the whole defense machinery

SILENCE IN CONNIVANCE

Every reasonably informed person knows these things to be true—knows, too, that they are getting worse, not better. Everybody talks about them, but nothing is done about them because everything heads up to Mr. Roosevelt, and nothing can be done about him. In such times as these there is real reluctance to criticize the President. Yet it seems worse than foolish to pretend that things are all right when it is so clear they are all wrong. Under such circumstances, to keep quiet is to connive in deceiving the people, to their great and ultimate suffering. Responsibility for the situation, which is so bad that General Johnson asserts if something is not soon done to straighten it out, "there will be hell to pay in this country," is directly upon Mr. Roosevelt and upon no one else.

He has denied that his desk is the real bottleneck, but it is nonetheless. Appealing to the country for national unity, the people have seen Mr. Roosevelt yield first to the farm lobby and then to the labor lobby. They find him warning of the danger of inflation and yet refusing to take the obvious steps to avert it. They see him fumbling with the vital price-control problem, shrinking from placing any limit whatever upon farm prices and wages, without which the whole effort to control prices becomes absurd. They see him, with a belated and feeble protest, permitting a politically inspired tax bill to take shape, and they know that he has violated his own recommendation that every nondefense expenditure be cut to the bone.

MUCH BEYOND DISPUTE

Further, they know that he has allowed the Federal finances to get out of control; that he persists in keeping incompetent men in important positions; that he has done nothing to check the radical New Deal group, bent upon using the crisis to promote their State-socialization plans. All this and more is known beyond dispute. It is not even denied. As a result, the defense effort lags. As it grows stronger in military and naval equipment, the Nation grows weaker in every other way.

The idea that because of the war these known facts should be soft-pedaled or ignored seems a dangerous one, indeed. If that idea is to be accepted, the disaster, when it comes—as it inevitably must come—will be complete. A far better idea would seem to be for the millions who are supporting Mr. Roosevelt's foreign policy to understand fully what is going on in Washington and exert their weight to force the President into some approach to competency in the handling of our internal affairs. Because, sound as is his leadership in the foreign field, what he is doing to us at home is a crime.

Mr. Speaker, the beginning and the end of democracy, or is it?

We are the people, or are we?

The merciless, devastating truth is mighty and must prevail.

The whole truth and nothing but the truth is what we, the people, are entitled to know.

A Plea for Honesty

EXTENSION OF REMARKS

OF

HON. C. W. (RUNT) BISHOP

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 8, 1941

RADIO ADDRESS OF HON. C. W. (RUNT) BISHOP, OF ILLINOIS

Mr. BISHOP. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech which I made over the radio yesterday:

Fellow Americans, I speak to you tonight from your Capital, Washington, D. C. I come to you with a plea for honesty. Every person, whether living in a metropolitan city of the East; the prairies of the great Mississippi Valley; the slopes of California; or in the cabins of the deep South is concerned about the apparent disregard in the moral standards of our people.

I want to make some observations and suggest that we, as Americans, start this very minute to halt any further drift on dishonest paths.

From 1787, when the Constitution of these United States was established to 1917—130 years—this country followed the sound doctrines advocated by Benjamin Franklin that "Honesty is the best policy." For 130 years we were taught that expediency never had been—was not—and never would be a successful alibi for dishonesty.

In that same period of time we grew from a despised group of colonies to a great and respected country. During that time few foreign nations tried to "shove us around." True they talked about it but only two had the insanity to try it.

Our policy then was short and simple—it was just plain, old-fashioned honesty.

This policy was no accident. It was the result of the failure of the Continental Congress to keep its word during the days of the Revolutionary War. In fact, to describe the utter worthlessness of anything was to brand it as "not worth a continental." Those wise and far-seeing men who made up the Constitutional Convention insisted on honest relations between the Federal Government and its citizens.

That relationship between the Government and our forefathers for the first hundred and thirty years was one of respect for each other, and during that period honesty was the very definite policy of the Government. To pay the highest tribute to the sterling character of anything in those days was to say it was "as good as a Government bond." May I ask what happened to that phrase and to that reputation which was built up by the sacrifices of a willing and believing people? May I ask when you last heard that phrase "as good as a Government bond"?

Let me call your attention to the fact that the decline of our moral standards followed immediately after the breaking of sacred promises to the people. In 1916 an election was held in this country on the basis of vindicating the Administration for keeping the country out of another European War. The people had their choice and they voted to stay out. That word was not kept—we went in. What did we go in for? To make the world safe for democracy. What did the world get out of that war? Millions of dead; millions and millions of cripples, and a crop of dictators whose reign of terror is without equal in the history of our times.

What did we get? Very little safety—no democracy—and the start of the lowering of the moral standards of our citizens. It is no wonder that the people lost respect for honesty when their inspiration and even their Government was not honest with them.

Many times we have heard of America being great because of the training of its youth on the baseball and football field of America—and that is no idle statement. Being an old football and baseball player I know well what this training means—it means honesty. No baseball team would ever tolerate a pitcher, who once having accepted the signal for a low inside curve deliberately threw a straight ball that was hit over the fence.

No football team would stand for a dishonest quarterback, who in the huddle agreed on the play to go around left end, then when he got the ball started for right end and was thrown for a loss. Such a player would be benched for dishonesty.

These illustrations are in language that every American believing in fair play understands. Every American knows just how vital it is to follow the signals when once given and that to violate them is dishonest and disastrous.

Of recent years we have seen time and time again the Government go into a huddle with its citizens—agree on the signals—and then see them disregarded. Is there any sound reason why the people are fast becoming of the conviction that a promise and a solemn pledge, once given, is no longer to be relied upon?

A concrete example of what I refer to is found in the conduct of this Nation's foreign policy. Look at the war between China and Japan. Your Government has repeatedly expressed its horror at the way China has been attacked by Japan. It is the sentiment of the American people that the war which has been carried on for years is unjustifiable, unwarranted, and has not one single reason to be continued. Our Government has so expressed itself time and time again and while it gave kind words of sympathy and encouragement to China—it sent shipload after shipload of war supplies to Japan to be used in carrying on that barbarous war—month after month and year after year. The people of southern Illinois think that is dishonest and I agree with them.

A year ago young men in this country were told that a bill was before Congress that would require 1 year of their life for military training. On that basis it was passed. They accepted its terms and answered when called. They left their jobs, professions, and homes for a year and no longer.

It now develops that they were never intended to be discharged at the end of the 12 months of training, but are to be held for a longer period. That, according to the people of southern Illinois, is not honest, and I agree with them. If they were to have been kept for more than 1 year, they should have been told in plain language.

Who are these boys? Well, they are not only draftees but also they are men who will run this country 15 or 20 years from now. What sort of government can you expect from millions of men who as boys were dishonestly treated?

Again I ask, Who are these boys? They are citizens of these United States who have a right to think. They are thinking as you and I. Since being a Member of Congress I have visited many camps and have talked to hundreds of draftees. I have made it a point to pick up many of these fine young men who were looking for rides back to their camp as I drove through the country. They tell me that, in their opinion, we have no business outside of the Western Hemisphere.

No one has ever accused the American people of being cowards. In fact, it was Thomas Jefferson who said, and I quote:

"Whenever the people are well informed, they can be trusted with their own government."

That statement is as true today as it was 150 years ago.

And I want to say to you tonight that if any emergency did arise there would be no need to pass laws to compel these boys to stay in the Army. They would stay because they love America and are just as patriotic as you and I.

If, as has been said, it was the intention to hold our boys for more than 12 months, they should have been told before the law was passed and the American people fully informed as to the reasons why.

The need for honesty in the conduct of the Government was so truthfully set out by James E. Rockwell, in the Daily Independent, of Murphysboro, Ill., on July 11, when, in his leading editorial, he said, and I quote:

"The first essential to a united nation is confidence of the citizens in their own government.

"It is difficult for anyone to have confidence in a government which does not keep its solemn word or observe the contracts it makes with its citizens.

"Remember that even Canada and South Africa have no overseas conscription. They are actually in the war, but their draft laws provide only for service at home for drafted men. South Africans are not used outside of Africa."

Still quoting:

"Despite the fact that we are not at war, not in any danger of invasion, and that all the army needed for the defense of America could have been raised by voluntary enlistment, our Government passed a conscription law. It provided for 1 year's service by drafted men, and it was stipulated that they should not be sent on foreign service. That was a solemn contract made with these men.

"The National Guard was called into service for a year of training on the same basis. Many of these men had to make very substantial sacrifices to answer the call, but they made those sacrifices expecting to complete their training in a year and return home.

"Now it is proposed to keep these men in active service indefinitely.

"So the solemn contract with these young men is to be broken, in true Hitler fashion. They are to be retained in service indefinitely, and may be sent to Iceland or even to Ireland. And the President told us all only last fall, and said it 'again and again and again,' that our young men would not be sent into foreign wars on foreign soil."

And I am still quoting:

"We are no longer waiting for the war to come to us. There is no longer talk of the danger of America being invaded. America is now being extended from Iceland—and maybe Ireland—to Guam and Wake Island. Our 'defense zone' is rapidly becoming the entire globe, and we are roaming the globe with a chip on our shoulder looking for a war. Wars aren't hard to find."

Americans are not afraid. We Americans can play our position on the team, but the signals must be clear, and, when once given, the game must be played according to the rules.

The Selective Service Act provides that it is for Congress to decide if there is an emergency, and in the event that Congress so decides these boys can be held for more than 12 months.

We Americans have not been shown that any new emergency exists now that did not exist last year, and I propose to keep faith with these boys, their parents and loved

ones, and vote against any resolution to hold them for longer than the period agreed upon. To do otherwise is dishonest.

As a Congressman and an ex-ball player who believes in fair play, I want to say that if, as, and when the great majority of our people start on a vigorous program of insisting on absolute honesty by the Government, then, and no sooner, will America be back on the right path and again boast, with a clear conscience, about being "as good as a Government bond."

How Will the Spoils Be Divided After the War Is Over?

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 8, 1941

Mr. THILL. Mr. Speaker, we might give some thought to the problems which will arise after the war is over. How will the spoils be divided? How will European and Asiatic territory be distributed? Who will control the monetary systems of continental Europe, Asia, and Africa? How will the "four freedoms" be brought to the conquered nations? Who will feed and clothe the people who will suffer the consequences of war? Who will supply the funds to reconstruct the cities, towns, and villages that have been devastated?

I pray there will be no Nazi victory and no Communist victory. There can be no freedom for the peoples of Europe and Asia if the ideologies of nazi-ism, fascism, and communism rule the oppressed natives of the Eastern Hemisphere. I despise and reject those doctrines of enslavement which are pronounced and followed by foreign dictators. There could be no better result of the present battle between the Nazi and the "red" than a stalemate, which would mean the end of communism and nazi-ism, doctrines which mean slavery for millions.

The following article, which appeared in the Christian Century, is interesting reading:

[From the Christian Century of July 30, 1941]

IF RUSSIA WINS

(By John Haynes Holmes)

Russia is in the war. Naturally enough, most Americans are rooting for Russia to win. But before we become emotionally too involved it would be well to consider what it might mean to have Russia win this war, or her particular share thereof. What would she get out of the struggle after it is all over? We may be sure that Russia is not going to fight through to victory for nothing. After she has scorched the earth of uncounted miles of her territory, laid down the lives of millions of her sons, seen her industries ruined, her cities bombed, her treasure wasted, and her dream of a Communist utopia postponed for a hundred years, if not altogether ruined, she is going to demand compensation in the settlement. Are we sure we are prepared to grant her demands?

Let us turn away from the battle for a moment and look into the future. Visualize the time when the fighting will be done and the peace must be made. What is Russia going to say and do?

The peace table, wherever it may be set up—in Geneva, or London, or Washington—will be an interesting spectacle. There will be Churchill, Roosevelt, De Gaulle, Chiang Kai-shek, and the representatives of the governments in exile. And there will be Joseph Stalin, smiling amiably through his mustache, as he smiled in that famous picture of Molotov and Ribbentrop signing the Russo-German nonaggression pact, and as he smiled again in what is destined to be that equally famous picture of Molotov and Sir Stafford Cripps signing the Russo-British cobelligerency pact.

I

The Soviet dictator will sit along with the premiers, the presidents, and the kings. His seat will be high up, near the head of the table. For the action of Russia will have been crucial if the Allies win this war. When the peace conference meets, Stalin's decision to fight in 1941 will be regarded as vital to victory in this war, as Wilson's decision to fight in 1917 was regarded as central to victory in the last war. Stalin will be well able to say to his associates, "I won this war for you. I bore the heat and burden of the day when the struggle was most critical. Mine were the blood, the sweat, and the tears. But I won this war not merely for you but for myself, for Russia quite as much as for Britain. I must be listened to. I'll sit here at Mr. Churchill's right."

First on the agenda of the conference, undoubtedly, will be President Roosevelt's "four freedoms," as first on the agenda of the Versailles Conference were Woodrow Wilson's 14 points. With this initial discussion, Stalin will not be much concerned. He will sit there silently in his place, smiling his enigmatic smile, while the conferees debate how to establish the "four freedoms * * * everywhere in the world." Only when this question of "everywhere" comes to the fore will Stalin bestir himself. He will then say, in quiet tones, that these freedoms are interesting and undoubtedly important, but that, so far as Russia is concerned, they are not precisely * * * er * * * er * * * practicable. There will be other peoples excepted from their application, of course. Among these will be the 350,000,000 people of India.

The four freedoms having been dealt with as satisfactorily as the 14 points were dealt with at Versailles, there will next come up the question of territorial settlements. Here Stalin will suddenly become alert, and, before anybody else has an opportunity to take the floor, will draw a slip of paper from his pocket and begin, "Gentlemen." Then he will proceed to lay down Russia's terms of peace. I venture to surmise that they will run something like the following:

1. Russia will annex Finland. In 1940, Stalin will explain, Russia was very lenient with Finland. When Helsinki sued for peace after losing the inexcusable war of 1939–40, Moscow respected Finland's independence and took only certain strategic points necessary to Russia's military security. Then, when Hitler pounced without warning upon the Soviets, Finland followed suit, and Marshal Mannerheim led Finnish armies onto Russian soil. There must now be left no danger of any repetition of this offense, Stalin will affirm. Leningrad must be made safe.

2. Russia will annex Latvia, Lithuania, and Estonia. Like Finland, these countries Stalin will explain, were a part of ancient Russia. The peasants and workers of these countries are entitled to enjoy the same proletarian emancipation that has been granted to the rest of the Russian people. Furthermore, these countries, like Finland, are necessary to Russia's military security. They are her bastions and bulwarks against the chaos of western Europe. So what was done at Versailles in 1919, and undone in 1940, must now be undone again, Stalin will say.

3. Russia will annex Poland, or at least that part of Poland which belonged to Russia before the war of 1914. It is true that the restoration of Poland was one of the noble fruits of the first World War. It is true that the new restoration of Poland, after the debacle of 1939 and the fourth partition of 1940, was one of the few perfectly distinct purposes of the second World War. What did Britain go to war for if not to save Poland? In what hope did Paderewski and all his heroic countrymen live in these last months, and Paderewski himself die, if not in the hope that Poland should be born anew? But Stalin will carefully explain that he shared in none of these promises. So far as the world knows, he gave no pledge to honor them when he joined the alliance with Britain. He has no sentiment about such things.

4. Russia will insist, under one form or another, on dominating the Balkans. Czechoslovakia, Hungary, Rumania, Bulgaria, Yugoslavia, Greece will fall under her sway as they now lie under Germany's sway. What more natural fruit of a victory in arms over Germany? And to these, undoubtedly, will be added the Dardenelles, as the key that turns the lock on all of eastern Europe.

5. Russia will probably demand East Prussia as her share of a dismembered Germany. Will Germany be dismembered? She certainly will, if this war is won by Britain and her allies. And in this division of the spoil, Russia will demand her ample portion.

6. After Europe, Asia. Here speculation is not so easy. But that Russia will openly and permanently take over Mongolia is probable; and that she will seize Manchukuo from Japan is not improbable. Russia's hunger for Manchuria is as insatiable as her hunger for the Dardanelles. And then there will be the settlement for all the aid she has given to China and the payment of Stalin's debt to the Communist armies in that divided country.

II

Such is the memorandum of demands which Joseph Stalin will quietly but firmly lay before a peace conference gathered some years hence to liquidate a victory which, if won, will be won largely by his arms. Just Stalin's little bill for services rendered. And that bill will be paid, be sure of that, to the very last farthing. When Churchill hailed Stalin as an ally and Roosevelt pledged to him support in this war, this indebtedness was acknowledged. When Britain signed the cobelligerency pact in Moscow, she signed a blank check to be filled in later by Russia. The outcome, if victory is won, is certain. After an immeasurably exhausting effort to destroy Nazi totalitarianism, the world will have succeeded only in putting in its place a more powerful, more widely extended, and therefore more formidable Communist totalitarianism.

Does this mean that I do not want Russia, and with her Britain, to win this war? That I desire a German victory? Not at all. I do not hope for an outcome of this war in terms of victory, but rather in the familiar Wilsonian terms of "peace without victory." Not otherwise, it seems to me, can the interests of humanity be served in contrast to the interests of nations and empires. As I clung to this formula when Britain was fighting alone against Germany, how much more do I now cling to it when Russia has become the possibly deciding factor in the fray. Her entrance makes it certain that, if victory comes to either side, the triumph of totalitarianism is inevitable. There is no solution of our problem of peace in any victory in this war. Only "a peace without victory can last."

What has happened to our minds that we fail to see these plain implications? This is what war does to us. This is what happens when we loose the forces of violence and

expect them to bring us salvation. Everything passes out of control. The worst turns to the best. All the high purposes and ideals with which we entered the fight become poisoned or lost. Our minds become palsied and our consciences dead. In the struggle to beat down our enemy, lest he beat us down, we resort to any means, however vile, that promise to be effective. We accept any ally, however disreputable or dangerous, who agrees to help us out. Before we know it we are crying with Satan, "Evil, be thou my good."

Stalin says that "our war for the freedom of our country will merge with the struggles of Europe and America for their independence, for their democratic liberties." "Democratic liberties"—that phrase is as blasphemous on the lips of Stalin as it would be on the lips of Hitler. Russia in alliance with Britain, as in alliance with Germany, remains what she was and is—a totalitarian dictatorship to be matched point by point with the dictatorship of the Reich. And now we find ourselves fighting against the latter to save the former! Where is democracy in such an issue? What becomes of liberty in such a fight?

This is the insane whirligig of war! Lift up the banner and draw the sword, and this is where we land. Our cause lost, our hope doomed, our integrity sacrificed—and all for nothing!

The Gallup Poll and the Townsend Plan—American Public Approves Federal Old Age Pensions

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, August 8, 1941

Mr. ANGELL. Mr. Speaker, the Gallup poll on old-age pensions, released on August 7, is a timely and illuminating report. It shows that our American people in all sections of the country are definitely in favor of universal Federal old-age pensions, with payments of sufficient size to provide adequate care for our citizens who are 60 years of age and unemployed. It shows complete disapproval of the existing social-security program for old-age pensions where the average payment throughout the country as a whole is only $20 a month and, in many sections, below $10.

In answer to the specific question propounded in the Gallup poll, which was Nation-wide, 91 percent of our people favor a Government pension and only 7 percent registered opposition. Sixty-four percent answered that the pension should begin at 60 or below, whereas only 36 percent were in favor of an age of 61 or upward. In answer to the question as to the monthly payments that should be made, the national average of the replies show $42 for a single person and $73 for a married couple. These amounts were considerably increased in all sections of the country, with the exception of the West Central and the South. The lower figures in these two sections of our country brought down the national average very materially. The South approves a payment of only $32 for a single person. It should be noted that the South is the portion of our country where the lowest pensions are paid under the present Social Security program. It is interesting to note in this connection that the younger voters of our country definitely approve of this program for Federal old-age pensions, and the voters in the age group of 21–34 approve a payment for a single person of $48 and a married couple of $77, which is considerably higher than the national average under the Gallup poll.

The second section of this poll has not yet been released by the American Institute of Public Opinion, but it is reported that it will show that 70 percent of the voters express a willingness to pay 3 cents out of every dollar of their income until they are 60 years of age in order to get a pension from the Government of $50 a month after they are 60, and only 18 percent expressed an unwillingness to do so. Here again the lower age group, 21 to 29, had a greater majority in favor of being taxed to pay for a pension 77 percent being in favor of the tax.

Mr. Speaker, the results of this poll show that the American voting public approve in broad outline the program which has been advanced by the Townsend organization. The strength of the Townsend plan lies in its soundness and simplicity. It is a universal Federal program providing an old-age pension for all American citizens over 60 years of age, unemployed, financed by 2-percent gross income tax on incomes in excess of $250 a month, the funds to be distributed pro rata to all citizens 60 years of age qualifying under the act. Contrary to widely prevalent belief, the Townsend plan does not provide for $200 a month pension. This is wholly and completely false. It is estimated that under present conditions the funds raised under the Townsend plan would provide a pension of approximately $50 a month for each annuitant, which, it will be noted, is about the amount approved by the voters in the Gallup poll. Statisticians and economists who have studied the plan have arrived at the conclusion that its costs will be below the 3 percent named in the Gallup poll. Furthermore, one of the major objectives of the Townsend program is national recovery. Under it the funds received each month by the annuitant must be spent within 30 days, which will insure continuing increased purchasing power on a pay-as-you-go basis, without adding to the national debt and without taxing industry to accumulate a huge reserve fund, as is done under the social-security program. The draining from industry of these huge pay-roll taxes and freezing them in a reserve fund has contributed to unemployment and prevented business recovery.

Following is the Gallup poll as released August 7:

THE GALLUP POLL—OLD-AGE PENSIONS OF $42 A MONTH FOR SINGLE, $73 A MONTH FOR MARRIED PERSONS ARE FAVORED

(By Dr. George Gallup, director, American Institute of Public Opinion)

PRINCETON, N. J., August 7.—The perennial issue of Government old-age pensions may be thrown in congressional laps shortly as the result of hearings now being conducted by a special Senate committee under Senator DOWNEY, of California. Washington observers report that the committee is virtually certain to recommend a liberalization of the pension system, and predict that a bill supported by Dr. Townsend or some similar measure may reach a vote in the Senate.

In such circumstances no question is more timely than to ask: Where does the American public now stand on old-age pensions? Is the public satisfied with the amounts granted to needy citizens at the age of 65? What sums would be paid if the general public set the scales?

As the pension question boils to the top once more, a Nation-wide survey by the American Institute of Public Opinion indicates—

1. That the vast majority of citizens (more than 90 percent) approve of the basic principle of Government-administered pensions. In the last decade the idea that old-age security is a Federal responsibility has apparently taken firm hold.

2. While the public shows dissatisfaction with the amounts now being paid to needy old people (present amounts average about $20 a month for the country as a whole) the typical American's idea of what his Government should pay is a moderate one.

Nor have the public's sums increased substantially over the past 5 years, despite rising costs of living, comparison with earlier institute studies shows.

3. Far from endorsing schemes like California's recent drive for "Thirty Dollars Every Thursday," the average American sets a figure in the neighborhood of $42 a month for single persons and $73 for married couples.

4. Finally, the public believes that citizens should become eligible for old-age pensions at the age of 60 instead of 65, as now provided by the Social Security Act.

7 PERCENT OPPOSE PENSIONS

In the preliminary question the institute asked: "Are you in favor of Government old-age pensions?" From a cross section of men and women in the United States voting population came the replies:

	Percent
Favor Government pensions	91
Oppose Government pensions	7
Undecided	2

Asked at what age pensions should begin, most voters named 60 years of age:

	Percent
Should begin before 60	17
Should begin at 60	47
At 61 or later	36

The survey voters were then asked: "What do you think is the smallest income per month that a single person over 60 needs for a decent living in your community?" And a similar question was asked regarding married couples over 60.

SECTIONAL OPINIONS

Here are the sectional medians for single persons and married couples on the basis of replies from the voting population—those who can make their opinions felt at the ballot boxes:

	Median monthly sum for single person	Median monthly sum for married couple
National average	$42	$73
New England	50	78
Middle Atlantic	50	78
East Central	42	74
West Central	37	59
South	32	59
West	48	76

Broken down by age levels, the medians are:

Voters aged—	Median monthly sum for single person	Median monthly sum for married couple
21 to 34	$48	$77
35 to 44	46	74
45 to 59	41	73
60 and over	40	62

Among other groups the highest medians for a single person were set in the upper income group (49 a month) and among people living in cities of more than 100,000 population (52). Lowest medians for single persons came from the bottom income groups and from farmers in general.

Sense of Humor

EXTENSION OF REMARKS

OF

HON. LUTHER PATRICK

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 8, 1941

Mr. PATRICK. Mr. Speaker, the gentleman from New Jersey [Mr. POWERS] took occasion to have a word for me on the floor last Monday, assailing my modicum of humor. While I may speak admiringly of his courage, for it did require certain courage in him to so take a fellow Member, yet I must add that the gentleman is all wet. Yes, fellow Members of Congress, Mr. POWERS is all wet. I know he is on the Appropriations Committee, a valuable member too, and he can stay there for my part—but the gentleman remains in the all-wet corner. The mistake he makes is a common one, and having more solemn sense—as good as it is to have—than sense of humor, he will probably remain mistaken and never be able to see or even feel the difference. But the difference is important.

Now, a sense of humor is a great deal more than merely being able to stir up a joke. It is even more than being able to stir up an appropriate joke. Yes, it is more than being able to honestly laugh at a joke. Humor is the saving grace of a sense of proportions. If a man has a sense of humor he has a sense of balance, a sense of the teeter-totter of values—oh, that is it—I have been chasing the term for years and never caught up with it till this minute—humor is the teeter-tooter of values and proportions. Eureka!

Humor prevents a man from taking himself too seriously and allows him to laugh when his own foot is caught in the stirrup. It is that warm quality which allows intelligent men to exchange pleasantries, witticisms, and jokes while sinister war shadows fall upon their way of travel or while they see their nation's debt or family debt mounting daily. They say, "Well, we have that, we shall have this, too." And, glory be, they do have it.

There is no better sign of a secured freedom nor the spirit of true democracy in this land than to see Americans cheerful and out for their diet of entertainment. Compare this country with serious, dour Russia, or with grim, stern Germany. The expanding spirit must be happy. Who started this stuff about humor and intellectuality being strangers? Humor abounds with life but also holds to sound sense the while.

I know what ails the gentleman from New Jersey. He thinks that a cheery or light-hearted approach to a serious subject is necessarily frivolous; feels that light steps cannot lead anywhere. That is where he slips up. He merely needs to open the cockles of his heart and let a little humor ooze through and oil up the stifle valves around those cockles. Then he will be able to understand many things that have mystified and puzzled him all his life. He will see waste places along his pathway suddenly burst into vegetation, life, and interest. He will see dull and listless things become objects of action and vigor. He will find doors opening where he thought only barren walls stood reaching to the sky.

You see, humor is not only smart, it is quickly practical—and do not confuse humor with mere wit. Wit may hide in a cat's ear, but humor is big as the outdoors—humor must be practical. It has to know that human nature is not perfect, that it often fumbles and stumbles, turns its ankle and falls down, sometimes spilling its load. But what does humor do? Runs up smiling and puts a hand under—forgives, overlooks, understands. Humor knew it would most likely happen, and so did not think the world would end and the Heavens fall when it did happen. Humor is kind, is human, is tolerant, and is willing to be helpful. Humor is the set of springs in the automobile, the sunshine by the roadside, and the mirror in the bathroom of life. Disregard the bland smile or the smirking grin if you will, but do not get snooty around the homey chuckle. There is medicine in it—and it may be good for what ails you, especially when times are serious, and when lawmaking is a heavy business. Now, I am ready to take up some other subject.

The Congressional Front

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 8, 1941

THAT OLD RAGMAN

Mr. DIRKSEN. Mr. Speaker, do you remember that old ragman with the rickety wagon and skinny horse who drove up one alley and down another in your town and mine and in a resonant sing-song voice cried, "Rags and old iron, rags and old iron." Perhaps he did not rate as one of the elite 400 in those days but today he becomes extremely important as one of the vanguard of national defense. Our steel mills must produce 82,000,000 tons of steel annually in order to meet the demands of defense. Bars, plates, shapes, rods, and a host of other forms of steel are indispensable to the building of ships, tanks, guns, and other military and naval instruments. To make this amount of steel requires about 30,000,000 tons of scrap. Whence comes this scrap? There are the farms and farm yards where worn-out machinery is eligible for the scrap heap. There are the used-car graveyards where an estimated four to seven million rusty chariots might each yield about 1,500 pounds of iron and steel scrap, 20 pounds of aluminum, and 60 pounds of copper and brass. Finally, there is that indescribable array of iron and steel lurking in backyards, cellars, attics, and obscure corners of the land, ranging from rusty sewing machine frames to worn-out lawn mowers, which might be gathered up, taken to the junk yards, and then transported to the steel mills. But who shall gather it and haul it to the market? Upon whom must we depend for scrap that the steel mills might operate to capacity? Why, it is that old man with the rickety wagon and skinny horse with whose melody even the children are familiar as he sings, "Rags and old iron." He is part of defense.

DEBATERS' HANDBOOK ON DRAFT EXTENSION

The Selective Service Act became law on September 16, 1940. It was approved in the House of Representatives by a vote of 263 to 149. It contains three limitations. The draft Army is limited to 900,000 at any one time. Selectees shall serve for 1 year unless Congress extends the term because of a national emergency. Service of selectees shall be limited to American possessions and to the Western Hemisphere. The new measure proposes that two of these limitations shall be modified or rubbed out entirely. The draft extension bill proposes to remove the limit on the number of men in the selective-service forces so that if appropriations are available, it can become an army of unlimited size. The bill also proposes to keep selectees in service for an indefinite period. The United States Senate set a limit of 30 months, but military authorities have consistently expressed a desire to retain men in service for the emergency which means an indefinite period. This bill when reduced to its simplest terms, therefore, proposes a selective-service force of unlimited size for an indefinite period. Shall it be enacted into law?

THE CASE FOR THE BILL

The proponents of this measure contend that it should be enacted because—

First. We are confronted with a serious emergency in the Orient, in South America, and in Europe.

Second. The inductees, only now, after a period of 12 months' training, have developed real military value as a part of our defensive forces.

Third. Discharging them at the end of 12 months would seriously disrupt the efficiency and morale of our present defense establishment.

Fourth. Discharging them now would make it necessary to return some of the selectees from the occupation forces at some of the vital new bases on the Atlantic coast and in Alaska and would present a serious problem both in transportation and in impairing the strength of those occupying forces.

Fifth. Congress has authority under the original Selective Service Act to retain selectees for a longer period than 1 year if a national emergency warrants such action.

Sixth. Discharging the selectees now would leave the United States undefended.

THE CASE AGAINST THE BILL

The bill should be defeated, say the opponents, because—

First. Retaining them in service would be a breach of faith not only with the inductees but with their families.

Second. While it is true that the original act provides that they may be retained by further legislation in the case of an emergency, this provision of the law was played down at the time of passage of the original act.

Third. Spokesmen in both Houses of Congress repeatedly asserted at the time of the passage of the act that it was only for a period of 1 year, and to retain them longer would be a breach of these assurances.

Fourth. The selectees are so distributed through our armed forces that only a small number would be relieved at the end of each month and their discharge would not impair our military efficiency. Figures indicate that slightly less than 14,000 would be eligible for discharge in November and slightly over 5,500 in December.

Fifth. If all of the 613,000 selectees now in the armed forces were relieved at one and the same time, it would still leave a defense force of 750,000 composed of Regulars and National Guardsmen, and that this force is adequate for all defense purposes.

Sixth. The selective-service army should not be increased until the Nation is more definitely advised what we propose to defend, where we propose to defend it, and how we propose to defend it.

Seventh. An army of unlimited size would be an open invitation to become involved in the present war and send an American expeditionary force to foreign soil.

Eighth. To rub out two of the three limitations in the original act becomes a standing invitation to eliminate the other limitations which prevent the use of selectees beyond the Western Hemisphere and open the door to the involvement in war.

Ninth. Selectees are now so distributed among our defense forces, both at home, in the islands, and in our new bases, that a very small percentage of the Regular Army would be required to replace them.

First Monthly Report of Government Finances, Fiscal Year 1942

EXTENSION OF REMARKS

OF

HON. EDWARD T. TAYLOR

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 11, 1941

LETTER AND STATEMENTS FROM THE SECRETARY OF THE TREASURY

Mr. TAYLOR. Mr. Speaker, under leave previously granted to extend my remarks in the RECORD, I include the following letter and statements from the Secretary of the Treasury concerning receipts, expenditures, the public debt, and other pertinent data relating to Government finances. Each month, commencing with January of this calendar year, I have placed exhibits of this character in the RECORD. There have been six of such monthly statements for the fiscal year 1941, commencing with January and ending with June last. The following tables bring the data down to the end of July, which is the first month of the fiscal year 1942:

TREASURY DEPARTMENT,
Washington August 11, 1941

Hon. EDWARD T. TAYLOR.
Chairman, House Committee on Appropriations,
Washington D C

MY DEAR MR CHAIRMAN: By direction of the Secretary and in accordance with the arrangements made with you as outlined in his letter of January 31, 1941, I am enclosing herewith the following statements:

Statement No. I, general Budget summary: Receipts and expenditures, showing (1) Budget estimates for the fiscal year 1942 and actual figures for the fiscal year 1941, and (2) actual figures for the first month of each of the fiscal years 1941 and 1942.

Statement No. II, effect on the public debt of financing the deficit, showing (1) estimated amounts for the fiscal year 1942, and actual figures for the fiscal year 1941 and (2) actual figures for the first month of each of the fiscal years 1941 and 1942. This statement shows the extent to which the net deficit has been met through borrowings and reductions in the Treasury's cash balance. It also shows the debt at the beginning and the close of each period.

Statement No. III, statutory debt limitation, showing the amount of the debt outstanding which is subject to the debt limitation and the balance of the borrowing authority, i. e., the amount of additional debt which may be issued pursuant to existing limitations.

Statement No. IV, general fund balance, showing an analysis of the general fund balance and the changes therein during the period. This statement sets forth the balances at the beginning and the close of the period classified as to working balance, increment on gold, and seigniorage. It shows how the general fund balance was affected by (1) borrowings, (2) excess of receipts or expenditures in trust accounts, etc., and (3) the net deficit as set forth in statement No. I.

Statement No. V, obligations of corporations and credit agencies guaranteed as to principal and interest as of July 31, 1941. This statement shows the contingent liabilities of the Government i. e. the outstanding securities issued by corporations and credit agencies which are guaranteed by the United States as to principal and interest.

Statement No. VI, combined statement of assets and liabilities of governmental corporations and credit agencies, as of June 30, 1941, based upon the latest official reports received by the Treasury. This statement shows the total assets of such corporations and agencies, the liabilities (including reserves), and their net worth. The liabilities are segregated according to obligations guaranteed by the United States and obligations not so guaranteed. The net worth is classified as to the amounts of the Government's proprietary interest and of the proprietary interests not owned by the Government. The total amount of interagency interests of all corporations and agencies included in this statement is also shown.

Very truly yours,

D. W. BELL,
Under Secretary of the Treasury.

I. General budget summary—receipts and expenditures

[On basis of daily Treasury statements, i. e., checks paid by Treasurer of the United States. In millions of dollars]

Classification	Full fiscal years		July 1 to July 31

III. *Statutory debt limitation*

[Under sec. 21 of the Second Liberty Bond Act, as amended. As of July 31, 1941. In millions of dollars]

Limitation	----------	65,000.0
Deduct:		
Gross public debt outstanding July 31, 1941	49,512.5	
Unearned discount on U. S. savings bonds (difference between current redemption value and maturity value)	1,151.4	
	50,663.9	
Less—Debt outstanding not subject to statutory limitation	576.6	
Total	----------	50,087.3
Balance of borrowing authority	----------	14,912.7

IV. *General fund balance**

[On basis of daily Treasury statements. In millions of dollars]

Classification	Full fiscal years		July 1 to July 31	
	Budget estimates 1942 [1]	Actual 1941	Actual fiscal year 1942	Actual fiscal year 1941
Balance in general fund at beginning of period:				
Working balance	1,884.6	1,162.8	1,884.6	1,162.8
Increment on gold	143.2	142.8	143.2	142.8
Seigniorage (silver)	605.4	585.2	605.4	585.2
Total	2,633.2	1,890.7	2,633.2	1,890.7
Increases:				
Borrowings—net increase in public debt	12,065.8	5,993.9	551.1	803.0
Net receipts, trust accounts, etc.	37.8	[2] 148.1	599.2	51.1
Total	14,736.8	7,736.5	3,783.5	2,744.8
Decreases: Net deficit (statement I)	12,767.0	5,103.4	1,184.7	487.2
Balance in general fund at end of period	1,969.8	2,633.2	2,598.8	2,257.7
Analysis of general fund balances at end of period:				
Working balance	1,195.9	1,884.6	1,848.2	1,526.8
Increment on gold	143.7	143.2	143.2	142.8
Seigniorage (silver)	630.2	605.4	607.4	588.1
Total	1,969.8	2,633.2	2,598.8	2,257.7

[1] Revised June 1, 1941.
[2] Decrease, deduct.
*Figures in this statement have been rounded to nearest tenth million and will not necessarily add to totals.

V. *Obligations of corporations and credit agencies guaranteed as to principal and interest*

[As of July 31, 1941. In millions of dollars]

Corporation or agency	Limit of authority	Outstanding liabilities [1]		
		Total	Matured [2]	Unmatured
Commodity Credit Corporation	2,650.0	907.0	----------	907.0
Federal Farm Mortgage Corporation	2,000.0	1,269.5	0.1	1,269.4
Federal Housing Administration	[3] 4,100.0	16.8	.2	16.6
Home Owners' Loan Corporation	[4] 4,750.0	2,418.2	9.3	2,408.9
Reconstruction Finance Corporation	7,408.1	2,101.6	.2	2,101.4
Tennessee Valley Authority	61.8	----------	----------	----------
U. S. Housing Authority	[5] 800.0	226.3	----------	226.3
U. S. Maritime Commission	[6] 200.0	----------	----------	----------
Total	----------	[7] 6,939.4	9.8	6,929.6

[1] Exclusive of obligations owned by the Treasury.
[2] Funds have been deposited with the Treasurer of the United States for payment of all obligations guaranteed by the United States, representing outstanding matured principal amounting to $9.8 million and interest of $3.3 million.
[3] Limit of authority to insure mortgages. This amount may be increased by $1,000,000,000 upon approval by the President. Debentures may be issued and tendered only in exchange for insured property acquired through foreclosure.
[4] The Corporation was authorized to issue bonds for an amount not to exceed $4,750.0 millions to be exchanged or sold to obtain funds for financing home mortgage loans or for the redemption of any of its outstanding bonds. Its authority to make loans expired on June 13, 1936, and the above limit may only be increased for the purpose of retiring its outstanding bonds by an amount equal to the amount of the bonds to be retired, which would not affect the net amount outstanding after June 13, 1936.
[5] Represents gross limit of borrowing authority. The Corporation has issued obligations totaling $495,256,000, leaving a balance of borrowing authority amounting to $304,744,000.
[6] Limit which may be outstanding at any one time with respect to the insuring of mortgages and the issuance of debentures.
[7] The total amount of assets of these corporations and agencies is in excess of the total amount of liabilities, including obligations guaranteed by the United States. See statement VI.

VI. *Combined statement of assets and liabilities of governmental corporations and credit agencies*

[As of June 30, 1941. In millions of dollars]

Corporation or agency	Assets		Liabilities			Net worth	
	Exclusive of amounts due from Government corporations and agencies	Due from Government corporations and agencies [1]	Obligations guaranteed by the United States [2]	Due to Government corporations and agencies	All other (including reserves)	Proprietary interest of the United States	Other
Commodity Credit Corporation	1,082.2	15.0	697.4	140.2	159.2	100.4	----------
Federal Farm Mortgage Corporation	1,472.1	2.7	1,279.1	1.7	94.0	100.0	----------
Federal Housing Administration	86.3	----------	17.6	----------	4.6	64.1	----------
Home Owners' Loan Corporation	2,491.6	100.0	2,435.5	----------	48.5	107.6	----------
Reconstruction Finance Corporation	1,646.3	1,065.0	1,746.7	69.0	360.4	535.2	----------
Tennessee Valley Authority	401.5	.8	----------	57.2	18.0	327.1	----------
U. S. Housing Authority	455.8	----------	227.0	85.0	6.0	137.8	----------
U. S. Maritime Commission	442.4	12.0	----------	----------	285.6	168.8	----------
Federal land banks	2,233.8	8.2	----------	.5	1,806.5	213.5	221.5
All other	3,726.1	366.7	----------	765.1	992.3	2,132.9	202.5
Subtotal	14,038.1	1,570.4	[3] 6,403.3	1,118.7	3,775.1	3,887.4	424.0
Less: Interagency interest shown above	----------	−1,570.4	----------	−1,118.7	----------	−451.7	----------
Total	14,038.1	----------	[3] 6,403.3	----------	3,775.1	3,435.7	424.0

[1] Includes capital stock and paid-in surplus of Government corporations and agencies.
[2] Includes principal and accrued interest.
[3] Excludes $301.7 millions held by the Treasury.

NOTE.—The foregoing figures are compiled from latest reports received by the Treasury Department from the respective corporations and agencies. The amounts covering obligations guaranteed by the United States differ from those shown in table V for the reason that they are stated in this table as of June 30, 1941, instead of July 31, 1941, and include accrued interest.

Dedication of Kingsley Dam, Nebr.

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, August 11, 1941

ADDRESS BY K. SEWELL WINGFIELD

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by Mr. K. Sewell Wingfield, as the representative of Hon. John M. Carmody, Administrator of the Federal Works Agency, at the dedication of Kingsley Dam, Nebr., on July 22, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The Public Works Administration is proud to have a part this afternoon in the dedication and presentation of this enormous dam and this wonderful lake to the citizens of Nebraska. Both Mr. Carmody, Federal Works Administrator, and Colonel Gilmore, Commissioner of Public Works, had hoped to be present today but the pressure of work in the interest of national defense has detained them in Washington. They have sent me to represent them and have asked me to express their regret at not being able to be here and to convey to you their sincerest congratulations upon the completion of this great project.

When Senator NORRIS learned that I was to speak today he asked me to read to you a letter of congratulation which he had just received from the President of the United States. I quote:

"DEAR SENATOR NORRIS: I feel that the dedication of Kingsley Dam in your State must not be allowed to pass without my expressing to you, and through you, I hope, to the people of Nebraska, my congratulations and my personal satisfaction over the completion of this splendid undertaking.

"This great dam, largest earth-filled dam in the world, save for Fort Peck, in Montana, takes its place in the front rank of the monumental structures this Nation is rearing to conserve our national resources and use them to build a stronger nation and a better life for our people. It will bring new life to drought-ridden farm lands, new hope and well-being to the victims of the drought.

"It makes possible a unified power pool, unique in certain respects, owned and controlled by the people, serving a very large proportion of the citizens of the State with electricity for their homes, their farms, and their factories. In this light the dam represents an epochal triumph for you, Senator, as the dauntless leader of the public-power movement in America and for the people of Nebraska working with their Government.

"It is a tragic circumstance that such triumphs so often must be achieved against the bitter opposition, legal and political, of short-sighted private interests. Yet all of us may take heart from the amicable settlement of this conflict in Nebraska through the purchase of the private utility facilities by the public power systems on terms which I am assured are fair both to the people and to the companies. The lesson we have all learned from this may point the way for other communities, if there be any, where there is strong and clear-cut demand from the people that power be publicly owned and publicly distributed.

"Again, congratulations to you and to those who have labored with you in the development of this great public enterprise.

"Very sincerely yours,

"FRANKLIN D. ROOSEVELT."

I am particularly happy that I should have been chosen to represent them here in Nebraska. My visit today is like coming back home. For 3 years prior to last September I was here in charge of P. W. A. work on all power and irrigation projects. Those 3 years were among the most inspiring of my life.

During that period of time I came to appreciate the spirit of devotion to their less fortunate fellow men that animated men like George P. Kingsley and C. W. McConaughy, both of whom labored on through disappointment after disappointment in their efforts to bring irrigation to the people of central Nebraska. It is indeed fitting that their names should be handed down to posterity and that Kingsley Dam and Lake McConaughy should commemorate their service for all time. But while we dedicate this great project, let us not lose sight of the fact that the entire irrigation and power development of the central and eastern parts of Nebraska are primarily the result of the untiring efforts of Senator GEORGE W. NORRIS. I hope that I may say that during the 3 years I spent in this State, I also grew to a better understanding and appreciation of the service Senator NORRIS has long rendered his fellow men, and of the democratic principles that have animated his whole life.

GEORGE W. NORRIS, above everything else that he may be, is an outstanding fighter for the principles of democracy. Time and again in his long career he has followed those principles regardless of party—regardless of self-interest. He has been a Senator in the finest sense of the word, because he has not only served his State, but has labored ceaselessly for his country. And he who serves his country best serves also his fellow men best.

It is hard for us to realize that just 10 years ago the efforts of Senator NORRIS to make available the great resources of the Tennessee Valley to the people were for the second time being blocked by a President of the United States. It is hard for us now even to imagine all the obstacles that were placed in the way; hard for us to remember all the details of that long, bitter fight which had to be carried on before Senator NORRIS had the opportunity of working with a President who shared his ideals. While the Nation as a whole is more familiar with the achievements of Senator NORRIS in the Tennessee Valley, you who have been participants in the battle here in Nebraska know that nearest to his heart has been the best development and use of the waters of this State for the people of this State. As a dramatic proof of the wisdom of the progress for which Senator NORRIS has been fighting, the droughts of the last few years have come just at the time when the irrigation projects were under construction. Now there are a few of your citizens who have not been convinced, either by Senator NORRIS or by nature, of the necessity for the proper conservation and use of your waters.

You remember the slow disillusionment of the ardent pioneer who followed the railroad and settled on your Great Plains. The spirit that was bold against the Indians, persevering in the erection of sod houses, gradually broke in the fight for water. The research of the scientists at your great university told you that crops should be diversified, but you learned through sad experience that there was not enough water for that necessary diversification. Corn and wheat—wheat and corn—were planted year in and year out, but little or no alfalfa, and always, to use Senator NORRIS' expression, you were "on the ragged edge, waiting for rain."

In 1914, under President Wilson's administration, Senator NORRIS secured a congressional appropriation of $10,000 for a study of the water resources in Nebraska. The people of Nebraska themselves raised money to help in this study. You probably remember that the first report was discouraging, but Senator NORRIS was not to be discouraged; unflagging, he continued his work. In 1922 he introduced into the Senate a resolution calling for an appropriation of $5,000 for a reinvestigation. By the time it got through the House of Representatives and became a law, however, it merely authorized the Bureau of Reclamation to make an additional investigation if money was provided from other sources. Once more the people of Nebraska raised from their own funds the necessary money for the report.

In June 1924 Senator NORRIS introduced a resolution and got it passed through the Senate appropriating $300 for expenses of a visit to Nebraska of the Committee on Irrigation and Reclamation. After the visit hearings were held on Senator NORRIS' bill providing for irrigation in Nebraska. Many of you here probably remember the testimony of Mr. McConaughy and Mr. Kingsley, as well as that of Senator NORRIS, back in 1925. Senator NORRIS' bill proposed to have the Treasury lend some $40,000,000 for the purpose of building reservoirs and canals necessary for this irrigation. His bill was passed by the Senate, but the cooperation which he received from the House of Representatives was insufficient to get the bill passed there.

The plan at that time, as many of you know, was to build the Plum Creek Reservoirs and irrigate from them, as well as directly from the Platte River at flood stages. The hold-up came when it was found that the reservoirs would produce power, and here the liberalism of Senator NORRIS was once more put to the test. There is little doubt that he could have got the passage of the bill by the House if he had been willing to do away with the power aspects of the project or to turn over the power practically free to the private power companies. In other words, if he had been willing to deprive the people of Nebraska of the power which the water generated, the Electric Trust, as he called it in those days, would have allowed the people the privilege of irrigating their own farms; but Senator NORRIS would not make such a compromise at the people's expense.

As the fight developed, the opposition of the private power companies became more serious; their attack came from many parts and in many guises. Even local railroads, which stood to benefit by the prospering agriculture the project would develop, were forced to reflect the opposition of the eastern money interests that controlled both them and the power companies.

It was not until President Franklin D. Roosevelt was elected that this great irrigation project could go forward. And it was not too soon. Crop failures were becoming more frequent, landowners were losing their homes, and it was more and more difficult to hold young people on the farm. In 1933 your State legislature passed Senate File 310, permitting the establishment of irrigation and power districts, and Congress created the Public Works Administration to give Federal aid to power and irrigation, and other permanent and useful projects. Many districts were organized, and most of them applied immediately to Washington for financial assistance.

As you will probably remember, Senator NORRIS urged from the beginning that applications from the two chief districts taking water from the Platte River should be considered together. In the rush of the early days this did not seem feasible; but I think

there are few now who do not realize that Senator NORRIS' suggestions were wise, and if they had been followed would have avoided many difficulties. As it was, the projects which were not opposed by the power companies were the first to get allotments, and it was only after the expenditure of much time and energy on the part of the friends of Tri-County that an allotment was finally made in 1935.

With the approval of Tri-County's application, and the growing realization both here and in Washington that the several districts should be treated as aspects of the same problem of water conservation, steps were taken for a cooperative and unified plan. Immediately the power companies went into the courts and attempted to enjoin such a plan. You are familiar with the long, hard fight; the delays and costs resulting from the court fight; but in the end the people's right to borrow money from their Government and to build for their own protection was upheld.

Now the projects are operating on a cooperative and unified basis, in harmony and understanding, with the common objective of conservation and greatest utilization of water and power. The unified projects extend from the upper reaches of McConaughy Lake, some 25 miles west of here, to Omaha, with thousands of miles of canals and laterals networking central Nebraska, and with thousands of miles of electric transmission and distribution lines forming a grid system over two-thirds of the State. The acquisition by the districts of practically all of the private power companies in the State has created the largest locally owned public power system in the United States. The control by the people of this potential source of wealth will bring for the future increased irrigation, better living conditions, and more jobs to the people of this State to an extent beyond comprehension. But along with these irrigation needs, these better living conditions, and these additional jobs, the project helps to fulfill at this time one of the Nation's most vital needs.

Kingsley Dam and the great power and irrigation system which it completes assumes new significance in the light of our present national-defense efforts. Defense activities are making heavy and increasing demands on our power supply. Recently the Federal Power Commission reported that power demands largely exceeded anticipated loads in nine important war-materials areas. National consumption of electricity continues to mount.

In the face of climbing demands, new Federal and non-Federal projects of the last few years are making their contributions to the power supply. Additional projects are being pushed into production far ahead of schedule. Construction of uncompleted projects has been speeded.

Many of these great power projects encountered the bitterest criticism and opposition when they were launched a few short years ago. Power projects were condemned by self-appointed critics often on the grounds that their production was not needed. The Nebraska projects became to one national magazine, for example, "P. W. A.'s problem children."

Now these same projects are demonstrating that their power output is needed. They are demonstrating that they could dispose of even greater amounts of power than they are able to produce. Over the country major electric projects, financed in whole or in part by the Public Works Administration, are playing an important role in the national-defense program. They are supplying hundreds of millions of kilowatt-hours of electric energy in various localities in which power shortages have become apparent.

We can rejoice that all of these millions of acre-feet of water, which in the past have flowed unused through the State, may now be used to increase and stabilize crop production and to produce power. Both the people of Nebraska and of the Nation have here today a double cause for rejoicing. We can rejoice in a great work well done, and we can rejoice in the completion of a true example of democracy at work, for this project represents the culmination of free, cooperative effort. It represents an engineering achievement constructed and operated in a way that only a free people could follow.

In the United States we have been conducting an experiment in democracy for more than 150 years—endeavoring to develop it so as to safeguard individual freedom and promote the common welfare. On the continent of Europe, 24 out of 27 nations have succumbed to dictators, from within or without, and only 3 small democracies manage to retain a precarious independence Fortunately, we are accustomed to social change by evolution rather than revolution; by voluntary cooperation rather than arbitrary force.

We must be constantly on the alert, however, for the welfare of the masses if our civil liberties, which we hold so dear, are to be preserved. We must realize that people will not long endure poverty in the midst of plenty; that they will not endure the failure to distribute justly the comforts and benefits of modern improvements in living, nor the continued denial of opportunity and an absolute lack of security In such circumstances, people may sacrifice freedom for the false promises of security.

It is human for each of us to prefer to go his accustomed way of life and give little thought to the difficulties and burdens of his fellow men. But the common good is our individual good, and from a purely selfish standpoint must be put first, if democracy is to be preserved. Our forefathers, who set up free institutions on this continent succeeded in founding and developing a great Nation because they sacrificed their individual interests to the common welfare.

And so this great Kingsley Dam and McConaughy Lake are a symbol of a free people. They represent the keystone to the whole irrigation and power program. Built through the joint efforts of local districts and the Federal Government, these projects are controlled and administered by duly elected representatives of the local people and will conserve natural resources not for a privileged few, but for the general public.

When Mr. Carmody visited these projects nearly 2 years ago, and spoke in Hastings, he said, and I quote:

"It is not enough to consider these projects as providers of water, or even as providers of power. They should be considered as a basis for a better life for the people of Nebraska. They should be a means whereby you extend progressive and humane principles. Not only should they provide for the conservation of water to add to the farmers' wealth, but the power they produce should be made available to the maximum number of people in your State. It should be made available to them at prices they can afford to pay, and it should be their insurance against private monopoly and private greed. Moreover, the Nebraska projects should set a standard of public administration that will itself be a yardstick for administrative policy, efficient public operation, proper relations with employees and recognition of their right to bargain collectively and to deal with management."

I know that you have heeded and will continue to heed Mr. Carmody's advice and in the spirit of Senator NORRIS, make these projects represent the continued progressive extension of democratic principles. In that belief and on behalf of the United States through the Public Works Administration, I present our part in this great development to you.

West Point's Visiting Board

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, August 11, 1941

LETTER FROM MAJ. GEN. WILLIAM C. RIVERS, UNITED STATES ARMY, RETIRED

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a letter written by William C. Rivers, formerly major general of the United States Army. The letter is about the administration of West Point. While it is critical, it is constructive criticism, as is proved by a portion of a letter which General Rivers sent me, wherein he says:

The Civil War was West Point's great task. About 100,000 officers, most of them from civil life, saw active service in both the Union and Confederate Armies. About 1,000 of the 1,250 West Point graduates who were living in 1861 were officers in the two Armies. During the 4-year conflict 445 graduates of West Point became general officers in both the Union and Confederate Armies. At the close of the war all the armies in the field on both sides, nearly all the corps, and a majority of the divisions were commanded by West Point graduates.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the New York Times of August 6, 1941]

WEST POINT'S VISITING BOARD—ANNAPOLIS PROCEDURE IS ADVOCATED FOR THE MILITARY ACADEMY

Maj. Gen. R. L. Eichelberger, Superintendent of the United States Military Academy, explains in his letter in your columns why a recent visitor saw the cadets at West Point being instructed only in close-order drill. The Superintendent states that the cadets were members of the large new fourth class, admitted on July 1.

General Eichelberger explains that the older cadets were engaged in firing all types of antiaircraft weapons and long-range seacoast guns at Fort Hancock, N. J. Other cadets were at Tobyhanna, Pa., engaged in practice fire with different types of mobile guns, and the older cadets have had flying training this summer at Langley Field, as well as some instruction work at Fort Benning, Ga., in advanced field work, including tank demonstrations.

West Point graduates appreciate the marked advance in the academic work at the Military Academy. They are confident that the present authorities appreciate the necessity for types of training which will develop young officers for our Army, with the highest qualities of personal initiative and resourcefulness demanded by new methods of warfare.

Many West Pointers would like to see their alma mater adopt a feature which the Naval Academy uses and which would add nothing to the expense of the Military Academy. The Board of Visitors which makes the annual inspection of the Naval Academy is composed

of six distinguished educators and seven members of the Naval Committees of the Senate and House at Washington. The West Point Board of Visitors contains no civilian educators. It is composed of 12 members of the Senate and House Military Committees.

On the list of the members of recent Boards of Visitors to Annapolis are found the names of the following presidents of universities and colleges: Dr. H. N. Davis, Stevens Institute of Technology; Dr. Edmund E. Day, Cornell University; the Reverend Dr. John F. O'Hara, Notre Dame; Dr. Angell, Yale; Dr. Dodds, Princeton; Dr. Sproul, University of California; and many others. The inspection of the Naval Academy is always made by a quorum of the Board of Visitors, who spend several days at the task. The printed report of these inspections evokes much comment in the press of the country.

For some years no quorum of the West Point Board of Visitors has inspected the Military Academy. The press reported only three members as having visited West Point during a recent year, and only for a single day. Even if a report of a thorough inspection of the Military Academy contained no suggestions for changes in the methods of elementary training and discipline, or for alterations in the curriculum, or concerning changes as to the buildings and grounds, there would be great value in such a report. The Members of Congress and the country at large would know that the school had been inspected by experts in education from other colleges.

WILLIAM C. RIVERS,
Major General,
United States Army, Retired.
NEW YORK, *August 5, 1941.*

Air-Mail Pick-Up Service Becomes Self-Supporting—Remarkable Results Achieved During First Year

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 5, 1941

Mr. RANDOLPH. Mr. Speaker, tomorrow marks the first year of the air-mail pick-up service. During this period the system has reached a basis where it can be considered self-supporting insofar as its direct cost to the Federal Government is involved.

SERVICE PERFORMED WITH PLANE IN FLIGHT

This novel air mail and air express makes pick-ups and deliveries with the plane in flight. It was given a year's trial on an experimental basis by the Post Office Department prior to the establishment of regular service on August 12, 1940. There are 33 communities in West Virginia which are served on the 5 routes, which include 109 communities in Pennsylvania, Ohio, New York, Kentucky, and Delaware.

Much of the experimental work was carried on in the congressional district which I represent. It is my belief that within the next 5 years, barring war developments, 2,500 American communities will receive this service. It is my information that more than 1,600 cities and towns are now asking for the advantages of this system.

At the conclusion of these remarks I have included a table which discloses the volume of air mail originating by communities on the lines, excluding the terminal cities of Pittsburgh, Philadelphia, and Harrisburg, but including the air mail that is dispatched from these terminal points by air pick-up exclusively. Sufficient postal revenue is produced to defray the out-of-the-pocket cost of the service to the Government.

The air pick-up service is completing tomorrow its first year of operation on a permanent basis as a regular part of the country's domestic air transportation system. In this time remarkable results have been achieved both in performance and in developing the air-mail patronage in the communities served.

SYSTEM COMPLETES 92 PERCENT OF SCHEDULES

During this first year the system has completed over 92 percent of its daily schedules, flying approximately 693,727 miles and making over 32,000 pick-ups and deliveries without losing a single piece of mail or express and without a serious flying mishap.

Considering that the air pick-up routes run for the most part through a section of the country where it is admitted some of the most difficult flying conditions are encountered, and that the operation requires contact flying where the pilot must see the ground at all times this performance record compares favorably with the transport lines which can go over the top in bad weather.

It is an outstanding accomplishment and duplicates the performance made by the air pick-up service in the same region during the year's experiment by the Post Office Department, a record that was subsequently cited by the Postmaster General as one of the most notable achievements in modern air transportation. The service continues to deserve this commendation.

Of equal importance and significance is the surprisingly large increase in air-mail volume in the communities on the air pick-up routes, which can be attributed directly to the establishment of the service. A check was made recently to determine this increase. It was disclosed that since permanent establishment of the service the air-mail volume has increased over 47 percent at the 53 points which were on the experimental air pick-up routes, and 93 percent at the 53 additional points on the present pick-up lines. Individual increases have ranged from 2 to over 1,000 percent.

It was further disclosed that, excluding the 3 terminal points of Pittsburgh, Philadelphia, and Harrisburg, the 106 cities and towns on the air pick-up lines, which, incidentally, serve more points than any other air line in the country, are dispatching an average of 254,223 pieces of air mail a month. The 3 terminal points are dispatching an average of 161,021 pieces of air mail a month via the air pick-up, making a grand total of 415,244 pieces.

In the annual report of the Postmaster General for 1940, the Cost Ascertainment Division of the Post Office Department estimates that each piece of air mail yields an average revenue of $0.0737. Computed at this figure, the air mail originating at the points on the air pick-up lines combined with the terminal dispatch by air pick-up, is producing at the present time postal revenues averaging $30,603.48 a month.

NO RATE YET FIXED FOR ALL AMERICAN

The Civil Aeronautics Board has not yet fixed the rate of mail compensation for All American Aviation, Inc., the carrier operating the pick-up routes, but this sum is adequate to cover what estimates of the out-of-the-pocket costs to the Government that have been submitted to Congress or that I have seen and still leave a fair margin for error in the calculation of the postal revenue. The estimates of the cost of the service appear to vary between 39 cents and 43 cents per mile. At the lowest figure, the monthly cost of the service to the Government, based on the completion by the carrier of 92 percent of schedules, would be $25,006.02, and at the highest figure the cost would be $27,570.74. On their face, these estimates approximate the rates now in effect on some trunk lines, which may be difficult to reconcile in a comparison of the two operations. The appearance is wholly illusory because the air pick-up estimates include an allowance for the transportation of the air mail between the local post office and the air field, an expense that ordinarily is borne by the Post Office Department. This item amounts to a little over 5 cents a mile.

The term out-of-the-pocket cost to the Government means what is paid by the Post Office Department to an air line for the transportation of the mail. In the case of the air pick-up service, this amount, whatever it may be, will represent practically the entire cost to the Government of maintaining the service, whereas in the case of the transport lines many indirect items also must be computed such as the cost of installing and maintaining the airways and the other elaborate facilities that have been established by the Government in fostering the development of air transportation. The cost of these far exceeds the payments made to the air lines by the Post Office Department.

While the air pick-up system utilizes these facilities, it is largely because they are available. Undoubtedly the service could be operated successfully if they did not exist at all. As far as I have been able to learn, the only expenditure made by the Government for airway aids for the air pick-up service has been for the establishment of two weather stations, which has involved only a very small expense. No town has had to build an airport in order to get the service, because the air pick-up does not need an airport for its operation.

NIGHT FLYING CERTAIN TO COME

Because the air pick-up routes operate during daylight hours and afternoon flights must be scheduled too early at many communities to collect their entire air-mail dispatch, the service obviously is not carrying all of the air mail these communities are generating. However,

this situation will be corrected when schedules are readjusted, extra operations added and night flying put into effect. It has been demonstrated that night operation of the air pick-up is both feasible and practical and All American is now developing equipment which will make such schedules possible in the future.

This pioneer enterprise builds aviation at the base and extends its useful services manyfold. When the defense effort is over, the release of the great productive plants, ground facilities, and thousands of trained men now being mobilized will give an impetus to all forms of flying so that the aviation industry of tomorrow will dwarf that of today.

In that closely woven development, the small plane and the pick-up device have a definite part by giving the benefits of aviation not only to the large cities but covering the entire Nation. Meanwhile, the rapid extension of flying facilities, for which the new pick-up service gives every community an incentive, can contribute greatly to our defense effort.

Increase in air-mail dispatch from cities and towns on air pick-up routes in first year of operation of service on permanent basis, 1940–41

Place	Population	Average number of pieces of air mail dispatched monthly prior to establishment of permanent air pick-up service	Average number of pieces of air mail dispatched monthly at present time	Percentage of increase in average monthly dispatch

Increase in air-mail dispatch from cities and towns on air pick-up routes in first year of operation of service on permanent basis, 1940–41—Continued

[1] Points on experimental air mail pick-up routes between May 12, 1939, and May 14, 1940.

[2] Service inaugurated July 1941. Present air-mail volume estimated.

[3] Terminal points.

[4] Excludes terminal cities of Pittsburgh, Philadelphia, and Harrisburg.

[5] Computed on basis of official annual count made by Post Office Department from Feb. 11 to 17, 1940. Pittsburgh, Philadelphia, and Harrisburg excluded.

[6] Computed from figures furnished by local postmasters, Pittsburgh, Philadelphia, and Harrisburg excluded.

Average monthly air-mail dispatch from terminal points via air pick-up: Pittsburgh, 121,410 pieces; Philadelphia, 38,410 pieces; Harrisburg, 1,201 pieces.

Dedication of Kingsley Dam, Nebr.

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, August 11, 1941

ADDRESS BY J. E. LAWRENCE

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by Mr. J. E. Lawrence at the dedication of the Kingsley Dam, in Nebraska, on July 22, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

IMPLEMENTS OF PEACE

You see here in front of your eyes the implements of peace.

They include a huge earthen dam upon the river—a dam into which millions of cubic feet of earth, concrete, and steel have been poured through the ceaseless labors of men for months and months; a forming, man-made lake behind that dam; the giant turbines of electrical plants generating the electricity to light the countryside and the towns and cities of the State, and to supply the energy to drive the machines of its factories; and, along the distant horizons, the network of canals and laterals to place water, sweet water, upon growing fields.

You, whose sane vision has been revealed so magnificently, along the distant horizons of those years ahead see more than this.

You see green fields of corn tossing their defiant tassels to the sun, and in the fall, with its first chill, rewarding the industrious farmer with heaping bushels of grain. You see thick, tall, fragrant, dark-green fields of alfalfa, sugar beets, potatoes, beans, and small grains nourished to health and maturity by the waters behind this dam. You see all of this, and more, too. You see the herds feeding peacefully upon the hills and the valleys—the herds of cattle, flocks of sheep, and thousands of pigs and fat hogs.

You see men planting the fields, cultivating the fields, and harvesting the fields—confident and serene in the knowledge that when the heat of summer comes that old tragedy of drought, which has been the familiar story of the truly heroic struggle of farm folks in sections of the plains area, will be rewritten to announce the triumph of men's vision and men's labors over disappointment and adversity.

These are the implements of peace.

This is the way of life, the American way of life of a peaceful people, who do not aspire to conquest, plot, or scheme to seize that which belongs to others, and who ask nothing more than to be permitted to till the soil, to go about the tasks of the husbandmen, and live in understanding with his neighbors, near and far, and to be permitted to build a home for himself and his family where he and they may dwell in contentment, and security.

That is not an unreasonable human aspiration.

It is so everlastingly decent and proper.

Men and women have struggled to achieve it since the beginning.

Out here in Nebraska, where people are young, where habits of life are simple, where

there is still in abundant measure the character and the ideals which are prized, the desire to live in pastoral simplicity and rugged strength, remains unmarked.

And when have the pulses, the heart, and the mind of people in calm, thoughtful contemplation failed to respond to that ageless story of men and women who till the soil, live upon the soil, and in the same measure as the corn of the fields receive strength and life from the soil?

These are the implements of peace, the symbols of peace, the honest thoughts of a peaceful people, the fruits of the planning and the labors of a peaceful people, the physical evidence that there remains in this world those who prefer to build rather than to destroy, to add to the fruitfulness of earth in preference to spreading upon it waste and desolution, hunger and death.

We prize our liberties.

We glory in the privilege which permits us to think what we please, to gather when and where we choose, say what we want to say, and worship without restraint according to the dictates of our conscience. We derive comfort from those delicate judicial safeguards so wisely constructed to protect the individual from the tyranry of a government. We will fight, if fight we must, to protect those liberties which inseparably are a part of American life, to defend American soil against any and all threats directed to it, and, finally, to turn back any challenge to the standards and ideals of the American people. As a young nation, a strong nation, where the blood of its men and women courses through veins without fear, and with clear conscience, we are now preparing to defend ourselves against any and all perils which may arise.

But we prefer peace.

We prefer to think, to plan, and to labor to produce precisely what you see here. We prefer to spend our strength, and our wealth, and our thought that not only we ourselves, that our children, and their children, may live in the hope and the faith which has been the foundation of the American people.

It is impossible under these circumstances to ignore the humble beginning of Kingsley Dam.

It could be desired, and desired so greatly, that some of those, all those who dared to hope, and to dream—they belong to that blessed group of dreamers whose magnificent mind castles take form and reality in solid masonry, earthen mountains, and blue waters—might be here now. They would enjoy it, not in the sense of personal self-gratification but because their spirit was hewed out of that intangible substance which gives to man the impulse to build. This dam is the ultimate triumph of 28 years of planning, labor, and struggle, of persistent hope against seemingly continuous disappointment, of the unshatterable qualities of persistence, determination, and resolution in the achievement of a sane, practical, splendid vision.

I refer, of course, to your pioneers.

I refer not only to the leaders but in equal voice to those who followed them. I refer to the intelligence of a region which recognized in an inspired leadership the elements of an undertaking of such vast proportions as to arouse the derision of some. But I cannot at this time neglect to pay tribute to such men as George Kingsley, W. C. McConaughy, J. S. Canaday, William Dutton, George Holdrege, and A. L. Clark. They were the friends and the neighbors of some of you. They walked among you, mingled with you, and talked with you. You knew them. You, better than anybody else, know how tenacicusly they held to their hope that some day in a future—a strong and certain future—fields which under a hot sun so frequently turned sear and brown and withered for lack of moisture, ultimately would remain green and productive through the help of the waters of a river flowing past your doors day and night.

They would enjoy being here today.

In the confirmation of their judgment, in the realization of their hopes, in the vindication of their faith, they would ask nothing more than to stand here at this dam and to look out upon the surface of the waters back of us, knowing that its stored waters not only would add infinitely to the productiveness of Nebraska but at the same time, through all the seasons of the year, it would bring light to the farm home, a new freedom to the farm wife, and a new, modernized, resourceful rural life to the American people. They would know that from the hours of that August day in 1913, when gathering informally, the crude foundations were laid for a 28-year struggle; a battle which for them never was to end during their lifetime so decent was their cause, so good their struggle, so honorable their fight, that in the end truth had its triumph and the people of this region, together with the people of Nebraska, their victory.

They were an unusual group. One a banker, one a farmer, one an elevator operator, one a jobber and retailer, one of diversified business interests, and one occupied an important and a most responsible post in the affairs of a great railroad. Each one in his own way left the mark of his character upon the thought of this State. They were men of conviction, but of common agreement and common purpose in the upbuilding of Nebraska.

We pay tribute to them gratefully and reverently, and we know that each here now, after 28 years of struggle, happily would say it's work well done.

It is impossible to view this dam, to view this lake, to look at these power plants, or to inspect the far-flung canals and laterals through which water will be placed upon Nebraska farms without thinking of another, or two others. You may be interested in the first day's impression of Nebraska's public works advisory board. While Mr. Dan Stephens, Mr. John Latenser, and your speaker sleepily climbed out of the car on the siding at Elwood for a day's ride by automobile through the tricounty area, it was the chill in the air of an October day which wiped the sleep from their eyes. Perhaps it was well. For after many hours, hours which included Plum Creek, a view of the Platte from the bluffs at Lexington, miles of riding over level stretches of country, magnificent farm land, where in the early days the fields of small grains and corn pushed skyward, that in the late mellow afternoon's warmth, Mr. Stephens leaned forward in the car to say huskily, almost in a whisper, to his companions:

"This is a great vision. Some day this land will bloom, these farm homes again will revel in new dresses of paint, the bins and cribs again will be filled with corn, and the pens and the yards again will be filled with chickens, hogs, and cattle. God intended this country to be peopled with families protected against adversities."

Mr. Stephens offered this benediction to this dam, this lake, these power plants, and these irrigation works, which then were forming and were to emerge from the planning of your pioneers and your people. I wish he were here today. I wish that voice which you came to know, and which you admire and respect, could be heard in grateful acknowledgment of the fulfilled hopes of Nebraska.

That's a salty, homely, old adage that the proof of the pudding is in its eating. By that standard this dam, its lake, and all of the labors back of it, already have been vindicated. You know of one single instance a year ago where water was placed upon parched and thirsty soil, a crop of corn was planted and harvested, and without water this spring that field planted to barley produced more than double the number of bushels to the acre that nearby lands yield. You know of a second instance where under similar circumstances, after irrigation a year ago, a second field demonstrated in simple, convincing fashion what water means to soil.

There is no ordinary ceremony and no ordinary development.

Not even those of the strongest imagination, or the most rugged faith in the righteousness of this development, can foresee all of its benefits or its full influence upon Nebraska thought and Nebraska progress, in the next 50 years.

Among those who came from Washington, among the skilled technicians, the trained engineers, was one who until that initial trip into this area, never had gotten his fingernails full of black dirt, believe it or not. He asked that the car be stopped. He got out, walked to the neighboring fence, and scooped a handful of it. His interest, and his absorbed attention was the most impressive tribute that I have ever seen paid to black dirt. Where he came from it was sand, and rock, and jack pine, and in the distant land where as an engineer he worked it was dry and forbidding desert, where once a decent civilization had flourished with ancient cities of gayety and color but now buried under the dust.

Then it was that he said that in their thoughtlessness nations and peoples wrote the death sentence to their own culture and civilization, to their own proud cities, to their own flourishing works, through their indifference to the conservation of those gifts which God placed in their hands. They were the same ambitious, the same industrious, and the same eager people the Americans were in the beginning, and now are. They had the same hope. They believed that their own paradise, with its abundance, provided them with the guaranty of perpetuity. Then, centuries later, they disappeared completely, or, escaping that fate, continued on and on under increasing oppression of poverty and hopelessness.

We would like to think it will be different here. We would like to believe that where there is the industry and the will to establish the finest democracy man has produced, there also is the foresight, the energy, and the unselfishness to perpetuate—to perpetuate it, not only in its spiritual fountains but to perpetuate it with material tools, through which can be fashioned standards of living for men, women, and children, which each day of the year will give to these fine definitions of freedom the hourly application of physical necessities and comforts in the American fireside.

This is what Kingsley Dam means. This is what the storage of water means—the storage of water in spring, fall, and winter, and those seasons where the river, unharnessed, rolls to the sea to discharge its contents into the Gulf of Mexico. This is what the water which fills the lakes, which fills the canals, which fills the laterals, and which flows out upon the fields means. This is what the electricity generated by the turbines, transmitted by the network of wires, carried to the farms and to the towns and the cities, the cheap electricity with which the streams, properly harnessed, means.

This, Kingsley Dam, its lake, its irrigation system, its power plants, through all the years ahead, will accomplish.

Surely, no one in Nebraska will close their eyes to the significance of the electrification of the farm homes of this State. The pioneer mother faced her task unflinchingly in noble spirit. She cooked the food, mended and made the clothes, looked after the youngsters, was the ministering angel in sickness, separated the cream, churned the butter, fed the harvest crews, and frequently went into the fields to garner the grain. She had a thousand industrious hands to perform an

incredible amount of labor. And, how she would rejoice in the knowledge that her daughter, and her granddaughters will have electric lights, ultimately, if not now, modern refrigeration, and all of the modern electrical appliances to emancipate her from the grinding toil which shortened her own life.

In those friendly, cheering, twinkling lights of the Nebraska countryside 25 years ahead, when, it is to be hoped, peace will have come to the world, when in the gathering dusk of the evening the family gathers around the table, it will be a new and a better farm life to add its contributions to well-being and happiness.

Here in this dam and in these waters is cheap electricity for the homes and the businesses of the cities. There, miles away from the Platte, where will be the reminder that because men had a dream, and believed in it and worked years to make it come true, darkness is banished.

Here in this dam and in these waters is a strong foundation for future Nebraska industry. No State in the Union possessed a people more eager to work, more endowed with habits of industry, and more naturally adapted to the requirements of machine operation. No State provides a more inviting field in so many particulars, and now with the ingredient of cheap power to drive the machines, it is becoming to industry to come here and to establish itself.

If the most practical application and the most useful service is to be made of this, about which men dreamed then every effort must be made to put it to useful work. Their vision will be justified and enlarged only to the degree which we ourselves see clearly and labor energetically. The opportunities are great; it is up to us what shall be made of them.

That is Nebraska's responsibility.

It does not stop. It goes on year after year, adding to the irrigated acres, to the output of the farm, to the improved crops, to their diversification, to the restoration of the soil, to the rebuilding of the water levels; to the ultimate hope that each day of the year shall send a stable stream of water past the towns and farms along the Platte; to more cattle, sheep, and hogs upon the hills, the farms, and the feed lots, to the beneficial use of electricity; and to the ultimate development of a flourishing industry, working shoulder to shoulder with a stable agriculture.

Nebraska does not belong to the past. It is not dedicated to doubts, fears, and inaction. It was established to grow, and it will only grow because men plan, both selfishly and unselfishly; men continue to see what they can do to better themselves, just as those that are responsible for this dam and this lake and all of its works were able to see. There must be no retreat in this State; there must be faith, hope, clear planning, courage, and labor.

That is present-day responsibility.

The tools with which we work are the tools put into our hands, applied intelligently by us, and improved in their use by us. They are simple tools. They are Nebraska's basic and sole resources. They are soil and water and sun. It must be remembered soil, exploited relentlessly, wears out; and water, equally commonplace, in the thoughts of those so pitifully dependent upon it, can be exhausted.

It was a wisdom of the pioneers; a wisdom comparable only to the legendary wisdom of Solomon of old, which recognized this simple, yet vital, fact. In all of their wisdom, some of the ancient and some of the old nations and peoples of the earth, peering into the future, were blind to the facts at their elbow.

We must not and shall not fail.

We could hope for nothing more, ask for nothing more, and seek nothing more than that there shall come to the people of Nebraska a full appreciation of a new state, now dimly taking form of stronger, more stable, and more beautiful homes and businesses.

There is one man, I am sure, who has seen all of this so clearly, and who has fought with the strength of a giant that it might come to pass. He is, as some of his Senate colleagues said only recently, and so fittingly, so genuinely American. In a long and in a distinguished career it is a matter of some interest that he never has surrendered his faith. He has been in many battles, on many far-flung battle fronts in which many different forces were engaged, but in all of them never once did he fall out from the ranks to seek cover and safety for himself.

His fights—frequently misunderstood—as frequently misrepresented, and misinterpreted—have been decent fights. They have represented decent causes. They have embraced undertakings which had for their aims only improvement of conditions which existed. Without exception they were launched, and they were waged with but one single, shining goal in mind. They were the struggles, which in themselves, constitute the continuing struggle of democracy to improve the lives of the people who charter democratic government and who continued to preserve it against the storms.

And, that has been nearest, closest, dearest to the heart of this splendid warrior—so gentle and kindly, so tolerant where tolerance can be exercised, so charitable, and still so loyal to duty and to conscience. That Ohio farm, that hard boyhood was an excellent school. Out of its classroom came strong humanitarian impulses, high integrity, courage in bulk, quality, and devotion. Out of its classroom came a flame of faith in democratic government. Out of its classroom, strangely, came a freshness of view, a buoyancy of spirit, a youthfulness in the ready acceptance of the fact of the constant changes which take place in this world to provide his 80 years of activity with inexhaustible energy. Finally, out of that classroom came the never-flagging spirit of simple birth, and hard work, and infinite yearning to make the most of soil and earth and water.

I do not pretend to speak for him. Yet there is reason to believe that the labor of years in Washington which gives him the greatest comfort and happiness is the knowledge that here in Nebraska, his home, through his own great unflagging labors, year after year, there has taken form a vast, comprehensive program of the conservation of natural resources.

I hail him as the true champion of conservation in America. He has been its best friend, and its most eloquent and able advocate. His has been the patience and determination to carry on the fight where others fail of weakness.

Never in all of his planning has it been for himself. There in his office in Washington, glancing from out of the window, some of you know that he spoke sorrowfully when his thoughts turned to burning fields in a drought State. There in his office he reconstructed the Loup Valleys, the Platte Valley, and the Republican Valley—their rivers harnessed, their waters stored for useful purposes, their droughts softened in harshness, and their floods checked.

That was his future view of Nebraska, and it belongs to him—to GEORGE W. NORRIS, without whom this would not have been possible.

On this occasion I take advantage of the opportunity to say to the friends, the neighbors, and to the people of Nebraska that one of the glorious contributions Nebraska's senior Senator has made to American progress is his ceaseless battle for the conservation of a Nation's natural resources.

These waters of the lake, these waters of the canals and laterals, this great earthen dam, Kingsley Dam, McConaughy Lake, the Jeffry power plant, the Johnson power plant, every foot of them, reflect his image, symbolized his faith, and express his hopes that a State which commissions him to serve it, shall live better.

All honor and all credit to him.

Here in your presence gladly I join with you in dedicating Kingsley Dam. I dedicate it to the reverent memories of those who first dreamed of it. I dedicate it to their sons and daughters, to their friends and their neighbors who now are here. I dedicate it to those women who, as their wives, served with them. I dedicate it to a new Nebraska, strong in purpose, clear-eyed in vision, resolute in the decent aim to create here a continuing culture and civilization under which people may live forever and forever in peace, plenty, and happiness.

President Misinformed on Strategic Highway Bill

EXTENSION OF REMARKS

OF

HON. BERNARD J. GEHRMANN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1941

Mr. GEHRMANN. Mr. Speaker, as a member of the Committee on Roads for the past 7 years, I have become quite familiar with the country's highway needs. In spite of the ever-increasing gas-tax revenues, by States as well as the Federal Government, proportionately less is spent for highway improvements and more and more is diverted for other purposes each year. The tendency of the Federal Government the last few years has been to reduce the amount of Federal aid to the States, in spite of the fact that traffic, especially heavy trucking, is increasing rapidly. Add to that the tremendous amount of military and other vehicles needed in our country's defense program, and it is not difficult to understand why large sums of money must be spent to keep at least the strategic highways passable. This was realized by the President more than a year ago, when he ordered the Bureau of Roads, together with the Army, to make a survey of much-needed improvements on highways designated by those agencies as important to national defense.

After nearly a year's study they made a report designating a total of about 78,000 miles as a strategic and necessary highway system. They found that approximately $500,000,000 would be required to place those roads in a fair condition for use of the Army equipment, as well as the ever-increasing movement of defense material. It would require the rebuilding or strengthening of 2,436 substandard bridges to permit the passage of even medium-sized Army tanks and other equipment, and it would necessitate the immediate widening or straightening of nearly 20,000 miles of road. The

committee held hearings almost daily for many weeks. Highway experts and officials from most States appeared before the committee and testified as to the needs in their respective States. The amount that would be needed to put the strategic network into condition, according to experts appearing from the States, amounted to approximately one and one-half billion dollars. That, of course, would require the matching of State and Federal money and several years to complete. But there is urgent need to strengthen or replace many bridges and remove certain other bottlenecks immediately in order to expedite troop movements and defense materials. In spite of the fact that the President's own committee, headed by Mr. McDonald, for many years the Chief of the Bureau of Roads, and the Army engineers reported that it would require nearly $500,000,000 the Committee on Roads brought in a bill recommending that $100,000,000 be appropriated for the strategic highway system. That was unanimously passed by the House, and the Senate increased this to $125,000,000, which was agreed to by the House membership.

The President objects to the method of apportionment provided in the bill. That $125,000,000 for strategic highways covering every State is apportioned exactly the same way as all Federal aid has been apportioned for many years. Some say that it is pork-barrel method. I resent that, as does every member of the committee. Without this apportionment it certainly would be "pork" for a few influential sections while others would not even get the smell of "pork." There has been altogether too much "pork" or favoritism in defense contracts; certain sections do not get any while other large industries are piling up contracts that cannot be completed for years to come.

The bill in section 3 provides $150,000,000 for so-called access roads. That amount is entirely free to be used wherever the Army with the consent of the President sees fit to use it, and if in their opinion the entire cost should be borne by the Government then the States need not match it. Another $25,000,000 was recommended to be appropriated to be turned over to the Army so that they can pay for repairing roads destroyed or severely damaged in maneuvers or other Army training work. I am of the opinion that the main reason why the President was advised to veto this bill was that the bill specifically provides that all the work is to be done under the direction and supervision of the regular State highway officials. Certain Washington officials want to get control of as much money as possible, and they do not like to have any State organization in a position to show them up as inefficient. Certainly our State and county highway officials, with their equipment and experience, are in a much better position to do this work than any Government agency that would otherwise be designated. The Army engineers stated that they would prefer to have the work done by the State and county highway organization, because their primary training was not building bridges or highways.

The reason why the veto was sustained by a very narrow margin is threefold. First, many leading Republicans realize that much more money than was provided in this bill will have to be spent. But since the President made a gesture of economy they voted to uphold him, knowing full well that he will have to come back and ask for an appropriation later on, unless he uses other defense funds not specifically authorized for that purpose. They believe they can embarrass the President later on. Then there are always a great many loyal Democrats that will uphold the President in anything he does or advocates. And the third group—which are a considerable number—are those who believe in pork-barrel methods, feeling that they have pull enough to get a larger portion if no definite allocation was made than they can under the apportionment method. I am satisfied that we will hear from the people when the Army traffic makes travel difficult, and I am certain that the Army itself will demand removal of bottlenecks on many strategic highways. The Committee on Roads did a fine job, and I am certain we will not yield now or in the future to abandon the present method of highway aid allocation. It is now free of politics and its consequent squandering of public money, and I am sure this committee will never yield to any pressure that would make this a political pie counter.

Retaining Selectees in Service—Soldier's Father Gives Attitude

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, August 8, 1941

LETTER FROM JOHN A. CHAMBLISS

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter written by John A. Chambliss, of Chattanooga, to a leading isolationist Senator. Mr. Chambliss has two sons in the service. His reasons for wanting them to be properly trained are convincingly in favor of extending the time of service.

The letter follows:

JULY 25, 1941.

MY DEAR SENATOR: You will be interested in the attitude of a plain family that has said little about the war and the part the United States is to take. You are a graduate of the Law School of the University of Michigan, and I am. Furthermore, a son graduated there in 1938. I may also mention that during the last World War the local bar association adopted a resolution the sum and substance of which was that the United States Senate should expel Senator La Follette. His attitude about the war was disapproved. I alone spoke against the resolution and was one of three who voted against it.

For 3 years I went to Virginia Military Institute. My eldest son went to Virginia Military Institute for a short time. Neither of us showed any military ability. Both left with poor records. But both believe no one can be convinced of the worth of military discipline and be trained properly in a year. My second son, who graduated at Michigan, is now subject to military service. My third son has since October last been in the Canal Zone, but yesterday his mother heard that because of a serious physical ailment he is to be returned to the States. My fourth son was inducted a week ago today. He had been at Haverford College 2 years and at Vanderbilt Law School 1 year. His general attitude has been opposition to war. Wednesday he told us that our participation seemed so inevitable that he had enlisted in the Regular Army for 3 years. He feels that the present situation arises directly out of our sense of isolation.

My wife and I can understand the heart strain when a son leaves to go into the service. We all long for the end of world-wide aggression.

It seems that Congress is not opposed to the military program. True Congress does not openly and by act give support. This lack of plain words and speech creates uncertainty. The world order is not plain speech. But would a plain resolution in Congress condemning the proposals of General Marshall get much support? So we conclude that the representatives of the people are really behind the proposals. Further, they may be for active participation in the fighting when trained men are available.

And this reference to trained men brings me back to my purpose in writing. If our men in the service are not well trained and devoted to work that even they do not really wish to do, then they are all in danger. If they feel sorry for themselves they are handicapped. If they think a substantial minority lack respect for their commanders, it hurts them.

Very sincerely yours,

JOHN A. CHAMBLISS.

Freezing the Wheat Surplus—Conference Report on H. R. 5300

EXTENSION OF REMARKS

OF

HON. WALTER M. PIERCE

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

Mr. PIERCE. Mr. Speaker, I am opposed to the adoption of the conference report on H. R. 5300, which is an amendment to the Triple-A act and relates to wheat-marketing quotas. The conference yielded to Senate amendments, and its report is printed in the CONGRESSIONAL RECORD for August 13, page 7084. This bill, when passed by the House, provided relief for the growers of wheat who had harvested light crops and had, unfortunately, sowed more acres than their allotment. It simply gave them the right to compute their actual production instead of their normal production. It weakened the Triple-A program only slightly and benefited those who were unfortunate in their production, by no fault

of their own. This was originally emergency legislation, now hastily transformed into permanent legislation without proper consideration. The bill went to the Senate after passing the House unanimously. The Senate loaded it with dynamite for the Agricultural Adjustment Act, known as the Triple-A program, evidently not understanding the full significance of their action. The bill was then sent to conference. The conferees' report is now to be considered by the House.

I urge all friends of the farmer, and of the Triple-A program to vote against the adoption of the conference report. If the bill is sent back to conference the conferees can then call before them those who are actually engaged in administering the Triple-A program, and they can then learn first hand the serious obstacles that the Senate amendments put in the way of the enforcement of the act.

These Senate amendments jeopardize the whole Triple-A program because they attempt to substitute hasty and binding legislation for wise administration which may be adjusted to rapidly changing conditions and the serious threats of a war-torn world.

These amendments do two things of major import; first, they allow the surplus wheat to be marketed through feeding to livestock; second, they freeze the surplus Government stores of wheat and cotton so they cannot be marketed commercially under any emergency or under any conditions which may arise in these very uncertain times.

This proposed legislation will destroy confidence and break down the morale of the four out of five of the American farmers who are in compliance with the Triple-A program. These compliers who plowed up wheat, in order to comply, will be bitterly resentful if Congress now puts a premium upon noncompliance.

FREEZING THE SURPLUS

Our Government now has on hand 7,000,000 bales of cotton and 180,000,000 bushels of wheat acquired under the loan program. Under the terms of this conference report, the Government will be compelled to hold these surpluses and will not be able to market them. In other words, it freezes them, and allows cotton and wheat produced this year to be marketed ahead of the great surplus carried by the United States Government. Even in case of emergency defense need for cotton, which is likely to develop, these Government stocks could not be used. We found out in the early 1930's what happens to the price of wheat when we have a surplus like that and no control.

We are told by those who agreed to the conference report that the freezing of these surpluses in the hands of the Government raised the prices of cotton and wheat the past few days. I doubt it, but even so, every friend of the Triple-A program realizes that such prosperity is artificial and short lived. As a matter of fact, it was not this action but the tight market situation caused by the loan program that raised prices.

The friends of the program are not asking, and should not ask, the Government to assume all the loss that may result from carrying these surplus agricultural products. Wheat will store safely quite a while, but cannot be carried indefinitely without deterioration. It seems the height of folly to take these chances if we should have the opportunity to divert these surpluses to consumers' use without in any way harming the producer.

I know of no more effective way to kill the Triple-A program than through enactment of this amended bill. It will deal a serious blow to a program which has brought the growers of cotton and wheat out from dire poverty and bankruptcy into a halfway prosperity. One informed witness before the House Committee on Agriculture said:

Nothing was ever done for agriculture before the Triple-A program that was worth the snap of your fingers.

AMENDMENTS BENEFIT SPECULATORS

There may be a chance to work off many bales of cotton in some of the various markets of the world. Why should not the Government avail itself of that opportunity instead of allowing the speculators to corner the market and raise the price on the few bales of surplus this year when there is a much diminished cotton crop?

We have a big wheat crop and a tremendous surplus; but if the speculators know that the wheat belonging to the Government cannot be sold, they will then speculate on this year's surplus and perhaps drive the price a few cents higher than it would have been, but the speculators, and not the producers, will reap the reward. I would rather the producer would lose a few cents a bushel than to suffer the prospective undermining of the entire Triple-A program. If it is rendered less valuable, public sentiment will not support its retention.

"FRIENDS" DESTROY THE TRIPLE A

The farmers of the United States fully appreciate what has been done for them by the Triple-A legislation. Imagine the situation today without the program. There would be bankrupt farmers with great stores of cotton and wheat, and absolutely without buyers for the surplus at home or abroad. No other country can buy the surplus or the new crop. England must buy first from Canada, which has enough surplus to take care of England for 2 years. We have wheat enough on hand now, without raising a single bushel in 1942, to carry this country and afford an ample surplus in September 1942.

The farmers know that those who would get them into a hole by freezing of the surplus for the benefit of the speculators are indeed false or misguided friends. It has been aptly said, "I can take care of my enemies, but Heaven protect me from my friends." That is just the position of the American wheat and cotton farmers today. I am not saying that the Senators who loaded the bill with dynamite were not intending to help the farmers, but I am affirming that they were short-sighted and mistaken. For a little temporary increase in price they were willing to sacrifice a long-range basic program which is the only hope for producers of surplus commodities.

KILL THE REPORT AND HELP THE FARMERS

Very few real farmers, and only noncooperators, will be hurt if this bill resulting from conference is defeated by the House. If it is adopted and if the President should veto it in the interests of American agriculture, we shall certainly sustain that veto in House or Senate because the true situation will then be apparent, and the producers of the Nation will be aroused and demand redress. I wanted to help those few whose crops were cut down by drought or for other unavoidable reasons, resulting in an excess acreage with less than the normal production. It was to help those unfortunates that H. R. 5300 was introduced. I am still willing to help them, but the hasty and uninformed action of the Senate has made it necessary for us to forget the difficulties of the minority in the face of the danger to the majority under threatened destruction of the Triple-A program. Freezing the Government wheat and cotton is the most short-sighted policy that I have ever seen attempted, and to think it comes, too, from the would-be friends of the producer!

FEEDING SURPLUS WHEAT

This conference report provides that excess wheat may be fed to livestock. That sounds innocent enough and very plausible, indeed. I wonder if the Senators who inserted this amendment have considered what it means? To have a real understanding, the legislator must know something of the why and how of the marketing quotas as part of the wheat program. I remind you that we are jeopardizing legislation which assures the American farmer, this year, a return twice as high as any other wheat-producing country anywhere in the world is giving its producers. In Canada, all along the northern boundaries of the United States, farmers are getting about 50 cents a bushel for wheat. In the United States they are receiving a dollar a bushel. Is there any other cause for this difference in price than legislation by this Congress?

I ask the friends of the Triple-A program to recall that when the harvest of the present crop has been completed we shall have on hand 2 bushels of wheat for every bushel that can be marketed. It is only common sense to hold back a part of the surplus in storage so we can sell the bulk of the crop at a decent price. We should not forget that 81 percent of the farmers, voting in a marketing quota referendum on May 31, 1941, demanded that action by their votes. They asked the Department to divide the limited market among the wheat farmers of the Nation. The farmers voted for quotas democratically, fairly, honestly, expecting to cut down their acreage and to hold back a part of the surplus as a protection for the price of wheat.

Now, think with me a minute what the Senate feeding amendment will do to the farmers' program. It proposes to permit the feeding of excess wheat. Actually

it is punching a hole in the gunnysack. You cannot hold wheat in a sack with a hole in it. Farmers know that, even if some of our statesmen do not. It matters little whether you sell your wheat in the grain elevator in its original form or haul it to the market in hogs. It is marketing the wheat just the same.

CORN PRODUCERS INJURED

This country has plenty of feed for livestock aside from a tremendous surplus of wheat. We are just about to harvest the biggest corn crop ever known. What will this proposal mean to corn producers? No amount of shouting or swearing on the part of noncooperators can justify the false assumption that the defense program needs this excess wheat for feed. Again I want to impress upon you that we will, at the end of this year, have on hand an extra year's supply. We could double, treble, quadruple our wheat-feeding program and still not touch a bushel of excess wheat.

CONTROLLING THE SURPLUS

What is the object of the marketing-quota program? It is to keep the surplus off the market so that fair prices for all farmers can be obtained. It does not necessarily mean a better break for a handful of noncooperators who have not made the sacrifices necessary to carry the program to its present satisfactory state. The larger percentage of the wheat growers have gone down the line, year in and year out, cooperating with the program, cutting down their acreage; and for what purpose? For controlling the surplus and upholding the price. They have willingly adjusted their acreage at seeding time. Now we ask the noncooperator to make some sort of adjustment in marketing and to do his share in order to support the program which saved him also.

AMENDMENTS DEFRAUD COOPERATORS

These Senate amendments grant special privileges to the noncooperators. That is the very worst kind of discrimination against the rank and file who have worked squarely for a fair price for agriculture. Freezing Government wheat and cotton is the worst kind of fraud. It is certainly dynamiting the Triple-A program with a vengeance and misusing those who have made it possible.

H. R. 5300, as it left the House, would have been of benefit to a few, not many, but it was intended to help those who were unfortunate in having crop failures. H. R. 5300, as loaded by the Senate, will, I fear, work disaster and may mark the beginning of the end of the greatest program ever undertaken in the interests of agricultural producers.

CITIES NEED FARM PROSPERITY

The real friends of the Triple A appreciate the support of the Members of this Congress who come from the large centers of population. Those Representatives from industrial districts have realized that prosperity for the wheat and cotton farmers meant prosperity for those who live in cities and manufacture things that farmers buy. True, the program has been bitterly fought by reactionaries all over the Nation. Today there is great rejoicing in the camp of those who have opposed the Triple A and would refuse a square deal to American agriculture. The speculator is happy because he sees the entering wedge for the wrecking of the program.

PROGRAM INCREASED PRICES

These Senate amendments constitute the death sentence for the results of 8 years of growing farm legislation. We have deliberately raised the price of wheat in the district which I represent, from 25 cents a bushel to approximately a dollar, and that in the face of almost a double increase in surplus. We have raised the price of corn from 20 cents a bushel to 80 cents a bushel. We have raised the price of cotton from 5 cents a pound to 16 cents a pound.

We have, it is true, interfered with the business of that group of speculators which manipulated the market at harvest-time, forcing the farmer to sell, and then increased the price when the producer had disposed of his crop.

WRONG TIME TO CRUSH FARMERS

This country needs all its united strength right now. Our civilization and our economic system now face the greatest test. In the effort to stop the German war machine we need the farmers' strength as never before. Is it safe to wreck the farmers' program now? I do not accuse the Senators of a deliberate attempt to ruin our program, but that is the effect of their amendments for unlimited feeding of excess wheat and freezing the Government stores. They would try to freeze us into insensibility—try to make us forget we have great stocks of wheat and cotton—try to put off the day when we have to face reality.

This freezing amendment bayonets the vitals of the ever-normal-granary principle. Actually, it goes even further in the wrong direction than an outright repeal of that program. It would also destroy the faith and confidence of the American farmers in the ability of Congress to separate political hocus-pocus from sound agricultural legislation.

ORDERLY MARKETING ESSENTIAL

Farmers are entitled to a stable program of price equality. Their overwhelming vote in the marketing-quota referendum shows that they are ready and willing to do their part in keeping our economic structure on a sound foundation. Both agriculture and the public have accepted the principle of the ever-normal granary, and that means acceptance of the principle that farm commodities are to be permitted to flow into and out of the granary in an orderly manner. If we dam that flow now, the day of reckoning will come when we need room in the granary for more stocks. The orderly handling of agricultural reserves, plus a realistic use of adjustment machinery, distinguishes the ever-normal granary from the disastrous Federal Farm Board program which ended in a "frozen surplus" fiasco.

We have done that which economists have always said could not be done. We have modified the law of supply and demand so far as wheat, cotton, and corn are concerned.

"FIFTH COLUMNISTS" FAN THE FLAME

It has been asserted in a reliable farm journal that much of the unrest and resentment against the wheat penalties has been instigated and encouraged by certain attorneys who are collecting $5 to $10 each from the resentful farmers and doing quite a thriving business. A second element in this situation is undoubtedly partisan politics, and this is, unfortunately, sure to arise even in regard to measures definitely beneficial to the farm interests. It is charged that the orators who are proclaiming the desire to right the wrongs of farmers are actually engaged in advancing the cause of Hitlerism at home and abroad. I do not know all the facts about these ugly rumors, but the Midwest press has taken cognizance of them, and they have been freely discussed. It appears to me in the interests of national unity, and distinctly in the interests of agricultural legislation, to settle this matter speedily by sending the report back to conference, aiding the small minority who have possibly suffered injustice, and proceeding with our Triple-A marketing-quota program.

Iceland

EXTENSION OF REMARKS

OF

HON. JOHN C. KUNKEL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

WASHINGTON NEWS LETTERS OF HON. JOHN C. KUNKEL, OF PENNSYLVANIA

Mr. KUNKEL. Mr. Speaker, at the time of the agreement concluded between the President of the United States and the Government of Iceland I discussed this subject in two of the news letters which I write to my constituents each week.

In these letters I discussed my views on this subject, and under permission to extend my remarks in the RECORD which was granted to me on July 14, 1941, I now include that portion of each of those news letters which relate to the occupation of Iceland:

[From the News Letter of July 9, 1941]

ICELAND

The action of the President in sending American naval forces to protect Iceland from occupation by any hostile power is a wise move which has my complete approval. It is merely a logical continuation of the policy of erecting a series of protective bases established, first, by the acquisition of the naval bases in the Atlantic from the British Government and, secondly, by creating a protectorate over Greenland. Geographers differ slightly as to whether Iceland lies entirely in the Western Hemisphere, but most authorities agree that at least the far greater part of the island does lie in this hemisphere. No one questions its importance to the

United States from a strategic military point of view.

By peacefully occupying this island we have taken a very large step to prevent future attack by an enemy nation upon our country. We have also greatly lessened the risk of war now and in the future. When we take control of Iceland we remove to a great degree the threat of its occupation by an enemy and we also eliminate the possible future danger of a race between our Nation and some other nation to reach it first. Situated as the island is, this country would very probably feel it necessary to attempt forcibly to expel any invader who had either gained control over it or who sought to gain control of this land. That would mean war. By acting now with the consent and approval of the Government of Iceland, it becomes most unlikely that any foreign power will dare to make an aggressive move in that direction. An unprotected small neutral would have been a continuing temptation to aggressors. The stronger the force we place there the more unlikely such an aggressive move becomes. An affirmative action very often is more apt to attain peace than a negative one. The present affirmative action falls in that class, because it renders safe a zone of potential dispute. Iceland is no longer a subject of argument; it is an accomplished fact.

I have always felt that the safest course was to talk little, but to act quickly and decisively. The present move will do much more to safeguard our Nation and to push away and keep away from us the danger of war than did any of the President's many belligerent speeches in which he established various vocal boundaries at various spots in the world. Bellicose talk causes trouble and friction without producing results.

The occupation of Iceland is not directly connected with the Atlantic patrol. The latter has been in effect for some months and had already been extended to include Iceland before our agreement with that country was announced and before our troops were sent there. But the establishment of the bases in Iceland also makes the risk of attack on American ships less likely; permits the transfer of British troops to places where they are sorely needed, and implements our policy of aid to Britain. It is intelligent, defensive strategy. It is dynamic defense. I hope it will soon be followed by the announcement of the establishment of naval and air bases at key points in South America through agreement with our sister republics.

I have secured from the Department of Commerce the following basic data about Iceland in which I believe everyone will be interested:

About the size of Kentucky, 40,000 square miles (only one-fourth habitable), mountains, lava fields, glaciers, and high plateaus sloping to coastal lowlands, no mineral resources, nearly all waterpower—estimated at 2,500,000 horsepower—remains unharnessed. Reykjavik, the largest city with a population of 36,100, is the capital. The entire population of 120,000, almost entirely of pure Scandinavian stock, literally lives off the seas, as fish and fish products constitute about 85 percent of all exports. Only about one-half of 1 percent of the total area is cultivated and short summers limit crops largely to hay and potatoes; on large tracts of grass lands, sheep raising is important.

[From News Letter of July 15, 1941]

NO JOINT OCCUPATION OF ICELAND

In his message to Congress the President said that the United States naval forces placed in Iceland were "to supplement and eventually replace British forces which have been established there." Last week I expressed my complete approval of this action on the theory that the United States alone was to occupy and defend Iceland. Later in the week Prime Minister Churchill told the British House of Commons, "We still propose to retain our Army in Iceland," and further, "it seems very likely that they (Britain and the United States) will cooperate effectively in resistance to any attempt by Hitler to gain a footing." While I strongly favor taking sole possession purely on our own responsibility, which is dynamic defense of America, yet I completely disapprove of a joint occupation.

First, the object of taking peaceful possession of Iceland is to provide for our own security. Hence control should rest exclusively with us to be utilized as our own defensive needs require, so that we can defend ourselves against any aggressor in the world at any time, whether the present status of that nation be that of a potential friend or a potential foe. Secondly, a joint occupation by a nonbelligerent, such as ourselves, and a belligerent, such as Great Britain, greatly increases the risk of our being drawn into actual hostilities. The troops and bases of a belligerent are always subject to attack by its opponent. For its own self-preservation such an attack is almost certain to be resisted by the nonbelligerent joint occupier, as well as by the belligerent. Thirdly, a joint occupation of an area of potential dispute tends to be a full military alliance, and it approaches Union Now, which is strongly opposed by the great majority of the American people.

* * * * *

There are two other items worth noting while on the subject of Iceland. No matter how wide are the differences of opinion as to just where the line of our foreign policy should be drawn, we all agree that our greatest natural protection against European wars and attacks is the 3,000 miles of water that lie between Europe and America. Yet there are three stepping stones bridging this large body of water: Newfoundland, Greenland, and Iceland. If we take the risk of letting any powerful European nation establish itself on this first stepping stone we have allowed this natural barrier to shrink by hundreds of miles. The President has made so many futile speeches establishing vocal boundaries for aggressor nations that we now know by experience that verbal warnings are not enough to prevent such a happening. Every American citizen appreciates the immense value of Hawaii, which is 2,400 miles away from us. All of us realize that our strong fortifications on that isle guard our west coast from the threat of invasion. Iceland, closer on our east coast, where our greatest productive centers are located, should be of even greater importance to us in the Atlantic than is Hawaii in the Pacific. Furthermore, expert opinion agrees that Iceland is much easier to defend than to attack because of its physical characteristics and its water boundaries.

In addition, the action should improve our relations with South America where it is most important that we should secure strategic bases as soon as possible. Some months ago the President pledged the southern republics that the United States would not permit Hitler to seize the approaches to the Western Hemisphere. The Iceland incident implements this promise. It gives further assurance to the republics in South and Central America that we seek these bases solely for the protection of this Nation from aggression and not for the purpose of extending our influence over South America—a course South America tends to suspect and fear.

Farmer Is Entitled to Cost of Production

EXTENSION OF REMARKS

OF

HON. BERNARD J. GEHRMANN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

STATEMENT BY TOM LINDER, GEORGIA STATE COMMISSIONER OF AGRICULTURE

Mr. GEHRMANN. Mr. Speaker, this morning I received the most comprehensive study of agriculture and its relation to the total national income it has ever been my pleasure to observe. It is prepared by Mr. Tom Linder, commissioner of agriculture of the State of Georgia.

While he does not include the largest single agricultural commodity, namely, the dairy industry, I find that these same comparisons apply to that industry as well. I believe these figures should be studied by people, including some of our metropolitan newspapers, that are evidently under the impression that the farmer is rolling in wealth, and that parity or 110 percent of parity as prepared in the price-control bill would be handing him more than he is entitled to. This will show clearly that the farmers' parity prices are based on 1909–13 prices which are 92 percent below present prices on things the farmer must buy. All will agree that the farmers are entitled to cost of production the same as any other individual or business is entitled to. If cost-of-production prices were to be figured based on present-day operating costs, the farmer would receive much more than the 110-percent parity price. The only way to reduce consumer costs is to eliminate unnecessary middlemen, and unnecessary service, all of which has been demanded by the consumers. The farmer cannot operate at a loss, and at the expense of his wife and children who must work like slaves much longer. Mr. Linder's statement follows:

HOW MUCH LONGER CAN THE AMERICAN FARMER LAST AT THIS?

The average national income for the 5 years from 1925 to 1929, inclusive, was $79,217,000,000.

This means that the total income of all kinds of all the people of the United States totaled this figure during those 5 years.

The average cash income to farmers throughout the United States was $10,006,000,000. The farmer received 12.6 percent of the total national income.

During the 5 years from 1935 to 1939, inclusive, the national income dropped to an average of $65,039,000,000 per year. Of this national income the farmers received an average cash income of $6,212,000,000, which amounted to 8.8 percent of the national income.

In other words, from 1935 to 1939 the farmers received only two-thirds as much

of the national income as they received during the 5 years from 1925 to 1929.

For the sake of argument I have included all Government benefits of all kinds received by the farmers during the latter 5-year period.

To show just what has happened to the farmers, I call your special attention to the last column in the following tabulation showing the percentage of national income received by the farmers in different years:

Statement showing gross farm income, with and without Government benefits, also percent of national income received by farmers for the 5-year average 1925–29 as compared with the period 1935–39

Year	Gross farm income, 1925–29	Farm products consumed on farm, 1925–29	All Government benefits to farmers, 1925–29	Cash farm income, 1925–29	Cash farm income without Government benefits, 1925–29	Total national income, 1925–29	Percent of national income received by farmers, 1925–29
	Thous. of dol.	*Thous. of dol.*		*Thous. of dol.*	*Thous. of dol.*	*Thous. of dol.*	
1925	10,581,000	495,000	----------	10,086,000	10,086,000	73,800,000	13.7
1926	10,580,000	922,000	----------	9,658,000	9,658,000	78,900,000	12.2
1927	10,700,000	828,000	----------	9,872,000	9,872,000	79,500,000	12.4
1928	11,089,000	1,090,000	----------	9,999,000	9,999,000	81,000,000	12.3
1929	11,221,000	804,000	----------	10,417,000	10,417,000	82,885,000	12.6
Total	54,171,000	4,139,000	----------	50,032,000	50,032,000	396,085,000	12.6
Average per year	10,014,000	827,000	----------	10,006,000	10,006,000	79,217,000	12.6

Year	Gross farm income, 1935–39	Farm products consumed on farm, 1935–39	All Government benefits to farmers, 1935–39	Cash farm income, 1935–39	Cash farm income including Government benefits, 1935–39	Total national income, 1935–39	Percent of national income received by farmers, 1935–39
	Thous. of dol.	*Thous. of dol.*	*Thous. of dol.*	*Thous. of dol.*	*Thous. of dol.*	*Thous. of dol.*	
1935	6,138,000	431,000	430,000	5,275,000	5,706,000	55,870,000	9.4
1936	8,012,000	1,415,000	287,000	5,970,000	6,257,000	65,165,000	9.2
1937	8,621,000	1,458,000	366,000	6,378,000	6,744,000	71,172,000	9.0
1938	7,538,000	1,290,000	482,000	5,432,000	5,914,000	63,610,000	8.5
1939	9,769,000	1,229,000	807,000	5,635,000	6,442,000	69,378,000	8.1
Total	40,078,000	5,823,000	2,372,000	28,691,000	31,063,000	325,195,000	8.8
Average per year	9,015,000	1,164,000	474,000	5,738,000	6,212,000	65,039,000	8.8

Column 1 of the above tabulation sets out the gross income received by the farmers each year during the two 5-year periods. The Government, in arriving at the figures in the first column, charged the farmer as an income all farm products consumed on the farm by man and beast.

The amounts charged to the farmer as an income for farm products consumed on the farm are set out in the second column of the above tabulation.

A casual consideration reveals that farm products consumed on the farm do not constitute an income at all. It costs the farmer just as much to grow the products consumed on the farm as it does to produce the products that are carried to the market and sold.

For this reason, I have subtracted the amount set up by the Government as products consumed on the farm from the gross income.

Column 3 of the above tabulation carries the total amounts of Government benefits of all kinds paid to the farmers during the latter 5-year period. I have also subtracted these in order to give a fair comparison of the real cash income of the farmer from 1935 to 1939, as compared to the cash return to the farmers during the 5-year period from 1925 to 1929, during which period there were no Government benefits paid.

Column 4 shows the actual cash return to the farmers for crops produced.

The actual cash return to the farmers for the 5-year period from 1925 to 1929 averaged $10,006,000,000 per year. The actual cash income to the farmers for the latter period from 1935 to 1939 averaged $5,738,000,000 per year.

During the 5-year period from 1935 to 1939 the farmer received 57 percent as much cash income as he did during the first period from 1925 to 1929.

The national income for the first 5-year period averaged $79,217,000,000, while for the latter period from 1935 to 1939 the national income averaged $65,039,000,000.

This means that the national income during the latter 5-year period was 83 percent, while the farmers' income was only 57 percent of the former period.

With the national income cut to 83 percent, it looks like the farmer would have been hurt enough if his income had also been reduced to 83 percent; but instead of being reduced to 83 percent it was actually reduced to 57 percent.

The percentage of the national income received by the farmer during the first 5-year period varied from 13.7 in 1925 to 12.6 in 1929.

The percentage of the national income received by the farmer during the last 5-year period was as follows:

	Percent
1935	9.4
1936	9.2
1937	9
1938	8.5
1939	8.1

It must be kept in mind that the percentage given for 1935 to 1939 include all Government payments to the farmers.

From the 10-year period 1920 to 1929 until 1941 the price of farm products declined about 33⅓ percent.

The percentage of the farmer's income decreased exactly 33⅓ percent, and the actual income was reduced exactly 33⅓ percent.

In my previous communication I demonstrated that the minimum prices that would represent parity for the horse-and-buggy days were as follows:

Cotton	$0.24
Cottonseed oil	.12
Corn	.99
Oats	.56
Wheat	1.64
No. 1 hogs	.12
No. 1 steers	.14
No. 1 veal	.14
No. 1 lamb	.16
No. 1 sheep	.08

In that communication I suggested that Congress should add at least 25 percent to these prices to take care of reduced acreage, protective tariff, high labor costs, and rural education.

The above tabulation demonstrates that the increase added, instead of being 25 percent, should be 33⅓ percent. This would put the price of these farm products as follows:

Cotton	$0.32
Cottonseed oil	.16
Corn	1.32
Oats	.74
Wheat	2.19
No. 1 hogs	.16
No. 1 steers	.17½
No. 1 veal	.17½
No. 1 lamb	.21
No. 1 sheep	.11

The facts are that the Congress has set up a controlled economy.

The further facts are that this controlled economy does not control anybody except the farmers.

The natural result of a controlled economy which does not control anyone except the farmers is to continually rob the farmer of more and more every year of the things he produces for the benefit of those who do not farm.

The national income for the next 12 months is bound to be at least $100,000,000,000. The Government itself is going to spend thirty to forty billion dollars.

During the 5 years period of 1925–29 the farmers were somewhat below parity with the "horse and buggy days" of 1913.

But even on a basis of the 5-year period of 1925–29, giving the farmer an average of 12.6 of the national income, the farmer in the next 12 months should receive a cash income of around $12,000,000,000.

If the farmer is put on an actual parity with 1913, and then we add 33⅓ percent to give him buying power to live at the standard of the present day, the farmers' income during the next 12 months would run around $18,000,000,000, or 18 percent of the national income.

This would be in line with the income that the farmer did receive prior to the enactment of high protective tariffs.

With prices of basic farm products as set out on page 5, and prices of other farm products in line with these, assuming that production is equal to the average production of the last 5 years, the farmer would receive a cash income of around $18,000,000,000.

Any legislation that does not provide actual parity on a basis of today for the American farmer is class legislation.

Any legislation which says to the American farmer, "You must produce food and clothing for the balance of the people at a price which does not give you equality with people in

other lines" is nothing short of legislating the farmers into peonage.

The farmers of America are the most patriotic people in America.

They are willing to make any sacrifice needed for national defense.

But to single out the American farmer and legislate the greatest hardships on him, when people in all other lines are being paid a bonus to support the Government in the war, is uncalled for, intolerable, and will not be forever submitted to.

We say today that the United States is giving $7,000,000,000 to England under the lease-lend bill and that we are going to give them seven billion more in the next 12 months.

Can you name anybody in America today that is giving anything except the farmer?

Do you know anybody else in any line of business that is working below parity?

No. The only two classes of people who are actually giving today are the farmers who raise the food and clothing and the boys who have got to carry the guns and do the fighting.

Statement showing 1925–29 5-year average prices of basic farm products compared with 1935–39 5-year average prices, also comparison of total farm income for the two 5-year periods

Commodity	Average price	
	1925–29	1935–39
Cotton	$0.19	$0.12
Cottonseed oil	.10	.09
Wheat	1.46	.94
Corn	.90	.74
Beef	.14	.12
Hogs	.11	.09

Farm income 1925–29, 5-year period:	
1925	$10,581,000,000
1926	10,580,000,000
1927	10,700,000,000
1928	11,089,000,000
1929	11,221,000,000
Total	54,171,000,000
Farm income 1935–39, 5-year period:	
1935	6,138,000,000
1936	8,012,000,000
1937	8,621,000,000
1938	$7,538,000,000
1939	9,769,000,000
Total	40,078,000,000
Total 1925–29	54,171,000,000
Total 1935–39	40,078,000,000
Difference between two 5-year periods	14,093,000,000

The total farm income for the 1935–39 5-year period includes all Government benefit payments paid from the United States Treasury.

From the above we find that the total farm income for the 1925–29 period was $14,093,000,000 more than for the latter 5-year period.

According to Statistical Abstract of the United States Department of Commerce, sixty-second number issued 1940, the total farm mortgage debt in 1935 was $7,645,000,000.

This shows the loss in farm income during the 1935–39 5-year period amounts to enough money to have paid off all the mortgages on all the farms in the United States twice.

Statement showing the average price of basic farm products for 1913 and the 10-year average price (1920–29) and the percentage increase necessary to give the farmers same purchasing power in 1941 as in 1913 and 1920–29, respectively

	1913 [1]	Increase necessary to reach parity [2]	Parity price for 1941 [3]	1920–29 period [4]	Increase necessary to reach parity [5]	Parity price for 1941 [6]
	1	2	3	4	5	6
		Pct.			Pct.	
Cotton	$0.12	92	$0.23	$0.22	11	$0.24
Cottonseed oil	.08	92	.15	.11	11	.12
Wheat	.95	92	1.82	1.48	11	1.64
Corn	.68	92	1.31	.89	11	.99
Beef	.08	92	.15	.13	11	.14
Hogs	.08	92	.15	.11	11	.12

[1] The average price of 6 basic farm products for the year 1913 are set out in column 1 of this table.

[2] From 1913 until 1941 the average price of the manufactured products the farmer buys has increased 92 percent.

[3] If we take the 1913 prices of the 6 farm products and add 92 percent to them we find that the parity price of these farm products in 1941 must be as shown in column 3 to give the farmers same purchasing power in 1941 as in 1913.

[4] The average price of these 6 basic farm products for the 10-year average period (1920–29) are set out in column 4 of this table.

[5] From 1920 to 1929 (10-year average period) until 1941 the average price of the manufactured products the farmer buys has increased 11 percent.

[6] If we take the 10-year (1920–29) prices of the 6 farm products and add 11 percent to them we find that the parity price of these farm products in 1941 must be as shown in column 6 to give the farmers same purchasing power in 1941 as in the 10-year average period (1920–29).

Amending the Selective Training and Service Act of 1940

EXTENSION OF REMARKS

OF

HON. HARRY SAUTHOFF

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

Mr. SAUTHOFF. Mr. Speaker, this bill calls upon the Congress to extend the term of the selectees beyond the 12-month period which was set forth in the original act passed by the House September 7, 1940. That particular act had a proviso in it—

That persons inducted into the land forces of the United States pursuant to this act shall not be employed beyond the limits of the Western Hemisphere except in the territories and possessions of the United States, including the Philippine Islands.

It also sets forth that—

If and so long as the United States is not at war, each man selected for training and service shall serve for a training period of 12 consecutive months: *Provided*, That if during his training period the Congress shall declare that the national interest is imperiled, he shall be subject to service until the Congress shall declare that the national interest permit his being relieved from active service.

Let us see what Canada has done about the draft. Under the Canadian Draft Act the draftee is inducted into service for a period of 4 months instead of 12 months. He cannot be taken for service overseas. Only the volunteers can be transported for service overseas. Furthermore, the age of draft service runs from 21 to 24 years, while ours runs from 21 to 38 years. The Canadian draftee gets $39 per month while our draftees get $21 per month for the first 4 months of service, and then, if promoted to the rank of a first-class private, they get $30 per month. If the Canadian soldier is a married man, his wife receives $35 per month and there is an allowance of $12 per month for each child under 16 years of age. This gives such a man a total pay of $38 per month or nearly $25 per week. In a good many instances a soldier drawing the $98 allowance and pay is earning more than he did in civilian life. That is considerably more money than we are paying our boys. I just wonder how much of this money is made possible by the lease-lend bill.

When this entire subject matter was brought out in the press only a short time ago, it was stated that the Congress would be called upon (1) to remove the prohibition of service of these selectees outside of the Western Hemisphere; and (2) that the national interest was imperiled. Because of the tremendous opposition to the suggestion that the prohibition as to service outside of the Western Hemisphere be removed, it became necessary to drop that issue from this bill and to rely solely on the second contention, namely, that the national interest is imperiled.

NATIONAL INTEREST IS IMPERILED

When this Service Act was passed, the national interest was not considered to be imperiled, because there was no such statement in the bill, and, in addition to that, there is a 12-month limitation on the service. So we must inquire as to what has happened since September 1940 that has created a situation that imperils the national interest. In truth and in fact there is no evidence before the House or any Member of it that we face any more serious situation now than we did when this act was passed. On the contrary, it seems to me that our situation is much better today than it was at that time because, if my memory serves me rightly, this act was passed not long after France had fallen and military experts, newspaper columnists and radio commentators were all predicting that Britain would fall within 4 or 5 weeks. The experts, as usual, were mistaken. Britain did not fall, but made one of the most memorable resistances to invasion that has ever been portrayed in history. The amazing courage of the R. A. F., although outnumbered and with less equipment, faced a storm of fire to aid the retreating foot soldiers and to guard the English coast. They gave such a splendid account of themselves that Hitler and his hoards were utterly unable to land on England's coast. And yet in spite of the fall of France and the hourly

expectation that England would be overrun, the Congress did not declare that our national interest was imperiled.

What is England's position since that day? She has become immeasurably strengthened with additional armaments and additional airplanes until now she claims supremacy in the air over Germany. In addition to that her splendid fleet is far superior to anything that Hitler can offer. Hitler cannot now and does not even try to invade England. It is apparent that he and his advisers consider such an undertaking a lost cause. So we find Britain immeasurably improved in her defense equipment since a year ago.

What is the fact about our own situation? I need not remind you that we have had 1,500,000 men in training for these many months last past; that we have built a huge air force; that we are doubling the size of our fleet which has now been augmented by two very powerful battleships and numerous auxiliary warships and also transport ships; our coastal defenses have been gone over and bases have been built and are now being built in every strategic position, including the Caribbean, Nova Scotia, and Greenland on the east and a number of places in the Pacific on the west, including Alaska.

Therefore, as far as Britain and the United States are concerned, they are both immeasurbaly stronger than they were 2 years ago.

Well, then, how about Germany? Has her fleet increased? On the contrary, the best warship she had, the *Bismarck*, has been sunk and the R. A. F. is doing a beautiful job blasting the rest of them which dare not come out of their harbors. Has Hitler acquired any additional land troops? On the contrary, it is estimated that he has lost 1,500,000 men in his war with Russia alone, to say nothing of the men and equipment he must have lost in his invasion of the Balkans, of Greece, and of Crete. Every day Hitler's strength is growing weaker while, on the contrary, Britain's and the United States' is growing stronger. Has he acquired additional supplies? No one can tell what he has lost in planes, tanks, and other equipment, but we do know from the statements of the British and the Russians that he must have lost a considerable amount of every type of equipment.

Has he acquired new money and additional credit? On the contrary, I think it is safe to assert that he does not have either.

And in addition to the foregoing he has made an enemy out of a powerful ally. When he concluded a treaty with Russia some time ago, all of us were dumbfounded and everyone felt that the British had blundered in their diplomacy. Now, however, Hitler has blundered, for with the invasion of Russia he has committed himself to a difficult, costly, and, in all probability, lengthy war. Hitler may learn, as others with delusions of grandeur have learned before him, that Russia is the burying ground of hopes and aspirations of would-be world conquerors.

I do not profess to be an expert in these matters, but it would seem to me that in view of the present situation of Hitler and Russia and the probability that he will be there until the rains come in September, when the mud will render his mechanized units ineffectual, and later on when those rains turn to snow, Hitler may find himself in the same difficult situation in which another would-be world conqueror found himself more than 125 years ago. The vast steppes of Russia with the snow and cold have decimated more armies than were ever reduced by shot and shell.

Then how can we say that the national interest was not imperiled in September 1940 but that now our peril is infinitely greater and we must hold these men in extra service because of that situation? Where is the new testimony to that effect? Where is the additional evidence that would establish that fact? None has been presented to us and until there is additional evidence to support that contention, it does not seem to me that we should enlarge the scope of existing law.

Without any facts before us that show there is an impending peril and a great need, how can we vote to dislocate the economic, occupational, and social life of a million young men, change their entire futures, and offer as our excuse, when challenged, that we had no facts showing that such a course was necessary? Why, then, this bill?

WESTERN HEMISPHERE

I believe that two other factors contribute mightily to this imperiling business, which were disclosed at the outset when this matter was first suggested, but have since been suppressed and driven into the background, namely, that, first, the Western Hemisphere restriction be removed; and, second, that we ought to have an army of two to three million men. What for? Can we truthfully say that we need such a vast army in the light of the evidence before us in regard to national defense? When the hearings were held on the selective-service bill, our Chief of Staff, General Marshall, testified that an army of 480,000 men fully armed and fully equipped could prevent any corps from abroad from landing on our shores. Then why conjure up a force four, five, or six times as great, if it is not necessary for our defense?

The answer must be obvious. Such an army is wanted for offensive warfare and not for the national defense. Personally I am strongly opposed to a second American expeditionary force. I see no possible justification for shipping men to Europe, to Asia, or to Africa to become involved in this war. We have been advised that the place has already been selected where some of these men are to be sent. It is Freetown, a seaport with a splendid harbor located in Sierra Leone, a British possession on the west coast of Africa, 500 miles south of Dakar. Of course, we have a right to land men there because Britain is a friendly country and Freetown is a friendly port; but when we realize that Dakar is a mighty base, well fortified with modern equipment and with a powerful garrison, held by the Vichy government of France, then we see the reason why our boys are to be sent 500 miles south of there, and why the Western Hemisphere restriction should be removed, and why an army of two to three million men must be enrolled. If our boys can be sent to Freetown, why not to any place in the Union of South Africa, or to British Somaliland on the east coast of Africa, or to the Suez Canal, or Bombay, or Calcutta in India, or to Singapore and Hong Kong, or any other place in the possession of the great British Empire, which extends all over the globe?

I believe that the young men of the United States should have the right to live their own lives in their own way, in their own country, among their friends and relatives; that their occupations should be of their own choosing and that they should not be compelled to underwrite the British Empire and to endure a bath of blood that will run the seven seas crimson with the very lifeblood of our youth. And do not be deceived, my friends. The mind that conjured the idea of removing the prohibition about shipping our boys out of the Western Hemisphere has not given up that idea. It still lurks as a sinister threat in the background, and will, no doubt, be brought forward again when the time is more propitious.

EXTENSION OF TIME

Under existing law the selectee, when he has finished his term of training, is placed in the reserve component. The President has the power under existing law to call out the reserve component, so that it must be remembered that even though the selectee has been released from his period of training after the 12 months have expired, under the existing law, nevertheless, as a member of the Reserve he is subject to the President's call. Therefore it cannot be said that our Army will disintegrate, because the selectees form only 40 percent of our Army and, in addition to that, new selectees are coming up constantly and the old ones will still be available as Reservists.

Another objection that I have to the extension of this time is that it violates the spirit of the contract existing between the selectee and his Government. Every selectee believed, his parents believed, his friends and relatives believed, and the country at large believed that when this act was passed and the young man was called into service, it was to be for the period of 12 months, and then he could return to his home and his occupation. Break faith with the boys in this respect and you destroy the confidence of your people in its Government. Break faith with the selectee and keep him in the Army against his will and against his agreement, which he thought he had, and it will destroy the morale of the Army.

On the American silver dollar is the motto, "In God we trust." Pass this act and the selectee can erase that motto and place in lieu thereof the sign of the double cross.

Farm Prices

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

Mr. MURRAY. Mr. Speaker, I wish to call the attention of my colleagues to an article from Sunday's New York Times which includes an official table from the Bureau of Agricultural Economics showing the present farm prices, the parity price, and the 110-percent parity price of various farm products as suggested by the new price-control bill now being considered before the Banking and Currency Committee.

[From the New York Times of August 10, 1941]

FARM INCOME GAINS TWO BILLION BY PARITY—PROPOSED 110-PERCENT LEVEL WOULD COST PUBLIC CONSIDERABLY MORE, ANALYSIS SHOWS

(By Wilthrop W. Case)

An increase of close to $2,000,000,000 in the farmers' annual cash receipts and a considerably greater increase in the cost of farm products to the country would be the direct results of the farm bloc's proposed 110-percent parity-price program. Under this program, the farmer would receive 127 percent more for his rye than he now receives, 127 percent more for his hay, 100 more for his barley, 79 more for his oats, 70 more for his buckwheat, 69 more for his peanuts, and 51 more for his wheat.

At the same time, those commodities, the prices of which already exceed the proposed 110-percent basis, could not be pegged at levels below those of July 29, although present prices in some cases run to as much as 26 percent above even the 110-percent level. The net consequence would be that farm prices would on the average be lifted to even more than the 110-percent level.

Although the concept of the parity price was first widely publicized as part of the original A. A. A. legislation in 1933, it antedates that period by many years. Soon after the World War the Bureau of Agricultural Economics in the Department of Agriculture began computing parity prices, and it is to the Bureau's figures that reference is always made in any discussion of the matter. The figures here mentioned are from the same source.

The parity price of a commodity may be briefly defined as that price which will buy the farmer the same goods that it procured him in the 5 years immediately before the last war. Practically, it is equal to the price received by the farmer during the base period, adjusted for the changes in his cost of living and in his farm operating expenses that have since taken place.

It is computed as follows: The Bureau has already compiled by States the average price received by the farmer for each crop during the base period of August 1909–July 1914, and from these State averages has worked out averages for the entire country. It also computes an index of the prices paid by the farmer for his purchases, etc., based on the calendar years 1910–14 equals 100. The average price received during the base period is then multiplied by this index in order to obtain the so-called parity price. The percentage to this price of the price currently received by the farmer for his crop (computed by the Bureau on the 15th of each month on the same basis as in the original base period) indicates, of course, by how much the current quotation falls short of theoretical parity.

Average prices reported by the Bureau of Agricultural Economics as being received by the farmer as of July 15 as shown in the first column of the accompanying table, the computed parity prices as of the same date in the next, and in the third the percentage of the actual prices received to the corresponding parity prices. In the fourth column are given the prices which the farmer would have to receive in order to obtain the proposed 110 percent of parity, and in the last the percentage increase in price that would be necessary to attain this goal.

It will be noted that a number of commodities are already above even the 110-percent level. These for the most part are products the markets of which are chiefly or entirely domestic and therefore largely unaffected by the wartime curtailment of exports. The farm bloc's plan, as already noted, would attempt to freeze these prices at the July 29 level. The increases in farmer income for 1941 crops resulting from 110-percent parity prices are shown in the following table:

Wheat	$404,543,000
Corn	619,336,000
Oats	311,685,000
Barley	153,294,000
Rye	28,662,000
5 major grains	1,517,520,000
Rice	5,002,000
Flaxseed	22,364,000
Beans, dry edible	14,256,000
Cotton [1]	206,605,000
Sweetpotatoes	19,478,000
Total 10 crops	1,785,825,000

[1] Not including cottonseed, which is already above 110-percent parity basis.

For all farm products the gain would not be likely to fall much short of $2,000,000,000.

Parity prices for farmers as of July 15

	Actual price	Parity price	Percent actual to parity	110 percent parity price	Percent increase required for 110-percent prices
Wheat, bushels	$0.856	$1.706	72.8	$1.294	51.2
Corn, do	.696	.854	81.5	.939	24.9
Oats, do	.327	.531	61.6	.584	78.6
Barley, do	.452	.823	54.9	.905	100.2
Rye, do	.464	.958	48.4	1.054	127.2
Rice, rough, do	1.103	1.081	102.0	1.189	7.8
Buckwheat, do	.628	.971	64.7	1.068	70.1
Flaxseed, do	1.71	2.25	76.0	2.475	44.7
Beans, dry edible, 100 pounds	4.14	4.48	76.4	4.93	19.1
Cotton, pounds	.1432	.1649	86.8	.1814	20.7
Cottonseed, tons	35.90	29.99	119.7	32.99	(1)
Sweetpotatoes, bushels	1.011	1.168	86.6	1.285	27.1
Hay, tons	7.66	15.79	48.5	17.37	126.8
Peanuts, pounds	.0416	.0638	65.2	.0702	68.8
Apples, bushels	.95	1.28	74.2	1.41	48.4
Hogs, 100 pounds	10.20	9.60	106.3	10.56	3.5
Beef cattle, do	8.78	6.93	126.7	7.62	(1)
Veal calves, do	10.27	8.98	114.4	9.88	(1)
Sheep, do	4.60	6.02	76.4	6.62	43.9
Lambs, do	9.13	7.81	116.9	8.59	(1)
Butter, pounds	.314	.339	92.6	.373	18.8
Butterfat, do	.365	[2].326	112.3	.359	(1)
Milk, wholesale, 100 pounds	[2]2.13	2.13	100.0	2.34	10.0
Milk, retail [4], quarts	.107	.090	118.9	.099	(1)
Chickens, live, pounds	.168	.152	110.5	.167	(1)
Eggs, dozen	.266	[2].257	99.6	.283	10.5
Wool, pounds	.365	.243	149.4	.267	(1)

[1] Already above 110-percent parity basis.
[2] Adjusted for seasonal variation.
[3] Preliminary.
[4] Retailed by farmer direct to consumer.

Mr. Speaker, the first reaction I had to this article was "why is the writer so disturbed by this price advance?" Would it be a very serious miscarriage of justice if the national farm income should advance nearly $2,000,000,000 when the national income is expected to rise $25,000,000,000, and when the rural people represent 25 percent of our population? If the ceiling on butter is to be 37.3 cents per pound, the ceiling on cheese will be about one-half, or 18.6 cents per pound.

I especially call to the attention of Hon. CLARENCE CANNON, chairman of the Subcommittee on Agricultural Appropriations the proposed ceiling of $7.62 per hundredweight on beef cattle and to the attention of Hon. HAMPTON FULMER the proposed ceiling of 18.1 cents per pound on cotton.

As most States produce butter, which normally represents about 75 percent of the manufactured dairy products, I know this product has universal interest. I will not take the time to try and discuss this butter question, but want you to ask your farmer friends while you are home if they can produce 37.3-cent-per-pound butter at present farm wage levels and with the present prices of products they purchase. Ask any butter-producing farmer if he can produce 37.3-cent butter with 93 cents per bushel corn, 90 cents per bushel barley, 58 cents per bushel oats, and $17 a ton hay, or whether it is more advantageous to him to sell his grains and fodder.

SOME FARM PRICES

The following official letter shows the prices of the major farm crops the 10 years before the House of Representatives came under the control of the New Deal, and the prices which have prevailed during the 10 years since the New Deal has controlled the House of Representatives:

UNITED STATES DEPARTMENT OF AGRICULTURE,
AGRICULTURAL MARKETING SERVICE,
Washington, D. C., August 9, 1941.

Hon. REID F. MURRAY,
House of Representatives,
Washington, D. C.

DEAR MR. MURRAY: In reply to your letter of August 6 requesting 10-year average prices

for certain commodities for the two periods 1921–30 and 1931–40, the following table will supply you with the desired information:

Average prices received by farmers

Commodity	10-year average price (1921–30)	10-year average price (1931–40)
Wheat,[1] cents per bushel	107.2	71.1
Corn,[1] cents per bushel	76.8	58.7
Oats,[1] cents per bushel	39.9	30.4
Barley,[1] cents per bushel	56.6	45.3
Butter,[2] cents per pound	39.9	25.5
Cheese,[2] cents per pound	20.1	13.0
Eggs,[2] cents per dozen	27.2	18.5
Hogs,[2] dollars per 100 pounds	8.95	6.35
Beef cattle,[2] dollars per 100 pounds	7.00	5.78

[1] 10-year season average price.
[2] Average price for 10 calendar years.

Very truly yours,

W. F. CALLANDER,
Head Agricultural Statistician,
In charge, Agricultural Statistics Division.

Percent higher 10 years before New Deal controlled the House of Representatives; wheat 50, corn 31, oats 31, barley 25, butter 56, cheese 55, eggs 47, hogs 41, and beef cattle 21.

Please note that the 10-year Republican average for butter and cheese was higher than the 110-percent parity price ceiling proposed by Henderson, Ginsburg, Hamm, Elliott & Co. When you put a ceiling of 37 cents per pound on butter you put a wage scale of 20 cents per hour or less for a large group of American workers. Cotton representatives say that 18 cents per pound for cotton is not over 18 cents per hour for the labor producing this cotton.

The prices of the great bulk of agricultural products have been so low for so long under the New Deal that farm price advances which would permit the farmer to live like the rest of the people in this world are disturbing to the farm price manipulators of the New Deal. The largest cost of producing agricultural products is labor and the labor which produces the food for this Natior is entitled to the legislative protection which is accorded to any other group of labor. This protection is not going to be accorded by the 37 cents per pound ceiling for butter proposed by the discredited apostles of the more abundant life. One fact is evident. Secretary Wickert will not get the dairy products he wants or thinks he wants with this program suggested by Mr. Henderson.

Since the Agriculture Department has gradually disintegrated into a social and political agency of government, the farmers of the country cannot expect their interests to be protected by the Agriculture Department. Members of Congress should study this problem and see that the rural people of this country receive the legislative protection to which they are entitled.

The Situation in South America

EXTENSION OF REMARKS
OF
HON. WALTER G. ANDREWS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

Mr. ANDREWS. Mr. Speaker, now, as never before in its history, this hemisphere is being subjected to an acute degree of imperilment from within and without due mainly to a well-organized, insidious effort on the part of a combination of foreign powers to disrupt not only the way of life of our people, but also to sow the seeds of discord and distrust among neighboring friendly countries. The form of organization and the methods of spreading subversive threats differ slightly in each American republic, but the aims are always the same—to discredit the efforts of the United States and other governments and to bring into power in each of the several countries a government which will be sympathetic to the totalitarian ideal.

The German organization, with brief reference to others, is considered here because it is a strongly centralized and directed military agent, formed along military lines, with a singleness of purpose to further the German war aims in a manner which has proved eminently successful in Europe—notably in Norway, the Low Countries, and France. Moreover, it is the model organization whose methods all other subversive groups attempt to emulate. Such a cleverly led and organized force requires at least the creation and maintenance of a large and well-trained counter force ready in the Western Hemisphere to assist and quickly move to assist any threatened country requiring aid, if the way of life in our hemisphere is to be maintained and the defense plans of the United States are to be realized.

In a brief review of the ramifications of the Nazi organization in Latin America and threat to all the countries in our hemisphere, only an outline of manysided activities of this huge machine can be covered.

First consider the situation in Argentina. These Nazi activities are controlled by a German who is listed as a civil attaché of the German Embassy staff. Before this man arrived, Christian Zinsser, who was in charge of German espionage in Poland before the war, was chief of the Nazi party both in Argentina and Uruguay. Two hundred and three German schools, 320 old-line German associations, and 102 local groups are used in spreading propaganda. Money for these activities is levied on all Germar nationals, and even Argentine employees of German firms. At least one daily newspaper, two weeklies, and one monthly publication are financed. Proof of the militant intent of the Nazis in Argentina may be found in the Patagonian investigation of German plans for control of this region in the early part of 1939, and the Misiones affair of 1940, where Nazi cells were uncovered in numbers. Another item that should not be overlooked is that a German Army mission directed the training of the Argentine Army until July 1940. The Argentine Government has been showing considerable concern in recent months over the Nazi activities, and recent raids on meetings and propaganda centers have all indicated that this activity is widespread.

In Brazil, the German Embassy in Rio de Janeiro estimates that there are 1,200,000 Germans and descendants of Germans. Here through foreign office officials the Nazis have built up a powerful organization for spreading propaganda, employing many in the Embassy in Rio de Janeiro whose names do not appear on any published list. The large number of Italians and Japanese who have settled in regional groups in Brazil is well known. This situation is of considerable potential danger.

When we turn to Chile we find that there are about 20,000 European-born Germans and between 125,000 and 175,000 descendants of immigrant Germans in the country. With this large German concentration, the German Embassy is able to assess from German firms and citizens enough money to spend 3,000,000 pesos—about $100,000—monthly on propaganda. The Nazis are extremely well organized here, having 65 party leaders, 101 bund leaders, and 107 teachers working throughout the country.

The Government of Bolivia, no less than a few weeks ago, on July 19, was forced to declare a state of siege in order to forestall a serious threat to its sovereignty which would have placed the whole country in strong totalitarian hands. This threat was planned through the assistance of the German Minister to Bolivia, Ernst Wendler. Had the proposed coup détat been successful, the contract for wolfram and tin with the United States and England would have been annulled, and the recently authorized air line operated by Bolivian and United States interests would have been expelled from the country.

In Colombia, which covers the southern approaches of the Panama Canal, the Nazi organization is well set up and very industrious. So far in this country little stress is placed on military activities, but every effort is being made to undermine the faith of the Colombian people in the democratic cause and to create ill will toward the United States. Because of the strong German commercial and financial interests in Colombia, the Nazis are able to spend large amonts of money on propaganda. Possibly the greatest threat to the Panama Canal can come from hidden air fields in the little-inhabiated regions within air-bombing distance of the Canal.

Our closest neighbor, Mexico, has Axis propaganda organizations embracing two separate elements, the international and

the domestic. The German group, which includes the official diplomatic and consular representatives and the unofficial German residents, is the most active and most influential of all.

German businessmen in Mexico are reported to contribute large sums of money monthly for German propaganda. The nerve center of all German financial activities is the German (South American) Bank, some of whose employees are charged exclusively with supervision of all "political-economic" accounts and the disbursement and supervision of funds allocated for these activities. In order to maintain this control, all the coercive methods available to the bank are used to force the German houses to carry on their business through the bank, and any attempt to elude this control brings immediate pecuniary difficulties in reprisal for the guilty one, through denial of credit, boycott on the part of the colony, or in some other form.

The Japanese have also long been active in Mexico for the collection of military information and the gathering of strategic raw materials, with perhaps more than a casual look at the countries of Central America. It is worthy of note that a man who is said to have been the directing agent for subversive activities in Thailand previous to the recent trouble there has been transferred to Mexico.

In Central America the Honduran Government, on March 21 last, declared the German chargé d'affaires at Tegucigalpa, Christian Zinsser, persona non grata because of his activities in spreading propaganda and attempting to provoke trouble between the United States and Honduras. This is the same German official who was reported so active and dangerous previously in Argentina. He was removed from the Argentine and then went to Honduras to continue his subversive activities.

The long-standing boundary dispute between Peru and Ecuador has recently again become active, and there is every indication of the Axis' hand in this incitement. It is events of this kind which the Nazis welcome to fan hatred between neighbors and to weaken the confidence of people in their governments. They also serve to engage the attention of the United States and tend to bring discredit on its good-neighbor policy.

A quick glance at totalitarian air activities in the whole of South America reveals the following:

The German and associate controlled air lines in South America first became active in the early 1920's. These enterprises were primarily commercial in nature and remained so until shortly after the accession of the Nazi regime in Germany. At that time German air-transport policy underwent a fundamental change and German activities in South America, while remaining commercial in form, became largely propagandistic and even military in intent.

A large-scale program was begun early in 1935, the spearhead of which has been the Brazilian Syndicate Condor. This line, to all intent and purposes, is an arm of the German-owned Lufthansa and has been liberally supplied with equipment and funds. In addition to expanding the services of wholly German-owned companies, the Germans have acquired influence over a number of South American-owned lines by selling them equipment and furnishing them with technical personnel on very liberal lines. There are nine Axis air lines—16,600 route miles—operating in South America, which use German equipment exclusively. Seven of these also employ various proportions of German personnel. Two of the latter, Condor in Brazil and Sedta in Ecuador, totaling 8,300 route miles, are completely German-owned and managed. Varig, in Brazil, though partly South American-owned, was originally organized by Germans.

Axis and particularly German air-line activities in South America on the present scale are certainly against every interest of the United States.

They offer both a near-term threat which is primarily military and a most serious long-term menace which in addition is economic and political. Certain of their routes clearly appear to have been opened to tap strategic areas without regard to traffic possibilities.

Since the outbreak of the war, some of the activities of the Axis lines have been almost openly military. Until prohibited by Brazilian Government, Condor used four-engined planes on several occasions to observe the position of British cruisers operating in South Atlantic, probably passing this information on to German surface raiders. As a connecting air link to Europe the Italian trans-Atlantic air line, Lati, today flies from Rome to Buenos Aires, Argentina, by way of the Brazilian coast. In March 1941 Brazil fined Lati because of an extended test flight that seemed closely connected with the departure of Italian freighters from Rio de Janeiro for Europe the next day. While this line normally makes one flight weekly to and from Europe, four flights were made from Natal during the period June 22–29, 1941. This increase of schedule coincided with the preparation for sailing of six Axis surface craft, which actually sailed June 27–29. Lati thus furnishes the Axis Powers in Europe a means of air reconnaissance of the South Atlantic Ocean as well as a fast route of communication and transportation.

The present German air lines represent a distinct threat to the Panama Canal. Should the war permit the Germans an opportunity, this network would undoubtedly be greatly expanded. Elaborate ground facilities of military value would be established and numbers of high-performance airplanes placed in service. Under such conditions the Sedta operations in Ecuador and the Condor in the western regions of Brazil would constitute constant menaces to the Panama Canal. In addition, Condor bases on the shoulder of Brazil would be of great value as a bridgehead for an invasion attempt.

The full story of the extent of the totalitarian effort in Latin America cannot now be told without injury to the measures the United States and other governments are taking to supervise and control this menace. This tremendous threat to our security and way of life can only be removed by a positive, adequate, and competent counter force always ready and available in the Western Hemisphere until this great danger is banished.

Shall the United States Enter the Shooting Stage of War?

EXTENSION OF REMARKS

OF

HON. ANTON J. JOHNSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

RADIO ADDRESS OF HON. ANTON J. JOHNSON, OF ILLINOIS

Mr. JOHNSON of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered recently over the radio:

First of all, I desire to express my thanks to the Mutual Broadcasting System for granting me this time. I am neither speaking for nor appearing for any group, but just as an average citizen expressing my honest convictions.

It is my purpose to discuss briefly the question, Shall the United States enter the shooting stage of war?

This question, of course has nothing to do with the matter of our defense and the defense of the Western Hemisphere.

The Monroe Doctrine, long an accepted policy by our people, was officially approved by an act of Congress only last year. Briefly, the common accepted understanding of that policy has been: We keep to our own Western Hemisphere affairs, and we will also keep out of Eastern Hemisphere affairs, and we expect the Eastern Hemisphere to keep out of Western Hemisphere affairs.

We are agreed on full defense of not only our own country, but also defense of the republics to the south of us who will cooperate with us and who are unable to defend themselves.

In the first place, it is my belief that the question of war or peace is being beclouded by a lot of issues that have little or no bearing upon conditions as they now exist.

War or peace is actually a matter of selection.

We can have either, and it is up to us to make our choice.

We are told that if we don't get into this war and help England defeat Germany, Italy, and Japan, we will have to do it alone later on. This might be true, but I do not believe it. I feel it is a false premise that will not bear up under cold and unemotional scrutiny.

There is no danger of the dictator nations being able to make a successful invasion of this country now or in the near future, whether England stands or falls.

The Axis Powers do not have the ships and lines of supply required for such stupendous undertaking, and they know it full well.

Our own Army and Navy experts are well aware of how supply demands pile up in geometrical progression as lines of communications and transportation lengthen. Nor is there any possibility of the Axis Powers being able to acquire such necessary facilities in the near future, either through the capitulation of the British and their latest ally,

Russia, or by their own shipbuilding and military production efforts.

Now, on the other hand, the United States does not now have the transportation facilities necessary to support the required line of supply for another invasion of Europe. The reason we do not have such facilities is largely because we have been giving too many of them away.

We hear a lot of talk about our coastal cities and industrial centers being bombed from the air. It is probably soon possible for suicide air squadrons to do that, but suicide bomber squadrons do not win wars. If that were so, England would have long since surrendered. No; it takes a powerful Navy, hundreds of cargo vessels, and millions of men to wage a transoceanic war—win or lose. Anything less than that in the way of equipment and facilities is even more foolhardy than even Hitler is apt to contemplate.

It is not my desire to create an impression that we are entirely free from danger. I admit we are faced with an acute danger. But it is from within rather than from without.

I refer to the minority war group, the 10 or 20 percent of our people who are clamoring for and pushing us toward war. What is their goal?

Can it possibly be to develop such a great national fear amongst us to the point where, in desperation, we enter into an offensive war before we are adequately prepared even for a defensive war?

My fellow Americans, should that occur, we will find ourselves in the midst of chaos, and that, I warn you, would be a quick end to all our freedoms and the last real representative form of government would pass from the earth.

A year hence our situation will be changed. We will have a much larger Navy, hundreds of additional cargo vessels, guns, and materials of all kinds, and upward of 2,000,000 well-trained soldiers. From the military and naval standpoint, we will then be much better prepared to aid in the defense of the republics to the south of us. We are in no such position today.

And don't forget—while bombers can level cities, disrupt transportation, and motorized divisions can overrun countrysides, it still takes the age-old foot soldier to win a war by actual occupation. They are just as necessary today as they were in Caesar's time, and probably even more so, for modern war arenas now embrace continents rather than just a few hundred square miles of territory.

So much for the practical side of the question whether or not we shall go to war now or remain at armed peace.

Let us look at the domestic economic angle.

Up to June 26, 1941, Congress has authorized more than fifty and one-half billions of dollars for defense, of which approximately twenty-seven billion has actually been spent for ships, airplanes, ordnance, training of men, and all the other items required to build a huge Army and Navy.

In addition, $8,775,000,000 has been advanced under the Lend Lease Act and through R. F. C. loans to the British, Chinese, and Free French. It is now reliably reported that Congress will soon be called upon for at least another $7,000,000,000 for lend-lease purposes, probably most of which is intended for Russia.

Let us realize the cost of war.

Go back 24 years, when we entered the first World War. Our national debt was then $1,000,000,000. At the end of the war our national debt had risen to the dizzy sum of $26,000,000,000.

During the succeeding administrations of Harding, Coolidge, and Hoover, that debt was reduced eleven billion in 11 years, to fifteen billion. And may I remind you that we have paid another fifteen billion in interest on the last World War debt.

Since 1930 we have not reduced that debt of fifteen billion. Now we confront World War No. 2 with a $45,000,000,000 debt, and with additional authorized expenditures confronting us it is estimated we will have increased our national debt to $100,000,000,000 this year.

If we are to maintain our national credit and prevent bankruptcy, we are going to pay taxes such as has never before been experienced in America. Yes, we talk about the three and one-half billion dollar tax bill now pending in Congress. That is only the new tax increase over the nine and one-half billion tax under existing law. Someone once said, "The power to tax is the power to destroy."

War and taxes for war can be implements of destruction to ourselves. Such huge expenditures with their attendant waste, if continued long, can have but one result, national bankruptcy.

Concentration of skilled workers into war plants, shipyards, etc., and the curtailment of regular industrial activities in many of the smaller cities of our Nation is already causing severe dislocations in our domestic life.

May I quote briefly from a letter received last week from a hotelkeeper in the Midwest:

"Since the first of the year more and more of our regular patrons are off the road, and always the same answer: 'Nothing to sell.'" Tragically he continues, "I hope that Congress in giving away billions to save democracy will find some way to save the individual, without whom there would be no democracy."

The temporary prosperity we are now experiencing is fleeting. It is not constructive nor enduring, for the reason that most of the defense money is being spent on articles of destruction, and it represents in all important phases a continuation of the distribute-the-wealth idea.

Time does not permit discussion of all the economic inequalities that resulted from the defense program thus far.

To me, the moral aspect of an aggressive war is unsupportable. Aggressors are ruthless; and should we send another A. E. F. to Europe, we, too, would become ruthless.

We are told we must fight the dictators to maintain the "four freedoms." I say the "four freedoms" will survive, whatever their transitory state may be at the moment. Those nations who want them will have them sooner or later.

"Save the world for democracy" is the slogan invented by the war advocates. What democracies are we to save, and who is to save who? Poor Finland, considered by us as the most honorable nation, the one nation who paid her World War debt installments to us, yet last week we read of Finland being bombed by Britain. Part of France fighting Germany and part fighting England. "Red" Russia, our new-found democracy, for years considered by us as our worst enemy because of the secret agents she has employed here in our Nation to plot our overthrow, now appears to have become our bosom friend. We are all beginning to say, "What's going on anyway?"

The greatest boon to mankind will be the powerful example we can set by showing them the futility of war, and that war is not necessary in a true republic. On the other hand, if we do go into these conflicts, we shall settle nothing, while at the same time prove ourselves to be no better than those who started them, and bring upon our own heads, as we did after the first World War, the criticism and even hatred of some of our Allies for prolonging the war.

Ladies and gentlemen, as you hear this talk tonight you may be wondering what you can do to help decide whether this Nation selects war or peace as its national destiny. Let me say in conclusion that you have everything to do with this decision. If you want America to remain at peace, write your President and tell him so. Do not stop there. Also write letters to your two Senators and your Congressmen asking them to take an active part in the crusade to keep America out of this war. Your letters are carefully read here in Washington, and in this final analysis your desires will be followed by your Government. The decision is in your hands.

Is Nation Being Taken Down the Road to Socialism?

EXTENSION OF REMARKS

OF

HON. LELAND M. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

AN EDITORIAL

Mr. LELAND M. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

IS NATION BEING TAKEN DOWN THE ROAD TO SOCIALISM?

"Are President Roosevelt and his more intimate advisers, in cooperation with the British Labor Party, bent on delivering the United States to Socialism? Are they trying to turn our Government into a labor government, paralleling the effort of Bevin, Laski, and the English radicals, and our economic system into a collectivist system control, as in the European dictatorships, by one strong leader and his aides?

"Have they seized upon the present defense crisis as an opportunity to discredit, then liquidate private enterprise? Is the administration taming a half-puppet Congress with patronage and breaking its prestige in order to forestall opposition to a socialist organization of society? Is it subordinating defense to politics and politics, in the ordinary sense, to class war?"

These are the startling questions that Amos Pinchot, New York statesman and publicist, asks the American people in a pamphlet issued by the Committee for Constitutional Government.

According to Mr. Pinchot, the plan involves continued expansion of Government control until private property will be largely in hands of the state, which will be ruled by Socialist labor parties in the United States and England.

Mr. Pinchot especially names Harold Laski, a British Laborite professor and an adviser of Mr. Roosevelt; Ambassador John C. Winant, Benjamin Cohen, Harry L. Hopkins, lend-lease bill administrator, and Justice Felix Frankfurter as members of this group.

What is most astonishing in this alleged program of upsetting our traditional democratic forms is the part played in it by such Englishmen as Harold Laski and John Maynard Keynes, of the British Treasury, who is generally looked on as the father of the Roosevelt spending-into-prosperity technique, and which sane Americans call squandermania.

It was Professor Laski who now has the President's ear, who said at the University of Wisconsin in April 1939:

"Should war be forced upon us and we see the old, ugly, imperialistic aims dominating the rulers of the democracies, we of the Labor Party and the working class everywhere see

it as our duty to turn those wars into civil wars and remake those governments which disregard the working classes, which are their foundations."

Turning imperialistic wars, so-called, into civil wars is what Lenin advised the workers of America to do in his "a letter to American workers," 1934. The Communist leader said:

"The American workers will not follow the bourgeoisie. They will be for us for civil war against the bourgeoisie" (p. 17).

Professor Laski, also in one of his books pictures communism as an experiment that has brought "exaltation to the common man," when, as a matter of fact nothing has so completely degraded the common man in all history.

As further proof that the administration is drifting into a socialistic government, Mr. Pinchot cites these instances:

"The judiciary bill to pack and control the Federal courts; the executive reorganization bill to move the powers of Congress into the President's hands; the Black-Connery so-called wages-and-hours bill, which, in its original version, was a bill to create a price-fixing and wage-fixing dictatorship over capital and labor; the May bill of 1938, aimed at arming the President with full censorship of the means of communication, and also, like the seizure bill, enabling him to rewrite, at his discretion, every contract entered into in the United States, whether between private persons and corporations, or between them and the Government; the bills providing for agricultural regimentation and price-fixing; the President's effort to place under political control medicine, insurance, railroads, and other enterprises and professions that should be private, competitive, and free."

This is all in line with government by Cabal to which the American people have been subjected for 8 years.

What they voted for three times was more freedom, a balanced budget, a reduction of taxation, no socialism, and no war.

What they have got or are about to get is, without a doubt, precisely what Mr. Pinchot exposes in his pamphlet—plus war!

The Wrath to Come

EXTENSION OF REMARKS

OF

HON. STEPHEN A. DAY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

EDITORIAL FROM THE CHICAGO TRIBUNE

Mr. DAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Tribune of August 8, 1941:

[From the Chicago Tribune of August 8, 1941]

THE WRATH TO COME

The Republican Party is the minority party, but it represents the majority sentiment in the most important division of opinion in a generation of Americans. The party representatives in the House of Representatives, recognizing this and the obligations it carries with it, have signed a resolution giving the people of the country "a definite expression of our views on national defense and foreign policy.

The declaration was needed to reassure the majority of the people that they have not been wholly deserted and betrayed by their representative system.

The position of most of the Republican Party leaders, both in and out of Congress, has been known, but it had become imperative that something like united party action should be taken to make it plain that the party stood by its own platform and would demand that the majority party, the one which won the election, should abide by its campaign pledges as given by the party platform and by the party candidates.

One pronouncement of weight came from 15 of the party leaders. The resolution of the House Republicans follows that, reinforces it, and puts the party behind it. Thus the party becomes by a full expression of its beliefs and decisions the party of opposition to entering the war abroad.

Under Mr. Roosevelt, the Democratic Party has ceased to be representative of the country which returned it to office. Every testing of public opinion shows that the people are 4 to 1 against entering a foreign war. People whose votes sent Mr. Roosevelt back into the White House and gave the Democrats the control of Congress are against the program to which Mr. Roosevelt and under him his party are openly committed. The program is a breach of faith with the people whose votes were obtained under false promises which they apparently fully trusted.

The Republicans in Congress, in their resolution, repeat not only the Republican pledge but the Democratic. The Republican platform said: "The Republican Party is firmly opposed to involving this Nation in foreign war." The Democratic platform said: "We will not participate in foreign wars, and we will not send our Army, naval, or air forces to fight in foreign lands outside of the Americas, except in case of attack."

The phrase "except in case of attack" cannot be used as an escape clause from the otherwise unconditional promise. The country has not been attacked. The people are not to be cheated by the assumption that if we do not at once carry the war into some foreign land we shall be invaded, nor are they to be deceived by the pretense that since these pledges were given them by their two major parties conditions have so changed that Mr. Roosevelt could not now honestly or wisely, prudently or patriotically, pledge himself as he did when he was a candidate. This is a pretense and a falsity.

All changes which have taken place on the war map since the November election have added to the difficulties of the Axis Powers, to the resources and strength of the British, and have improved the defensive position of the United States. Japan, although more aggressive, is in greater difficulties and is aggressive for that reason. Italy has become almost negligible, and Germany, which had gone from one easy victory to another, is engaged to the full testing of its powers in a great war.

These conditions are all favorable to the keeping of pledges, particularly of those pledges unequivocally given by Mr. Roosevelt himself. And yet we have the Democratic Party putting forward as its principal spokesman in the Senate such a man as CLAUDE PEPPER, of Florida, who demands that the American people commit themselves to a military and financial catastrophe which this little trifler with national destiny describes as incalculable. He talks of the squandering of hundreds of billions of dollars and of the sacrifice of millions of lives, for years and years, as if it were tolerable to the thought or endurable to the flesh. He, speaking for his party and his party chief, confronts the Nation with this fate as if it were unescapable and were already upon us.

There is a design that it should be unescapable, and the Democratic Party in Congress, dumb or indifferent, paralyzed or hypnotized, is surrendering the majority of its votes to authorize war abroad, supporting a policy denounced by the people, denounced by these very Democrats themselves, and by every truly prophetic voice.

Do Mr. PEPPER and those for whom he speaks think there will be anything left of the Democratic Party if what he predicts for the United States should become a reality—because of what he and they have done? Even if the country as we have known it and its Government as we have desired it to be should survive in the long endurance that would be required after such an experience, the men and the party who had brought it about would be buried under a hatred which would last as long as they and their acts were remembered.

Fear of punishment is not a high motive, but possibly these subservient men will listen to none other. The Republicans may be able to do no more than present a front against the misrepresentatives of a people threatened by their own Government, but the Republicans can do no less.

The madness of the war party increases day by day. It has lost reason. It is demanding human sacrifices and wants—to splatter its altars, but there is wrath coming and the persons who betray the country, sacrifice its youth, and leave it in the world's wreckage will feel the edge of that just anger.

Attitude of Management Toward Industrial Safety

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

ARTICLE BY GUY CLOW

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article, which was written by one of my constituents:

[From the Coshocton (Ohio) Tribune]

ATTITUDE OF MANAGEMENT TOWARD INDUSTRIAL SAFETY

(By Guy Clow, manager, James B. Clow & Sons Co., Coshocton)

Accident prevention in industry is a divided responsibility. Management must assume its share and the working personnel must also accept its share. Mutual benefits cannot be attained without the assumption of mutual responsibilities.

Speaking from the viewpoint of the employer, I would say that the initiative in any safety program rests with management. It is the duty of the employer to provide safe working conditions and, as far as possible, minimize the inherent hazards of production. On the other hand, it is the responsibility of the worker to make use of the safety measures provided for his protection and also to provide the human element without which accident prevention effort is useless.

We believe that industry, especially that portion which is agreed on the policy of modern and progressive methods, is living up to its ideals as regards safety. Its primary motive in reducing the number and severity of accidents is purely humanitarian. No employer who has kept his standards keyed to the social problems of the day wants to see anyone of his employees suffer injury and

monetary losses incident thereto. Wherefore, his first consideration in setting up a safety program must be predicated upon the desire to maintain the physical welfare of every man or woman in his employ. Regardless of the erroneous impression that employers have no human interest in their employees, we believe that this is rather universally true.

Because of the emphasis given to the economic aspects of safety, and perhaps justly so, many employees have gathered the impression that accident prevention programs in industry are primarily motivated by the desire to save money for the company. As far as progressive industry is concerned, this is a popular fallacy. It is true that the consistent adherence to safety methods and safe practices will save money for the employer in many ways. It cuts down needless overhead expenses, saves the loss of time needed for production, eliminates a lot of waste due to breakage and spoilage and brings to the employee a peace and contentment that is a valuable asset in maintaining plant morale.

No employer, in this age of keen competition, will overlook the real value of accident prevention as an aid in sustaining his economic status, but in the safety movement, these rewards for safety effort should be and, we believe, rather generally are, looked upon as incidental to the human value involved. This is particularly true at the present time, when the entire industry of the Nation is engaged in an all-out effort to increase production for the national defense. Conservation of manpower is just now one of the prime essentials of the defense program and the maintenance of the health and fitness of workers is a necessary step in that direction.

It is not through any selfish motive that industry asks employees to faithfully comply with safety rules and regulations, and be careful of doing things calculated to endanger their own safety and that of their fellow workers. As a matter of fact, the real beneficiaries of a safety program are the worker himself, his dependents, and the community in which he lives. It is the worker who undergoes the physical pain and mental disruption due to a disabling injury. It is the worker who exchanges the wage his labor produces for the $18.75 per week it is now possible for him to receive in compensation, or the $21 per week available after September. It is the worker who is forced to the necessity of curtailing his living expenses in accord with reduced income, and it is his family which must deny themselves the necessities and luxuries made possible by steady work at good wages. To him disability means an irretrievable loss, whereas it is possible for the employer to cover accident outlays into the cost of production.

Burden on Draftee in United States Far Worse Than in Canada

EXTENSION OF REMARKS

OF

HON. KNUTE HILL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

ARTICLE BY HAL BURTON

Mr. HILL of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following article. No comments are necessary. The simple facts recited in this article are conclusive in showing two things: That with proper equipment draftees can be fully trained for defense purposes in a period of 4 months; that Canada, a part of the British Empire, is doing this very thing and that these draftees are not even asked to serve throughout the Western Hemisphere outside of Canada.

BURDEN ON DRAFTEE IN UNITED STATES FAR WORSE THAN IN CANADA—DOMINION SOLDIER SERVES BUT 4 MONTHS; AMERICAN MUST COVER THE HEMISPHERE

(By Hal Burton)

OTTAWA, August 11.—In Canada, a married man is automatically exempt from the draft. In the United States, he is automatically exempt only if he has dependents.

A Canadian draftee need only serve within the ocean boundaries of the country. An American draftee is liable to service anywhere within the Western Hemisphere, which covers everything from Greenland to Hawaii, and from Newfoundland to the southernmost tip of South America.

4-MONTH TRAINING

In Canada, a man who enlists in the reserve force, corresponding to the National Guard in the United States, is not called up in the draft. In the United States, such a man is part of the Regular Army.

In Canada, a man who has completed his 4 months' training under the conscription laws may obtain a leave of absence to return to a job essential to national defense. In the United States, once such a man is classified and sent to camp, he's in the Army to stay.

These essential differences between the Canadian and American conscription systems were elucidated today by a group of government officials. Two additional points were brought out by Maj. Gen. L. B. Lafleche, associate deputy minister of national war services:

1. The Canadian draftee does no K. P. or fatigue duty other than the policing of his tent. Such work is left to overage enlistees, such as members of the veterans' guard—enlisted soldiers of the last war who attend to cooking, sweeping and other services indelibly associated with the American draftee.

DRAFT AGES DIFFER

2. No Canadian under 21 or over 24 is eligible for service under the draft laws. In the United States the minimum age is 21 and the maximum 28.

The Canadian 21-to-24-year-olds have already built an army of 102,000 home-defense soldiers; volunteers from 18 to 43 already have provided an army of 100,000 abroad, with an additional 200,000 soldiers and airmen at home.

The draft regulations specify that those presently subject to call shall be individuals not more than 24 years old on July 1, 1940, and 21 or older since that time.

This week end the Government announced that the 3 divisions presently overseas, plus a tank brigade and corps troops, will shortly be supplemented by 2 more divisions of 10,000 each. In the last war the Canadians had 425,000 men overseas. Before the end of this war the figure may be the same, or higher.

VOLUNTEERS ABROAD

Service abroad, on a volunteer basis, has brought an entirely satisfactory response. The last call, for 32,000 men, brought 50,000. That, officials say, is why no universal conscription for overseas service has occurred, unlike the last war.

"In the new type of war," one official commented, "where the fire power of a group of soldiers is so greatly intensified, 10 men may be as effective as 50 were in the last war. To date, for us, this has been a war of movement, with low casualties. We have sent abroad and are training for service abroad all the men we need at the moment. If we need more, we will call them."

The Canadian Army breaks down into four subdivisions: (1) Those called for compulsory military service; (2) those who volunteer for overseas service; (3) those in the reserve force; (4) those in the veterans' guard.

Those in compulsory service receive 4 months' training and thereafter are held on active duty. Originally draftees received 30 days' training and then went into the reserves. This plan ended February 3, 1941, when the reserve period was expanded. On April 21, 1941, draftees were ordered held in active service "for the duration" after completing their 4 months.

OF DEFINITE VALUE

In this 4 months, Canadian Army officials believe, a man competent for home defense can be turned out. He spends his first 2 months being conditioned in 1 of the 39 training centers. He spends his second 2 months learning a special branch of the service, as he may elect—such as artillery, infantry, signal corps.

He learns, initially, how to do columns, wear his uniform, army routine, to get his infantry training, read maps, fight with a bayonet, and to prepare himself for the branch of the service he wants to enter.

"In 4 months," General LaFleche commented today, "a man can be brought to a point where he is of definite value in defense."

Under the conscription laws, postponements may be granted for a maximum of 6 months to men engaged in essential services—farming, fishing, lumbering, trapping, mining, placer mining, gold prospecting, seafaring, railroad transportation, or other seasonal occupation.

FIFTEEN TO TWENTY-FIVE PERCENT DEFERMENT

When a man is called for service he may apply for a postponement in writing within 8 days. One of the 13 divisional boards in Canada, corresponding on a larger scale to American draft boards, will then consider his application. No postponement for longer than 6 months is granted, and the average is only 2½ months.

If a draftee who applies for a postponement is employed in a key defense industry, he is given no special consideration beyond his initial postponement. The shop for which he works is expected to train older men and women as replacements for such young draftees.

But once he has completed his 4 months' training, if the shop or factory for which he works can prove that he is necessary to its continued operations, he can be released from active duty on leave of absence. He gets no pay from the Army while on leave, and he can be called back at any time.

The number thus exempted varies from 15 to 25 percent in official estimates.

Extending the Period of Service of Persons in the Military Service

EXTENSION OF REMARKS

OF

HON. GEORGE M. GRANT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

Mr. GRANT of Alabama. Mr. Speaker, I approach this important matter with a

deep feeling and a heavy heart. This is a time to lay aside all prejudices and to calmly and dispassionately approach the subject with one thought in view, and that is the well-being and security of our Nation. What is best and what should be done under the circumstances as they exist today? Does the passage of this pending legislation work a hardship on those in service; and, if so, does the security and well-being of this Nation demand that this hardship and sacrifice be required of those who are now in service and those who may later be called? I do not accept this matter lightly. To me it has meant much thought and consideration and many sleepless nights. There is more involved than a mere affirmative vote. We cannot thus cast the issue aside and let it end there. Unless we are willing to meet the challenge and go further, it is best that the House reject the legislation.

We listen to the war news over our radio and then turn to our favorite orchestra or quiz program. We daily read of the killing of tens of thousands in Russia and China and then turn to the comic or sports sections. It is taken as a matter of course. But, my colleagues, when it is brought home to us, then it is a different story. Yes; today, even this very hour, American boys, our boys, are paying the supreme sacrifice. We are at war in many ways. It is poor consolation to the members of one's family to tell them that their loved one, who has lost his life in training, was not shot down by an enemy and that we are not at war. To them it is war and their loved one has paid the supreme sacrifice in order that we may be prepared.

A relative of mine recently lost his life in a Navy plane and a relative of my wife lost his life as a cadet in the Army Air Corps. This same thing is happening daily to families throughout this Nation. The war is being brought home to them.

I, for one, do not charge anyone opposed to the extension of the draft as unpatriotic. Just a day or so ago, in talking to a Republican colleague, I learned that he had already lost a brother and has a son in the service. While opposed to the extension, I know that he is just as good and as patriotic an American as I.

It is an easy matter to make stirring speeches calling upon someone else to fight and die—yes, and to serve. I know what war is, I know what it means, I know what it is for a nation to be unprepared. God forbid that the youth of this Nation shall ever be called upon to again go into battle unprepared as was done in the last World War. While never being in actual combat myself, I have through my limited service learned and seen the penalties paid by this Nation by unpreparedness during our last war. I want no more of it. I am for peace, but peace with honor and peace with security.

Yes, I shall vote for an extension of service, but in doing so I pledge myself that insofar as lies in my power that I will see that this Nation does its duty toward these men and their families. The veterans of the last war have been called Treasury raiders and vilified. The Nation soon forgets, but my pledge here and now is that as one voting for this extended service that I shall not forget whatever comes. My personal feeling is that we will not become involved in the present war, however, we have no such guaranty. With a wild man loose in the world we must take every precaution. We must prepare for peace, not for war, and then if war comes we can meet the enemy on equal terms.

I realize that the extension of the period of service will work a hardship upon many of the men in service. Certainly no one can argue that if we were actually in war that the men would be turned out in 12 months and while we are not in war, conditions have developed whereby it would seriously affect the safety and security of the Nation to end the training at this time. While it was generally understood at the time of the passage of the act that only 12 months would be required, there was nothing in the act so stating and there was no contract with any such terms. The act clearly states that:

> Each man inducted under the provisions * * * shall serve for a training and service period of 12 consecutive months unless sooner discharged, except that whenever the Congress has declared that the national interest is imperiled, such 12-month period may be extended by the President to such time as may be necessary in the interests of national defense.

The only question now involved is whether or not the national interest is imperiled. Each of us must answer this in our own mind.

I shall vote to increase the pay of the men in service after his 12-month period of training. I believe this to be right and proper.

In voting for this measure I make the pledge that I will support all legislation tending toward national defense and legislation that will insure those in service the very best and most modern equipment. I do not see how anyone can vote for this measure and stop there. You have just begun—unless we are to follow through, let us not enact this legislation.

We can extend the time of service, but my colleagues our first line of defense lies on the production line. The defense and future not only of this Nation but of those nations fighting the aggressor, depend upon our ability to furnish supplies in ever-increasing quantities. This is more important than any extended service bill, because we must produce supplies, planes, tanks, and other implements to help all nations over the world who are fighting the aggressors. If we are able to send them sufficient supplies, then our boys will never have to fight. This is our first duty, yet we quibble and "fiddle while Rome burns." If the situation is so acute as to require additional service it is serious enough to do something about the strike situation. I maintain that the same power that has the right to draft and extend the period of service has the power to do something about strikes.

Until recently there has been a great lull in the number of strikes, but just at a time when we are considering extending the service limit a new crop breaks out. The papers for the past week have been filled with strikes, strikes, strikes.

The union-shop issue is the only controversy between the Federal Shipbuilding and Drydock Corporation and 16,000 strikers. Work has been halted on the construction of 13 vessels. This strike is the biggest blow at the national-defense program since the North American Aviation strike. The President has been asked to take over the plant in order to enforce the union demands.

A large number of employees failed to report at the Philadelphia Navy Yard in what naval officials describe as a refusal to work unless they obtain double time for Saturday. Admiral Watson, commandant of the yard, said that this action violated an agreement with the union that all overtime and Saturday work would be based on time and a half.

Read the reports and look at some of the pictures coming from these strike centers and see whether you approve of the actions of the picket lines. I do not want any repressive legislation, but I do want something done about the jurisdictional strikes over the country and something done whereby an American citizen who wants to serve his country on the production line will not be molested. And I know that the boys who are receiving $21 a day once a month instead of double time at $21 a day want something done.

Harry Hopkins, administrator of the lease-lend bill, serving as the President's special envoy to London, in a speech broadcast to the British people promised the British that the tools needed for victory are on the way from American production lines. I want to see this promise carried out.

I do not lay all the trouble to labor. Some of it lies with the administrative officials and with the plants. I noticed just a few days ago that one of the large plants was going on a 6-day week. Just think! Here we are in what some consider the worst crisis in our country, and a plant just now going on a 6-day week. Does Saturday work interfere with some of the officials' golf games?

Our much-heralded plane output continues to lag. Only 10 heavy bombers were produced in May and few more in the following months. Do we think that Hitler is going to sit down and wait for us to prepare?

I have been into the homes of the service men of this country. I know what a sacrifice many of them and their families are making. I recently saw one brave old soul who had given several boys for service out collecting aluminum pots and pans for defense purposes. In other homes I have seen mothers grieve for their sons who had been in service for less than 4 months and who were sent to Alaska without even an opportunity to say good-bye. What promise can we give these mothers? I know not what prom-

ise you may make, but as for me, come what may, I solemnly promise to do everything possible, regardless of cost, to see that they are adequately protected by land, sea, and air.

If Congress has the power to enact this law, certainly we have the power to write into the act some definite restrictions as to deferments. It is my understanding that much latitude has been granted the local and State boards in this matter, however, the press informs us that the National Director of Selective Service stopped the New Jersey draft boards from reclassifying the strikers as available for military duty. If this policy is to be followed, it is certainly sad news to the young, patriotic men of New Jersey and other States who will have to fill in while their neighbor down the street, by reason of his having a good job cannot only stay out of service as long as he remains on the job, but can by reason of his once working, stay out on strike and remain exempt. If this fair and right? Is it the way this law should be administered?

Let us so operate this law that there will be a minimum of just complaints. Unless some of the governmental departments here in Washington change their views and actions, it shall be my purpose to introduce a resolution calling upon each of them to submit to Congress a detailed statement as to each and every person that has applied for deferment and what action, if any, has been taken by the department or agency in recommending such deferment. We might as well be frank about this matter. It is common knowledge that many of the departments and agencies are loaded down with young attorneys who have been seeking deferment on account of their indispensable governmental work. It is also common knowledge that thousands of these on the pay rolls would never be missed; that their particular work can just as easily be done by others in the department, many of them older persons who have been pushed aside by the youngsters. It is hard to understand just what a young lawyer out of school for only a few years and, in most cases, has never been engaged in the actual practice of law, can do what some other older attorney with experience could not do.

They are certainly in contrast to the young man who has started a little business and who has to give it up. He has to make a real sacrifice. What can he expect when he returns with his business gone? Not only do we have the men who will lose their business but we have the man who had a steady job. The law stipulates that when he returns that his old job shall be given back to him; however, in many cases the firm will be out of business or, for some other reason, he will be unable to secure his job. Not so with the Government employees. The Government will still be in business—at the same old stand. His job is assured, so why should they be exempt?

Let us make this law of selective service a real American law with "equal service for all."

Extension of Military Service of Selectees

EXTENSION OF REMARKS

OF

HON. JOSHUA L. JOHNS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

LETTER FROM CONSTITUENT AND ARTICLE FROM APPLETON (WIS.) POST-CRESCENT

Mr. JOHNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and newspaper clipping referred to therein:

AUGUST 8, 1941.

The Honorable JOSHUA JOHNS,
House of Representatives,
Washington, D. C.

DEAR MR. JOHNS: No doubt you have received many letters of this nature expressing the real feeling we parents have for our boys in selective service.

We happen to have a son who volunteered in good faith last January because he, like most other boys, had faith in his Government—a faith that every real American had. Why should that faith be broken because the majority of our Congress either don't know the significance of that word or are just taking the destinies of this good country of ours out of the hands of the people?

We've been the one Nation in the world where faith has been the dominating factor—faith not only in our country but in its leaders as well. Making those promises and breaking them as soon as they are made surely doesn't build up the morale of the people, especially young America, now serving their country.

We here in Wisconsin thank God that we have representing us in Congress men who realize what that group is bound to throw us into.

Our son, a boy whose word is his bond, sure has some consideration coming to him.

Parents pride themselves in bringing boys like that to an age where they become good, honest citizens—citizens who can be trusted and an asset to any community. Breaking that faith which they had so strongly entrenched in their hearts is bound to reflect in the type of citizens we are building if this present mad crowd is permitted to dominate the people.

I am enclosing a clipping which I feel pretty much expresses the opinion of all the boys now in selective service.

Yours sincerely,

ARTHUR C. ECKER,
Appleton, Wis.

[From the Appleton (Wis.) Post-Crescent of August 7, 1941]

APPLETON SOLDIER SAYS "POLL" DIDN'T INCLUDE THIRTY-SECOND DIVISION

That the alleged "poll" of enlisted men in the Army which is said to have revealed that 90 percent of the men were willing to remain in service beyond the year for which they were originally called did not include the men of the Thirty-second Division at Camp Livingston, La., was the interesting observation made by an Appleton member of this outfit in a letter to the Post-Crescent. This young man, whose name is being withheld so that he will not be subjected to censure for expressing his views, said that "not one enlisted man in the whole Thirty-second Division could be found who had been questioned regarding his approval of extended service."

His letter follows:

"My qualification as a military critic due to my status of a lowly private, may be somewhat dubious.

"However, I shall attempt to make up in clarity and understanding what I lack in finesse.

"I hate to explode any myths regarding the intelligence of the enlisted personnel, but if I do I am sorry and beg the pardon of the officers who of course are supposed to possess all the intellectual capacity conducive to an efficient army.

"Some days ago the radio said newspapers heralded the fact that, after an extensive poll of various Army camps, it was found that 90 percent of the men were willing to remain in service. For some reason which neither radio or newspaper failed to divulge, no mention was made as to whom conducted the poll. Another odd fact was that not one enlisted man in the whole Thirty-second Division could be found who had been questioned regarding his approval of extended service.

"After a more thorough probe the same situation was found to exist among the surrounding camps, of which Claiborne, Shelby, and Beauregard are a part.

"Furthermore, not one man questioned showed any desire to stay beyond his 1-year term. They did, however, without exception demand to be placed on the reserve list after their year's service had been completed and, if any hostile moves were directed against this country, such as General Marshall appears so apprehensive of, they one and all expressed their willingness to drop all civilian pursuits and answer the call at once.

"Now, just who was questioned in this so-called poll and who gave the answers remains a mystery. This writer has a sneaking suspicion it was the generals and higher officials of the varying divisions who gave the generous 90-percent estimate. Any person who has had any contact with the Army at all can tell you that an officer would ten times rather have a trained unit under his command than a new batch of recruits. After an outfit has had 6 months or more of service the officers can sit back and the organization will run itself.

"However with a new group of men coming in every year, such as the Selective Service Act calls for, you can easily see how an officer would be required to earn the large salaries that a lot of them are now drawing. In view of all this it is quite obvious why the higher officers are fighting to retain the guardsmen and selectees beyond their 1-year terms.

"Any soldier trained a year and then placed on the Reserve list is just as efficient in a military sense as the one who is compelled to remain in active service and away from home against his will.

"You, as a civilian, may not know that the average soldier kept in camp commences to decay. His morals become lax, his self-esteem practically vanishes, and his morale decreases daily. As for physical condition the boys were in better shape 6 months ago than they are today. However the good general says we are more vital to defense of the Nation stationed down here in Livingston, more so than if we were back in Wisconsin.

"Well, he should know; he's being paid to make observations such as that. Still I don't know; human nature is kind of funny and you can't judge a man's motives by his statements or actions. At any rate the enlisted men are not supposed to reason why, so I'd better lay off."

Labor Profits Unlimited

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

EDITORIAL FROM THE MEMPHIS COMMERCIAL APPEAL

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article appearing in the Memphis Commercial Appeal entitled "Labor Profits Unlimited":

[From the Memphis Commercial Appeal of August 7, 1941]

LABOR PROFITS UNLIMITED

Memphis labor leaders, asked what becomes of the initiation fees charged workers on national-defense projects, have declined comment or have said that the subject is not one on which they could throw light.

They have a perfect right to withhold such information from the public. There is no law which can compel them to reveal the financial status of their organizations. One cannot quarrel with them on that score.

Still, the incident prompts consideration of some important facts:

The union "take" during the construction of Camp Forrest at Tullahoma was estimated at $640,000.

The "take" on the Quartermaster depot at Memphis may run as high as $100,000.

Congressional tax experts at Washington estimate that the building-trades unions, enforcing closed shops in the big cantonment and other huge building jobs of the Army and Navy, collected membership fees from many thousands of temporary workmen. Their receipts during the 9 months ending June 30 have been estimated by authorities as in excess of $20,000,000.

The payment of initiation fees on closed-shop defense jobs is not a voluntary process. The worker is dragooned into making it.

The average individual who makes an investment in a business or industry can withdraw that investment, either at profit or loss as circumstances dictate.

The only thing a defense project worker, who holds temporary membership in a labor union at a price in addition to his dues, gets out of his investment if he quits the union is starvation, for he is forbidden work on any other projects.

The tremendous sums being collected by labor unions are a result of governmental paternalism which makes it possible for union leaders to work their rackets.

The Government neither knows nor cares how much is collected in initiation fees and it requires no accounting.

Contrast that with the position of the average corporation, industry, business, and individual, who, through one form of taxation or another, is compelled to reveal to the Government the most minute details of financial status. Fear of penal confinement spurs the reluctant.

Under the present system of exempting labor unions from accounting or taxation of any kind, the worker, who must pay to work in violation of all the traditions and principles of American freedom, must accept the word of the officers about where his money goes or petition a court for an accounting.

The inequity of such a situation must be apparent to any fair-minded person.

The American people are presently to be taxed to the limit of ability to pay in order that the defense needs can be met. Is there any reason why labor unions, profiting largely as a result of defense projects, should escape? Or, at the very least, be exempt from making a strict accounting to the Government under whose benevolent protection labor unions operate?

The labor unions' position that the public has no interest in their profits is not entirely sound, for the public has a very definite stake if large parts of those profits are being expended for the purposes of maintaining legislative lobbies, or are being tossed into the kitties of union political friends. The taxpayer foots the defense labor bill.

A move is now under way in the Congress to tax labor-union incomes. Such taxation would be one of the most healthful things which could be done in behalf of the general welfare of this Nation.

So long as men are compelled to pay for the right to work—heretofore something the Commercial Appeal had always believed was God-given—somewhere along the line there should be a very accurate accounting, and in view of the strain on the National Treasury, a substantial kick-back.

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. WALTER C. PLOESER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

Mr. PLOESER. Mr. Speaker, during the progress of the public debate and committee hearings on the subject of the St. Lawrence seaway project, proponents of the measure have rather persistently encouraged the impression that organized labor was for the building of the waterway. I contended from the very beginning that American labor would be severely injured, if not actually punished by this particular project.

It will be interesting to the Members of this House to know that the following individuals and labor organizations testified against the St. Lawrence seaway project before the House Rivers and Harbors Committee:

Edmund D. Sullivan, representative of Local No. 1462, International Longshoremen's Association, Lakes district, page 1191 of the hearings.

Coleman T. Perkins, president, Grain Shovelers Union, Local No. 109, International Longshoremen's Association, page 1194 of the hearings.

Thomas Kennedy, secretary-treasurer, United Mine Workers of America, page 1461 of the hearings.

John L. Lewis, president, United Mine Workers of America, page 1562 of the hearings.

J. G. Luhrsen, executive secretary of the Railway Labor Executives' Association, spoke for the following organizations: Brotherhood of Locomotive Engineers, Brotherhood of Locomotive Firemen and Enginemen, Order of Railway Conductors, Switchmen's Union of North America, the Order of Railroad Telegraphers, American Train Dispatchers Association, International Association of Machinists, International Brotherhood of Boilermakers, International Brotherhood of Blacksmiths, Brotherhood Railway Carmen of America, Sheet Metal Workers International Association, International Brotherhood of Electrical Workers, International Brotherhood of Firemen and Oilers, Brotherhood of Railway Clerks, Brotherhood of Maintenance of Way Employees, Brotherhood of Railroad Signalmen of America, Order of Sleeping Car Conductors, National Organization of Masters, Mates and Pilots of America, National Marine Engineers' Beneficial Association, International Longshoremen's Association.

J. T. Corbett, national legislative representative, spoke for the Brotherhood of Locomotive Engineers.

W. D. Johnson, national legislative representative, spoke for the Order of Railway Conductors.

S. C. Lush, deputy president, spoke for the Brotherhood of Railroad Trainmen.

Resolution from the Switchmen's Union, which was passed at their national convention held at Buffalo, N. Y., appearing on page 762.

A. F. Stout, national legislative representative, Brotherhood of Maintenance of Way Employees.

A Passé Authority

EXTENSION OF REMARKS

OF

HON. THOMAS D. WINTER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

EDITORIAL FROM THE NEWTON (IOWA) NEWS

Mr. WINTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Newton (Iowa) News:

[From the Newton (Iowa) News]

A PASSÉ AUTHORITY

We note that Pearson and Allen of the Washington Merry-Go-Round—a feature that is carried regularly in the Daily News—has recently gone to some length to set up William Allen White, the noted publisher of Emporia, Kans., as a sound political critic.

We cannot agree.

Mr. White has recently attempted to blow the Republican Congressmen of Kansas "out of the water" for criticizing the New Deal administration. He even went so far as to say that the Kansas Congressmen were traveling the Quisling route. Then Mr. White blackmails them further by threatening defeat in the congressional election of 1942.

We have a profound respect for Mr. White as a writer, a quipper, a good story teller, and an author. Despite his extreme age, we are inclined to believe that his judgment might still be pretty sound in such fields.

In the field of politics, however, Mr. White has always been a maverick. He is listed as a Republican in political campaigns. For the last quarter of a century, to our personal knowledge, he has always

been on both sides of the fence in every campaign. The Democrats have always known this. During his second campaign for the presidency, Mr. Roosevelt visted Emporia and said many nice things about Mr. White. Mr. White, who was supposedly supporting Alf Landon from his own State, reciprocated notably thereafter and took occasion from time to time to chastise Landon, to the great embarrassment of the Republican Party not only in Kansas but throughout the Nation.

Republicans have long since ceased to consider Editor White as a reliable asset in any political campaign. His make-up and temperament disqualify him as a reliable and trustworthy campaign worker. He blows both hot and cold and no one can tell during the campaign which way he is going to jump.

The Democrats make great use of Editor White as a Republican authority for the reason that he can always be relied upon to perform valuable service for them.

It is our thought that there is still ample room in this country for an intelligent and militant, though loyal opposition party. The Nation needs just such a force at this time. The Kansas Congressman and other Republican Congressmen of the country (yes, and a large number of Democratic Congressmen) are crying out against our own totalitarian Government. They are opposed to one man, our President, making all the decisions for our people. Editor White knows too well what is happening right now and what will happen in the future under the New Deal regime. As a newspaper publisher, he is derelict in his duty if he does not sound warning from time to time as he sees the decay of our representative Government. A publisher and a Kansas Congressman, as public servants, are under obligation to the public to point out vigorously the unsound steps that our Government is taking.

While we do not see Mr. White's editorial column regularly, it is our conviction that he is guilty of more "Quisling" than the Kansas Congressmen if he is swallowing, without a word of dissent, everything that is going on in Washington.

No, we don't want Democrats and New Deal columnists to pick out Republican master minds for us.

A United America

EXTENSION OF REMARKS

OF

HON. JOSHUA L. JOHNS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

RADIO ADDRESS OF HON. FRANK B. KEEFE, OF WISCONSIN

Mr. JOHNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the gentleman from Wisconsin [Mr. KEEFE]:

My fellow Americans, it is a trite expression that history repeats itself. The shocking, bloody record of 1916 and 1917 is repeating itself today. Hysteria, hate, greed, and avarice are again attempting to ride roughshod over sanity, tolerance, love, and charity. Emotionalism is supplanting cold logic, and wicked attempts are being made by subtle propaganda to scuttle the thinking of the people of America on the all-important subject of peace.

Men and women in high places, unable to meet the issue with facts, are now resorting to name-calling and smear campaigns in a vain effort to vilify patriotic Americans and to stifle free speech and freedom of assembly. They would even deny their right of petition and, by advocating further bureaucratic control of industry, labor, and agriculture, threaten the destruction at home of the so-called four freedoms they hope to give to bloody Joe Stalin and the rest of the world.

I denounce this effort as un-Christian and un-American. I have a sublime confidence that the dominant spirit of the American people will insist that human freedom and constitutional government be maintained here at home and that we must not acquire ruthless dictatorship here as the price for trying to extend our system of government to the four corners of the world. I am convinced that an outraged public opinion will force the advocates of intolerance, gag rule, and war to abandon their bitter campaign and that the recent apology from Secretary Stimson to Senator WHEELER is just the beginning.

Recent press releases indicate that the late candidate for the Presidency on the Republican ticket is making speeches about the country, pleading for unity. My fellow citizens, are the American people divided? Every instrument reflecting public opinion discloses that 80 to 90 percent of our people are thoroughly united against the involvement of this Nation in a shooting war.

I ask the gentleman, What greater unity could he ever hope to attain? Is he in fact asking for unity or is he asking that the 90 percent of our people who are opposed to our involvement in a shooting war abandon their position and allow the 10 percent to control their lives and destinies and their fortunes?

I say to you, my fellow Americans, that, despite all the efforts of organized propagandists to the contrary, the people of this Nation are united.

They are united in demanding an impregnable national defense.

They are united in demanding that money appropriated for national defense be wisely and honestly expended so as to make national defense a reality instead of having it a mere blueprint or on order.

They are united in demanding that campaign pledges solemnly given to the American people be observed and not treated as mere campaign oratory.

They are united in demanding that we stop undeclared acts of war without congressional approval as provided in our Constitution.

They are united in demanding that the administration keep the platform pledge upon which it was elected, namely: "We will not participate in foreign wars, and we will not send our Army, naval or air forces to fight in foreign lands outside of the Americas except in case of attack."

They are united in demanding that the Nation keep faith with the selectees.

They are united in the opinion that morale and faith in their Government and its objectives are the very foundation and groundwork of national defense.

They are united in the opinion that the recent statement made by Senator PEPPER, of Florida, in which he stated: "Some folks talk about these boys going home. Mr. President, they will be in the Army for at least 5 years and maybe 10," constitutes a tragic breach of faith that threatens to undermine the morale not only of the selectees but of all people who still have faith in representative government.

They are united in their willingness to make every sacrifice necessary to protect this hemisphere against invasion from any foreign foe.

They are united in demanding that defense work be given to the small industries instead of having 56 favored corporations receive 75 percent of all defense business.

They are united in demanding the curtailment of expenditures for nonessential, nondefense items.

They are united in demanding that the Congress function as free men and women and that we maintain a government of law instead of one of men.

They are united in their opposition to ever-growing and expanding bureaucracy in government that is constantly destroying and shackling their liberties.

They are united in their love of country, home, and fireside.

They are united in a common impulse to extend all possible aid to oppressed people throughout the world compatible with their desire for self-preservation.

Yes, my fellow Americans, we are in fact a united people.

That union results from the spirit that has made America great. Make no mistake that such unity means craven cowardice. These same peace-loving Americans, when attacked or when firmly convinced that the Nation is in imminent danger, will fight. They will fight without compulsion, and the brilliant record of our recent past clearly demonstrates that the adventurous spirit of our forefathers still lives.

Stand firm, my fellow Americans. The Congress needs your help and your inspiration. I say to you that there are men and women in the Congress who still have vision, courage, and independence.

We have not forgotten the advice given by the President when he spoke on the subject of "peace" at Chautauqua in New York. Listen to his words. I quote:

"Nevertheless, if war should break out again in another continent, let us not blink the fact that we would find in this country thousands of Americans who, seeking immediate riches—fool's gold—would attempt to break down or evade our neutrality. They would tell you, and unfortunately their views would get wide publicity, that if they could produce and ship this and that and the other article to belligerent nations, the unemployed of America would all find work. They would tell you that if they could extend credit to warring nations, that credit would be used in the United States to build homes and factories and pay our debts. They would tell you that America once more would capture the trade of the world. It would be hard to resist that clamor. It would be hard for many Americans, I fear, to look beyond to realize the inevitable penalties, the inevitable day of reckoning that comes from a false prosperity. To resist the clamor of that greed, if war should come, would require the unswerving support of all Americans who love peace. If we face the choice of profits or peace, the Nation will answer—must answer—we choose peace. It is the duty of all of us to encourage such a body of public opinion in this country that the answer will be clear and for all practical purposes unanimous."

Those were the words of President Roosevelt speaking in 1936 in a period when sanity, calmness, and logic ruled the thought of the people of America. We who oppose the active participation of this Nation in a shooting war are in complete accord with the solemn advice which the President gave the Nation at that time.

We are now in the midst of another World War. The admonitions of the President were intended to guide us in just such an emergency. He was mindful of our experiences in the last World War. He cautioned us to resist the clamor for war. He implored us to look beyond, to realize the inevitable penalties and the inevitable day of reckoning. He predicted the course the American people would follow. He predicted that they would choose peace.

I say to you, my fellow Americans, you have made the choice. Your letters, your cards, your telegrams all tell us of your decision. You have told the Congress and

the President you want peace. Your answer today, as predicted by the President in 1936, is for all practical purposes unanimous. You want preparedness. You want Americanism. You want peace, and the courageous, independent, patriotic Members of the Congress of the United States intend to respect your wishes.

Who are the ones that clamor for war? You know as well as I who they are. Why do they clamor for war? Every honest, patriotic American knows the answer.

Men and women of America, stand firm. We shall resist the rising clamor of greed, intolerance, and war. With God's help and your continued support, we shall work without stint to provide an impregnable national defense. We shall insist that in all our decisions and in all our deliberations the rights of the American people shall be first served. We shall demonstrate to the world that free men and free women still have the capacity for self-government. We shall make democracy function here at home.

While we shall meet the complexities of each sad day with a prayer for peace on our lips, our hearts and our bodies will be prepared to make any contribution necessary for the preservation of our country.

We have but one allegiance, that to the United States of America, one Nation, indivisible, and with liberty and justice for all.

Neighbors and Names

EXTENSION OF REMARKS

OF

HON. WILLIAM L. NELSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

RADIO ADDRESS OF HON. WILLIM L. NELSON, OF MISSOURI

Mr. NELSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech which I made over radio station KMOX, St. Louis, Mo., on Saturday, August 9:

Let us, my friends, think together about neighbors and names. A long time ago, before words were wedded by Webster, two-root words being joined together as "neighbor," meaning "near dweller," the neighborhood differed greatly from that of today.

The frontiersman regarded members of the family in log cabin or "soddy," although separated by many miles, as near neighbors. This was true even though such distances, as measured in time, were far greater than now.

Not so long ago we talked of ferrying a small stream. Now American-built bombers are "ferried" over the Atlantic. Time was when men thought of the near neighbor as the one living on the next lot or on an adjoining farm. Then came modern transportation and communication. Again the near neighbor, as in the days of Daniel Boone and other hardy trail blazers, may live far away, hundreds or even thousands of miles. This may not be a pleasant truth. The world may be too much with us. But because men have sought to shorten both time and distance, it is so. For better or worse, we are neighbors to the whole world. As the New York Times so well says, "A new neighbor has moved in. The new neighbor is the world. He is Europe, Asia, Africa What he does concerns us closely. If he is a bad neighbor, we shall suffer. If he is a good neighbor, we shall gain. But get along any more on this earth without an awareness of neighbors we cannot." It is added, "Our peaceful wilderness, which is now the whole earth, is threatened." But for this, I would add, our problems would be less complex, our position more secure.

The frontiersman, when Indians or other dangers threatened, joined with the settler up the creek or across the prairie in the hope that both might survive. It has been said, "Men do not feel themselves to be brothers in days of happiness, triumph, pride, exalted egotism, but in days of danger, misfortune, and sorrow." For much of the world these latter days are here.

As to early settlers, whether descended from native stock of the older settled commonwealths, or followers of Duden, those of German blood largely migrating to the eastern river section of Missouri, all coveted good neighbors.

The man who, with his family, came to clear the forest or break the prairie sod—came with rifle, ax, and Bible, all of which were used as he sought peace and security—raised few artificial barriers.

Facing danger from without, neighbors, near dwellers, sought common ground for cooperation. Whether Protestant, Catholic, or Jew, mattered little. Christianity, in its broadest sense, was placed above narrow creed. Politics played small part, artificial distinctions, less. What do these amount to when weighed in the balance against the safety of the land we love?

I do not wish us to think entirely of national security as determined on battle fronts. Preparedness is the best guaranty for peace. The United States has entered upon a program designed to make it impossible for us to be overcome by any foe or combination of foes. I have little fear of an invasion. I am, though, deeply concerned as to our country when again the dark clouds of war disappear. If old ideas and old ideals are greatly changed; if the home, such as our mothers and fathers knew, is lost; if racial prejudice and hatreds, too often the byproducts of war, are continued, dark will be the day. We must learn to live together as neighbors. While we want to be good neighbors to the whole world, insofar as this is possible, it is very much more important that we be good neighbors with our own people. When sickness or death visits the home, it is not the stranger far away, but the nearby friend, who helps heal our sorrows. Little does it matter how the name of this neighbor is spelled or pronounced. So I want to say a word about names.

The fact that one may have a foreign-sounding name should not cause us to question his loyalty. A number of outstanding Members of Congress have names which even try the tongues of the clerks who call the roll. On the other hand, I would remind you of individuals who possessed fine American names, but whose records stand for shame. The arch traitor of revolutionary days, the spy of whom every schoolboy has read, bore a good American name. The most conspicuous slacker in the last World War has for his first name the name of one of the greatest Presidents of the United States. So, in determining the good or evil in folks, names are not enough.

Speaking of names, there is entirely too much name calling. This statement goes for both sides, the "furs" and the "furnists." Spokesmen for the so-called "war crowd" and spokesmen for the so-called "peace group" are equally guilty. While on one hand impeachment is demanded, on the other there are cries of "traitor." Such talk is harmful now and does not augur well for the future. The guilty need a button on one lip and a buttonhole in the other.

It has been asserted that talk is cheap. This is not true, surely not when unity is so essential to national safety. The period of peace, for which you and I hope and pray, may bring to us even greater problems than now press for solution. Worse than the wounds and worries of war may be the narrowness, selfishness, and sordidness of peace. Now is no time to build spite fences, with a "devil's lane" between. As a people, we must work together now if we are to live together later. How can we hope to be good neighbors with those overseas while failing to live together as good neighbors here at home?

The St. Louis Post-Dispatch, in a recent issue, carried a cartoon, the caption of which is "We need some union now at home," and picturing two parrots as they shout at each other, "appeaser," "warmonger," "pro-Nazi," "interventionist."

Yes, wranglings weaken and sap our own strength. Epithets encourage our enemies. Unity here at home will help.

Yet, paradoxical as it may appear, I am for war, for a war against intolerance, a war against suspicion, a war against doubtful "isms" of all kinds, a war against greed, a war against narrowness, a war against hyphens regardless of the nationality concerned, a war against gossip, and, lastly, a war against plain lying.

Again referring to names and origins, while the country from which we come matters little, there must be absolute loyalty to the land of one's adoption. There must be no divided love, no divided allegiance.

The good neighbor is a good American. That name is enough. No hyphen for him. Neighbors and names. There are no other neighbors like Americans, there is no other name like America. Summarizing then, let us say, "America—love it or leave it."

Politics First, America Second

EXTENSION OF REMARKS

OF

HON. W. O. BURGIN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

EDITORIAL FROM THE CHARLOTTE (N. C.) OBSERVER

Mr. BURGIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Charlotte Observer of August 9, 1941:

[From the Charlotte (N. C.) Observer of August 9, 1941]

POLITICS FIRST, AMERICA SECOND

Fifteen Republicans, headed by former President Hoover, all of them nationally known, and all of them of rather impressive spread of influence in another period, have signed up to condemn before the American public "the warlike steps" which the administration is taking, and to see what they can do in the way of arousing the people of this Nation to have the President estopped from carrying the country into war.

First off, let us say that such a movement is abominable and contemptible as an act of disunity and obstruction in these grave moments of the Nation's history.

It is putting politics of the worst possible name and brand—partisan politics—first, and the destiny of this Republic second.

These men are Republicans, former Presidents and former candidates for the Presidency, men from the leadership and active authority in the Republican Party, who are trying to lead a purely party protest and rebuke, appealing to their political friends and supporters of the past on a cheap partisan

basis, and endeavoring to revive the ashes of their own dead Republican organization with the fires of discontent over the present policies of the Washington administration.

They intend, if they can, to utilize the present crisis in which America finds itself for personal and political ends.

They would turn the fearful emergency confronting their country into an opportunity for overturning the political leadership of the Nation.

They are manifestly out to smear Roosevelt and all of those who are responsible with him for the steps which have been taken to safeguard the security of this Republic and to arm it against the scourge of Hitler and his mad revolutionaries.

Their direct accusation is to effect that the President is leading us into war; that he is virtually conducting already an undeclared war against imaginary enemies.

They would even attach the label of communism on the White House, because, forsooth, the administration is willing to aid Russia in order that England may be aided in further order to strengthen our own defenses against Hitler.

All through their pronunciamento runs the thread of irrefutable evidence that it is Roosevelt they are after; that means that the enterprise is politically inspired.

It must mean, also, therefore, that the 1942 congressional elections are in their minds, and beyond that, the next Presidential referendum is also in their considerations.

A fortunate factor for the country in this detestable adventure is that the men inspiring and directing it are dead politically and don't know it.

They are not representing the rank and file of the alive and clear-thinking masses who fly the flag of the Repubican Party over their political heads.

They are mostly "formers" and "ex-es." That means their day is done and their race run and their influence is as decrepit as their thinking.

There is "ex" President Hoover, "ex" Vice President Dawes, "ex" Republican National Chairman Fletcher, "ex" Minister to Canada MacNider, "ex" Governor Lowden of Illinois, and so on.

These are men who were vibrant and magnetic in their day, but this is not their day. Their places have been taken by others, who are more abreast of the times and who have wrested the leadership of the Republican Party from its former fossilized leadership.

These are such men as have their feet in the nineteenth century, their heads buried in the sands, their eyes set into the past, their hearts against the chosen authority now established in Washington and their hands lifted against the policies of aggressive defense which this present authority in Washington is wisely adopting.

While one may righteously feel enraged over the meanly obstructionist tactics of even an aggregation of political "has beens," one must, at the same time, feel a measure of sympathy and compassion for them because of their quite evident political senility.

It is pathetic that such able men as these and men once so prominent and influential and wise in their leadership of the American peoples are content to abide in the past and to be unalive to the new, albeit bitter and hate-filled world that has rushed by them and left them standing by the old gates.

Once great men who, somehow or other, can manage to ignore realities, laugh off the terror that fills up the hemispheres, blind themselves to the fires that are consuming the planet and to play with their little political dolls at a moment when a combination of gangster powers are plotting the destruction of their country and their own peoples.

Abominable and contemptible, to be sure; but sad, in a way, and pathetic.

Our Destiny—Socialism or Democracy

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

EDITORIAL FROM THE DEPOSIT (N. Y.) COURIER

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Deposit (N. Y.) Courier:

[From The Deposit (N. Y.) Courier]

OUR DESTINY—SOCIALISM OR DEMOCRACY

Frequent and informal discussions with many of the so-called thinking people here in our own community have disclosed a common assumption that the remaining democracies will have to live under a taint of socialism when the war is over.

In other words, the idea is prevalent that we cannot survive the current ordeal without absorbing some of the poison that has stricken civilization. Here in our own country, many public officials and thousands of private citizens cry in alarm against "appeasement." They say you cannot appease the monster that is sweeping Europe.

They say, and rightly so, that there can be no compromise with a philosophy whose ultimate aim is enslavement of the common man. But strangely, these selfsame people accept calmly the idea of adulterated democracy. They propose, after the war, mind you, to attempt a compromise with the very thing that they now claim cannot be compromised with, cannot be appeased—authoritarian government. We all know that a Hitler is simply the result when authoritarian government reaches maturity.

There are, of course, certain powers which we must grant the Government to guarantee an adequate defense program. Our President has informed Congress and the country that the existing emergency makes it necessary to hold draftees in the Army longer than the original period of 1 year. Good Americans have disagreed sharply and bitterly and have availed themselves of the rights and heritages of democracy to criticize the President for breaking a contract. Mr. Roosevelt has, and we think successfully, denied the charge.

We approve the granting of power to the Government to take such steps as that concerning the draft duration for we feel it to be necessary and logical. However, there are certain steps which fail to measure up to the standards of necessity.

Right now in this country we are condoning a compromise with the forces that destroy freedom of the individual. We are allowing our basic industries, the key to the whole free-enterprise system, to be edged ever closer to Government domination, apparently in the belief that it cannot be helped in the view of world trend.

Such a theory must certainly be the result of the most feeble rationalizing. We are either going to have freedom and representative government in this country now—and after the war—or we are not. If we try to appease the forces of socialism by allowing the Government to gradually absorb the utilities, the banks, the railroads, mining and oil, under the guise of creating a better postwar society, we are heading for trouble. We will find that our basic industries have become mere patronage machines. All remaining enterprise will be forced to its knees in an effort to "get along" in a corrupt bureaucracy. Labor will find itself caught in a struggle between two systems—the free enterprise system versus an authoritarian socialistic system of the same brand that has engulfed Europe.

We have seen that in Europe power grasppers cannot be appeased. We have not yet found it out at home.

Selective Service Act

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

Mr. COCHRAN. Mr. Speaker, the subject before us is of great importance to millions of young men in this country. The fact that I did not vote for the original Selective Service Act should not be taken as an indication of my views on this legislation. I came to my conclusion on the original bill because of the testimony before congressional committees of leading officials of our Army and Navy which clearly indicated that they were not in a position then to either house or equip millions of men. True, before that vote was taken they had supplemented their original statements. I advocated then giving the President unlimited power to call out the National Guard, the Naval Reserve, as well as the Reserve officers, and I did not indicate that there should be a limit as to the time they should serve. Those men, during peacetime, had indicated a desire to serve in the armed forces of our country in the event of necessity and, therefore, it seemed to me they had no reason to complain if called at a time when they were needed.

Following the passage of existing law, 17,000,000 men, using round numbers, between the ages of 21 and 35 registered. It is reasonable to assume that practically all men between these ages registered, because of the fact that the census figures as of April 1940 disclosed an estimate of 16,404,000 men in this country between the ages of 21 and 35, and the registration of over 600,000 for military service over the census figures speaks for itself.

If I had voted for the Selective Service Act a year ago I would not vote for the bill as reported by the committee, because the Congress told the young men of the country in that law that they would only be required to undergo a period of 12 months' training. If I had voted for that law I would feel that I had been a party to making a contract with these young men and I would not now be a party to breaking that contract. Of course, if we were at war, a different situation would be presented.

I have given a great deal of thought to the amendments to the act of 1940 which are being considered. First, I do

not think the Congress should break the contract it made a year ago, but I do think we should make provisions to permit the young men who were called and who desire to remain in the service say, for 1, 2, or 3 years, as they might select.

I have been endeavoring to secure some figures in reference to the number of young men in this country between the ages of 21 through 27. There is no break-down at the present time in the Government agency administering this law because of the fact that those that originally registered were between the ages of 21 through 35.

The most reliable information that I have been able to secure is to take the census figures as of April 1940, showing men between 21 through 27 which is 7,966,945.

As I understand it, there are at the present time over 625,000 selectees in the armed forces. In other words, you still have over 7,000,000 young men whose ages are between 21 through 27 who have not as yet been called. It is my view that it is not fair to the 625,000 young men who have been called to require them to shoulder the entire burden and over 7,000,000 men not be required to do service. Of course, part of the 7,000,000 that I refer to will be called at a later date, but if you are going to retain in the service for an indefinite period those who have already been called you will not have the facilities by any stretch of the imagination to properly house and equip a million or more additional selectees.

This emergency, or whatever anyone desires to call it, affects the entire population of the country and the Selective Service Act should apply equally to all those who are within the ages provided by that act.

What I would like to see is the discharge of those, after they have served 1 year, who desire to leave the service and replacements be made immediately. The men discharged would recognize that in the event of war they would be subject to recall.

I confess that I am not in a position to submit any evidence as to the length of time necessary to properly train young men for military service, but it does seem reasonable to me that you can make a good soldier out of a man in a year's time, other than a combat aviator. One thing is certain, when the boys go home they are going to be in better physical condition than they were when they entered the service, and the great majority of them will keep themselves in that physical condition. I also think that tens of thousands of them will remain in the service; once having had a touch of military life it will appeal to many.

There is one phase of this situation that should give everybody a great deal of concern, and that is to what extent dissatisfaction will exist among the selectees who will be required to remain in the service if this bill passes as reported by the committee. I think we would be far better off if we had 1,000,000 satisfied men in the Army than to have a personnel of 4,000,000, with over half of them dissatisfied. Here is where you are playing with fire. I have heard no one that contends it is going to be necessary to discharge all of the selectees at one time. In other words, the period of service of groups will expire on certain dates, and they can be replaced immediately by those whose numbers have been called. If, in the end, say 5,000,000 of the young men who have registered have received training, the value of that from a military standpoint cannot be underestimated.

I cannot conceive that the action taken by the Congress on this subject will have any direct bearing upon what any foreign nation might do or think, nor do I care. They certainly should remember that we are not at war, and, while we all pray that we will not become involved, nevertheless, if the worst comes, history will repeat itself and the youth of this land will respond to the call.

There is no place in the world where the citizens of any nation have the freedom to express themselves as they have in this country. The feeling of the youth of this country, I think, is exemplified in a letter I received from a very dear friend of mine. I have seen eight children grow up in this family. The mother is a widow and has a number of grandchildren. She wrote me and told me that four members of the family were subject to call and that she had no objection but she did think that one of the boys should remain at home, those not subject to call being married. She wanted to know if there was anything that she could do to keep one of the boys at home. They all had good positions. She stated there was not one of them that would ask to be deferred. Of course, I was forced to advise her that unless one of the young men requested exemption her application would receive no consideration. She replied to my letter and asked me not to misunderstand her as she was simply seeking information and that under no consideration would she ask for the exemption of any one of the boys because of the fact that they all desired to respond to the call. She did say that she felt if three of her sons entered the service it was only reasonable that one might be left at home.

I assume I have received as many communications as anyone else in reference to this legislation. They are not inspired because the language is not the same. Many of them urge that I support this bill as reported by the committee while others take the opposite view. They contain various expressions, outstanding among them being that to change the law today when we are still at peace would be a violation of a contract that the Government made with the selectees. Others have listened to some of the speeches of outstanding Americans saying that the passage of this bill will involve us in war. One said it is common to comment that—

Hitler has never kept his word. Do we want to place Uncle Sam in the same position?

Another letter says:

If the Congress of the United States does not have honor enough to keep faith with its own citizens, where is there any honor left in the world?

Other letters hold that if there is any extension of service it should be voluntary. A draftee writes me that he would be willing to give up his life for the country if necessary and if the time arrives when he must return he will do so at once but he feels that as he entered the service for 1 year he should be released at the expiration of that period.

Writes another:

My son, married for 4 years, volunteered to serve 1 year, which I thought was a noble thing to do. He writes me he does not see how a Government can expect to develop loyalty and all that goes with it by promising one thing and then later break that promise.

Another calls attention to the time of enlistment of Canadians, their salaries, which I know nothing about, but he says it is limited to a few months and not for foreign service in some instances.

If war should come call them back in the service and they will willingly respond, but let Congress keep its word and see that the boys are sent home after their 1 year's service—

Reads another.

I could go on and quote other hundreds of letters I have received. As I previously stated, many of the communications are in favor of the bill as reported by the committee and this includes officials of veterans' organizations.

Feeling it will be for the best interest of the morale of the Army of this country, I propose to vote against the bill as reported by the committee.

If the Secretary of War as well as the Chief of Staff of the Army and other leading military officials know now that it is absolutely necessary to continue the boys in the service, they knew it a year ago and it was their duty to have said so then rather than ask the Congress to call the boys for 1 year and now request that their service be unlimited.

Government Operation by Subterfuge

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

ADDRESS OF CHARLES A. LINDBERGH

Mr. LAMBERTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Charles A. Lindbergh before an America First Committee rally in Cleveland public auditorium, Sunday, August 10:

GOVERNMENT OPERATION BY SUBTERFUGE—NATION BEING LED TO WAR OF ATTACK AGAINST WISHES OF MAJORITY OF PEOPLE—EACH STEP TAKEN WITH PROMISE TO STAY OUT

There is no need for me to outline to you the seriousness of the situation we face today in America. In the past we have gone on the assumption that our country was governed according to the will of the people. That has

been taken for granted as a part of the American system of life.

We were taught, even as school children, that government by the people was inseparable from the freedom and liberty for which our forefathers fought.

RECALLS CHECKS

We were taught that, as American citizens, we inherited the right to know about, and to vote upon, the fundamental policies of our Nation. In the past we elected candidates to office to represent us, and not to rule us.

In the past our President was responsible to our Representatives in Congress. And the Supreme Court sat, incorruptibly, as a final safeguard for freedom and justice in our Nation. Each one of these branches of government, the executive, the legislative, and the judicial, was intended to be a check upon the others, that our American way of life might be preserved.

But now the question arises whether we any longer have a representative system of government in this country, whether we any longer have the right to know about and to vote upon the fundamental policies of our Nation.

We are faced with the stark fact that we have been carried to the verge of war against the opposition of a majority of our people—a war not of defense, but of attack; a war not in America, but in Europe and Asia.

WITHHELD INTENTIONALLY

We are faced with the realization that our President consults our Representatives in Congress with less and less frequency, and that, while the direct attempt to pack our Supreme Court failed, its membership has now changed indirectly through retirement.

We are faced with the knowledge that the most important issue of our generation—that of peace or war; that of defense or attack; that of whether or not the destiny of America is to be forged with the destiny of Europe—has not been placed before a vote of our people. That issue has been withheld from us, and withheld intentionally.

National polls show that from the time this war started in Europe, when Americans were asked whether or not we should enter it, the overwhelming majority answered "no." National polls today show that the great majority of our people still stand opposed to entering the war. But step by step we have been carried toward it.

STEPS TO GET INTO WAR

The administration in Washington has not even tried to follow the mandate of our people to stay out of war. Many of the officeholders in our Government have made every effort to evade that mandate. Instead of informing us, they have withheld information. Instead of taking steps to keep us out of war, they have taken steps to get us into war.

From the repeal of the arms embargo to the occupation of Iceland, we have become more and more involved. And each step we have made toward war has been with the promise of the administration that it was for the purpose of keeping us out.

Men and women of Ohio: While there is still time to think and speak freely, Americans must ask themselves this question—are we operating under a government by representation, or are we operating under a government by subterfuge? If our Government carries us to war with the majority of our people against it, are we not faced with a problem that is even more fundamental than war itself?

SERIOUS CHARGE

I fully realize that the charge of subterfuge is serious in the extreme; but let me recall to your minds a few of the facts that lie behind it.

Do you remember how we were told that the repeal of the arms embargo would be the surest way to keep this country out of war? The same people who tell us now that we must go to war, told us then that it was only necessary to sell arms on a "cash-and-carry" basis in order to insure victory for the Allies.

They were emphatic in saying that no one asked us to lend money, or to send troops abroad. It was only last spring that the lease-lend bill was passed, again with promises that it would keep us out of war; but by that time we were informed that we had to lend arms in order to insure victory.

RECALLS PROMISES

You remember as well as I, all those other steps that the administration said were so definitely "short of war"—the transfer of planes, and warships, and cannon; the draft of men; the expenditure of countless millions.

We were never told the true meaning of the measures the administration asked us to support. During the weeks before election we were told "again and again and again" that American boys would not be sent to fight in foreign wars. But we now find that inside of these sweetened promises of peace lay the deadly pills of war and that we have been swallowing them one after another for many months.

We find that while the American people were promised peace, the British people were given to understand that we would enter war. Only a few days ago the Prime Minister of England confidently told his people that America is on the verge of war. British generals discuss openly when and where an American expeditionary force is to be sent. And our President does not renew his promise.

CITES MORE EXAMPLES

Now that the elections are over, we in America ask in vain to be told even once again that our boys will not be sent to fight in foreign wars.

These are not the only proofs of the subterfuge in our present Government. Let us cite a few more examples.

Not many months ago our President told us that "convoys mean shooting, and shooting means war." Then, a little later, when we objected to the use of convoys, we were informed that our Navy was not convoying, but that it was already being used to "patrol" the seas for an indefinite distance from our shores.

The word "patrol" has been substituted for the word "convoy," and possibly the letter of the law was satisfied; but whatever may be the legal technicalities, the fact remains that the American people were misled.

CALLED "FIFTH COLUMN"

The hypocrisy and subterfuge that surround us come out in every statement of the war party. When we demand that our Government listen to the 80 percent of the people who oppose war, they shout that we are causing disunity.

The same groups who call on us to defend democracy and freedom abroad demand that we kill democracy and freedom at home by forcing four-fifths of our people into war against their will. The one-fifth who are for war call the four-fifths who are against war the "fifth column."

These interventionists, who call themselves the defenders of freedom and democracy, dare not place the issue of war to a vote of our people. They dared not let us vote on war at the last election, and they dare not let us vote on war today. They are afraid to put the issue to a referendum of the people, or to a vote of Congress.

WARNS OF INCIDENTS

They know that the people of this country will not vote for war, and they therefore plan on involving us through subterfuge. As I said months ago, I have listened to interventionists in this country argue among themselves about what steps "short of war" would take us into war most quickly.

Men and women of Ohio: The war party's plan is clear. Since this country will not enter war willingly, they plan on creating incidents and situations which will force us into it.

The interventionists know that if our defense program is extended far enough into Europe or Asia, they can get us into a foreign war under the guise of defending America.

They now say, with all the power of their propaganda, that we must occupy Africa in order to defend America. They say that we must control islands lying off the coast of the Eastern Hemisphere. They want us to send our soldiers to the East Indies, the Cape Verdes, the Canaries, Madeira, the Azores, Scotland, Ireland, and possibly England as well.

GREATEST BATTLE IN UNITED STATES

And they know that if our occupation of Iceland doesn't bring on the shooting, the occupation of these other places will.

We are told that we must fight for the freedom of mankind. But the greatest battle for freedom is being fought right here in America today. If we cannot maintain our freedom in the New World, we cannot force freedom on the Old World.

What is freedom of it is not the right of a free people to vote on the issue of foreign wars? Where is freedom if four-fifths of a nation can be carried to war against its will?

Where is freedom when Americans ask unanswered whether or not our Navy has already fought upon the sea—whether or not our forces have already been sent abroad? Where is freedom when the American Army is sent to occupy an island of Europe without our Congress even being asked?

HITS FOREIGN AGENTS

Where is freedom when it becomes disunity for citizens to meet and discuss their beliefs on the fundamental issues of their nation? Where has freedom gone when we in America are not even informed of the underlying intentions of our Government; when the agents of a foreign power are encouraged to speak and to travel throughout our land, while the same lecture halls that are open to them are closed to those of us who place the welfare and independence of our own country above the interests of any foreign power?

I will tell you where freedom lies today. It lies in the meetings of fearless men and women throughout this land—in meetings such as we are holding here in Cleveland tonight; in hundreds of similar meetings in every section of the United States—in cities, in villages, and on farms. Freedom for us in America lives or dies with the success of these gatherings of our citizens.

NOT ON SOVIET BATTLEFIELD

Freedom for us does not lie on any Soviet battlefield, or on any coast line of Europe, Africa, or Asia. It lies today in the question of whether or not the action of our Government in America is controlled by the will of our people. If we are represented in Washington, we are free men; but, if we are ruled by Washington, we are not.

Freedom lies in the support we give to those patriots in Congress who still stand undauntedly opposed to war, who still listen to the voice of the people they represent. Freedom for us depends on whether or not we are ready to protect and carry it on through these days of trial and war.

The America First Committee has been organized by American citizens who are ready to fight to maintain the freedom and independence we inherited from our forefathers. We have organized to give voice and strength to the great majority of Americans who oppose this war. We have organized to make their influence—your influence—effective.

ASKS IMPREGNABLE DEFENSE

We stand for the right to vote on the vital issues of our Nation. We stand for the right of citizens to meet and to discuss the problems of war and peace. We stand for the

right of those who do the paying and the dying to also have a voice in the deciding. We stand for an impregnable defense and an independent America.

If you stand with us, we ask you to join our committee. We ask you to help us organize these meetings. We ask you to write to your Congressman and Senators in Washington, demanding that they heed the voice of the people who elected them, and that they in turn demand that the people of our Nation be accurately informed of the developments of this war, and of the actions and intentions of our Government.

Men and women of Ohio: For 2 years I have traveled through this country, speaking in opposition to our entering the war. I have said that I believe it would be disastrous, both for America and Europe, if we took part in it.

MAKE VOICE HEARD

But the issue today is even greater than the issue of war or peace. It is the issue of whether or not we still have a representative Government; whether or not we in the United States of America are still a free people, with the right to decide the fundamental policies of our Nation.

This is an issue that strikes to the foundation of our way of living, our Government, and our rights as citizens. This meeting tonight and the meetings like it that are being held all over this country, are held to protest that this Nation was founded on the principle of Government by consent of the people—an informed people, a trusted people.

These meetings are held to demonstrate our adherence to this principle. If you believe in this principle, we ask you to make your voice heard by our Government in Washington. We urge you to speak, to work, and to pray—that representative government may not perish from this nation.

A Vexing Question

EXTENSION OF REMARKS

OF

HON. JOSEPH E. CASEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

EDITORIAL FROM THE BOSTON POST

Mr. CASEY of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Post of August 8, 1941:

[From the Boston Post of August 8, 1941]

A VEXING QUESTION

There is obviously much justice on either side of the controversy in Congress regarding extension of the selective-service law.

One of the things that we in this country have been complaining about in totalitarian governments is that their word is no good. They have no point of honor. They cannot be trusted.

Yet we can recall nothing more solemn than our promise, both from executive and legislative sources, to the draftees that they would not be held in service for more than 1 year.

That is one side of the argument, and we must not let it be regarded as unimportant.

The other side is that the emergency of 1940 has developed and expanded into a much greater emergency of 1941, and that our country is so endangered that we cannot let our soldiers go home, as we promised.

There is considerable debate upon this angle and upon the extent of the emergency.

But if the emergency is greater, the country has to protect itself. The rights of the individual must be restricted for the good of the whole. That is the way all law and all government works.

One underlying question, which looms large at times, is that the real reason for extending the service of our soldiers is that they have not had the equipment to be trained properly in the space of 1 year. The soldiers themselves say that this is the reason and much credence must be placed on their opinions.

But there is still another aspect of the situation, which, as far as we know, has not been publicly expressed.

The present law is so designed that if a man is released from training at the end of 1 year he still is on the active Reserve rolls and can be called back into service at the onset of a new emergency.

This fact puts a man in position of being temporarily discharged, but with the possibility hanging over him in civilian life of being summarily taken back into the service at any time.

It means that he gets back into a job, and begins to soften again. A few weeks of this and it would take him months to get back into shape. We humans deteriorate very rapidly under soft living.

Thus, if the soldier is called back he has his old "rookie" days of blisters and aches to put in again. He does not like this. In addition, his sense of esprit de corps is ruined, for when he is called back he probably never will see his old company, regiment, or, perhaps, division again.

A soldier, looking at his own future and that of this country, knows that this is something that he does not want. He knows that it is better for all to remain in his own outfit and in physical trim as long as there is any chance of being called for further service.

The efficient soldier is not produced by stops and starts.

Gambling With Security

EXTENSION OF REMARKS

OF

HON. JOSEPH E. CASEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

EDITORIAL FROM THE WASHINGTON POST

Mr. CASEY of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of August 11, 1941:

[From the Washington Post of August 11, 1941]

GAMBLING WITH SECURITY

Some very strange arguments are being advanced by Members of the House against the draft-extension bill. We are told by Representative SHORT, for example, that it would be a "breach of faith" for Congress to keep selectees in the Army longer than the 1-year period provided in the original act. Even a breach of faith would be justified in the eyes of most citizens if that should be necessary for the defense of the Nation. But actually there is no foundation whatever for this charge. Congress did believe a year ago that 12 months of training for the selectees would be sufficient to give the United States assurance of ample military protection. But it also recognized the fact that it was dealing with a fluid situation and therefore provided that the term of service required of drafted men could be extended by a congressional declaration. In other words, Congress left itself free to modify the training period in any way that it might see fit.

One might argue, with an equal poverty of logic, that the enactment of a new tax bill would be a breach of faith with taxpayers. If every change in legislation were to be regarded as a betrayal of citizens affected by it, the hands of Congress would be tied and the country would be helpless in the face of a crisis. Before legislators make use of such shallow arguments, moreover, they ought to remember that their first obligation is to keep faith with the Nation they serve.

Some other Members of the House seem to be disturbed because they can't see the whites of Hitler's eyes gleaming across the Atlantic. "Show us the emergency," they cry; and when no one points to a launching of ships from some foreign shore to invade the United States, they express a willingness "to let the boys go back home." No one would be so nonchalant about protecting his own home. On the contrary, everyone insists that a police force remain on the job all the time and most of us complain loudly when it shows any lack of efficiency. A nation without a powerful police force in a world rampant with conquest, revolution, and war, is not likely to remain a nation for any great length of time.

The simple fact is that we are living in a time of world crisis. We do not know what turn events may take, but the possibility of having to fight for our freedom is ever present. Whether or not the menace of today evolves into war next month or a year hence, we must be prepared to meet it. And that preparedness cannot be achieved on short notice. In the circumstances, there is only one safe course to take and that is ample preparation for the worst that may happen. To gamble with our national security by making any lesser effort would be equivalent to putting a very low price on the blessings of democracy.

Selective-Service Extension

EXTENSION OF REMARKS

OF

HON. LAWRENCE J. CONNERY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

Mr. CONNERY. Mr. Speaker, the provisions of the bill calling for extension of the service of selectees and the National Guard are entirely too drastic and, I feel, unnecessary under existing conditions.

Are we aiming at another A. E. F.? If not, then the General Staff of the War Department in advocating unlimited service by selectees and National Guard men is admitting its own incompetency.

Because of the tremendous problems involved in setting up the selectee organization when the act originally went into

effect last year, it is conceded that in a great many instances in camps throughout the country it has been an impossibility to adequately train the men within the 1 year specified. Therefore a limited extension of service to make up for those few months lost by delay in starting should sufficiently suffice. But I cannot, for the life of me, see the necessity of keeping these men in service for an unlimited period, or for 2½ years, as has been suggested, unless an offensive A. E. F. is contemplated, and I am definitely against that.

To my mind a standing army, in which a strong morale is necessary, cannot be organized by drafting unwilling men. These selectees have no complaint against being called into service for a reasonable length of time for defense training, and were they convinced that a national emergency exists I am sure that they would gladly serve unlimitedly and their morale would be high under those circumstances. An efficient standing army can only be organized through voluntary recruiting, and since the Selective Service Act became law a year ago the War Department has been lax in failing to diligently pursue its recruiting drive.

There is no need for such drastic legislation as this. Under the provisions of the Selectees Service Act, when a selectee's training is completed he automatically becomes a member of the Army Reserve force of the United States and therefore is subject to recall into service at any time the President deems it necessary.

If our national interest is imperiled to the extent that we would be led to believe, then what are we waiting for? Why waste the time we are consuming in considering this legislation? Why not put into effect immediately this Reserve force?

I have signified upon many occasions in the past my utter antagonism and dislike for Hitlerism and all the other "isms," and I have favored all aid possible to those combating these "isms," but I do not want, and I believe the American people do not want, another A. E. F.

Vote for the Defense of America

EXTENSION OF REMARKS

OF

HON. THOMAS D'ALESANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

Mr. D'ALESANDRO. Mr. Speaker, I will vote for the extension of the selective-service training because I love America. I think the time has come when the American people and their Representatives must stand up and look at the things as they really are and not as they desire them to be.

I have firm confidence in Gen. George C. Marshall, Chief of Staff, and I place great weight on his statement which says that the Army would be disintegrated if the selectees are not trained for an additional time.

Our responsibility as Americans is a great one—that of guaranteeing to our children and our children's children a country blessed with free institutions. These great gifts and privileges can only be perpetuated if each and every one of us, young and old, will guard these blessings as we would our lives, and if we are vigilant, so that subversive propaganda and forces from foreign shores are not permitted to influence our lives. We must put our patriotism above our own personal comforts. We can no longer bury our heads in the sand but must face the real crisis in true American spirit.

[From the Baltimore Sun of August 11, 1941]

COMPLETE THE TRAINING

Among the Members of the House who oppose the bill to extend the period of military service are some who would count the noses of pressure groups in any emergency and would vote with an eye single to political safety. Some others are so ruled by political passion as to be blind to reason. But others opposed to the bill, or hesitant over it, are decent men disturbed by the sacrifice required of the soldiers who will be kept in the service for a longer period.

These decent men among Members who oppose or who hesitate ought to put to themselves one solemn question: Can any sacrifice required of the young men of America be more serious, more terrible, than to send them into modern war untrained to protect themselves, or only half-trained? It would be superfluous to restate the nature of mechanized war. Everyone knows. It would be superfluous to restate the art and science now employed in war, or the striking power and the killing power of new weapons. Everyone knows. It must be obvious to the dullest mind that untrained or half-trained men will be slaughtered in battle. Can the Congress exact any sacrifice of American youth equal to that?

There is no doubt that to extend the service of young men now in uniform or to be put into uniform will, in many cases, involve hardship upon them and upon their parents. The original induction in many cases involved hardship. But Hitler has made hardship the lot of all men. We do not have choice between ease and hardship. We have choice between different kinds of hardship. In this case the choice is simply stated. Do the people, do the Members of Congress, prefer that our sons shall have the hardship of an extension of service which will permit them to be thoroughly trained? Or do the people, the Members of Congress, prefer to risk the ultimate, terrible hardship of unnecessary slaughter of our sons?

Gen. George C. Marshall, Chief of Staff, has clearly illuminated the whole question in his testimony before the House Committee on Military Affairs. At one place in that testimony he said:

"We have had some tragic examples in our history of good men, sound men, being involved in humiliating reactions on the battlefield, and the very same men performing magnificently at a later date, when they had been thoroughly organized and trained. We had such situations in the Civil War. In fact, most of the Union Army ran into the arms of Congress, I think, after the first Battle of Bull Run. And yet later on those same men did some of the heaviest fighting and took the heaviest punishment in the history of the world. But it took years to develop that state of discipline."

Into that professional military testimony must be read the human elements with which decent Members of the House are concerned. Those armies of the past not only failed when fighting as untrained men and succeeded after being trained. They also left in their graves great numbers of men whose lives might have been spared had the training been given before, and not after, initial battles. If that was so in the relatively simple military operations of the past, no great imagination, only simple common sense, is necessary to foreshadow the horrors which will follow the use of untrained or half-trained men against trained armies of today possessed of modern weapons of death and destruction.

Responsible men cannot take refuge in the assertion that there is no real danger that our Army will be engaged in battle. There is danger. An overwhelming preponderance of opinion in the country has declared that there is danger. What else is the meaning of the whole vast armament program which is quickly revolutionizing the social and economic life of the Nation? What else is the meaning of the great lease-lend program? What else is the meaning of the unprecedented enactment of compulsory service in peacetime—an enactment which no one seriously proposes to repeal?

There is danger that the men in our Army will be engaged in battle. While that danger stands before our eyes it will be a sin against American youth to fail in any steps which will assure their thorough training to engage in battle on even terms. It will be a sin against American youth to ease the hardship of extended training and expose them to the vastly worse hardship—the horror—of battle without adequate training. It will be a sin against the youth who are now directly affected by the proposed legislation, for in emergency they may have to return to the ranks only half-trained. It will be a sin against their present comrades in arms, for they will be left to face the future with depleted and enfeebled units. It will be a sin against the youth who are yet to be called, for they will begin their service, in this time of danger, in a weakened and unprepared Army.

To the decent men in the House who oppose this bill of extension, or who hesitate we say: Think solemnly of your responsibility. For every boy whom you relieve of the hardship of extended service, you may consign another boy to unnecessary slaughter on some field of battle where he will face a trained foe.

Construction of Roads for the National Defense

EXTENSION OF REMARKS

OF

HON. PETE JARMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

Mr. JARMAN. Mr. Speaker, my very natural interest in both our national defense and in highway improvement has caused me to listen attentively to the entire debate in the other body and in this, and to consider the matter very maturely. My esteemed lamented father was a pioneer in the good-roads movement, and it is only natural for me to wish to go along with my colleagues in their road-building enthusiasm. It is equally natural, however, not only because of my experience during World War No. 1, but because I love America and consider it by far the greatest country in the

world, for me to be intensely interested in our national defense. Undoubtedly the latter is paramount to the former and should in no way be jeopardized thereby. All of my thought and listening leads to the definite conclusion that the whole question here is whether the purpose of this legislation is national defense or highway building. Could I become convinced that it is the latter, my conviction that funds appropriated for that purpose should be apportioned pursuant to the well-established formula is so strong that there would be no question in my mind whatever. If it is defense legislation, however, an entirely different picture is presented. I quote from the title of this bill:

To authorize appropriations during the national emergency declared by the President on May 27, 1941, for the immediate construction of roads urgently needed for the national defense.

I also quote from the President's veto message:

One of the major provisions of this bill involves authorization of $125,000,000 to correct critical deficiencies in lines of strategic network of highways and bridges with the further provision that these funds are to be apportioned among the several States in accordance with the existing Federal Aid Act. The critical deficiencies in highways and bridges that may require prompt correction in the interest of our national defense cannot be reasonably related to the population of States or the other factors which enter into ordinary apportionment. The result, therefore, is the necessity for the appropriation of a far larger sum of money to meet immediate requirements than would be necessary if these funds were applied to critical deficiencies without the apportionment method. I am unable to approve this method of expending money for the immediate national defense and for which I recommend a total of $25,000,000 without apportionment. Such a distribution formula entirely disregards, it seems to be, the main purpose to be accomplished, which is that of providing highway construction in particular areas, and in those areas only, where there is immediate need of such construction in the interest of our national defense.

Four sections of the bill authorize appropriations. All but one of them do so in this language:

for carrying out the purpose of this section during the continuance of the emergency declared by the President on May 27, 1941.

I can find nothing in these quotations or in the bill from which they are taken on which to base an argument that this is a road-building, rather than a national-defense, measure. Despite this fact, I believe every telegram I received from our State Capital, except one, referred to "a method of allocation which has been in force since the Highway Act of 1916." Now, how can the Highway Act of 1916, and the method of allocation of funds which has been in force since that date, have anything whatever to do with an emergency-defense measure resulting from the emergency which is scarcely more than a year old in this country? These telegrams merely strengthen my conviction that the position of the President is well taken. Furthermore, the fact should not be overlooked that he is Commander in Chief of our Army and Navy. As such, he asked for what I regard as a strictly defense measure. The Congress gave him something different than what he requested and thought he needed, and it was in sufficient disagreement with his opinion of the needs that he vetoed the Congressional action. Undoubtedly more than passing consideration should be given to his considered opinion on such a matter, even though the very nature of the case prevents us from having been solicited to sustain his veto.

My position is that I favor, and expect to continue to vote for, the expenditure of any amount of money necessary for legitimate national defense, but I do not believe the defense of our country can know State lines and population. I also favor the expenditure of any reasonable amount for highway construction, my conviction being very strong that such funds should be apportioned among the States according to the formula heretofore mentioned. I do not believe, however, that they should be confused or that any other endeavor, regardless of its merit in its proper sphere, should be thrust into our defense program to slow it down or add to its already necessarily tremendous cost. As the President well says, "the population of the various States in the Union cannot possibly be related to the critical conditions in our highways," for the remedying of which he asked funds. You will recall that he requested $25,000,000 to be used where most needed. Instead, the Congress gave him a hundred and twenty-five million to be apportioned among the States pursuant to a formula in use since 1916. This is his main objection to the bill. Certainly the critical conditions he has in mind could be more quickly remedied under the authorization he requested than the one he received. Therefore, since it is reasonable to assume that if his veto is sustained today the Congress will shortly pass legislation more in line with his needs, I am strongly convinced that the sustaining of his veto will accelerate our national defense. Furthermore, I believe that more of these critical situations will be remedied by the $25,000,000 used where most needed, as the President wishes, than by the $125,000,000 distributed throughout the United States for general road-building purposes, even though many beautiful and delightful highways might be constructed by the distribution.

There are several other angles which should be considered. I realize the necessity of curtailing nondefense spending during the emergency and of preventing the national debt from growing any larger than necessitated thereby. The people of America are going to share this realization, if such is not already the case, when the new tax bill becomes operative. I said while discussing the lease-lend bill that it would cost much, and that as much as possible of the cost should be raised by taxation so as to relieve as much as possible the burden on our children and theirs. The people of America are perfectly willing to pay any reasonable amount of tax for national defense. Whether they are willing to be so heavily taxed for road building and other peacetime activities under the guise of national defense is another question.

Still another angle is our knowledge of the probability that the unemployment situation will be terrific when the dove of peace shall have finally brought this world from its present condition of carnage and ruin. I think the President was absolutely right, for instance, in stopping the construction of post offices and other peacetime public buildings to contribute toward a backlog of employment after the emergency. I do not know whether adequate labor, and particularly skilled and technical labor, such as engineers, which I understand is scarce indeed, is now available for such a road-building program or not, but I do know, or at least I greatly fear, that much more will be available after the emergency, and that unless such peacetime endeavors are postponed until then, we may reflect in comparison on 1929 to 1933 as the good, old prosperous days of yesteryears.

I judge from the telegrams I have received from road building people who are not my constituents that it is assumed that my State would profit in road building by our failure to sustain this veto. I can but believe, however, that since we have numerous defense projects in Alabama, the final result will be that we would fare about as well by the use of whatever money is necessary for emergency defense highways where these emergencies exist as by such a distribution as this. This is particularly true in view of the President's lack of serious objection to the access-roads section of this bill. Regardless, however, of what the result may be in highway construction, our crying need today is national defense. Should our defense prove inadequate, I do not see that there would be much difference whether we have four-lane highways or not. Therefore I believe that this highway-building program is entirely out of place in this particular bill and cannot conscientiously support it. I can find no fault in the reasoning indulged in by the President, who, bear in mind, is also Commander in Chief of our defense. Consequently, though the line of least resistance dictates contrary action, I shall vote to sustain it.

Abraham Lincoln and The Controlled Press

REMARKS

OF

HON. MARTIN L. SWEENEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1941

Mr. SWEENEY. Mr. Speaker, one of the most important newspapers in the country that is shouting for war and carries an editorial a day for the past year to send our boys to foreign battlefields is the Cleveland Plain Dealer. Those who do not agree with their foreign-policy editorials are classified as "fifth columnists," Nazis, Bundists, Fascists, and

before we started to send aid to "red" Russia, they were called Communists. Daily this newspaper attacks men like Senator BURTON WHEELER, Col. Charles A. Lindbergh, Congressman HAMILTON FISH, and Congressman MARTIN L. SWEENEY, because we dare to expose the war racket and urge the people of the country to be for America first over every nation on earth.

This newspaper comes by its policy of name calling honestly. When Lincoln sought election for a second term at a time when the great Civil War was raging, they indicated their espousal of human slavery and editorially made the most vicious attack on the character and reputation of Abraham Lincoln ever made by any publication of that period. Here is what they said about Lincoln, and I am reading from a photostatic copy of their original editorial published September 6, 1864.

[From the Daily Plain Dealer, Cleveland, Ohio, of September 6, 1941]

THE RECORD OF THE ADMINISTRATION PARTY

The bright record of General McClellan is in the possession of the American people and all the efforts of unscrupulous demagogues and a bitter partisan press to impugn that glittering record have miserably failed. No blot or stain rests upon it. But let not the defamers of our noble candidate expect under false cries of unionism, to turn the public gaze from their own past history. Like the blood upon the hand of the guilty murderess, it will stand and all the waters of the earth cannot wash it out. Greeley may prate of the flag, but he cannot burn up in fire, or obliterate from the memories of men his Tear Down the Flaunting Lie. Hale and Sumner and Washburne, with their coadjutors can never destroy their fierce invectives against the Union. The shibboleths under which they waged war against us, "Union savers," "Dough faces," "The South can't be kicked out," "Let the Union slide," "The Constitution is a covenant with death, and a compact with hell," will rise in judgment against them for all time, and will confront them in the last day, before the awful tribunal of the Most High, as dread witnesses of their guilt in plunging this fair and prosperous land in fratricidal war. Lincoln cannot shake off his incendiary declaration in the canvass of 1858, that the country "Must be all slave or all free." He dare not invoke the Union made by our fathers in this political contest. He is chained to the sectional Union of an Abolition Party. He has protracted this war and filled unnumbered thousands of graves to build up such a Union upon the ghastly wreck of that sublime fabric which the patriot statesmen of 1787 created.

The agitations of 30 years on the stump in State legislatures, in town meetings, in Congress, in schoolrooms, in private families, in newspapers, and in the very sanctuaries of worship by these "wolves in sheep's clothing," calling themselves the exclusive patriots, bear grave testimony against them now, refute their pretended loyalty to law and devotion to the national unity, and warn the people to repose in them no further trust or confidence. The lessons of the war add strength to this warning. Who can deny that they have prostituted the men and money freely given by a brave hearted people—to eternize abolition, instead of to perpetuate the integrity of our country. It is a damning fact that cannot be killed and buried by all the political bravos and undertakers in their ranks. Thurlow Weed, one of their own party, admits the fact and attempts to cast the sole odium on Sumner, Wade, and other advisers of Lincoln. The latter gentleman must bear his full share of reproach. The people made him their chief agent. They hold him responsible for the terrible abuse of that high trust. Let the people then judge the Baltimore nominee and the men who nominated him by their past record, and put their verdict of censure upon it, with a weight like the seal of Solomon, in the November election.

WHO IS RESPONSIBLE

For the withdrawal of McDowell's Corps, and the abandonment of the seige of Richmond?—Abraham Lincoln.

Who is responsible for Pope's defeat at Manassas?—Abraham Lincoln.

Who is responsible for cheating the country of the fruits of the glorious victory of Antietam?—Abraham Lincoln.

Who is responsible for the slaughter and defeat at Fredericksburg?—Abraham Lincoln.

Who is responsible for the terrible havoc and disaster at Chancellorsville?—Abraham Lincoln.

Who is responsible for the overland route entitled, "My Plan," by which 125,000 men were lost?—Abraham Lincoln.

Who is responsible for the present occupation of Mexico by an Austrian usurper?—Abraham Lincoln.

Who is responsible for keeping our soldiers in southern prisons, unless Negroes were considered equal to white men?—Abraham Lincoln.

Who caused the illegal arrests, suspension of judicial writs, suppression of newspapers, interference with elections in northern States, and manifold other violations of the constitutional law of the land?—Abraham Lincoln.

Who stands like a specter of death in the way of an honorable peace with the Union restored?—Abraham Lincoln.

Who is Abraham Lincoln?

A third-rate lawyer from Springfield, Ill., who once kept a whisky still up a hollow, split 3,000 rails, now splits the American Union, and calls for Negro songs on a crimson battlefield, yet has the audacity to aspire again to the Chief Magistracy of this great Republic.

OH! DON'T!

Some of the Republican journals are finding fault with General McClellan's personal appearance. This is refreshing even for September. But, oh, shades of Apollo, Hyperion, and Adonis, what shall be said of the form and face of the present incumbent of the White House.

We relent. It would be cruelty to pursue the subject.

Mr. Speaker, you will notice that they even made a disgraceful reference to his profile and appearance. What an insult to the Great Emancipator whose picture adorns the walls of every schoolroom in America and whose features are imprinted on our currency and the coin of the realm.

In another issue of the Cleveland Plain Dealer on September 13, 1864, and I read from an authentic photostat of the original article of that day. Lincoln is referred to—

as a miserable failure, a coarse, filthy joker, a disgusting politician, a mean, cunning and cruel tyrant, and the shame and disgrace of the Nation.

The people of Cleveland, Ohio, will recall the vile and brutal attack made by Cleveland Plain Dealer and other Cleveland papers upon the beloved late mayor, Tom L. Johnson, in his magnificent fight against special privilege.

Today in Cleveland this newspaper which also financially controls the Cleveland News is joined with the Scripps-Howard newspaper, the Cleveland Press, in violation of the Sherman and Clayton Antitrust Acts. This monopoly, in violation of law, compels the advertisers and readers who use the newspapers to pay "through the nose" by a uniform exorbitant rate of display and classified advertisements and a uniform price for the sale of their papers.

All of the Cleveland newspapers pose as moralists in the community and vilify and insult every public official who will not take orders from them. Witness their brutal campaign against the late Sheriff Martin L. O'Donnell which resulted in his death. They condemn bingo playing and crap shooting as immoral but think nothing of influencing the Department of Justice to fix the case of their lawyer who ran afoul of the law in seeking to make a fraudulent income-tax return. I might say that they were successful in this fix and their lawyer was saved from a criminal indictment which might have sent him to a Federal penitentiary. They refused to expose the vendors of worthless Alleghany stock because some of them were in on the racket. They shout about crime waves which everybody condemns but they should be reminded that any gangster problem we have in Cleveland stems from the time a few years back when during their circulation wars these newspapers placed in the hands of boys 16 and 18 years of age guns and blackjacks which resulted in bodily injury to these youngsters and in one case resulted in the murder of a 17-year-old boy.

In the best organized town in the country they constantly smear the organized labor movement. They forget that labor which supports these metropolitan newspapers can destroy them overnight if they ever entered into a campaign to withhold their patronage from the papers and the few department stores that control them.

Some of us in public life have felt their lash because we voted for the soldiers' bonus, collective bargaining, and opposed wage cuts for Federal employees that were unjustified.

For the past few years their control has reached into the city government of Cleveland. Editors, not a mayor, are running the affairs of Cleveland. They cover up the mistakes and irregularities of the present administration in power, and attempt to dictate to political leaders of both parties. Thank God the people of Cleveland have caught up to the controlled press in their city. Every suspicion points to the fact that they were subsidized in the last World War, and in the present world crisis suspicion again indicates that they are once more subsidized. They have been known in the past to stir up religious and racial intolerance in what was once the most tolerent city in the country.

These newspapers continue to pay their editors salaries equal to that of the President of the United States. The editor of the Plain Dealer receives $75,000 per year and the business manager gets $240,000 per year. Other papers pay comparable salaries to their editors and managers.

Despite the huge profits and large salaries paid to personnel by the newspapers they were cruel enough to drive the newsboys off the streets of Cleveland 1 year ago because they refused to pay a fraction

of a cent on street sales and refused to recognize the Newsboys' Union.

Mr. Speaker, the people of Cleveland have a chance this year to break the power of the controlled press. This will be an important issue in the municipal campaign of 1941. "The people versus newspaper control of our city government" is a timely and necessary slogan.

Public officials who are courageous enough to give battle will be deliberately cartooned, misrepresented, and ridiculed by their $75,000-a-year editors but when this occurs there will always be the consolation "look at what they said about Lincoln."

Proposed Arkansas Valley Authority Endorsed by High Government Officials—All the Nation's Hydroelectric Power Must Be Developed

---

EXTENSION OF REMARKS

OF

HON. CLYDE T. ELLIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

Mr. ELLIS. Mr. Speaker, the proposed Arkansas Valley Authority has received the endorsement of practically every high official in the Government of the United States—including President Roosevelt.

The Committee on Rivers and Harbors, of which I am a member, has just completed hearings on the St. Lawrence seaway project. Certain statements and endorsements were made at this hearing which I feel are important enough to repeat here.

WILLIAM S. KNUDSEN

I quote a question which I propounded to Director General William S. Knudsen, of the Office of Production Management, and his answer:

Mr. ELLIS. Assuming that the Arkansas Valley Authority, which is on the Arkansas, St. Lawrence, Red, and White Rivers on the west side of the Mississippi, would produce about as much power as the Tennessee—the bill is pending before this committee—based on what you have said just now, do I understand you are in favor of that project also?

Mr. KNUDSEN. Yes (p. 828).

Said Mr. Knudsen, also:

I don't believe we will ever have power enough in the United States. The country is growing so fast, the population is increasing and there is more and more demand for power every day. And if we have the power, why should we not use it? I think it was Mr. Coolidge——

Mr. DONDERO. Mr. Knudsen, I didn't quite understand you. Who was it you quoted?

Mr. KNUDSEN. I think it was Mr. Coolidge who at one time said he wanted to save the people, and the more power you have the more people you save.

Hydroelectric power has its advantages. While the first cost is heavy, it is cheaper to produce. Nobody can produce steam power at the cost of hydroelectric power, and wherever it is available, it seems to me we ought to take advantage of it. There would still be room for the use of all the steam power we could make. The distance of transmission, of course, makes it necessary in certain places to have steam power. In some cases we have gas that can be used, and I think that every available fuel, and every available opportunity for power should be developed to the fullest extent.

Our defense industries are in constant need of more power. We work with the Federal Power Commission, and with the Department of the Interior to round up all the available power we can get, and we are constantly looking forward to see where we will have more available power, because, as you understand, the chemical and electrolytic process have been vastly developed during the last 20 years, and I look for still greater forward development in the next 20 years.

So we need power; we need power for manufacturing; we need power for civilian use, and wherever we can obtain such power at low cost, I think we should take advantage of the opportunity.

* * * There is going to be a demand for power in the United States Even after the emergency is over, I think there is going to be a greater demand for power, and I think that any investment you can make in power for the future is a good investment for the United States and for the future of the United States (pp. 812-813).

I say I am not a power engineer, nor can I pose as a power expert, but I bought a great deal of power during my 20 years with General Motors, and my 10 years with Mr. Ford. Whenever I bought water power I got it cheaper than I could get steam power, even if I generated that steam power myself (p. 820).

SECRETARY STIMSON

Congressman SMITH of Washington propounded to Secretary of War, Henry L. Stimson, certain questions which I quote together with the Secretary's answers:

Mr. SMITH. But are you of the opinion, Mr. Secretary, that the generation of power and making it available to our Government, a large block of power, would be a very valuable factor in the prosecution of any war which we might have to enter?

Secretary STIMSON. With that I heartily agree.

Mr. SMITH. Is it not a fact that Germany, starting with the Hitler regime, has developed all of the available hydroelectric power within Germany and now, since the outbreak of the war, is doing the same thing in all of the conquered countries under her sovereignty at this time?

Secretary STIMSON. Well, I cannot state the extent to which she has done it, but I understand she is making great steps in that direction (p. 10).

SECRETARY KNOX

On the question of whether the projects of the A. V. A. could be completed in time to be of assistance in this emergency, I quote a statement of the Secretary of the Navy, Frank Knox:

It is driven home to me with the close application I must give to the subject of sea power that we are going to live in a disturbed world for a long time, no matter what the outcome of the war may be, and in that world which is out of balance and struggling for a new and secure footing the control of the seas is going to be of immense importance (p. 95).

On the same point, Secretary of War Stimson said:

There is a very good chance, a very strong chance, in my opinion, of the emergency lasting long enough to enable this country to reap the benefits of this construction of the seaway (Four Years, p. 6).

Incidentally, the following dialogue is interesting:

Mr. ELLIS. But do you think it would be possible to do any of this shipbuilding up and down the Mississippi River?

Secretary KNOX. Yes; I am going to do so.

Mr. ELLIS. I hope you do, and particularly along the eastern border of Arkansas.

Secretary KNOX. I cannot answer as to that.

The CHAIRMAN. On the Arkansas River (p. 111).

SECRETARY OF COMMERCE JESSE JONES

Following is a question which I propounded to the Secretary of Commerce, Jesse Jones, and his answer:

Mr. ELLIS. Mr. Secretary, you are also in favor of opening up such rivers of the country as can be opened up—naturally, I have in mind those in the Arkansas country—for navigation also, where that can feasibly be done, are you not?

Secretary JONES. Yes, sir; I have said that (p. 298).

CHAIRMAN OLDS

Chairman Leland Olds, of the Federal Power Commission, stated:

I think every hydroelectric development we can make at the present time is going to strengthen this country in its defense program (p. 347).

Said he also:

Today Germany can command, or it will be commanding within the next 2 years, about 200,000,000,000 kilowatt-hours of electric energy. Our last year's production in this country was about 144,000,000,000 (p. 330).

Quoting again from Chairman Olds:

Our power flood-control division has been working frequently with the United States Corps of Engineers on these multiple-purpose river plants, and it is surprising how much good water power you can still find west of the Mississippi; that is, between the Mississippi and the Rockies. Among other things, we find very excellent hydro power in the streams of Arkansas, particularly the White River, where the developments at Table Rock, Bull Shoals, and Norfolk combined would give you primary power in a very considerable quantity (pp. 350-351).

JULIUS H BARNES

Julius H. Barnes, three times president of the United States Chamber of Commerce, gave his indorsement, and I quote the following dialogue:

Mr. ELLIS. When were you last president of the United States Chamber of Commerce?

Mr. BARNES. I was president in 1929, 1930, 1931.

Mr. ELLIS. And are you now connected with the chamber in any way?

Mr. BARNES. No.

Mr. ELLIS. You know, do you not, that the United States Chamber of Commerce has condemned, or failed to prove, or has disapproved, this project?

Mr. BARNES. I do, and I differ with the chamber's expressions.

Mr. ELLIS. So do I. You know, too, that the United States Chamber of Commerce has disapproved the proposed Arkansas Valley Authority development and other similar developments?

Mr. BARNES. Is the Arkansas Valley largely a power or an irrigation project?

Mr. ELLIS. Similar to the T. V. A.; power, navigation, flood control, and reclamation. Do you know that they condemned that, too?

Mr. BARNES. I do not know it; but I would not be surprised.

Mr. ELLIS. Well, I am telling you that they have, and I am not surprised; but would you disagree with them on that score?

Mr. BARNES. I think I would (p. 316).

ROOSEVELT ENTHUSIASTIC

Several times lately President Roosevelt has discussed the Arkansas Valley proposal with congressional leaders. On July 16 he discussed it with Senators NORRIS and STEWART and Congressman KEFAUVER and told them he hoped to get it passed at this session. On August 2 he told Congressman JOHN RANKIN that the authority bill must be passed.

STATUS OF A. V. A. BILL

The A. V. A. bill, now pending before the Rivers and Harbors Committee, was referred in regular order to the various Government departments. They in turn made their reports to the National Resources Planning Board and the Bureau of the Budget. Mr. Roosevelt requested Harold Smith, Director of the Budget, to make a study of the reports, endeavor to work out any differences, and report back to him. There are questions of administration on which the departments have not agreed, but I am hopeful that a decision may be reached and that hearings may be had before the Committee on Rivers and Harbors within a few weeks.

What a blessing it would have been if we could have had the A. V. A. in operation at this time.

Simon Bolivar Anniversary

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1941

Mr. MARTIN J. KENNEDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter of President Roosevelt and address of Frederick E. Hasler, president, Pan American Society, at ceremonies in observance of the one hundred and fifty-eighth anniversary of the birth of Gen. Simon Bolivar, held at the statue of the liberator in Central Park, New York, Thursday, July 24.

The observance of the birthday of the Great Liberator, which is a time-honored custom of the Pan American Society, was of especial significance this year because of events in Europe and the Far East and their possible effect on the welfare of the United States and our sister republics to the south.

The society, which is the oldest nongovernmental organization in this country devoted to the development of true friendship and better understanding between the 21 Pan American nations, is doing splendid work in supplementing the good-neighbor policy of our Government. Its membership, numbering 1,000, is made up of representative men in the United States and Latin America who are working to make and keep the bond between these nations so sound in principle and of such mutual advantage that it will grow stronger and more precious with the passing years. The society and its officers—Mr. Hasler, in particular—deserve our thanks for the many fine things they are doing.

The celebration began with a luncheon held by the society at the Hotel Bolivar, 230 Central Park West. The consuls of 14 Latin-American Republics were present at the lunch, and Dr. Luis Fernando Guachalla, Bolivian Minister to the United States, had come from Washington to attend it. From there the guests marched to the Bolivar statute. They were preceded by a United States Army Band, two rifle platoons of the military police, and a color guard from Fort Jay, Governors Island, carrying the 21 flags of the American nations. The band played the anthems of the American Republics. Wreaths bearing their colors were placed at the foot of the statute by Dr. Guachalla, Mr. Hasler, and various Latin-American organizations. Dr. Guachalla spoke in Spanish of Bolivar's achievements.

President Roosevelt, recognizing the importance of the occasion, wrote the following letter, which was read by Mr. Hasler:

THE WHITE HOUSE,
Washington, July 18, 1941.

DEAR MR. HASLER: Not the weakest among the many bonds which unite the American republics is the memory of the great men throughout the continent who led the struggle for the achievement of the independence of the 21 sovereign nations of America. The life and deeds of Simon Bolivar and of the other heroes of the lands to the south of us are becoming constantly better known in the United States. Conversely, the achievements of George Washington and of those who labored at his side to found our Republic are from year to year the subject of more widespread interest and study in the other American republics. The resulting development of a body of shared knowledge regarding noble and heroic efforts directed toward common goals is a source of strength and vitality in the development of our relations.

It is, therefore, with particular pleasure that I send this message of greeting on the anniversary of the birth of Simon Bolivar. I wish that it were possible for me to be with you at the statue of that great man and join with you in paying tribute to his memory. His ideal of continental solidarity is constantly before us in these tragic times; it encourages and stimulates us in the development of the defenses of our hemisphere against the perils which threaten it.

Very sincerely yours,

FRANKLIN D. ROOSEVELT.

FREDERICK E. HASLER, ESQ.,
President, Pan American Society,
New York, N. Y.

Mr. Hasler delivered the following timely and impressive address:

It is in a spirit of deep humility and veneration that we meet today to honor the memory of one of the world's greatest soldiers, statesmen, and patriots—Simon Bolivar, the great liberator and father of Pan-Americanism. No word or act of ours can add to the luster of his sainted memory, but, with each passing year we gain a new conception of how his life and achievements influenced the destiny of a great continent and still shine as a guiding star over the whole Western Hemisphere.

How shall we measure the greatness, the nobility, the self-abnegation of Simon Bolivar? He was a mighty warrior, an inspiring leader, a tireless crusader for the right of humanity, a brilliant statesman with vision, a man who willingly sacrificed inherited wealth, social position, and official prestige so that he might serve his fellow men. As a result of his lifelong efforts, when the short life span of his 47 years passed, he bequeathed to future generations the precious heritage to enjoy and to protect liberty.

Like other great men who had unselfishly served humanity, he died a disillusioned man, with his great plan, an alliance of the nations of the New World, ruined by the indifference, suspicion, selfishness, and lack of vision of men then in power.

Bolivar was gifted with a vision that was almost superhuman. Picture, if you can, a man whose mind was so brilliant that he could gage the ruthless ambitions of men of future generations so accurately that he foresaw the cataclysm which Hitler today is forcing upon the world. Such a mind was Simon Bolivar's. He envisaged the day when his New World would be called upon to save the Old World. That day has arrived. He outlined the formula by which this salvation might be accomplished and the forces of evil might be routed. Let me read you Bolivar's own words, as quoted by John Jennings in his book, Call the New World:

"From the very start of my career," Bolivar said, "this has been my dream; the thing for which I have fought above all else—a free and independent America, united in the interests of democracy, upholding liberty before the world; not an America welded into a single great nation, mind you, for that I recognize is impossible, but a great federation of independent States, each sovereign in itself, yet together upholding the principle of freedom in a world that would stamp it out. This has been my dream of (Latin) America. I had not dared to hope that you of the North would join in it. Now, by the words of your President, this dream is enlarged and made possible. One day, my friend, mark well my words, it will fall to the New World to uphold and defend the civilization which has already begun to decay in the Old. And only by such union will that be accomplished!"

Is it any wonder that the memory of Bolivar is dear to us? Today we raise our faces in devotion before this shrine of liberty which symbolizes his mighty deeds and inspired words.

If some of our statesmen who were contemporaries of Bolivar had possessed his knowledge and distrust of European politics and his vision, and if they had been guided by his knowledge, the Western Hemisphere could have been unified and made invulnerable, both economically and in a military sense, and we would not have to worry about the threat of invasion, as we are worrying today. The Western Hemisphere could have become so strong that no nation or group of nations would have thought of attacking or even threatening us.

Some statesmen of Bolivar's day, for selfish or other reasons, refused to see the dangers which the Great Liberator so clearly saw. We have a parallel to that situation in the United States today. Bolivar was threatened and had to fight hard in his efforts to do what was best for the welfare and safety of the people he loved. Today, our President is being attacked and his motives impugned by the Quislings of this country, in public office and out, who, by undermining public confidence, morale, and loyalty, are in effect sabotaging our defense effort and playing into Hitler's hands.

The pity of it. Civilization, freedom, and democracy are smothered in smoking ruins in most of Europe and the Western Hemisphere is certain to be the next coveted goal of the pagan hordes. These appeasers in our midst would have us believe we are in no danger. Thank God, we have a President and a majority in our Congress who think

otherwise and who are taking the wise course to insure the safety of this hemisphere and the preservation of Christianity and freedom.

We know that today the Latin-American nations and the United States are facing the gravest crisis in their history. Just at this moment the danger is equally as internal as it is external. Sincere men and women are hoping against hope that a decision will not have to be made, that a miracle will spare them the horror of meeting the brutal facts face to face. Like the ostrich, they bury their eyes and minds in the sand of mental stupor. Others, all too many, engage their poisonous tongues and pens in spreading half truths, painting distorted word pictures to distract attention from the main issue. For what reasons? Who knows? Frustrated ambitions? Personal spite? Envy? Desire to keep themselves in the limelight? Whatever the motives of such persons, it is difficult for patriotic Americans to disassociate them from the Hitler-directed "fifth columnists" who are, everywhere active in plotting for our destruction.

Democracy recognizes the right of the individual to express his honest convictions, but for its own preservation democracy cannot countenance the perversion of this liberty of free speech by its enemies.

My friends, only when we have destroyed this danger from the enemy within, can we be certain of victory over the enemy without. To bring the truth of this forcibly home to us, let us read Bolivar's "Manifesto to Cartagena," which, early in his career, he addressed to the people of New Grenada. This manifesto was one of his greatest documents. It was a direct statement of his political philosophy, to which he firmly adhered. He said:

"We had philosophers for statesmen, philanthropy for legislation, dialectics for tactics, and sophists for soldiers—internal dissensions were in fact, the poison which carried the conutry to its doom. * * * It is necessary that a government identify itself with the circumstances, times, and men surrounding it. If they are prosperous and calm, the government can be mild and protective; but if they are turbulent and calamitous, the government must show itself terrible and must arm itself with a firmness equal to the dangers, without paying heed to laws or constitutions until peace is reestablished."

Mark you well those words of the Great Liberator. They are as true today as they were more than a century ago.

In this tribute to Simon Bolivar I should be remiss if I did not mention another heroic figure who was one of his contemporaries—San Martin, a great soldier and a great patriot, who did more than any other one man for the cause of independence in Argentina, Chile, and Peru. Both men were cast in the same mold. Both had the attribute of true greatness—subordination of self. In 1822, San Martin unselfishly relinquished his leadership in order that Bolivar might have undisputed authority to bring together all factions of the revolutionary movement.

Today the Western Hemisphere needs more patriots of the type of Bolivar and San Martin. Were they alive, they would be the first to punish internal treachery and to fight appeasement, and the first to unite us to defend the precious heritage of freedom which they won for untold millions of their fellow men in the New World.

Unless we keep faith with the great leaders of the past—Washington, Bolivar, San Martin, and Lincoln—we cannot hope to continue our American way of life and to enjoy the privileges and blessings of true democracies. Their lives are stories of inspired vision, hardship, and sacrifice. We shall prove unworthy of the heritage they bequeathed us if we are not willing—yes, eager—to work for defense until our muscles ache and our bodies sweat; if we are not glad to economize so that we pay our share of the cost of defense, or if we hesitate to make sacrifices to insure the complete and lasting triumph of Christianity and freedom over paganism and slavery.

Last January, I visited the beautiful city of Caracas, the birthplace and the last resting place of the mortal remains of Bolivar. As I stood in the quietness and peace of that hallowed sanctuary, the Pantheon, there was no feeling that it was a place of death, but only a feeling of beauty, immortality, life everlasting and victory. There "slept" the man who dreamed of a new world where all men should have equal opportunity, the right to think, talk, and live as God intended men should—as human beings.

If Bolivar, the conqueror of the impossible, whose astounding military feats have never been excelled and are so fantastically incredible as to pale into insignificance the vaunted prowess of Hitler's panzer divisions—were he here, today, speaking to us, what would be the burden of his message? Can there be any doubt that he would call upon every man, woman, and child in the nations of the Pan-American Union to uphold and strengthen the men we have chosen as our leaders? I can hear his voice exhorting us:

"This is no time to call yourselves members of this or that political faction. There is but one classification for you today—citizens of the Americas, pledging faith in and allegience to your chosen leaders; backing them up with all you have—heart, mind, and body and worldly goods. Do this and victory shall be yours, as it was mine—victory of freedom over tyranny, of right over wrong, of courage over appeasement and defeatism, of God and democracy over atheism and Hitlerism—victory of honor and life over degradation and death."

The world of free men which we call democracies—our world—is fighting for its very life. It is facing the greatest crisis in its history. The pleading hands of millions of once free people and the hands of others still struggling to hold their liberty are outstretched to the Western Hemisphere. We must not and we shall not fail these brave people who rely on us for help.

Let us not forget in this crisis that one of the vital elements of Bolivar's success over the oppressors was the unity of his people. We can help make this unity ours, if we leave this anniversary celebration with the firm resolution to lay aside all differences and to work as one people, united, unafraid, unconquerable—Americans all.

Letter Concerning Husband Who Is Now in the Army

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

LETTER FROM A CONSTITUENT

Mr. MARTIN J. KENNEDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter, which speaks for itself:

The Honorable MARTIN J. KENNEDY,
House of Representatives,
Washington, D. C.

DEAR SIR: Although I realize it is essential at this time to develop a well-trained Army, I am very much opposed to the extension of the draft limit beyond the original year. If all the boys were really being well trained in modern warfare, perhaps there would be some value in extending their period of service beyond the year, but from what I have heard from many intelligent young men it seems that the lack of good training is appalling. Therefore, I think it is most unfair to put all the burden on the men who have already been inducted.

In any case those over 28 years and the men who were married before the draft went into effect should certainly be released as rapidly as possible; also, some efficient method should be devised for releasing those on whom retention in the Army is working great hardships. I understand that the Senate passed a proposal to release men over 28, but I do not know what provisions the House of Representatives has made along these lines. I feel very strongly that a bill should be passed to release them right away, regardless of how the draft-extension bill turns out.

The administration of the draft law has been particularly unfair in New York City, especially, it seems, in this district. My husband, who is 31, was inducted into the Army on March 11, although we had been married at that time for 3½ years. He was in business for himself as a commercial photographer; I had continued with my work until his business was well enough established for me to stop and have the family that we had been planning. Just at the time he was getting on his feet he was called into the Army and had to give up his business. If and when he ever gets out, he will have to start at the bottom again unless he is released very soon.

In addition to all the other worries, he contracted pneumonia a few weeks after being inducted and was in the hospital at ——— for 5 weeks. Shortly after he became sick the combination of worry over his condition and the fact that I became run-down physically after he left put me in a hospital in New York at the same time. In May he was transferred to ———, supposedly to be sent to the technical school for aerial photographers, but he still has not gone to school, and until last week was not even a photographer. Aside from the terrible uncertainly and the fact that we can make absolutely no plans for our future, we are both very unhappy, to put it mildly, over this enforced separation. Inasmuch as my husband has received practically no training, due in part to his illness and transfer, is there any way that we could obtain his release from the Army soon?

Of course, as you can see, I have a selfish reason for wanting a bill passed to release those over 28, but even without that I think it is most unjust to hold men in the Army when they were just getting a good start on their careers.

Very truly yours.

Problems of Small Business

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

SPEECH BY ALFRED C. GAUNT

Mr. VOORHIS of California. Mr. Speaker, unless certain present trends are reversed or at least checked we are going to find the control of American industry

concentrated to a far greater extent than has ever been the case before and to a far greater extent than can presently be safe in any democracy.

This is why I am inserting in the CONGRESSIONAL RECORD the following speech of Alfred C. Gaunt at a symposium on small business in Chicago last June:

REMARKS AT SMALL BUSINESS SYMPOSIUM

(By Alfred C. Gaunt, Treasurer, Merrimac Mills)

If I may outline what I hope may be a contribution to this discussion on the Outlook for Small Independent Business in Our Modern Economy it might be on the angle of what will be the impact of emergency or war and most war conditions on small independent business.

Professor Cabot, of Harvard School of Business Administration, said this spring that he was greatly impressed by the caliber of 300 small businessmen who were in attendance at a series of conferences there, as contrasted to the representation of big business, who had constituted the conferences of the previous year. He said to the small businessmen's group, "The small businessman is broader in his outlook than the executive in a big business, probably because he has to be more resourceful and have greater initiative."

London reported after two months of war 20,000 small businesses closed and 20,000 more that could go on but little longer. In the line of manufacturing in which I am greatly interested, we are told that England's small manufacturers are by law being combined with their larger competitors, or otherwise eliminated.

Small independent business will be the first to suffer with the advent of war and the program of regimentation that of necessity goes with war. In Italy, Germany, and Russia, small independent business has largely ceased to exist.

We face the serious problem of how to arm ourselves without losing the democratic rights we would defend.

In America, small businesses employing less than 200 workers comprise 98.7 percent of all businesses, according to the Social Security Board's latest figures. They do 65 percent of the Nation's business.

If we believe, as I feel we all do, that the promotion of small independent business today is the preservation of democracy tomorrow, it behooves us to examine now and act now to save from extinction our small independent business, as a means of inestimable service to the welfare of our country.

The United States follows the pattern of Britain to a large degree, especially in this war—and we are only about 1 year behind Britain in many economic processes, perhaps including the rapid elimination of small businesses. The minute we get into war, our economic processes will rapidly catch up and even pass Britain in speed. Are we now, here, on the immediate verge of a wholesale quick elimination of small independents as in Britain a year ago?

There are, fortunately, some forces at work for small independent business that we should support as vigorously as we fight against forces of regimentation or monopoly that would destroy us.

Perhaps you are familiar with the fact that both political platforms, for the first time in their history, mentioned small business by name; and that also for the first time in history Congress has set up a committee specifically for the study of the problems of small independent business. Likewise, the T. N. E. C. has done a most excellent piece of work in its investigation and report on the relative officiency of large, medium, and small businesses, and in revealing factually the dangers inherent in monopolistic practices. And Thurman Arnold, Assistant Attorney General of the United States, has just announced the setting up of a separate division in the Department of Justice "to be an effective public defender and public agent of the small businessman."

A start has been made toward securing representation for and recognition of the place of small, independent business in our economy and life. The organization and convention of this splendid group of independents is a real contribution to the cause.

But it is only a start. We see labor and agriculture and big business recognized even by Cabinet positions. On the top policy-making Board of Defense and Production is labor's representative and two representatives of big business. They are fine men; but at this particular time of emergency for small independents—do you not join me in asking—why do those who can contribute the most, and who are liable to suffer the most, why do they have no representation?

Do you doubt the need of representation? Do you feel that the interests of small, independent business are adequately covered by the present set-up?

Let me give you an up-to-date example of what is transpiring. Until recently the Army, in invitations for bids on serge for uniforms, set no minimum quantity on which a manufacturer might bid. They received bids from 78 worsted mills. The next invitation said, "No bids for less than 25,000 yards," whereupon bids were received from but 36 bidders.

The small manufacturer was side-tracked, and this action naturally restricted the sources of supply. If less competition means higher prices, then the Army must pay more for its goods. As I left home Saturday, a new call for bids for a further quantity has been issued. This time the minimum has been raised to 100,000 yards.

The Army have, from their standpoint, a logical answer. They say—and they are right—that problems of inspection, etc., are reduced when they have but a few mills to deal with.

But what will be the immediate and post-war effect on the existence of small independent business if this policy is pursued and widened? Can we not agree that even if it is more trouble—it is well worth it?

And yet this is just the plan of saving clerical and inspectors' time at the expense of the very existence of small independents, that we will see employed in increasing measures, unless small independent business is on its guard, and unless it has representation of, by, and for independent small business on all Government policy-making boards and departments. With very great respect for Jesse Jones and other fine men that have preceded him, the Secretary of Commerce should not be a banker, not a lawyer, not a big businessman, not a social worker, but an independent businessman—one of the great rank and file.

The planks on small business of the political parties are good ones, but meaningless unless put into effect.

"Without representation of, by, and for independent small businessmen by representatives of their own choosing, as labor and consumer, and agriculture and big business now have, democracy in the United States cannot be preserved under modern conditions."

In Britain it was neglect rather than design that failed to give representation to independent small business on defense and war council and boards. The same neglect, rather than design, is now hurting small independents in the United States. It is already probably "too late" in Britain to save independent small business. But why should it be allowed to be too late in the United States?

The problem of how to give this representation to independent small business is, of course, a great one. But there are associations such as you have here and some manufacturers' associations and national trade associations, which are made up of and controlled and dominated by independent small business. From these, the Government could at once get representatives of independent small business to serve. The respective association should pay the expenses of these representatives except where the Government or defense commission or council or board pays its other members.

Here are some of the policies for which such a representative might stand:

1. Making such regimentation as may be necessary on a graduated basis, with big business first, medium business next, and the tiny "pants presser" entirely exempt.

2. The promotion, wherever practical, of many prime contracts to many small contractors rather than following the program of big orders to big concerns, with the delays and inequities incident to subletting and subcontracting.

3. The lifting of this inequitable burden on small enterprises of governmental reports and returns and their undue tax on the time of the small businessman.

4. An alleviation of disproportionate cost to small units of credit accommodation and financing and insurance and other service.

5. Insisting that any emergency measures requiring overlong hours of labor, or agricultural or industrial regimentation be effectively limited to the term of the emergency.

6. The continual and vigorous promotion of full, free, and fair competitive enterprise in industry, trade, and agriculture.

7. The encouragement of growth of proprietor-owned-and-operated enterprise with the social benefits resulting from close contact between owners and employees.

8. Discouraging those tendencies toward absentee ownership which work to destroy human relationship, and thus engender the wholesale curtailing of employment at the first sign of business recession.

9. Retarding the absorption of small business by big aggregations of capital, as an insidious menace to the liberty of the citizen.

10. Elimination of State barriers affecting interstate trade.

11. The removal of artificial rewards to bigness, and artificial penalties on smallness.

Senator AIKEN of Vermont said the other day that we have at hand elements that could make for nazi-ism, "big army, big business, big government:" "but," he added, "the good sense of the American people will set up safeguards." We know that this Vermonter is right; but let us now, at the beginning of this war, before it is too late, put into effect policies and support forces already in action, that will effectively prevent post-war depressions and unemployment and disasters, and even revolution.

I close by asking you: Will we move now for representation, that we small independent businessmen may participate and contribute, not as suppliants, but as full-fledged partners?

The Return of the Musk Oxen to Alaska

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

ARTICLE BY STANLEY P. YOUNG

Mr. ANGELL. Mr. Speaker, as a member of the special committee for conservation of wildlife resources, and the standing Committee on the Territories, I am deeply interested in the result of a program for the return of a herd of

musk oxen to Alaska and the development and preservation of this species of wildlife which formerly abounded in that section of our country. Having been born and raised in the far west and a descendant of covered-wagon pioneers, I have witnessed the disappearance or depletion of many of the species of wildlife which formerly abounded in great numbers in our vast public domains.

In recent years much has been done by our conservation-minded citizens and public officials in preventing further depletion of the stock of these wildlife creatures. Some of our citizens who were residing in Alaska in 1927 caused a memorial to be addressed to the Congress of the United States by the territorial legislature of Alaska requesting that funds be provided to purchase and locate in Alaska a herd of musk oxen. The late Senator Peter Norbeck of South Dakota, an early champion of conservation, and Representative C. C. DICKINSON of Iowa, in cooperation with Irving McK. Reed, who was then a member of the Alaska Game Commission, were successful in securing an appropriation by the Congress of $40,000 to be used for this purpose. The action was approved by the President May 27, 1930. The work in carrying into effect the project was entrusted to the Bureau of Biological Survey of the Department of Agriculture. This Department was later transferred to the Department of the Interior and recently was combined with the Bureau of Fisheries, and is now known as the Fish and Wildlife Service.

When "Ding" Darling was Director of the Wildlife Bureau he placed in charge of the big-game preserves for the protection of the preserves from game-law violators Stanley P. Young. Mr. Young is senior biologist of the Fish and Wildlife Service. He comes from my native State of Oregon and is performing a very fine service in this most important field, and particularly in the conservation of wildlife resources. Mr. Young has written a most amazing and interesting story, describing our Government's successful undertaking in carrying out the mandate of the legislation to which I have referred, in reestablishing a herd of musk oxen in Alaska after the absence of 100 years. The herd is now increasing and has almost doubled in size. I am sure that this article will be of great interest to all who are interested in the conservation of wildlife resources, as well as the development of our outlying territories.

In accordance with consent heretofore given me, I include in my remarks this article by Mr. Young, which appeared in the August issue of the American Forest. The article is as follows:

[From American Forests of August 1941]

THE RETURN OF THE MUSK OXEN—IN ONE OF THE MOST DRAMATIC UNDERTAKINGS IN BIG-GAME CONSERVATION, THESE INTERESTING MAMMALS OF THE BLEAK ARCTIC TRAVEL 14,000 MILES TO BECOME REESTABLISHED IN ALASKA

(By Stanley P. Young)

The musk oxen, one of the most interesting mammals of the bleak Arctic, has returned to Alaska, and while little is known of its disappearance from that region more than a century ago, its return is boldly written in what is perhaps the most dramatic chapter in the annals of big game conservation. Indeed, this remarkable undertaking of reintroducing a game animal into its ancient habitat has few parallels in conservation history.

To reestablish their kind in our northern territory, the musk oxen were transported by boat and by railway a distance of approximately 14,000 miles, the longest and most hazardous journey in the history of transplanting any mammal for restocking purposes. Captured in Greenland, the animals were shipped by boat to Bergen, Norway, and then to New York City. There they were crated and sent to Seattle, Wash., on express railway cars, to again be loaded aboard a boat for Alaska. More than 2 months were required to move the animals from Greenland to Fairbanks. Despite this record-breaking journey, the herd, consisting of 34 animals—15 males and 19 females—arrived at its destination in splendid condition.

This was in 1930. Nine years later, in 1939, when the herd was last counted on Nunivak Island, where it was released, it numbered 60. Biologists have full faith that the animals will continue to increase and in time be of sufficient number to permit restocking of other areas in Alaska.

But before reviewing this amazing undertaking, it may be well to consider the musk oxen and its bleak habitat. The term Arctic, to a great many people, suggests a desolate, ice-bound land—or water—where little life is supported. However true this may at first appear, there is error in such thinking. In our so-called Arctic wastes may be found a profusion of bird and mammal life in season, such as many species of migratory waterfowl, fur bearers, Arctic hares, lemmings, caribou, wolves, and musk oxen.

The greatest concentration of wildlife in the so-called Arctic wastes is to be found during the late spring and summer months, following which nearly all of the mammals either hibernate or, along with the birds, migrate to a more suitable winter habitat. Of the mammals which neither hibernate nor to any great extent migrate from this chosen Arctic home, the musk oxen is capable of contending with some of the bleakest habitats found anywhere.

This picturesque mammal was first discovered in North America by intrepid northern explorers and traders near the close of the seventeenth century. Although, as may be conjectured, the musk ox is related to wild and domestic cattle, it is generally smaller than most breeds, though some of the old animals have weighed 900 pounds. From the tip of its nose to the end of its short rat-like tail, the musk ox is nearly 8 feet long. As with most mammals of the cattle type, the adult bull is larger than the female. The young, one baby calf, is generally born in April or in early May, and this calf is reared in the valleys of the Arctic hills, mountains, and tundra flats. Here a profusion of sedges, grasses, and shrubs blossom in the fast growing short spring and summer, and from these the herds with the young take their subsistence. These herds are generally small, averaging from 5 to 12 animals.

Arctic summers usually disappear with great suddenness, leaving little semblance of an autumn, and early snows cover much of the musk oxen food. With this quick disappearance of fresh grasses the mammal turns to dwarf willows, saxifrage, and other herbaceous plants and grasses which it obtains by pawing through the snow with its broad hoof.

Two of the natural enemies of the musk oxen have been the arctic wolf and the isolated tribes of primitive man, such as the Eskimo and the Indian. Against these enemies this interesting and formidable appearing Arctic creature held its own in fair numbers. The modern firearm, however, coupled with predation and the take by the northernmost tribes, spelled its doom.

Originally, musk oxen occurred from Alaska eastward to and including Ellesmere Island. Crossing Baffin Bay, and still eastward, it was again encountered in the coastal fringes of Greenland. Adolphus W. Greely, leader of the famous Greely Arctic Expedition in the early eighties, found the animal near old Fort Conger, approximately 1,100 miles north of the Arctic Circle, on Ellesmere Island, and points westward. Greely's men captured calves and attempted to tame them, with the result that some became docile and tractable even to the extent of hauling in teams. The chief difficulty was to keep the sledge dogs of the expedition from killing them.

Today, the musk oxen has disappeared from much of its original Arctic domain. The use of modern firearms, which against the musk oxen began 40 years prior to the advent of the present century, has been the greatest contributing factor. For a time its skin was utilized in the fur trade; northern whaling crews killed many animals for food; then the formidable heads with sharp, curved horns became highly prized as trophies. Canada, taking cognizance of this condition, some years ago set up a musk-oxen sanctuary of approximately 15,000 square miles along the Thelon River east of Great Slave Lake in the Northwest Territory.

Research has failed to find any authenticated occurrence of the musk ox in Alaska since it was first explored by Europeans. The various tribes of natives in the Territory, however, state that the animal did occur there about 100 years ago. Also, remains of the mammal have been found in Alaska; and it is known that portions of the Territory are suitable for musk oxen.

So, in 1927, resident Alaskans presented a memorial through their Territorial legislature addressed to the Senate and House of Representatives of the United States requesting funds to purchase a small herd of musk oxen. This plea came to the attention of the late Senator Peter Norbeck of South Dakota, that grand old man of conservation, and Representative C. C. Dickinson of Iowa, later a Senator from that State. Together with Irving McK. Reed, then a member of the Alaska Game Commission, they obtained favorable action by Congress for an appropriation of $40,000 to be used in obtaining a herd of musk oxen and transporting the animals to Alaska for restocking purposes. This action was approved by the President on May 27, 1930. The agency of the Federal Government to which this undertaking was entrusted was the Bureau of Biological Survey of the Department of Agriculture, later transferred to the Department of the Interior and, during the past year combined with the Bureau of Fisheries into an organization known as the Fish and Wildlife Service.

By the time the appropriation became available musk oxen in North America had become so reduced in numbers that it was impossible to obtain surplus animals. Finally, contact was made with Johs. Lund of Aalesund, Norway, who was familiar with the technique of capturing musk oxen alive in Greenland. To him, therefore, was given the contract and task of rounding up a herd of 34 animals. The Greenland musk oxen differ somewhat from those that formerly occurred on the continent of North America, foremost in that they are slightly smaller. However, from a practical game-management standpoint, the differences are negligible.

The majority of these Greenland musk oxen were roped by Mr. Lund and transferred from the mainland in whaling boats to a ship which carried them to Bergen, Norway. They were placed in specially constructed crates which permitted the animals to stand or to lie down in comfort. Grasses and hay taken in the locality of their capture provided suitable food.

On September 6, 1930, the herd of 34 animals, half of them calves, the remainder yearlings and 2-year-olds, was shipped from

Bergen and 10 days later arrived in the port of New York. From there they were removed to Athenia, N. J., where for 33 days, in accordance with Federal regulations, they were held in quarantine. This procedure was necessary to be assured that such diseases as foot-and-mouth disease and rinderpest were not present in the herd. During this interval two experts from the Biological Survey were placed in charge of the animals, and American grown alfalfa hay became their main food. About 5 pounds of hay an animal were daily consumed along with considerable water, the latter probably caused by excessive heat on the Atlantic seaboard and, in addition, to thirst caused by the great environmental change.

At the end of the quarantine period, the animals, still in their individual crates, and well supplied with hay and water, were loaded into steel express cars for their 5-day trip to Seattle. At this point they were again placed aboard a boat for the week's journey to Seward, Alaska; then in freight boxcars, they made the rail trip northward to College, near Fairbanks. They arrived at this destination on November 4, and on the following day, near the campus of our most northerly institution of higher learning, the University of Alaska, were released into a 7,500-acre pasture—part of the Biological Survey's cooperative reindeer experiment station. This was to be their home for the following 6 years—years of care, study, and experiment. All of the musk oxen reached College in splendid condition.

Accidental injuries reduced the herd to 32 animals shortly after it was placed in the pasture. These, however, soon responded to handling and could be driven easier than reindeer when it was desired to corral them. While under observation at this point, it was found that in spring and fall the animals fed chiefly on grasses and sedges, in summer on shrubs, and in winter on cured grasses, sedges, and, to some extent, on lichens. By 1932, the herd was further reduced, 2 of the animals falling victims to bears.

In April 1934, the first of the calves were born, and in May and June additional calving took place. There were nine 5-year-old cows at this time and 7 of them gave birth to calves. Four cows that were 4 years old did not breed. Of the original 34 animals brought to Alaska, 10 had died by 1934, leaving 24 of the original and 5 new calves, a total of 29. Additional calving during the spring of 1935 brought the herd to 32.

It was ascertained up to this time that apparently the musk ox does not breed until 4 years of age, and calves at 5 years. It was also found that the gestation period is 8 months rather than 9 months, as previously believed.

In the summer of 1935 the first of these musk oxen, two adult bulls and two adult cows, were liberated on Nunivak Island in the Bering Sea. Unfortunately, a third cow was killed en route. This island lies approximately 25 miles from the mainland and south of the mouth of the Yukon River. It is about 40 miles wide and 70 miles long, containing nearly a million acres of superb grazing land. Also, the island is completely free of all predators, such as bears and wolves.

In 1936, when checks indicated the 4 animals were doing well, it was determined to liberate the remainder of the herd there. The animals were accordingly rounded up and crated—27 in all. By this time the youngsters trapped in Greenland had matured into real animals, and it was with difficulty that they were captured. They were hauled by trucks and freight cars to Nenana, from which point they were transferred to the engine deck of the S. S. *Nenana* for the long trip down the Yukon River. Arriving at Marshall 4 days later, the animals were reloaded to a covered barge and, towed by motorship, resumed their journey down the Yukon to its mouth, at Kotlik, thence across Pastol Bay in the Bering Sea to St. Michael. Here they were placed on an open barge, the crates, covered with tarpaulins, being lashed with cables to prevent shifting of the load. On July 14 the barge, in tow of a motorship, headed for the open sea and Nunivak Island.

At this time of year northern Alaska may be visited by sudden and severe storms, so there was great anxiety on the part of us directly concerned with the movement and management of the animals. Three men were assigned to the barge, one to look after the barge itself, the others to care for the comfort of the musk oxen. From the words of one of these men, some idea may be had of the hazards involved in this dramatic trip: "In letting out the towline," he related, "it fouled on an object in the bottom of the bay, perhaps an old 1,000-pound anchor, which was dragged out to Stuart Island, a distance of about 15 miles, before being dislodged. Heavy seas were encountered outside of St. Michael Bay, and until we reached the shelter of Stuart Island the going was rough. The weight on the towline pulled down the bow of the barge and prevented it riding over the waves, so it plowed through them. The barge was put to considerable strain these 2 hours. After freeing the towline the barge rode more smoothly."

"When we reached the open sea the barge began to reveal its age. The drift bolts in the bow parted, opening a seam its full width, through which the water poured each time it hit a wave. Other seams began to open, and by 9 a. m., the water stood 3 feet deep in the well of the hold."

Hand pumps were resorted to and the speed of the towing ship was reduced until a stop was made in the lee of Sand Islands. Here the barge was repaired, and on July 16, the journey resumed to Nunivak. By early in the evening of that day, anchor was made on the east side of the island, a few miles south of Cape Etolin.

A number of Eskimos live on Nunivak Island, and with their cooperation the job of unloading the animals was completed on July 17. The weather fortunately held good, which enabled the men to place the barge well inshore. From this position gang planks were placed onto dry land, and down these planks the crated musk oxen, one by one, were shoved. Released from their crates, the animals soon took to their new and permanent home. A reconnaissance of the island proved that the four musk oxen released in 1935 were definitely established. A check of the island in 1939 revealed that the initial stock of 34 animals received at College from Greenland in 1930 had multiplied to more than 60.

Thus Alaska has her musk ox once again, after probably the longest and most hazardous journey in the history of transplanting any mammal for restocking purposes. The total distance these animals traveled was approximately 14,000 miles. But a sudden storm might have wrecked all the fine work that was so vigorously and effectively sponsored by Senator Norbeck and Representative Dickinson 6 years previously—in fact—wrecked the whole venture and caused the loss of human life. But such is the risk many enthusiasts in wildlife conservation are willing to assume.

It is hoped that as the Nunivak herd continues to increase a surplus will be produced. This will permit the restocking of other Alaskan areas containing suitable habitat where this interesting mammal of the bleak Arctic may live and breed and thus perpetuate its kind again over much of its old range in that romantic territory.

We Should Not Break Faith With Our Conscripted Men

EXTENSION OF REMARKS

OF

HON. LE ROY D. DOWNS

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

Mr. DOWNS. Mr. Speaker, I realize that I am serving my first term as a Member of Congress, and I also realize that I have been elected in one of the most critical periods in the history of this Nation to represent 450,000 people. I further realize that these 450,000 people are looking to me for proper representation and leadership.

Carrying out their wishes, I have voted for every act to give aid to Great Britain and her Allies. I hate Hitler, and I sincerely hope that he is defeated. I feel that we should prepare ourselves for any eventuality which may occur during this crisis, but in carrying out this program of all-out aid to Britain and her Allies and our home defenses, we should not break faith with the young men we have conscripted for service in our armed forces.

Congress made a pact with these young men more than a year ago in which it ordered them into service for 1 year. Today we are preparing to tell these young men that Congress did not mean what it said a year ago and now they must serve for an unlimited period. I sponsored an amendment to take them out but it was turned down. I am opposed to adding 18 months.

The only reason that has been given for this attitude is the statement that a great emergency exists. Our distinguished chairman of the House Military Affairs Committee, in a statement given to the public press, said that if the Members of Congress knew what was going on it would raise their hats right off their heads. I say, Mr. Speaker, that the Members of Congress should know what is going on when they are asked to vote on legislation of this type. If this country is in grave danger, we should know. If such a terrible situation exists that America is threatened with being wrung from her foundation of democracy, then we should know. There is not one man among the selectees, National Guard men, and Reservists in the service today who would not willingly continue in the service if he really believed that this continuation would preserve this country.

We, in New England, are not seeking to disrupt the armed forces of this country; New England is noted for its patriots from the day of the American Revolution to the last World War. Our young men are willing to serve for any length of time or to give their very lives if the future of this Nation is at stake. But I say, give us the facts—give us the reasons—which make

it necessary to break faith with these young men, and then we are ready to follow.

I am not convinced that the conditions today are as threatening as a year ago. One of the surest ways to bring about the downfall of a democracy is for that democracy to break faith with its citizens. The Congress of the United States made a pledge to its young men and if that pledge must be broken, then these men should be given the true facts which make it necessary to break that pledge.

An Army composed of disgruntled soldiers with broken morale is of no value.

Gallup Poll Shows Overwhelming Majority of Public Favor Adequate Federal Old-Age Pensions

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

SECOND RELEASE OF GALLUP POLL

Mr. ANGELL. Mr. Speaker, on August 8 I included in my extension some remarks on the first release recently made by the American Institute of Public Opinion, known as the Gallup poll, of the results of the poll made by the institute on old-age pensions. As pointed out in my remarks, the great majority of the American public, including those in the younger groups, favor Federal old-age pensions universal in their application, beginning at the age of 60 and providing a pension sufficient for proper care of this group of our citizens who, under existing conditions of mass production and centralization, are unable to secure remunerative employment after obtaining the age of 60.

I now include as part of these remarks the second release of the Gallup poll on this very important subject. The release is as follows:

THE GALLUP POLL—MAJORITY OF PUBLIC FAVOR OLD-AGE PENSIONS FOR NEEDIEST CASES ONLY, SURVEY FINDS

(By Dr. George Gallup, director, American Institute of Public Opinion)

PRINCETON, N. J., August 8.—One of the fundamental ideas of the Townsend plan is that old-age pensions should be paid to all citizens past 60 who will agree to quit work, if they have any, and not merely to the neediest old people.

Washington observers would not be surprised if some such proposal emerged eventually from Senator DOWNEY'S Senate committee investigating the pension issue. The California Senator is known as Dr. Townsend's principal spokesman in Congress.

Where does public opinion stand today on the question of universal pensions?

With Congress preparing to tussle with the old-age pension question again shortly, Nation-wide studies by the American Institute of Public Opinion indicate the average American still believes pensions should be limited to those demonstrably in greatest need.

REALITY VERSUS IDEAL

But the survey shows that much of the average man's thinking about pensions reflects a mental struggle between the ideal and present reality. Thus, while the majority feel pensions should now be paid only to persons in greatest need, an equally large majority say they would be willing to lay aside a substantial percentage of their income over the coming years to make pensions, in effect, universal.

This, of course, is the long-time object of the Social Security Act, which calls for a rising scale of employee-employer contributions until 1949, when the worker and his boss will each be required to lay aside 3 cents for every dollar of the employee's wages under $3,000 a year.

How willingly the rank and file would make this 3-percent contribution toward future pensions is indicated in the following question:

"Would you be willing to pay 3 cents out of every dollar of your income until you are 60 in order to get a pension from the Government of $50 a month after you are 60?"

The institute put the question to men and women now under 60 years of age in all parts of the United States.

Their answers were:

	Percent
Would be willing	76
Would not be willing	18
Undecided	6

TOWNSEND PLAN

The survey shows that considerable misinformation still exists regarding the Townsend plan, possibly because of tactical changes in recent years regarding the plan's objectives. Thus the survey found that whereas nearly 9 persons in every 10 had heard of the Townsend plan, the average man with any notion of the sum at all thought it proposed pensions of $200 a month—as once stressed by some proponents of the plan.

Actually, Dr. Townsend proposes a tax which he believes would provide pensions of $50 a month "at the outset" with the hope of larger amounts later.

Voters were asked: "Do you know how much per month each person is supposed to receive under the Townsend plan that is now being proposed to Congress?" In reply, 5 percent said the plan was supposed to provide $50 a month or less, 7 percent named a figure between $75 and $200, and 15 percent mentioned $200. The great majority (73 percent) either had no impression about the figure or had not yet heard of the plan itself.

The Lights of Old

EXTENSION OF REMARKS

OF

HON. EMMET O'NEAL

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

POEM BY M. H. THATCHER

Mr. O'NEAL. Mr. Speaker, the Honorable M. H. Thatcher is a distinguished citizen of Louisville, Ky., and Washington, D. C. Among many high positions occupied by him was that of Congressman from the district which I now represent. As a friend and admirer I was surprised and delighted to read some of his poetry. I am sure that many will be pleased to have it printed in the CONGRESSIONAL RECORD.

THE LIGHTS OF OLD

(Hymn Penitential)

(By M. H. Thatcher)

Unveil, O Lord, the Lights of Old,—
  Those which the Fathers knew,
When they designed and built the Ship,
  And formed the Vessel's crew!
The night is dark, and we are lost
  Upon a stormy sea:
O grant us, Lord, the Lights of Old,
  To lead us back to Thee!

We seek to win, with sweatless brows,
  The meeds of thrift and toil;
The sacred altars we profane,
  And strip them from the soil.
Mad cults prevail, and Reverence
  Before us, bleeding lies;
Confusion reigns; while, in our midst,
  The Towers of Babel rise.

The wage of sin, indeed, is death,—
  A truth we have forgot;
As we have sown we must needs reap,—
  Yet would escape our lot.
Thy ways, O Lord, we have ignored,
  The Word we have denied;
The things of sense we have enthroned,
  The spirit crucified.

Neglect hath wrought the Ancient Curse:
  Gone is our hope and trust;
We live the life of Babylon,
  And revel in the dust.
Sackcloth and ashes must we bear,
  The bitter chalice drain,
Ere we may pass from death to life,
  And know Thee, Lord, again.

Serve Thou, O God, the Nation's need;
  The Healing Leaves restore;
Give us the courage, vision, strength,
  That blest the days of yore!
The Heritage we must preserve,—
  Whate'er the cost may be;
Vouchsafe, O Lord, the Lights of Old,
  To make us one with Thee!

Minnesota Newspapers in Discussing St. Lawrence Project Exhort Us "To Look Before We Leap"

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

EDITORIALS FROM VARIOUS NEWSPAPERS

Mr. VAN ZANDT. Mr. Speaker, volumes have been written employing millions of printed words in a desperate effort by the advocates of the St. Lawrence project to justify its construction as a necessary adjunct to our national defense.

Gayly lithographed pamphlets with Old Glory emblazoned on their red-white-and-blue-bordered covers are being utilized in an attempt to give the St. Lawrence project a patriotic tinge of deepest hue.

In view of the oft-repeated utterances from the lips of proponents of the St.

Lawrence project that the great Middle West wholeheartedly endorses the construction of this proposed international ditch, it is significant to note from the following editorials appearing in Minnesota newspapers that the people of that great State are not as gullible as the rest of the American public is being asked to believe. As a matter of fact, they are leery of the methods being used by the advocates of the St. Lawrence project in selling a Presidential pet to the American people in a foil wrapper with the imprint "national defense"; nor are they content to have the rest of the world believe that the citizens of the great Middle West can hardly wait until the economic monstrosity known as the St. Lawrence project is permitted to shower mankind with its so-called manifold yet doubtful blessings.

The editorials referred to are as follows:

[From the Fairfax (Minn.) Standard of April 3, 1941]

TO LOOK BEFORE WE LEAP

In Ottawa recently Canada signed a pact agreeing to the St. Lawrence waterway. Such a project, furnishing a direct route to the sea from the head of the Great Lakes to both Canada and the United States, would be of great benefit, of course, but would the huge outlay of money, the 5 years' time required to complete it, justify the United States to begin it now, when threats of war hang heavy, when strikes and shortage of manpower would make it still costlier, take still longer to complete?

It is more than a hundred years since the first United States surveys were made for a ship canal to connect the Great Lakes with the Atlantic; 45 years since the first International Waterways Commission was set up; 20 years since the International Joint Commission made its report.

In 1934 the United States Senate rejected the treaty which would have created the seaway. The President is entirely for it, and, possibly the Senate would again obey his crack of the whip—but is that seaway, deemed unwise in 1934, when the world was at peace, when conditions seemed on the way to improvement, any more to be desired today, with conditions as they are?

True, power plants would develop millions of horsepower, seagoing vessels could reach the far inland harbors for 6 or 7 months of the year, and large shipbuilding industries could be developed on the shores of the Great Lakes, close to the natural resources and steel mills.

On the other side of the picture is the cost which would be more than five millions, and possibly very much more—under present conditions. It could not be completed before 1945, and would require huge amounts of material, many thousands of men now needed for defense projects.

It requires, and should certainly receive most careful consideration, most thoughtful study, before our country would undertake this project at this time.

[From the International Falls (Minn.) Journal of April 9, 1941]

POWER FOR DEFENSE

Proposed construction of the immensely costly St. Lawrence power project is again in the headlines. It is now being promoted in the name of national defense. But the inescapable fact is that the St. Lawrence development cannot possibly be put into operation in less than 5 years. The most pessimistic believe the war will end before then.

So, in pushing our own defense program, we must look elsewhere for the power to motivate our machines and to keep our factories pouring out goods in an ever-increasing stream. We must look to the privately owned, publicly regulated electric-utility industry.

This industry now produces 90 percent of all the power used in this country. In the great industrial areas, where the bulk of defense orders must be filled, it provides close to 100 percent of the power used. No industry is doing more to make certain that future demand, no matter how great, will be efficiently and economically met—and at no cost to the taxpayers.

What this country needs is power now—not power which cannot be supplied for 5 or 6 years. And "plenty of power now" is the utility industry's motto. Without argument or debate, it is quietly caring for the greatest industrial production drive this or any other country has ever known.

[From the Marshall (Minn.) Messenger of March 24, 1941]

THE SEAWAY PROJECT

After years of waxing and waning enthusiasm, interest is again blowing hot upon the Great Lakes-St. Lawrence River seaway, a treaty permitting development of the project having been signed last week between the United States and Canada.

As is natural, this section of the country is interested in seeing the project to open the Northwest to ocean shipping go through, while the East isn't so sure but what it would be damaging to its own sea commerce.

Chief argument at the moment for the project—an argument probably foremost in the mind of the administration—is that the hydroelectric power that would be forthcoming from such development will be of use in Canadian and American armament efforts.

Furthermore, it would open the Great Lakes area—a region relatively secure from military attack—as a new and important shipbuilding center, one close to the sources of the raw materials that go into that industry.

Too, the advantages of shipping directly from inland harbors, bordering great productive areas of the Nation, are cited.

But there is—as there always is—another side to the matter.

Opponents of the project declare that the seaway as now planned will not be deep enough to accommodate the larger ships, that thus there will be relatively little gain.

It is pointed out that, while the hydroelectric power that would be provided is desirable, facilities to produce it will not be ready until 1945, a fact which is substantiated by the administration. By that time, say opponents, the need for greater power supplies will have passed, assuming, of course, the war will be nearing its end by then.

Likewise, declare opponents, the tremendous cost and the huge quantities of materials required, as well as the great demand for workmen, would deprive the more urgently needed defense industries of resources.

Thus, while there is no doubt but what the Northwest would benefit from the seaway, there is the question of greatest national good.

The seaway should pass that pre-examination before the "go" signal is given. It is hoped, of course, the verdict is that the project will be of benefit to the Nation as a whole.

E. L. B.

[From the International Falls (Minn.) Press of April 10, 1941]

POWER FOR DEFENSE

Proposed construction of the immensely costly St. Lawrence power project is again in the headlines. It is now being promoted in the name of national defense. But the inescapable fact is that the St. Lawrence development cannot possibly be put into operation in less than 5 years. The most pessimistic believe the war will end before then.

So, in pushing our own defense program, we must look elsewhere for the power to motivate our machines and to keep our factories pouring out goods in an ever-increasing stream. We must look to the privately owned publicly regulated electric-utility industry.

This industry now produces 90 percent of all the power used in this country. In the great industrial areas, where the bulk of defense orders, must be filled, it provides close to 100 percent of the power use. No industry is doing more to make certain that future demand, no matter how great, will be efficiently and economically met—and at no cost to the taxpayers.

What this country needs is power now—not power which cannot be supplied for 5 or 6 years. And plenty of power now is the utility industry's motto. Without argument or debate, it is quietly caring for the greatest industrial production drive this or any other country has ever known.

[From the Eveleth (Minn.) Clarion of April 3, 1941]

There's nothing like looking ahead. Editor Rossman of Two Harbors takes the position that everyone in northeastern Minnesota believes in the construction of the St. Lawrence waterway, but he thinks it should not be done right now. This great undertaking should be reserved for the period immediately following the war, he thinks, so that it will help take up the slack which is sure to come when peacetime arrives. All work of such nature which is not essential to immediate programs of defense should be laid over until that time when we shall not be hurrying to make cannons and planes.

[From the Stillwater (Minn.) Post of April 3, 1941]

IN AGREEMENT

In glancing through the Grand Rapids Review last week we observed an editorial pertaining to the much-discussed St. Lawrence waterway project. Despite the war threat the famed project is still pondered, and legislation is still being talked to hurry its start. We're inclined to agree with the writer of the following:

Everyone in northeastern Minnesota believes in the construction of the St. Lawrence waterway.

Where there is an opportunity to greatly improve transportation facilities, progress should be made. Improvements in transportation may adversely affect some interests and some localities. But that should not rule. Industry and business should group itself around transportation. Without such things there is little hope for the general development of the State.

On the other hand, we cannot agree that the St. Lawrence waterway should be built immediately. In fact, that would be shortsighted policy. This great undertaking should be reserved for the period immediately following the war. It should not be started now to add to employment and activities which would otherwise be large. It should be kept to take up the slack which is sure to come when peace arrives.

All work of such nature that is not essential to immediate programs of defense should be laid over until that time when we shall not be hurrying to make cannons and planes.

[From the East Minneapolis (Minn.) Argus of April 4, 1941]

Do you recall all the hubbub when that Great Lakes-St. Lawrence waterway treaty was turned down by the Senate in 1934? There was much acrid language thrown about and considerable high blood pressure generated. And now the State Department quietly signs an agreement with Canada, and

we suppose the quarter-billion-dollar deal will be consummated without much further ado. While we are delighted to see this go through, we can't help being impressed with the ease with which Washington now does things without giving a hoot what you or I think about it.

Extension of the Selective Training and Service Act

EXTENSION OF REMARKS

OF

HON. CARL T. DURHAM

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

Mr. DURHAM. Mr. Speaker, we have for past weeks listened to the reasons for and the reasons against continuing selectees, National Guard men, and reservists in training for a longer period. I have at all times in my life tried to analyze the opposition that one faces, the fact being inevitable that one eventually has to face opposition, and then in a very definite way plan to meet this opposition on at least even terms but preferably better terms.

Whether we admit it or not—and I do—the American style of living is today facing serious trouble. The American youth of today, if he thinks of these things in his private moments, must boil over as it is bound to create a rage in his breast.

Masters of propaganda have destroyed nation after nation in Europe by keeping the citizens split up. We are competing today with an ideology for which no real American can have any sentiment, and this ideology is backed up by a scientific war. Scientific war, in my opinion, will govern all future conflicts. It is the duty and job of our citizens to make the most effective use of military weapons and training. To do this in one-tenth the time of any other nation is not sound reasoning. Rapid development in the past few years has established this as a fact.

Today we have listened to the arguments that we are not as much endangered as we were a year go and therefore, no greater peril exists. I wish I could feel that this European war was just another European war and not deliberately steered at our American style. This war is being waged today in every conceivable way in each part of the world where Axis Powers have control and have sympathizers. With the Vichy government yielding day by day to demands for more bases no one can deny that the very lifeline of commerce in the Far East is in much worse situation than a year ago.

Our greatest American joy has been our growth. To continue this we must not weaken at any point, and by this method we will be able to steer this revolution from America. This is what the American youth is called upon to do, and it should be the common goal of every real American to keep this war as far from America as we can. This calls for sacrifices, for how long I do not know, but this I am sure of—the American morale will continue to spread. The larger, the more efficient force we train, the stronger democracy will stand. This is our first duty. The advantages of personal freedom carry great obligations, and unnecessary doubts undermine devotion to duty. I believe that our American soldiers will shoulder this further responsibility with unswerving determination to protect and preserve the American ideals.

Prohibiting Importation of Animals and Their Products From Countries Infested With Hoof-and-Mouth and Other Diseases

EXTENSION OF REMARKS

OF

HON. AUGUST H. ANDRESEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

Mr. AUGUST H. ANDRESEN. Mr. Speaker, at this time I desire to call the attention of Congress to an important bill, known as H. R. 5531, which I introduced on August 8. This legislation provides a definite prohibition against the importation into the United States of beef cattle, dairy cattle, sheep, goats, swine, and poultry—and their products—when such animals are infected with hoof-and-mouth and other contagious or infectious diseases.

The passage of this legislation is imperative. American producers of livestock are now being threatened with a removal of the sanitary restrictions which prohibit such importations. If this is accomplished, domestic producers of beef and dairy cattle will face disaster from the ravages of destructive diseases to their herds.

Strict and watchful enforcement of sanitary laws, by State and Federal Governments, has given to our country herds of cattle comparatively free from infectious disease. We cannot afford to take any chances on importations from infested countries. Surely, foreign producers, who desire to sell their products in the American market, should be compelled to meet the same sanitary requirements now rigidly enforced against domestic producers.

Mr. Speaker, on the 24th day of July, I predicted that through the Machiavellian manipulations of our astute State Department our country would shortly be again subjected to the threat of an epidemic of rinderpest and foot-and-mouth disease. I referred to the plans which are being matured as between the State Department and the Argentine Government to remove the quarantine on the shipment into this country of fresh, frozen, and chilled lamb and mutton from the province of Tierra del Fuego. That territory, as you know, forms the southernmost point of South America. About one half of the island is under the control of Argentina—the other half by Chile. It is separated from the mainland by the narrow Magellan Straits, a body of water very easy to cross with flocks of livestock and sheep from the disease-infested mainland of Argentina into Tierra del Fuego where they can be slaughtered and shipped to this country.

I am confidently expecting this removal of quarantine to occur in the forthcoming trade agreement with Argentina at which time we may also expect the duty on canned beef, casein, cheeses, flax, and other farm products to be cut the full limit of 50 percent. Of course, the quarantine removal might be effected by a simpler method, such as a partial lifting of the quarantine which has been laid down against Argentina because of the known prevalence in that country of rinderpest and foot-and-mouth disease. But this type of action seems hardly likely, since we know that the Secretary of Agriculture in response to a request from the Secretary of State for an opinion by his solicitor upon this question, passed the buck back to the Secretary of State with the suggestion that the responsibility be thrown upon the retiring Attorney General who now adorns our Supreme Court.

This admirable reluctance of Secretary Wickard, based upon some knowledge, is not shared by the estimable, enthusiastic, and idealistic Mr. Hull, who, in haste to hold the South American countries close to his bosom, either willingly or unwittingly, lets himself be outtraded by them, both in matters of tariff and of sanitary restrictions.

During the past 23 years the Federal Government, the several States, and the producers of livestock, including dairy cattle, have collectively spent over $470,000,000 to eradicate tuberculosis and Bang's disease and keep under control the incidences of those two diseases.

As early as 1884 the Federal Government began taking steps to protect the internal spread of contagious animal diseases and also in later years has taken some precautions to control entry of infected animals and disease-carrying animal products. These steps augmented by the expenditure of vast sums of money have almost entirely freed our country from bovine tuberculosis and achieved great progress in eradicating and controlling Bang's disease and other infectious or contagious diseases of animals.

During this period we have had several outbreaks of foot-and-mouth disease, one of which cost the livestock producers of the United States more than $100,000,000. All of these outbreaks have been traced to foreign sources. As a result of the known foot-and-mouth disease prevalent in them, the Secretary of Agriculture, acting under the permissive authority of section 306 (a) of the Tariff Act of 1930, has established quarantines against practically all of the major cattle and sheep producing countries of the world except the North American Continent and Australia. These quarantines have also included rinderpest, a distemper type of disease which fortunately has not yet been introduced in the United States. The proposed lifting of restrictions by our State Department authorities, who

are more familiar with the blends of tea than the problems of cattle, lays open this country to vast trouble and great losses.

In analyzing the authority given to the Secretary of Agriculture and the President under the progressive types of legislation now on our statutes, I find that it continually has been only of a permissive character. Even with respect to keeping abreast of the spread of diseases and the development of foreign methods of controlling it, the authority is permissive. Also, I am convinced that as long as the major power to establish protective measures against the importation of disease-carrying animals and their products (aside from the protective power afforded by the Lenroot-Taber bill controlling in some degree the importation of fresh milk and cream) lies in the Tariff Act, this power will be jeopardized continually by the activities of those in high authority who appear to be more anxious to protect the economic well-being of the residents of foreign countries than that of our own citizens.

Accordingly, Mr. Speaker, I have today introduced a bill (H. R. 5531) intended to afford real protection to America's producers of beef cattle, dairy cattle, sheep, goats, swine, and poultry. This bill is intended to constitute permanent, continuing legislation superseding weaker laws and to offset the sapping activities of the State Department. In it I provide for the prohibition of the importation of all animals having infections or contagious diseases, all meat products from animals which at the time of slaughter had rinderpest and foot and mouth disease, all unpasteurized milk and cream drawn from diseased animals, all edible products of unpasteurized milk drawn from animals having tuberculosis, and all dairy products from areas of foreign countries wherein methods of eradication and control are not rated by the United States authorities to be equal to the United States methods.

In the drafting of this legislation I have not been unmindful of the fact that prior to the introduction of my bill previous legislation has been forestalled and thwarted by the State Department by such means as the insertion of so-called sanitary provisos in most of the trade agreements entered into between the United States and several foreign countries.

These sanitary provisos have taken the form of a tacit promise on our part that before applying any new measure of a sanitary character, whenever practicable, we will consult with the other contracting government with a view to insuring that there will be as little injury to the volume of commerce of either country as may be consistent with the purpose of any proposed sanitary measure. Again, most of the agreements contain the further proviso that when either contracting government makes representations respecting the application of any sanitary law or regulation for the protection of human, animal, or plant life and there is disagreement concerning it, the matter will be referred to a committee of technical experts for recommendations, and I wish to add, presumably before any such law or regulation may be made effective.

In other words, our Government agrees to make itself subservient to the views and wishes of foreign countries, as determined by their own self interests, before taking any step to protect the health of our citizens. The Congress, which is obligated to legislate for the public health and welfare is, in effect, supplanted by an array of co-international experts. This presents an excellent device for delaying effective action to protect ourselves by sanitary embargoes and quarantines and makes possible the inroad of infectious and contagious animal diseases to a point where the damage can be measured only in terms of further hundreds of millions of dollars of appropriations by Congress and the States to eradicate such diseases.

Having this in mind I have provided in the bill a regular and legal method whereby the contractual obligations of these sanitary provisos may be terminated, thus once more freeing this country to do what it may please in protecting the heatlh and welfare of its citizens.

I am confident that my bill is of inestimable value to the livestock and the dairy industry of this Nation and that it will receive a widespread support from the people and a strong nonpartisan support in this Congress.

Extension of Military Service

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

TELEGRAMS FROM COMMANDERS OF THE MASSACHUSETTS AMERICAN LEGION AND VETERANS OF FOREIGN WARS

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegrams:

BOSTON, MASS., *August 12, 1941.*

Congresswoman EDITH NOURSE ROGERS,
House Office Building, Washington, D. C.:

General Marshall's advice and warning should be heeded. Urge your vote for extension of military service. Its defeat would constitute a national menace. The Army should be maintained at maximum efficiency during the national emergency.

CHESTER GRANT,
Commander, Massachusetts Division, American Legion.

BOSTON, MASS., *August 10, 1941.*

EDITH NOURSE ROGERS,
Member of Congress, Washington, D. C.:

In accordance with resolution adopted at recent department encampment urge adoption of Senate bill extending service of selectees and National Guard.

JOSEPH PETERSON,
Department Commander of Massachusetts Veterans of Foreign Wars of the United States.

Draft Bill Democracy's Test

EXTENSION OF REMARKS

OF

HON. JAMES P. McGRANERY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

EDITORIAL FROM THE PHILADELPHIA ENQUIRER

Mr. McGRANERY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Philadelphia Enquirer for today:

[From the Philadelphia Inquirer of August 12, 1941]

DRAFT BILL DEMOCRACY'S TEST

After weeks of debate, of argument, discussion, and maneuver, the draft-extension question, on the eve of conclusive action in the House of Representatives, is still precisely what the Inquirer said it was when it first became an issue. It is a crucial test of the ability of our American democracy to decide with firmness and intelligence what we as a people must do for the sure defense of the land we love, for its way of life and its high and unmatched liberties.

The final approach to the subject must be not emotional but realistic. The decision will be registered by the few hundred men of the Congress of the United States. But supporting them there must be the wisdom and courage of 130,000,000 Americans.

In this and in no other light will their action be judged in the totalitarian chancelleries of Europe; in the war-fevered offices of the Japanese Government at Tokyo; among the disillusioned, bitter-minded men of Vichy.

The cagey statesmen of Latin-American countries who, belatedly but with commendable discretion, have given evidence of a growing realization that their salvation lies in joining us to present a firm front to the forces of aggression, will settle anew in their minds the question whether the American people are infirm of purpose, or are strong and united and determined in the face of danger.

As a people we dare not dispose of this vital question sentimentally, with passion, or with the least regard to partisan politics. Any attempt to build it up into a partisan issue would be despicable.

No one can fail to feel the utmost sympathy for the families of men in the service, or to understand the manifold personal problems involved in our efforts to create a large Army. It is essential that where such problems as those of dependency or partial dependency appear among the men in the camps, early and adequate steps be taken to dispose of them.

It is sheer human nature, and all of us can understand it, for men in the camps, whether harassed by such problems or not, to wish it were all over. It is natural that at the end of their year they should want to go home. Military life, now more than ever, is tough going. But can the American people ever again submit millions of young men to the certainty of enormous and terrible losses by creating armies half taught, barely fit, and totally unready?

There has been passionate declamation that the draft extension is "heading straight for war." We must ask ourselves whether any other course would not be heading straight for disaster. We do not have to be experts

to appreciate the force of what our military leaders say.

Inception of a 12-month training period under the Selective Service Act was a mistake. It has been possible in that time neither to train men adequately nor to provide for a sufficiently powerful fighting force in their place if they are sent home.

There is grave question whether that and other limitations upon our military training program have not been gleefully interpreted by the ruthless masters of aggression as just the sort of weak and ineffective gestures they hoped for. There is an equally grave question, now, whether the proposed 18-month compromise or any other hard and fast prescription will not be laid to half-heartedness and indecision on the part of the American people as a whole.

This is no time for national irresolution. Only those who refuse to see world conditions as they are can fail to acknowledge that the dangers which impelled us to plunge into a vast program of defense a year ago and to start creating a modern Army to make that defense certain, are now multiplied many times.

Theories that we can depend upon this, or that, or the other event to remove the urgent necessity of building up our own defenses fade away in the light of grim realities. The fond hope that Russia can hold or even destroy the Nazi march of conquest is based largely upon wishful thinking. Can we afford to risk our future on so dubious a gamble?

The menacing scourges of humanity who made this war are out to win it at all costs. If they don't they face certain retribution at the hands of their exploited followers. But if they are victorious, it is folly to think they would refrain from attacking a rich, hesitating Western World.

The American people want to live in peace and security. Above all else they do not want war, now or in the future. It is impossible to believe that they would approve action which would weaken our defenses before the sneering eyes of Hitler and the international bandits under his banner.

Passage without delay of a soundly built draft-extension measure will be a ringing assurance to the whole world that the American people know what they have to do and will do it.

Extension of the Selective Training and Service Act

EXTENSION OF REMARKS

OF

HON. JOHN W. FLANNAGAN, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

Mr. FLANNAGAN. Mr. Speaker, let us look the issue right in the face and view it in a common-sense way. We are confronted with a great emergency—probably the greatest emergency we have ever faced—and we are right in the midst of preparing against that emergency. We have appropriated billions of dollars, part of which is to be used in building our armament to the point where American will be so formidable that she can withstand any force directed against her, and the balance of which is to be used in training our young men in the use of that armament. The building and training go hand in hand. It would be foolish to train our young men without providing the armament for them to use and it would likewise be foolish to provide armament without training our men in the use of it. America is weak and helpless with trained men but no armament, and she is likewise weak and helpless with ample armament but no trained men. To make America strong, we need both. The trained men are as important as the armament, because, you know, with all our progress we have, as yet, been unable to find a substitute for training and experience.

Now, we all seem to be united on the armament program. What I cannot understand is why there should be a division on the training program. Are there among us those who are so foolish as to vote for armament, and then vote to withhold the experienced manpower to operate the armament? Such voting simply does not make sense to me.

Another thing I cannot get through my head is this: How can the Members who vote against this bill justify their vote to spend billions for armament? If the national interest is not in peril, then I would like for them to tell me why they voted billions for armament. If the national interest is in peril, then I would like for them to tell me why we do not need trained men to man the armament.

In this emergency, as I see our duty, there is but one thing for us to do: Find out what is necessary to preserve the safety and security of America, and then, whatever the answer, execute that answer like true Americans.

We hear a lot about compromising. Compromise what? Would you compromise the safety and security of our country? I am against a compromise. I am in favor of doing the things that those in authority, and who should know what is necessary for our protection, advise. My colleagues, there are some things above and beyond the realm of compromise. No true man would compromise his honor; no true woman would compromise her virtue; and no true American would compromise the safety and security of his country.

And then they tell us if we extend the length of service we will be breaking faith with our boys. I deny it. The original provision in Draft Act of September 16, 1940, reads:

> Each man inducted under the provisions of subsection (a) shall serve for a training and service period of 12 consecutive months, unless sooner discharged, except that whenever the Congress has declared that the national interest is imperiled, such 12-month period may be extended by the President to such time as may be necessary in the interests of national defense.

I know not what others did, but I do know that I made no promises in conflict with the plain provisions of the act. Had I made such promises, call my vote what you may—breaking faith or any other ignominious name—I would still vote to extend the service period, because I am convinced the national interest is imperiled, and if the test ever comes to me between breaking faith with my fellow man and keeping faith with my country, then you can record me as having voted to keep faith with the country I love.

The Damnable Proposal of "Union Now" Means Renunciation of the Declaration of Independence

EXTENSION OF REMARKS

OF

HON. GEORGE HOLDEN TINKHAM

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

STATEMENT OF AMERICA FIRST COMMITTEE

Mr. TINKHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by the America First Committee:

(Prepared by America First Committee Research Bureau, Washington, D. C., August 6, 1941)

DID YOU KNOW THAT UNION NOW MEANS RENUNCIATION OF THE DECLARATION OF INDEPENDENCE, AND IMMEDIATE SHOOTING PARTICIPATION BY THE UNITED STATES IN THE WAR?

UNION NOW?—THE CLAIM

"There is at least a possibility that we are right in believing that we can neither maintain the essentials of our constitutional system, even here at home, nor win the war without establishing a provisional Federal union with the British." (Clarence K. Streit, president, to Convention of Federal Union, Inc., on June 28, 1941, reported in Federal Union, July-August 1941, p. 2.)

"From the war in which accounts between Britain and America are now getting somewhat mixed, the step forward to a common army, navy, and air force—and taxation to pay for them—is not far distant. * * * We in Great Britain have all to gain from a union, and the invitation must come from America." (Col Josiah Wedgwood, Member of the British Parliament, in the course of an American lecture tour, Washington Times-Herald, July 9, 1941.)

THE ANSWER

"We, therefore, the Representatives of the United States of America, in general Congress assembled, do, solemnly publish and declare, that these United Colonies are, and of right ought to be free and independent States; that they are absolved from all allegiance to the British Crown, and that all political connection between them and the State of Great Britain, is, and ought to be totally dissolved; * * * And for the support of this Declaration, with a firm reliance on the protection of Divine Providence, we mutually pledge to each other our lives, our fortunes, and our sacred Honor." (The Declaration of Independence.)

AS OTHERS SEE US

The American people have expressed their desire to aid Britain by "steps short of war." Attempts are now under way to undermine that policy and to drag the United States into the present war by the devious method of urging alliance with Britain. Symptomatic of these attempts have been the recent statements of British leaders. As public officials, of one country, they could not, of course, openly and expressly urge

another country to declare war or to form an immediate alliance which necessarily involved participation in war. But their public statements have gone as far as was possible. Thus, Lord Halifax, British Ambassador to the United States, urged recently an Anglo-American alliance after the war for the purpose of establishing a new world order, to which other nations (including the Latin-American countries) would be permitted to adhere. (Christian Science Monitor, June 20, 1941.) Prime Minister Winston Churchill has called for Anglo-American unity of aims, and has proclaimed that "united we can save and guide the world." (Washington Post, June 17, 1941.) Australian Minister Richard G. Casey announced in one address that neither the United States nor the British Commonwealth could alone solve post-war problems, and asked for recognition of the "fact" that "we are essential to each other in peace—as essential to each other as one blade of a pair of scissors is to the other." (New York Times, June 14, 1941.) In another address, which the press reported as stopping "just short of advocating immediate union of English-speaking peoples * * *" he proclaimed that preservation of the world was in the combined hands of the United States and the British family of nations. (Baltimore Sun, July 5, 1941.) Dr. R. C. Wallace, principal of Queen's University, in Canada, looked forward to a permanent partnership of the United States and Canada as an outcome of the war, for the ultimate purpose of cementing a permanent Anglo-American alliance. (New York Times, June 24, 1941.) The most forthright of British propagandists to visit the United States, Col. Josiah Wedgwood, called for immediate union and American participation in the war in such tactless terms (New York Times, June 3, 1941; Washington Times-Herald, July 9, 16, 1941) that his visit here was soon terminated by the embarrassed British Government.

LEAD KINDLY STREIT

The most important organizational expression of the elements which desire an Anglo-American alliance is Federal Union, Inc., organized in 1939 to promote the plan conceived by Clarence K. Streit, and commonly known as Union Now. According to the annual report of Dr. Emery W. Balduf, executive director of Federal Union, Inc., this organization now has 93 chapters in as many American cities, and 126 separate organizing groups. During the past year and a half they have produced and distributed more than 1,500,000 pieces of literature (Federal Union-World, July-August 1941).

In addition to numerous sporadic broadcasts (including the American Forum of the Air on Sunday, August 3, 1941) Federal Union has recorded a series of some 15 radio talks to be rebroadcast over local stations throughout the country. Extensive publicity in contemporary periodicals presents the message of immediate union with Britain to an audience of several million people. Durng the month of July this propaganda was featured in Readers' Digest, Liberty, and Look. The September issue of Screen Life is presenting a story on the Federal Union plan as explained by those heroes and heroines of Hollywood suddenly turned foreign-affairs experts, who are Union Now devotees. The Book of the Month Club has announced that as their book dividend for September and October they will give away copies of both Clarence Streit's original Union Now and his more recent Union Now with Britain, to from 150,000 to 200,000 of their members. The executive director of Federal Union, Inc., boasts further that from March to May of this year his committee obtained 31,686 inches of free newspaper publicity. (E. W. Balduf, Federal Union Convention Report, Cleveland, June 29, 1941.)

ENTANGLING ALLIANCE

Just what would happen if the United States were to adopt the plan for "union now"? According to the literature issued by Federal Union, Inc., and the answers that literature gives to questions about the nature of the plan, these would be the results:

1. Immediate shooting participation by the United States in the present war. According to advocates of the plan, "we are already involved, through our guaranties to Canada and Latin America, our aid to Britain, our defense preparations, and the conscripting of an army."

2. An American A. E. F. would have to fight to defend every or any part of the British Empire, for Federal Union, Inc., points out that, for example, "American boys (would) have to go to war if Japan attacked Australia."

3. We would be compelled to stay in that war so long as Britain and her dominions desired to keep fighting, and Britain and her dominions could not make peace if we objected. "Union Now" literature points out that "under the Federal Union arrangement, one country in the union could no more make a separate peace than the State of New York could make one for the United States of America," and that the British Government could not make a separate peace or surrender its fleet.

4. There would be a common military machine, composed of the combined armed forces of Britain and the United States.

5. There would be a common citizenship, giving British subjects a voice in effect in American affairs and Americans a voice in the affairs of the British Empire. One of the first and most significant obligations of this new citizenship would be common taxation—on both Americans and British—to pay not only for the cost of the war (which is estimated to be costing Britain now $53,000,000 a day) and for the cost of this combined military machine but also for the cost of post-war reconstruction of the British Empire. Citizens under this plan would owe allegiance not to their respective nations but to a supergovernment which Clarence K. Streit calls "World federation for peace and democracy."

6. A common war cabinet, in which President Roosevelt and Prime Minister Churchill could get together for consultation and decision, would be an important initial feature of this supergovernment. Lease-Lend Administrator Harry Hopkins has already set in on a meeting of the British War Cabinet (New York Times, July 18, 1941), and the rumors, as yet not authoritatively denied, of a meeting now in progress between the two Chiefs of State may be carrying on the trend toward such a supergovernment. (New York Times, August 6, 1941.)

7. The fate and welfare of the millions of people in the colonies and possessions of the British Empire would become in part our responsibility, for "Union Now" would make them part of the territorial possessions of the new supergovernment, without the right to participate in that government. Added to our own problems would then be responsibility for the fate of the 60,000,000 people in British Africa, the 367,086,000 people in British Asia, the 3,249,000 people in British Europe (outside the United Kingdom), the 13,259,000 people in British possessions in the Western Hemisphere, and the 10,516,000 people in Australasia (The Statesman's Yearbook, 1940).

TWENTY-SEVEN TO TWENTY-THREE

The advantages to an embattled Britain of such a union are obvious. The advantages to the United States are less evident, and supporters of Union Now find it necessary to speak in generalities and platitudes in order to sell their plan on this side of the Atlantic. One new feature of Clarence Streit's plan, as revised in his second book, Union Now With Great Britain, is designed to appeal to those Americans who cherish visions of imperialistic grandeur a la Henry Luce. For example, in his column of March 22, 1941 (New York Herald Tribune, March 23), Mark Sullivan wrote:

"While Britain is unable, alone, and the United States is unwilling, the two together could readily dominate the world. Britain could continue to be the greatest mercantile sea-going nation. As to naval power, Britain and the United States in union could have dominance beyond any dream of challenge."

Mr. Streit's latest sugar-coating of Federal Union, to increase its palatability for Americans, would provide for American domination of the union by granting to the United States 27 votes in the world congress as against a total of 23 for the combined British democracies—United Kingdom, 11; Canada, 3; Australia, 3; and 2 votes each for Union of South Africa, New Zealand, and Eire. Mr. Streit does not say whether this suggestion has the approval of Mr. Churchill and his government. H. N. Brailsford, well-known British journalist, on July 20, 1941, stated that British governmental circles do not look with favor upon this plan. (Baltimore Sun.)

SUGAR-COATING

Glossing over their immediate demand to abrogate the sovereign independence of the United States, Mr. Streit and his fellow unionists hasten to assure us of their desire that such a nuclear union between Britain and the United States "shall grow gradually into the United States of Man by peaceful submission of outside peoples to equal membership" as soon as such peoples shall have established their fidelity to the democratic way of life. (Look, July 29, 1941, p. 33.) By thus envisioning as a possible outgrowth of their plan some beatific system of world-wide cooperation for the betterment of man, the federal unionists have corralled into their camp many sincere persons who realize that world peace can only result from universal recognition of the brotherhood of mankind and who hopefully grasp at Union Now as a tangible movement with such an end as a possibility, however remote. These followers are inclined to overlook the imperialist structure of the British Empire, as, indeed, they also overlook the British background of the leading American proponents of Union Now.

BRITISH NETWORK

But a more important fact which is overlooked is that Union Now is geared to American participation in the war and to Anglo-American world domination—its inevitable, if not its ostensible, result. This is not surprising, when the leading supporters of Union Now are identified. The Federal Union organization must be viewed against the long history of attempts in the United States to promote American participation in the League of Nations and to bring about an Anglo-American alliance. Space is lacking to review here what one informed commentator called the British network (Quincy Howe, England Expects Every American To Do His Duty (1937)), but it is clear the Federal Union reflects the influence of such organizations as the League of Nations Association, the English Speaking Union, the Foreign Policy Association, and the Council on Foreign Relations.

WHO'S WHO

Leading interventionists abound in the ranks of Federal Union. Many of the leading supporters of Union Now are members or active supporters of such interventionist groups as the Committee to Defend America (formerly the Committee to Defend America by Aiding the Allies), the Fight for Freedom Committee, the Church Peace Union, and the Interfaith Committee for Aid to the Democracies. Many have signed interventionist statements issued by special groups, or have made public statements of an interventionist character. These include (see New York Times, March 18, April 9, May 9, May 23, June

16, June 15, July 21, July 17, 1941, and Federal Union list of supporters): Margaret Culkin Banning, Stringfellow Barr, Mrs. Emmons Blaine, Clare Boothe, Esther Caukin Brunauer, Lyman Bryson, "Ding" Darling, Russell Davenport, William Alfred Eddy, Charles G. Fenwick, Dorothy Canfield Fisher, Henry W. Hobson, Edwin P. Hubble, Frank Kingdon, Mrs. Thomas W. Lamont, Max Lerner, Bishop Francis J. McConnell, Thomas Mann, Raymond Massey, Helen Hill Miller, Lewis Mumford, Bishop G. Ashton Oldham, Endicott Peabody, Chester Rowell, Robert E. Sherwood, William J. Schieffelin, Ralph W. Sockman, Eugene Staley, Admiral William H. Standley (retired), Lyman Beecher Stowe, Betty Gram Swing, Edmond Taylor, Dorothy Thompson, Mrs. Frank Vanderlip, J. Skottowe Wannamaker, James P. Warburg, William Allen White, Alexander Woolcott, Mary E. Woolley, Rear Admiral H. E. Yarnell (retired), Henry Goddard Leach.

The most cursory examination of the partial list of council of advisors, printed on Federal Union literature reveals that an overwhelming majority of the council fall into the interventionist class.

OXFORD ACCENT

Despite the claim of Federal Union that their program is 100-percent American, the fact remains that many of the organization's leaders—and followers—have close ties with the motherland. Clarence Streit, founder of the movement, was a Rhodes scholar, receiving his indoctrination at Oxford University in 1920–21. Apparently, his inspiration for the Federal Union scheme came to him at Geneva, after he had completed his studies at Oxford and was employed as a Times correspondent to the League of Nations. Prominent on the national committee of Federal Union is Mrs. Thomas W. Lamont, wife of the J. P. Morgan partner who served as American purchasing agent for the British Government during the World War. In a letter to the New York Times, dated October 18, 1935, Mr. Lamont defined their mutual attitude:

"We were pro-Ally by inheritance, by instinct, by opinion, and so were almost all the people we knew in the eastern seaboard of the United States."

Another leader of the Federal Union movement in this country is Russell Davenport, chairman of the board of editors of Fortune, and personal representative of Wendell Willkie in the 1940 Presidential campaign. At the Cleveland convention of the Federal Union (June 28–29, 1941) Mr. Davenport, who was chairman of the resolutions committee, exhorted his followers to action with these words:

"Now is the time to advocate immediate union with Great Britain, even though this does not meet with the ideal of our ultimate goal. We do not mean to compromise our ideal, but we must seize upon the emergency which will guarantee the advantages that the pooling of all our resources will give." (Cleveland Plain Dealer, June 30, 1941.)

Also on the council of advisors for Federal Union we find Dr. Frank Kingdon, English-born clergyman-educator, and Dr. Stringfellow Barr, president of St. Johns College, also a Rhodes scholar and a classmat of Clarence Streit at Oxford. Another important member of the national committee is Frank Aydelotte, Rhodes scholar, American secretary to Rhodes trustees, former national director of war issues course for the War Department Committee on Education and Special Training (1918), now member of the Athenaeum Society of London, author of The Oxford Stamp, and co-author (with L. A. Crosby) of Oxford of Today. Another member of the council of advisors for Federal Union, Inc., is John Balderston, former editor (1920–23) of The Outlook, published in London, and former London correspondent (1923–31) for the New York World. According to Who's Who for 1940–41, John Balderston is still a member of the Pilgrims Club in London, and makes his home at 38 Trevor Square SW., London, England.

Also listed among the sponsors of the Union Now plan are Rear Adm. H. E. Yarnell (retired), Adm. William H. Standley (retired), and Brig. Gen. George V. Strong, present Assistant Chief of Staff of the United States Army. (Washington Post, June 18, 1941.) This situation was brought to the attention of Congress by Representative GEORGE H. TINKHAM, of Massachusetts, on June 17, when he demanded the removal of these officers who support union of the United States with Britain. (CONGRESSIONAL RECORD, June 17, 1941, p. 5387.)

REQUIRED READING

There are signs of official sanction of the Union Now scheme by other leaders of American destiny. In Senate Document No. 182, Seventy-sixth Congress (a report on schools and training courses in Government departments), it is suggested that there is a "tie-in" between lectures scheduled by the Department of Agriculture Graduate School and the movement sponsored by Federal Union. This report includes the following statement:

"Judging by press releases of the past few months, and public utterances of Government officials in high places, the movement has gained such headway as to receive official sanction and advocacy." (CONGRESSIONAL RECORD, June 17, 1941, p. 5387.)

The June 1941 issue of Federal Union World boasts that Clarence Streit's Union Now is recommended reading for new officers by the General Staff of the United States Army in a list of recent and standard works. (U. S. War Department Training Circular No. 25.)

In the Ladies Home Journal (July 1941), Mrs. Eleanor Roosevelt says on her featured page:

"If you ask me, I think the union of all free democracies, whether English-speaking or not, is much to be desired in the future. Without it, I see no prospect for eliminating war."

Perhaps it is significant that Robert E. Sherwood, prominent writer and important influence upon recent Roosevelt speeches, is an ardent advocate of the plan for Union Now. Perhaps, the plan assumes new significance in the light of current rumors that President Roosevelt and Winston Churchill are presently engaged in conference somewhere in the Atlantic. (United Press from London, August 5, 1941), following the participation by Lend Lease Administrator Harry Hopkins in a meeting of the British War Cabinet (New York Times, July 18, 1941).

On June 16, a Member of Congress called for an investigation by the Dies committee to determine whether the Union Now movement is an un-American activity. (New York Times, June 17, 1941.) The Washington Times-Herald of June 17 observed:

"The type of British propaganda which incites such disloyalty to America and American institutions is distinctly not admirable.

"It is just as dangerous to American unity and American integrity as the Communist propaganda which demands first loyalty of American citizens to Moscow.

"All such propaganda to mislead our citizens and abate their loyalty to their own land and institutions should be branded as subversive.

"Propaganda to lead us into war in the interests of alien lands is bad enough, but the attempt to make us sacrifice not only our welfare but our independence for the benefit of any foreign nation should not be tolerated by a self-respecting people."

At this writing no official congressional investigation of Federal Union, Inc., has yet been launched.

Army Morale Hurt by Sham Training

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

ARTICLE FROM THE BOSTON HERALD

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Boston Herald of August 3, written by the well-known and brillian columnist, Bill Cunningham. The article is copyrighted but I have secured permission from the author to reproduce it here. It is most pertinent to the bill we are considering today and well worth careful reading and thoughtful study. Although Mr. Cunningham has described himself in his column as "an old-fashioned model T American with no fancy trimmings," he is most modest. His column is one of the most widely read in the country and his ideas and opinions are highly valued. My plea has always been to give our soldiers the equipment so that they may be trained in its use. Our national defense must be the first consideration.

The article follows:

[From the Boston Herald of August 3, 1941]

ARMY MORALE HURT BY SHAM TRAINING—BORED, DISGUSTED SELECTEES FEEL CHEATED FOR LACK OF REAL WEAPONS

(By Bill Cunningham)

At current quotations, we have approximately one and three-quarter million men theoretically under arms in this Nation, with another three-quarters of a million newly carded and indexed by virtue of the second draft. This coming week the Congress of these federated Commonwealths is apparently going to start its ponderous wheels grinding upon a proposition to hold all conscripts already in the service in for another year and a half, and to make the tenure of service of all yet to come 2½ years, unless, of course, we get in it, whereupon they're in until the arrival of whatever passes for peace.

The idea is, naturally, to give our troops "more training."

That's the expression used.

The term is three-quarters false because of the word "more." If the camps from Maine to California, from Seattle to St. Augustine, dared to stand up and speak with the one thundering voice of the concerned draftee, the shout you'd probably hear would be "What training?"

MILLION MEN WASTING TAX MONEY

Preparing to fight, if we fight anything, the most powerful, most ruthless, most precisely organized, most murderously equipped, hardest hitting, and most ingenious destructive force the world has ever seen, we've held a million men in uniform for almost a year, at an expense our great-grand children, and theirs, will be staggering under, and, in terms of the thing they're to fight if they fight anything, they might as well have been so many juveniles on a semi-serious dude ranch.

Except for a few specialized units, representing a ridiculous minority, they haven't

done any training because they haven't had anything to train with. Where are the guns, the tanks, the grenades, even rifles for the infantry? Have they gone to the British? Are they now going to the Muscovites? Or haven't we made any, for all the taxes and the talk?

There's no finding out from headquarters, for that's a military secret. They won't tell you how many they have at any Army post, either, for that's a legitimate military secret, too. You can always see a few. Especially down at Fort Benning in Georgia, they have quite an array of ugly looking rolling stock, but that's one place and one unit.

The cold truth of the matter on this draft business up to date is that the administration, either knowing a lot the rest of us didn't, and don't yet, or anxious to audition for the star role in Armageddon's third act, rushed all these youths into service with nothing for them to do, and almost nothing for them to do it with.

And that's still where the matter remains almost a year later, with a new crop coming up.

My argument isn't against the calling of them, nor even the retaining of them, but it is against citing a situation as definite and menacing, taking a million loyal men, most of them from jobs, and practically all of them from homes, swearing them to fealty, telling them their homeland needs them to guarantee its future physically, and then turning them into grass cutters, ditch diggers, road builders, and bored and disgusted barracks steps loafers, because, although they're willing and anxious, there's nothing anybody can do about it

When are they going to arm this Army?

When does all this training start?

I'm not speaking for myself. I'm speaking for the soldier Regardless of what you may read or hear from some official spokesman, the morale in this great citizen army of ours is low. It's not strong. The reason is that it feels it's wasting its time. After a manner of saying, it really feels cheated. It went in "to serve." It's ready to serve. There's no rebellion against the general idea. If our Nation is in danger, it wants to be ready. It's not getting ready. It's got nothing to get ready with.

You read a lot about maneuvers, mock war, sham battles—we had one down on Cape Cod this week. It looks serious and professional in the newspaper headlines, with such captions as "Invader cut to pieces" and "Blue Army annihilated." That's newspaper stuff. Actually a Boy Scout overnight hike has as much of the European war in it. Practically everything is "simulated" from the theoretical enemy to physical discomfort.

SIMULATED WEAPONS STILL BEING USED

More than a full year after we started officially talking war, and almost a year after we filled our divisions and flung up our great camps, we have broomsticks and wooden dummies over the shoulders of men who've been in uniform 10 months, stovepipe on sawhorses serving as cannon, old broken-down trucks simulating tanks. Not in every instance, you understand, but in more places than not.

There are crack National Guard outfits with but four Garand rifles to a company. There are artillery outfits still hearing how by way of blackboard. The officers in most units are going to school. The men work as road crews or sit around whittling.

And we're the people who're talking about fighting Germany, and thanking God for the unexpected resistance of Russia because the item of time is so precious to us.

I may possibly be overdrawing the picture a shade, but it isn't much of a shade. The Army's doing what it can to keep the men occupied undoubtedly, but the typical soldier is disgusted and disillusioned. Here's a bona fide letter from Camp Hulen, typical of enough like it to show that the author, unknown personally as he is to your correspondent, is not just a sorehead taking his gripe out on a stranger. It's typical, too, of the way the men from almost all the camps talk when they really let their hair down. Don't take my word for it. Try talking with a few yourself.

HAS "NOTHING TO DO"

But here's the letter. Please ponder it:

"DEAR MR. CUNNINGHAM: I don't suppose many citizens of this great country are especially interested in the Forgotten Regiment, as we call ourselves, but, as usual, I have nothing to do, so if you don't mind I'll pass on a few of the collective thoughts of 1,400 disillusioned Bostonians.

"First and biggest joke of the situation is the year of 'intensive training' we were going to receive. I think I can fairly say that in 10 months and 3 days we have actually done 4 months' work. When I say 4 months, I am speaking of the days we have actually soldiered.

"The rest of the time has been spent in cutting grass, laying roads, doing various sorts of day labor, and just plain loafing. Now they're talking about extending the period of 'training' a year. General Marshall has said he can't picture returning thousands of men to civilian life, but he apparently could picture taking the same thousands away from homes and jobs and herding them 2,000 miles south of God's country in a snake-infested, bug-ridden swamp to do nothing they could not have done better at home, and to learn nothing they could not have learned better where they were. And he apparently can picture keeping them here.

"President Roosevelt has said he doesn't want to break up 'this fighting force' the Nation now has. Two simple questions will answer the President: (1) What good is a 'fine fighting force' only partially equipped? (We've been in 10 months, and we're still waiting for equipment. What do they plan to train another million men with?) (2) Weren't we learning just as much, and in just as good physical shape, and weren't we certainly off the taxpayers' necks when we were home on the job going to the armory for one drill a week? The answer to that last one is 'Yes.'

"Frankly, I know this is a waste of time writing this way, and if the powers that be knew I was writing to the press, it would mean a month in the guardhouse, but when you have nothing to do with your time but waste it, you might as well waste it in some definite direction. I'm telling you, whether you believe it or not. I'm writing exactly what the enlisted man of the First Corps Cadets thinks. These aren't just only my words. I have heard them expressed over and over in the endless 'bull sessions' and this is exactly the way we all feel.

"The news just stated that President Roosevelt is afraid of 'breaking faith with us.' He is breaking faith. He's already broken faith in herding us into an army without equipment for training and turning us into yard cleaners and loafers instead of what we thought we were going to be—soldiers training intelligently for the defense of our country.

"Every newscast that tells about that law they're considering to give us another year of this sends the morale of this particular regiment crashing to new lows. If they make the fatal mistake of passing that law in Washington, and we are left in Texas to sleep through more of this, open wide the New England guardhouse doors, for, law or not, here we come!"

The soldier signs his name, battery, and regiment.

For obvious reasons, I'm not printing it.

READY TO DESERT

I'm not even guaranteeing that he speaks for the mass of his regiment, but he certainly speaks for himself, and that's the way the mind of at least one trooper in a crack National Guard regiment, famous for its tradition and its spirit runs when it reflects upon the current service. He even concludes with the definite threat of desertion. They shoot a soldier for that in wartime. This must be half-wartime, and that seems to mean that the young man, if he means what he says, is desperate to the point of considering the commission of a really serious military crime.

This particular soldier seems to be suggesting that he and his buddies would and could take the trials and tribulations of of life in the Texas bad lands in stride if they only felt they were really accomplishing the thing they recruited to do. There are others, to what number nobody knows, but we soon possibly may learn, who make no such pretensions. They went because they had to, and with no enthusiasm in the project. They feel they've done their job for the agreed-upon length of time and now they want to be released from it and get home.

There are undoubtedly a few who think it all swell fun and hope it never, never stops, but most of your draft army will be found under the first two classifications. This country is far from being even partially aroused. There's a vast amount of slack between the virtual wartime basis of the administration and the torpor, serenity, befuddlement, or whatever it is, of the general public.

UNITED STATES "CROWN COLONY"

The American public can be aroused. It became so thoroughly aroused in the last war when that German U-boat poked its nose up off the shores of New Jersey and Cape Cod and shelled without provocation, or excuse, some helpless cabin cruisers and fishing boats that 300,000 angry American males stormed the recruiting offices of New York City in 1 day alone. But nothing such as that has happened yet in this war. Nothing of ours has been attacked without provocation. We haven't been insulted nor belittled as a people.

We've got a lot of theoretical reasons to get ready, it's true, and plenty of tragic examples of those who didn't get ready to reflect upon and to profit from. But people are such that it takes fact, not theory, incidents, not parables, really to bring them out of their preoccupation with personal affairs. Fireside chats, the war dance of partisan columnists, the sympathetic turning of the United States into a Crown colony of Great Britain for all practical, and even impractical, purposes, and the resounding contributions to the Letters From Readers columns of metropolitan newspapers written mostly by women who once visited Stratford-on-Avon, or old geezers who can write a great war but who are too feeble even to watch one, won't do it and haven't done it. We're still unconcerned mentally.

NOT MAD AT ANYONE

Ours is a collection of soldiers that isn't mad at anybody nor afraid of anything. Therefore, it's a little short of burning zeal to start with. American soldiers can get mad I have it on the authority of one who's seen them boiling that no breed of human being can be as ruthless, as tough, as really bloodthirsty as the plain garden variety of American soldier when he is really and truly outraged.

The man who told me was a top sergeant in the Philippines during trouble out there.

"You didn't see American soldiers mad in the World War," he said, and, come to think of it, he's correct. It was more the spirit of adventure over there, a thrilling hide-and-seek game with keen and dangerous fun.

"I've seen 'em really mad," he solemnly insisted, "when you come upon a couple of

your buddies, who've been ambushed, and who've then been stripped and mutilated with knives in a fashion that turns your stomach even to try to describe, you see red, brother, and you go out to avenge them. There are still a few of us around who saw some of that and know what proceeded to happen. We're not telling even yet for it's not even pretty remembering. But take my word for it, there's nothing tougher in Germany nor anywhere else on earth than an ordinary American soldier when he really gets sore."

But we've got none of that. And have none of it.

We've got a lot of nice kids from a soft kind of living, in there trying to play soldier for reasons they don't clearly understand and neither do their folks. We've had a million of them almost a year and we've got another million coming up. We've spent an entire dynast's ransom on their keep and we're going to dig for more.

Ask any of them you chance to know, how nearly ready they feel their outfit is to go out and try conclusions with a panzer column. Ask them how many rifles they have, how much work they've had with antitank guns. How much actual shooting they've done and at what?

Some more of those mammoth "full dress" maneuvers are now starting in the South. They've moved the Forty-third Division out of Blanding, for instance, across lots toward Louisiana to participate. Maybe they've progressed a little further in the maneuver department than they were a couple of months ago when I saw a piece of that performance in Tennessee.

TRAGICALLY COMICAL

Part of that were really comical, if the elements of tragedy in terms of absolute preparedness hadn't been such a perfect shadow of their amateurism. It had been announced in dead seriousness that this was it. Here was to be actual war all but the shooting and killing. Here was to be the actual dress rehearsal, European style war under strictest and most taxing combat conditions.

They moved the entire Second Army into the wild Cumberland hill country bringing some from as far north as Michigan, and the problem they gave it made the blood run just a little cooler. One couldn't help feeling that maybe this was the American high command's idea of how Hitler, or whoever might conceivably try to invade this country and that, furthermore, that this was what might proceed to happen if he did.

The problem presupposed that "the invader" had punctured the defenses of this hemisphere by blasting his way in through the St. Lawrence waterway, had paralyzed Canada and had invaded the United States in the vicinity of Chicago. Chicago was considered to be in his hands. Detroit, Cleveland, and all such production centers as Youngstown, Akron, etc., had been bombed to rubble.

TRANSPORT PROBLEM

Transcontinental railway lines had been broken, roads dynamited, bridges blown, so the transportation of American forces back and forth was problematical, and now "the invader" was pouring full force straight down the Mississippi River Valley trying to reach New Orleans and cut the Nation in two.

The American defenders had been unable to hold him or even to slow him appreciably until he reached the vicinity of Tennessee. The invader was still pouring down the valley full blast, but the Second Army had been able to maneuver into position, get organized, and prepared to hurl its full strength in the path of the advance.

To complicate the problem, however, it was also presupposed that the invader had actually effected a landing on United States soil somewhere over on the seacoast of Georgia, and from that direction his dread panzer units were plowing cross country over secret routes to attack the Second American Army from the rear, attempting to encircle it in one of the celebrated Nazi rings of steel. That part about the invader coming down the Mississippi was entirely simulated. There was no invader nor any troops pretending to be one.

The panzer, or motorized, part in the rear, however, was to be the real McCoy, with the tanks and other motor units from Fort Meade, Md., and Fort Benning, Ga., actually coming cross country and going into action as part of their training. Having seen some of those motorized units at Benning, it was that portion of the program that captured my interest. I wanted to see those big babies roll under actual campaign conditions.

And there, so the story went, were to be actual campaign conditions, nothing less.

UTTER FARCE

Actually, that entire part of the performance was a farce. The tanks arrived, not under their own power nor secretly but hauled up in broad daylight to the freight depot of a town in the "battle area" on a series of freight trains, like the Ringling Brothers circus. The war had to be held up a couple of days until they could get them unloaded and gassed up.

And then, they might as well not have had them, for by Army regulations, or something, they couldn't be driven across private property, which meant farms and fields and streams and such, that tanks are made principally to cross. The only place they could move was along public highways. This, as it chances in those Tennessee hills, is often pretty tough traveling, but this wasn't a job of trying to discover what a tank will take in the way of hills. They already know that.

This was a tactical military problem, of trying to spot the approach of tank columns, combining in a secret advance of menacing proportions and intentions, and of quickly and effectively shifting artillery to knock them to pieces.

Your 10-year-old kid and a few of his friends could have solved that particular problem without previous training. All they'd need for props would be a common ordinary road map from the nearest Tennessee filling station. If the tanks weren't coming along the road, they were bound to be on the next one, or maybe the other one over there leading in the same general direction. A kid on a hilltop could wave, "Here they come." The kid playing general would then casually move his theoretical artillery to an eminence commanding that particular cow trail and say "Fire when ready." That would be all there was to it.

Down there, they did it a little more simply. They merely sent up a plane. It looked up one road and down the next until it saw the tanks. One tank company tried to make it a little more realistic—with no results. Conceding that it was spotted and that artillery was going to get it, it tried to turn around and simulate a retreat, but the road was so narrow the drivers found they couldn't pivot the contraptions, so they simply climbed out and down and said, "Aw, shucks."

HAD TO OPEN GATE

More ludicrous still was the episode wherein a file of tanks theoretically became engaged with a bunch of machine-gun nests hidden in the straw stacks of a hay field. Here was one time they got off the high roads, apparently with some farmer's permission. The tanks were supposed to charge into the field and have it out with the machine guns at close range.

But they had to call the battle off temporarily while a guy in the first of the attacking tank file, opened his hatch, climbed out and down and opened the pasture gate, so the tanks could get in. They couldn't bust up private property.

And these were "actual war conditions" * * * "getting ready to fight Germany."

None of this is fiction. It's fact, easily verified, and rather sad fact.

What's the point in kidding ourselves?

That's what France did.

Our Navy and our Air Corps may be something else again, but this is the Army, and that's what all the current talking is about. A million half-busy disgruntled kids in uniform may be a lot of things, but they're certainly not an army fit to grapple with and strangle Nazi mechanized murder. And if it's not to stand ready to stop that, what have we got them together for?

Where are the implements, the instruction, the real training, the true preparedness? I'm asking what the soldiers are asking, and what they've got a right to be asking, for it's they who steeled themselves to make the necessary sacrifice. Hold them, if you will, but give them something to work with, to learn with. Deal summarily with every strike that delays the still mythical production. Quit giving away everything we make until our own are at least reasonably well equipped—I'd even say fully equipped.

Either that or turn 'em loose. We'd have no Army that way, but we have nothing but a largely unarmed mob that would be slaughtered as it is. We've been fully militarized for practically a year, and we couldn't lick the Boy Scouts of America, granting them license to throw plenty of stones.

The imperial legions of Hitler don't throw stones, and they can't be stopped with quotations from Churchill and U. S. O. service clubs. Put a million guns in a million pairs of hands. Sharpen the eye and strengthen the spine. Then the term "fine fighting force" will have some body to it, and the United States will have some genuine protection.

If we're going to have an Army, let's have one. If we're not, let's quit fooling and let these kids go home. I think we ought to have one, but apparently those who yelled it into being are short a follow-through. This first year hasn't got us out of the kindergarten class.

My country, 'tis of thee!

What Constitutes Parity for the Farmer?

EXTENSION OF REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

EDITORIAL BY TOM LINDER

Mr. FULMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including an editorial by Hon. Tom Linder, commissioner of agriculture of the State of Georgia. I believe that this editorial will be of great interest to those who are interested in seeing to it that farmers get a fair and square deal under any price-fixing program that we may enter into.

The editorial follows:

On July 17 of this year, together with other commissioners of agriculture, I appeared be-

fore the subcommittee of the Senate Agricultural Committee on the question of price fixing.

At that time I submitted a tabulation of data which shows that on a basis of 1913 the present prices of basic farm commodities are far below parity, even for the horse-and-buggy days of 1913.

On the night of July 17, at a dinner in the Raleigh Hotel, the question of fixing prices was again discussed.

This dinner was attended by several commissioners of agriculture, who had the honor of having as their guests Senator THOMAS of Oklahoma, chairman of the subcommittee, Senator TAFT, of Ohio, together with several Members of Congress.

During the discussion I suggested to the Senators and Members of Congress present that it would be unwise for Congress to delegate to any man or any set of men the tremendous power and responsibility to arbitrarily fix prices on any commodities, and especially products of the farm.

I suggested that if price fixing was undertaken by the Congress that the Congress itself should, in any legislation passed, provide a yardstick that would, to a large extent, automatically adjust the relative prices of the different commodities.

I was asked to prepare and submit to the committee a tabulation showing what would be a parity price on basic farm commodities.

Accordingly I have prepared the following tabulation for the information of all parties at interest.

I have tried to make this tabulation as simple as possible.

I have incorporated in this work the figures comparing the year 1913 with the year 1941.

I have also taken the 10-year period beginning January 1, 1920, and ending December 31, 1929, and have compiled a very interesting and revealing fact.

Comparison of the two results is astounding in that it shows the relative economic condition of the agricultural products during the year 1913 to be almost identical with the relative economic condition of the same commodities during the 10-year-period average.

For instance, on a basis of 1913, the present parity price of cotton is indicated to be 23 cents, while on a basis of the 10-year average—1920 to 1929—the parity price of Middling cotton is indicated to be 24 cents.

On a basis of the 1913 figures, the parity price of corn in 1941 is indicated to be 83 cents, while on a basis of the 10-year average the parity price of corn is indicated to be 99 cents.

On a basis of the 1913 figures, the parity price of hogs is indicated to be 12½ cents, while on a basis of the 10-year average the parity price of hogs is indicated to be 12 cents.

On a basis of the 1913 figures, the parity price of wheat is indicated to be $1.30, while on a basis of the 10-year average the parity price on wheat is indicated to be $1.64.

Roughly speaking, from 1913 to the 10-year average the cost of commodities which the farmer buys advanced in price 80 percent, while during the same period the price of cotton advanced a little less than 50 percent.

From the 10-year period to 1941 the price of commodities which the farmer buys increased 11 percent, while the price of cotton and other basic crops decreased 33⅓ percent.

The net result is that farm equipment and supplies cost the farmer today, in terms of farm products, about 45 percent more than they did during the 10-year period.

Taking the average price of several basic farm products over the 10-year period, I have added 11 percent to match the 11-percent increase in farm machinery and supplies. The result is that the following prices are indicated as parity today as set out in the following tabulations:

Farm commodities	Price 10-year average, 1920–29	Percent increase needed for parity	Computed parity price
Cotton, Middling	$0.22	11	$0.24
Cottonseed oil	.11	11	.12
Corn, No. 1	.89	11	.99
Oats, No. 1	.50	11	.56
Wheat, No. 1	1.48	11	1.64
Hogs, No. 1	.11	11	.12
Beef, No. 1, steers	.13	11	.14
Veal, No. 1	.13	11	.14
Lamb, No. 1	.14	11	.16
Sheep, No. 1	.07	11	.08

The proposed parity prices above set out are based on the following tabulation of manufactured commodities which the farmer must buy:

Manufactured commodities	Unit	10-year average price, 1920–29	Price, 1941	Percent change
Farm wagon, 2-horse, complete 42-inch box with drop tongue	Ea.	86.40	87.50	+1
Turnplow, 2-horse, 12-inch (David Bradley)	Ea.	14.66	14.50	−1
Hillside turnplow, 1-horse, 0-inch (David Bradley)	Ea.	5.96	6.70	+12
Drag harrow, 2-section, 70-tooth (David Bradley)	Ea.	17.11	21.00	+23
Hay dump rake, 10-foot, all steel (David Bradley)	Ea.	35.56	43.90	+23
Lift mower, 6-foot cutter bar (David Bradley)	Ea.	65.75	78.85	+20
Manure spreader, 2-horse (David Bradley)	Ea.	128.87	142.70	+11
Combination corn and fertilizer drill, No. 2, 1-horse	Ea.	17.48	21.50	+23
Pitchfork, 4-tine, 4½-foot handle	Ea.	1.24	1.49	+20
Shovel, long handle, round point	Ea.	1.03	1.29	+25
Common nails, 8-penny	100 lb.	3.73	3.60	−3
Ax, 4-pound single-bit, with handle	Ea.	2.04	1.95	−4
Work shirts, cotton, men's	Ea.	.99	.98	−1
Overalls, men's	Pr.	1.37	1.39	+2
Work shoes, men's	Pr.	3.23	2.98	−7
Total		385.42	430.33	+11

The above tabulations and estimates do not take into consideration four main items which should be given earnest consideration by the Congress in any action contemplated.

First. No account was taken of the decreased acreage and production permitted the farmers under the triple-A program.

Second. No account is taken of protective tariff, which has always been a major problem to farmers.

Third. No consideration is given to the increased cost of farm labor.

Fourth. No consideration is given to the major item of additional farm conveniences to provide a better standard of living on the farms, such as the use of electricity for lights, refrigeration, and power; the additional use of automobiles and trucks; and the added expenses incident to better rural education of farm children.

It is my belief that proper consideration of the three major items as set out above would easily justify an increase of at least 25 percent to the above prices for farm products.

During the discussion at the Raleigh Hotel, I made a statement to the Senators and Congressmen present, as follows:

"It is not a question of whether or not we will have price fixing. We already have it.

"When a farmer goes to buy a tractor or a plow of any kind, the price is already fixed. When he goes to buy a shirt, a pair of shoes, back band, or any other article that he must have, the price is fixed. There is no competition on the selling end.

"It is not a question of whether we will have price fixing, it is a question of who will fix the price, and it is a question of whether or not the price paid the farmer for his products will be in line with the prices which the farmer must pay when he goes to buy.

"I suggest that should the Congress, in its wisdom, decide on a price-fixing program, that no power be delegated to any man or any body of men to fix prices on any one commodity.

"There is no man or any body of men wise enough to accumulate and assimilate enough information to be able to wisely fix prices on the many thousands of commodities involved in commercial activity in this country.

"Furthermore, any man or any body of men set up as a price-fixing agency will, in the very nature of things, in a great many cases, hear the evidence on one side of the case only and will not have adequate information before them presenting the other side of the case.

"The only sound basis, in my opinion, for Congress to undertake a price-fixing program would be along the following lines:

"Take the average price of all basic commodities over the 10-year period from January 1920 to December 1929 and provide the relative values of all commodities during that period as a basis for the fixing of all prices.

"This would automatically fix the price on all commodities by the simple expedient of fixing a price on one. This would also simplify the matter to where the ordinary citizen would be able to determine the fixed price on any commodity by applying the 10-year average price plus whatever percentage Congress might determine to arrive at the fixed price."

TOM LINDER,
Commissioner of Agriculture.

Cost of Sugar Production

REMARKS
OF
HON. JAMES DOMENGEAUX
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

Mr. DOMENGEAUX. Mr. Speaker, on yesterday Price Administrator Leon Henderson set a ceiling price of 3.50 cents per pound on raw sugar. This is the first ceiling price fixed for any agricultural commodity produced in the United States and is discomforting and discouraging news for the beet and sugarcane producers of continental United States who throughout the years have struggled so hard to prevent this much needed industry from slipping into the category of utter bankruptcy.

In view of the ever-rising cost of sugar production in continental United States, I wish to here and now publicly protest against what appears to me to be an arbitrary selection of this necessary farm product as a trial balloon for the fixing of ceiling prices of farm products in this country. While sugar is used on every American table, it is still the cheapest food article consumed by us Americans. The cost of producing sugar in this country has risen sky high. Everything the

sugar farmer must spend in the production of sugar, whether it be beet or sugarcane, has risen to such a high level that to fix an arbitrary price of 3.5 cents per pound, without hearing, is an invitation of involuntary suicide to this industry. The labor costs, that of farm equipment, fertilizer, and all things that necessarily go in the production of sugar in this country have increased to a level that there is not a single beet or sugarcane grower in the United States that will be able to make a dollar's profit out of 3.5-cents-per-pound sugar.

With the present international situation, it seems only fair and obvious to me that our Government should be encouraging the production of continental sugar instead of inviting our sugar producers out of this farming enterprise. Our memory is short if we do not remember what happened during the aftermath of World War No. 1, respecting the price of sugar, when the American consumer was compelled to pay anywhere from 25 to 30 cents a pound for this product, due to the low level of production then reached in continental United States.

Sugar production is already unfairly restricted by law and departmental regulation, and to now have to face such a ridiculous price ceiling, is an obstacle we can hardly expect our continental producers to survive. Then woe unto the consumers for whom Mr. Henderson now displays such a solicitous interest. Let the continental producer become discouraged or bankrupt, and we will again witness the price debacle of World War No. 1.

I do hope that every beet and sugarcane producer in continental United States will let his voice be heard in protest of this unfair and lightning-like action of Price Administrator Leon Henderson.

[Here the gavel fell.]

TELEGRAMS, LETTER, AND RESOLUTION ON RETENTION OF SOLDIERS

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegrams, letter, and resolution:

DES MOINES, IOWA, *August 12, 1941.*

Hon. JOHN W. McCORMACK,
House Office Building,
Washington, D. C.:

You may use the following as you desire in the consideration of retention of selectees:

"The American Legion feels situation demands enactment of necessary legislation to insure keeping intact during emergency troop units already trained and retention of selectees in service. We want, we need, we must have an Army and a Navy prepared to fight immediately if necessary; prepared to fight as a cohesive, effective unit, and prepared and authorized to fight wherever and whenever necessary, to defend our rights, our property, and our country. We want no shackled Army or Navy. We must be prepared in every way by authorization, training, by equipment, by leadership, and by support to do our defensive fighting outside the United States. To be so prepared Congress should without delay remove the fetters from our Army and Navy and back them up with all necessary appropriations. The Selective Service Act under which the selectees were inducted into service provided at the time they were inducted that they could be retained in the service longer than a year if Congress determined the emergency demanded it. The National Guard men, in effect, enlisted for 3 years or the duration of the emergency. There is no breaking faith with these men. Furthermore, they have proved by their training service and their general deportment and behavior in camp that they are a fine lot of patriotic Americans. It is solely a question as to whether the emergency requires their retention. I am sure that these men in training would say they want to stay in the service if the emergency requires. The Chief of Staff, who should know, says that it does. He has so recommended to Congress. Congress should act promptly and favorably on his recommendation."

MILO J. WARNER,
National Commander, the American Legion.

BOSTON, MASS., *August 10, 1941.*

JOHN W. McCORMACK,
Member of Congress,
Washington, D. C.:

In accordance with resolution adopted at recent department encampment urge adoption of Senate bill extending service of selectees and National Guard.

JOSEPH PETERSON,
Department of Massachusetts Veterans of Foreign Wars of United States.

THE AMERICAN LEGION,
NATIONAL LEGISLATIVE COMMITTEE,
Washington, D. C., August 11, 1941.

MY DEAR CONGRESSMAN: For 20 years the American Legion has advocated and presented to the Congress a program for universal military training in order that the young manhood of our country would be prepared to serve efficiently in the event of an emergency.

On September 16, 1940, the Congress enacted the Selective Training and Service Act of 1940. Congress did this because of the emergency threatening the country. Certainly the crisis confronting us is more serious today than it was at that time.

The national commander, Milo J. Warner, has repeatedly stated to the country that the American Legion feels the situation demands the enactment of necessary legislation to insure keeping intact, during the emergency, troop units already trained, and retention of selectees in service.

The American Legion supports unqualifiedly legislation extending the training period for an additional 18 months, and we request your support of this legislation.

Very sincerely yours,

JOHN THOMAS TAYLOR,
Director, National Legislative Committee.

RESOLUTION FOR CONVENTION OF MASSACHUSETTS FEDERATION OF LABOR

Whereas a victory of the Axis Powers in the present war would constitute a fatal blow to democracy all over the world; and

Whereas from their internal actions the German and Italian Governments have demonstrated they are savage enemies of organized labor; and

Whereas only with a defeat of the Axis can there be any hope that various social gains, painfully established since the last war, can be maintained: Therefore be it

Resolved, That this convention call on the National Government to take any steps thought wise by the administration, acting on the advice of the United States Army Chief of Staff, Secretary of the Navy, and other responsible agencies to keep at maximum efficiency the United States Army, Navy, and defense program; and be it further

Resolved, That this convention urge and will support whatever action is deemed necessary by the administration to make sure that American aid reaches our heroic English brothers; and be it further

Resolved, That this convention pledge itself to the moral unity demanded by an unlimited national emergency; and be it further

Resolved, That copies of this resolution be sent to the American Federation of Labor, to the constituent members of the Massachusetts Federation of Labor, and to the President and Members of the Congress of the United States.

Amendment: Call on the National Government to take necessary steps with the advice and consent of Congress.

The Republicans Keep Faith With the People and Reaffirm Their Peace Pledges

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

Mr. THILL. Mr. Speaker, the overwhelming desire of the people in this country is for peace. In public-opinion polls throughout the Nation Americans have expressed their opposition to entering a foreign conflict. Yet the administration, step by step, is leading this Nation into war, against the wishes of the people. Our disheartened and discouraged citizens can now take hope from a clear-cut declaration by the Republican minority that they reaffirm their pledge to avoid participation in a foreign conflict. The minority party is now representing the majority of the people in this country.

G. O. P. DENOUNCES IGNORING OF CONGRESS BY ROOSEVELT IN STEPS LEADING TO WAR—HOUSE GROUP REAFFIRMS PLEDGE TO AVOID PARTICIPATION IN FOREIGN CONFLICT

Aroused by President Roosevelt's constant disregard of Congress in undertaking steps in the foreign field, a majority of the House Republican membership in conference have adopted a resolution condemning "all executive acts and proceedings which might lead to war without the authorization of the Congress of the United States."

The resolution, supported by an overwhelming number of the House Republicans, reiterated the party's platform pledges of last year opposing involvement of this country in foreign wars. The Republican group likewise pointed to the Democratic platform pledge against sending "our Army, naval, or air forces to fight in foreign lands."

The text of the resolution was as follows:

"The Republican Members of the House of Representatives, believing that the people of the United States are entitled to a definite

expression of our views on national defense and foreign policy, hereby declare:

"1. We affirm the pledge of our 1940 party platform: 'The Republican Party is firmly opposed to involving this Nation in foreign war.'

"We approve the restatement of this principle subsequently written into the 1940 Democratic Party platform: 'We will not participate in foreign wars, and we will not send our Army, naval, or air forces to fight in foreign lands outside of the Americas, except in case of attack.'

"We demand the fulfillment of these pledges.

"2. We reaffirm the declaration in our party platform: '* * * We condemn all Executive acts and proceedings which might lead to war without the authorization of the Congress of the United States.'

"3. We reaffirm the declaration of our party platform, as follows: 'Our national defense must be so strong that no unfriendly power shall ever set foot on American soil. To assure this strength our national economy, the true basis of America's defense, must be free of unwarranted Government interference.'

"We firmly believe in maintaining and upholding the Monroe Doctrine and safeguarding this hemisphere from foreign invasion. We insist that our national defense be strong enough to accomplish these objectives.

"4. The lease-lend policy was presented to the American people as a measure short of war. We insist that it be administered as a short-of-war measure.

"We are convinced that this declaration of policy is overwhelmingly supported by American public opinion, and that such a program will assure the greatest possible degree of national unity and security."

Men Under Arms

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

EDITORIAL FROM NEW YORK TIMES OF WEDNESDAY, AUGUST 13, 1941

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial from today's issue of the New York Times, entitled "Men Under Arms."

[From the New York Times of August 13, 1941]

MEN UNDER ARMS

When the House of Representatives voted yesterday on the proposal to extend the present period of military training under the Selective Service Act it had before it the advice of the two public officials above all others whose expert opinion on this question was entitled to respect. The Chief of Staff of the Army had warned the House that the result of failure to approve this plan would be "virtual disbandment or immobilization of two-thirds of our trained enlisted strength," and that this in turn "might well involve a national tragedy." The Secretary of State had warned the House that defeat of the proposal would have "an exceedingly bad effect" on this country's position in international affairs. There cannot be the slightest doubt of the accuracy of this diagnosis. Rejection of the plan would have dismayed our friends abroad, in Europe, in Asia, and perhaps, above all, in South America, and given our enemies a legitimate chance to rejoice over the apparent half-heartedness of our defense effort.

It is deeply regrettable that a single vote should have determined the margin by which the House chose yesterday to heed the clear warnings sounded by General Marshall and Secretary Hull. But at least it is now certain that the new American Army will be kept intact. And before our enemies abroad attempt to draw large conclusions from the strength of the opposition in the House they will do well to note—what any American could tell them—that considerations of domestic politics had an important part in the result. Unfortunately, Republicans in Congress are still playing the old-fashioned American game of politics and still trying to maneuver themselves into a position in which they can profit, some day, from a hoped-for popular "reaction" against the President's leadership.

As a consequence of the decision which Congress has now made, a great many young Americans who will soon have contributed a full year of their lives to the service of their country will be called upon to make a further sacrifice. But they make this sacrifice now to forestall a worse sacrifice later on. They give their time in order that an unprepared American Army may not be butchered in a war brought on by its own weakness, or an unprepared country be exposed to the whims of a dictator. The price is high. But in this uncertain world of 1941 it is a good bargain.

Decentralization of Government Agencies

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

Mr. COCHRAN. Mr. Speaker, for many years I have advocated decentralization of Government agencies where it clearly develops that it is possible to do so without impairing the efficiency of the agency involved.

As we all know, there is nothing in the Constitution that requires Government departments and independent agencies to be located in Washington, but there is in some of the basic laws provisions where at least part of a department or Government agency must be located in the Capital.

For instance, the Interstate Commerce Commission, the Federal Trade Commission, the Securities and Exchange Commission, the Federal Communications Commission, and the Tariff Commission are in a way agencies of the Congress, although independent establishments and directly answerable to the President. To move those agencies from Washington, naturally, it would be a mistake. The Congress is charged with certain responsibilities, but it is impossible for the Congress without aid to carry out the obligations, and it was for that reason that Congress set up some of the independent establishments, such as the Interstate Commerce Commission, Federal Trade Commission, and so forth, delegating to those Commissions power lodged in the Congress. I think I can say without fear of contradiction that such agencies are not going to be moved from Washington, at least the headquarters of the agencies. It might be possible to decentralize certain divisions of the agencies; and if that can be done without impairing the service, it should be done.

It seems to me that the Social Security Commission, various branches of the Department of Agriculture, the Department of Commerce, Department of the Interior, and some independent agencies can be moved to the field and should be moved to the field.

Naturally, I want my city and State, both being centrally located, to receive consideration in connection with any transfers. At the present time the Director of the Budget and the Administrator of the Public Works Agency are making a survey, at the request of the President, to determine what branches of departments and what agencies might be moved to the field. The Committee on Public Buildings and Grounds of the House is likewise giving this matter its attention. The condition in Washington, both from the standpoint of housing Government offices as well as finding places to live for employees of the Government, has become so congested that it is imperative that the situation be corrected wherever it is possible.

Until action is taken to transfer a Government agency no complaint whatever is heard, but when the order is issued then complaints are received, instigated to a certain extent by officials and employees of the agency involved and those doing business with the agency.

Now, let us take for instance the Federal Home Loan Bank Board and the Home Owners' Loan Corporation. The order has been issued to move this organization to New York. Immediately complaints are received and articles are published in newspapers to the effect that the Board was in disagreement in reference to the transfer.

In order to keep the records straight, I include as part of my remarks two releases, one of August 5 and one of August 8, which refer to the transfer of the Federal Home Loan Bank Board and affiliated organizations. The releases follow:

WASHINGTON, August 4.—In compliance with the direction of the President, the Federal Home Loan Bank Board announced today that the Board and most of the supervisory operations of the Federal Home Loan Bank System, the Federal Savings and Loan Insurance Corporation, and the Home Owners' Loan Corporation would be transferred to New York during the period between September 15 and September 29. It is expected that the work of preparing the space which has been leased at 2 Park Avenue, New York City, for the occupancy of the three agencies, will be completed by the middle of September and that practically all of the units can be moved about that time, although it is possible that some of them cannot be transferred before the last of September.

In conformity with the requirements of the statutes as set forth in an opinion submitted to the President by the Attorney General, there will be retained in Washington such representation of the bank system, the Insurance Corporation, and the Home

Owners' Loan Corporation as is necessary to meet such requirements.

In a current bulletin to employees the Board made clear that, as a result of the President's recent Executive order, employees, where conditions warrant, may be promoted, transferred, or assigned as promptly as convenient to positions within or outside of the agencies under the direction of the Federal Home Loan Bank Board without loss of the civil-service status they would acquire by remaining in their present positions. It was announced also that the Board had been assured that full departmental status of employees of the Bank Board and its agencies removed to New York will be maintained.

Arrangements are being made by the Board for setting up special units in Washington and also in New York through which employees will be able to obtain promptly full information as to housing facilities obtainable in and around New York, with rates and conditions. All employees are requested to file promptly with the Personnel Department information as to their needs.

WASHINGTON, August 8.—John H. Fahey, Chairman of the Federal Home Loan Bank Board, today said:

"Certain misleading reports, concerning the removal of much of the Federal Home Loan Bank Board work from Washington, call for a statement of the recorded facts. Contrary to rumors circulated, the votes of the four Board members who were in the city, authorizing the lease of space in New York, were unanimous. All four members of the Board also voted alike on necessary resolutions providing for the removal of our three agencies. The statement to the press on August 5, announcing that members of the Board as well as other executives and employees should make the move, was also approved by the four members of the Board who were present, without a single negative suggestion.

"It is true that when removal from Washington was first discussed the members of the Board, in common with most of our employees, expressed their preferences for remaining in Washington. It was agreed, however, that if we were to move, the Board could not discriminate in its own favor by insisting that its members and certain well-paid executives should continue to live in Washington while hundreds of employees of moderate incomes were being asked to move at considerable discomfort and in some cases at material sacrifice. The statement which has also been made that 60 percent of our employees are declining to consider moving is also without foundation. We do not know how many of our people cannot go. Replies to the questionnaire we submitted only last Tuesday have not yet been returned.

"As has been announced, the Board will continue to have in Washington a small organization of ample size to take care of all work which must be done here and maintain all necessary contacts.

"It is, of course, true that moving from Washington will involve some inconvenience, not only to Board members but other employees, and it will mean some extra work for our executives; but when the transfer is effected there will be no interference with the efficiency of our operation. It is my opinion that every Government department and agency in Washington that can in this emergency possibly make room available for defense units which must be here should do so as quickly as possible and forget personal inconvenience. An especially favored section of the civil population in the present emergency should in the common interest respond as readily to the wishes of the Commander in Chief as do the armed forces."

The United States and Japan

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

Mr. McCORMACK. Mr. Speaker, it has been the consistent endeavor of the Government of the United States to persuade the Japanese Government that Japan's best interests consisted in pursuing the policies of international conduct which this Government advocates.

On July 16, 1937, shortly after the outbreak of the conflict between Japan and China, the Secretary of State made a statement in regard to the position of this Government concerning international situations and problems in various parts of the world in regard to which this Government was deeply concerned. Reference was made in that statement to the principles of support for the processes of negotiation and agreement by peaceful means, of faithful observance of international obligations and treaties, of the modification by orderly processes of treaties and agreements when necessary, of respect for the rights of other nations, of effective equality of commercial treatment and opportunity, of promotion of economic stability and security universally, and of the reduction and limitation of armaments. In a further public statement made by the Secretary of State on August 23, 1931, it was expressly shown that these principles were made applicable to the far eastern situation.

As the far eastern conflict continued and as hostilities spread, American nationals' rights and interests, as well as the nationals' rights and interests of other countries, suffered from the acts of Japanese authorities or their agents. This Government sought with persistence and patience to obtain redress from the Japanese Government; it has endeavored through diplomatic means and by a reasoned approach to protect American interests and rights in the Far East and to maintain the principles of foreign policy which this country regards as fundamental. It has declared Japan and China responsible, respectively, so far as there is such responsibility recognized under international law, for the acts of their respective authorities in China which have caused injury to or the death of American nationals or danger to or loss of American property. It has abstained from giving assent to situations brought about in contravention of international law and treaties and by unwarranted use of force.

This Government has had, in the Far East as elsewhere, over and above its concern for the protection of its nationals' interests, a paramount aim, namely to support orderly processes in international intercourse.

The Secretary of State on April 17, 1940, made a public declaration stating that it would be prejudicial to the question of stability, peace, and security in the entire Pacific area if there should be any big alteration of the status quo of the Netherland East Indies. He called attention on September 4, 1940, to the announced desire of the Government of the United States and several other governments, including the Government of Japan, that there be preserved unimpaired the principles of the status quo. On September 23, 1940, the Secretary of State was moved by developments in Indochina to state that it appeared obvious that the status quo in Indochina was being disturbed under duress. The President in a message to Congress on January 26, 1940, declared that this country must commit itself "to full support of all those resolute peoples everywhere, who are resisting aggression and who are thereby keeping war away from our hemisphere."

This Government has, in dealing with the far eastern situation, exercised great patience in the hope that the Government of Japan might perceive that the best interests of Japan lie in developing amicable relations with the United States and other peacefully inclined nations.

The Japanese occupation of Manchuria in 1931 and the setting up in that territory of a regime under Japanese control under the name of Manchukuo constituted the first serious breach in the basis of international relations which had been established in the Far East by the Washington Conference Treaties of 1922. Hardly had Japan initiated consolidation of its control over Manchuria when it began to carry out a consistent policy of squeezing out foreign interests. Following the Japanese military operations against the Chinese forces which began in July 1937 and which have resulted in Japanese occupation of large areas of China, the Japanese set-up in the occupied areas puppet regimes, following the pattern of Manchukuo, which instituted a system of trade and exchange control and monopolies of a character discriminatory in favor of Japanese trade and business. The trend of Japanese policy in China proper as well as in Manchuria indicates clearly that the Japanese Government is seeking to establish in areas under its military occupation a general preference for and superiority of Japanese interest which will frustrate the practical application of the principle of the open door and deprive nationals of third powers of equal opportunity or even of any opportunity.

During the past year there has been an enlargement of Japan's objectives, which originally envisaged reducing China to the status of a unit in Japan's new order in Greater East Asia, but which have now been extended to include the colonial possessions of European powers in southeast Asia and the western Pacific. From previous experience and current developments in those parts of China which have come under Japanese control we know that the new order means political subservience within the area to the will of Japan, and means economical

employment of the resources of the area concerned to the enhancement of the military and economic strength of Japan.

On November 25, 1936, Japan and Germany concluded the so-called anti-Comintern pact, to which Italy later became a party, and on September 27, 1940, the conclusion by Japan, Germany, and Italy of a tripartite agreement of alliance was announced. Shortly after the conclusion of this alliance both the Japanese Prime Minister and the Minister for Foreign Affairs issued statements of an intent clearly designed to intimidate the United States.

The Japanese occupation of Manchuria in 1931 gave a strong impetus to the expansion of Japan's armaments, with the result that Japan's economy has been largely subordinated to military and naval requirements.

On September 27, 1940, the world was informed officially of the conclusion by Japan, Germany, and Italy of a tripartite agreement of alliance. This announcement followed a steadily developing trend in Japanese foreign policy. As an illustration of this development, mention may be made of the changes in the phraseology adopted in Japanese official utterances on foreign policy in the past 3 years. When Japan sent troops to north China in July 1937, Prime Minister Konoye stated that this action was taken only "to preserve the peace of east Asia." On November 3, 1938, while Prince Konoye was still Prime Minister, the Japanese Government issued a formal statement in which it announced that Japan was seeking the establishment of "a new order" based upon "coordination between Japan, Manchukuo, and China in political, economic, cultural, and other fields." On August 1, 1940, Prince Konoye, who had again become Prime Minister, stated that Japan sought the construction of "a new order for greater east Asia." Still later the Japanese Minister for Foreign Affairs stated to Ambassador Grew that it was the intention of Japan to create a "new order in greater east Asia, including the south seas"; and on October 4, 1940, Prime Minister Konoye referred to the aim of the alliance with Germany and Italy as joint cooperation to establish "a new world order."

The technique developed by Japan for the mobilization of the trade of large areas in the Far East has become quite familiar through its use in Manchuria and north China. The first step is military occupation; the second step is the establishment of a Japanese-controlled regime; the third step is the creation of a new currency; the fourth step is the attempt to drive out the Chinese national currency, the pegging of a new currency to the yen, coupled with the imposition of exchange and import and export controls which operated to permit a comparatively free flow of funds and merchandise between the occupied area concerned and Japan but which operate to restrict and impede the flow of funds and merchandise between the areas concerned and other foreign countries.

ECONOMIC AND STRATEGIC IMPORTANCE OF THE FAR EASTERN AREA

The following excerpts quoted from an article in the Geographical Review for April 1940 by Robert Burnett Hall under the title "American Raw Material Deficiencies and Regional Dependence" may be of interest:

We come now to those most important of all sources of strategic materials—the lands west of the Pacific. By "a pyramidal error of geography" the United States finds itself so vitally and overwhelmingly dependent on southeastern Asia that our entire foreign policy must be adjusted to that fact. What is to be our attitude toward Japanese expansion? Of what value Guam? Are we to relinquish the Philippine Islands? Can we stand by idly if Germany invades the Netherlands, mother country of the East Indian colonies? These and many other questions are involved. It is not an exaggeration to say that the United States would be compelled, for its existence as a major industrial state, to wage war against any power or powers that might threaten to sever our trade lines with this part of the world.

Under present conditions southeastern Asia supplies the bulk, if not all, of five first-priority materials: Manila fiber (100 percent), quinine (99 percent), rubber (98 percent), silk (98 percent), and tin (93 percent). It also supplies the bulk of two second-priority materials: Tungsten (92 percent) and mica (61 percent of preferred grade). The bulk of coconut-shell char is also produced in this region. We import as well large quantities of antimony from China, chromium from the deposits of the Philippine Islands, which are being rapidly developed, manganese from British India, and wool from China and India. From the South Pacific come large quantities of chromium from French Oceania and wool from Australia and New Zealand. Some nickel can be obtained from New Caledonia. The Netherlands Indies have recently developed an important aluminum-mining industry, for which Germany has been the chief market. New nickel deposits are now under operation on the offshore islands of Sumatra.

It seems, therefore, that the lands beyond the Pacific could completely supply the demands of the United States in 10 of the 17 strategic commodities, 6 of which are first priority. Two more first-priority commodities and one third-priority material might also be entirely obtained from southeasten Asia within a short time: chromium, manganese, and aluminum. The rapidly growing chromium industry of the Philippine Islands is of particular significance to us. We could also obtain important quantities of nickel and optical glass. In fact, only 2 of the 17 materials seem to be without productive capacity in this area: quartz crystal and quicksilver.

Certainly no other part of the world bears so vital a relationship to the United States in case of emergency. Fortunately these lands are accessible to us by way of either the Pacific or the Atlantic. There is no very important difference in distance between the Panama Canal route and the two alternative routes to the Atlantic—Suez and the Cape of Good Hope. Under normal conditions of trade, 39.45 percent of our strategic stowage is employed in trade with this region. In terms of unit-miles, the problem is enlarged nearly threefold as compared with trans-Atlantic and Western Hemisphere sources.

In summary, it would seem that in time of crisis we could dispense entirely with our strategic materials trade with Europe without too serious consequences. Neither of our two major deficiencies, quicksilver and optical glass, is a first-priority material. Neither is required in large volume, and both can be readily stored. The production of both can be greatly increased at home, and there are other foreign sources of supply.

Latin-America's monopoly, or near monopoly, of our imports of quartz crystal, antimony, and aluminum is significant; but only quartz crystal is of first priority and cannot be obtained from other lands. Chromium, manganese, and wool supplies are important but not—at least at present—adequate; and other sources are available. Canada's virtual monopoly of the nickel industry, the potentialities of tropical America in coconut production, the possible expansion of Bolivian tin production, and the possible redirection of Argentine and Uruguayan wool exports increase to seven the materials that might be obtained entirely in the Americas. Certainly Western Hemisphere self sufficiency will not be attained within our time.

Africa's manganese and chromium are important to us and may well become more so; but if our South Atlantic routes should be severed, both materials are available elsewhere.

Our dependence on Russia is so specialized, and our relations with Russia so doubtful, that our trade is already rapidly shifting to other sources.

Only on the lands west of the Pacific, and especially on southeastern Asia is our dependence so vital and complete that our very existence as a great industrial power, and perhaps even as an independent state, is threatened if the sources should be cut off.

Who Determines Our Foreign Policy?

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

RADIO ADDRESS OF HON. ROY C. WOODRUFF, OF MICHIGAN

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following radio address delivered by me over blue network, National Broadcasting Co., Monday, August 4, 1941:

The American people within the last week have had revealed to them the extent to which the administration apparently is going toward involving this Nation in a shooting war. This is done while our Army is still unprepared and unequipped, and without approval, advice, or consent of the Congress, or of the people themselves.

It has been noted for the past 2 years that most of the accurate information about the administration's foreign policy does not come from Washington, but from London. For the past 2 years events have been foretold, and movements and policies of the administration have been accurately foreseen, by statements coming out of London. At the very time when the administration was denying it intended to do certain of these things, officials of the British Government were saying the United States did intend to do these things. In practically every case the administration did do exactly what London officials said it would do, despite New Deal denials to the contrary.

Again we have such a situation confronting the American people. The country is against war. The people do not like and do not want any close hook-up between the bloody dictatorship of Joe Stalin in Russia and the free constitutional republic of the United States of America. But within the matter of a few days, Harry Hopkins, superboss of the $7,000,000,000 lend-lease-give program, arrived in London on a secret mission.

He made a speech in which he bluntly told the British something the American people had not been told—that American warships are convoying materials to Britain alongside British warships.

Prime Minister Churchill tells the House of Commons and the British Nation that the United States "is giving us aid on a gigantic scale, and is advancing in rising wrath and conviction to the very verge of war with Germany." Immediately thereafter we hear that Mr. Hopkins is in Moscow clasping the bloody hand of the Russian dictator, Joe Stalin, and promising him every help he asks for at the very time our own troops do not have the equipment with which properly to train.

As a result of the inexplicable policy of the Roosevelt administration, our Nation is confronted by the most serious challenge in its history to its continuance as a free constitutional government.

By successive steps we have been led down a dangerous road toward war. Each one was taken while the people were being assured it was a step in exactly the opposite direction. Each inevitably led to the next. As the Nation is thus led along this road which has brought us to the circumstances and conditions we face today, the people are being told that "since we have gone this far, there is nothing for us to do but go ahead." I wholly disagree with that policy of futility and blind recklessness.

Those who continue to urge us along this road at headlong pace constantly repeat, parrot-like, the insistent assertion that "the people are united on this course of action; they have approved this policy." This assertion is not true, and no amount of repetition can make it true. It is a subterfuge and a device of the propagandists. The people haven't been consulted in advance about any of these policies or acts which have taken us down the road we are traveling. They haven't been asked—and in most cases they haven't even been told.

Our trouble has been that those who want to plunge us headlong down the road to war have not met the criticisms; they simply insisted on abusing the critics. They have not been willing to discuss principles and policies, ways and means; they have insisted on hurling epithets and on making abusive personalities take the place of fair discussion and honest answers. That situation is worse today than it has ever been. The administration does not want to explain its actions, disclose its policies, or account for its expenditures to the people of this country.

Jealousies, bitter quarrels, and mutual suspicions have split the administration's advisers into groups and cliques. Confusion has resulted. The work on the national preparedness program is lagging desperately, while the administration advisers fight and quarrel over who shall have authority and exercise direction.

Recently, the House minority leader, the Honorable JOSEPH W. MARTIN, Jr., pointed out in a statement to the press the grave danger inherent in this bickering and confusion and lag in the preparedness program. The warnings issued then have since been strikingly confirmed. It is revealed that the delivery of machine tools to the Navy is only about 40 percent of schedule. The schedule is only a tenth of what it should be, we are told. In spite of this situation, during the first 4 months of this year we exported—sent out of the country—these tools in the value of $8,000,000.

A bitter dispute between William Knudsen, the able, practical, and experienced production man, and Leon Henderson, the inexperienced, impractical theorist, has shaken the whole flimsy structure of the national preparedness organization—and the end is not yet. We need men and women in charge of the preparedness efforts whose experience, character, capacity, and integrity will inspire the Nation with confidence, courage, resolution, and activity.

Now this attitude, these concealments, these mistakes, and this intolerance of criticism—this unwillingness of the administration to be candid with the people or to submit to any policing of its actions or any audit of its spending, has operated—in conjunction with the events in other parts of the world—to bring about conditions which are dangerous in the highest degree to the security and welfare of this Nation. These conditions must be remedied and remedied quickly. Only the people, by expressing to their representatives in the Congress, and to the President, their determination that these conditions shall be remedied, can bring about the desired result. And we can then keep out of a shooting war.

As it is, we are being plunged headlong toward active participation in a shooting war, for which we are wholly unprepared, either in trained men or equipment, machines, or munitions. Harry Hopkins tells us in a speech from London that the American Navy is convoying British supplies. If this is true, it is a gross overstepping of Presidential authority; it gives the lie to direct and emphatic testimony by Cabinet members before congressional committees; it is a gross definance of the Congress.

Broken promises, contradictory policies, and unexplained inconsistencies are causing the people to lose confidence in the integrity and the capacity of the administration.

The people are beginning to fear audibly that the administration is still centering its eyes and its efforts on continued social experimentation, and on trying out social theories rather than on the paramount and desperate need of proper national preparedness, the one thing that can keep us out of war and perpetuate our liberties, This causes the people to grow more and more uneasy.

The people have awakened to the fact that little if any effort is being made by the administration to achieve efficiency and economy in our nonpreparedness expenditures. They fear the political bureaucrats are bent on perpetuating themselves in powerful and profitable positions by continuing the spending. Those conditions must be remedied. Definite and unmistakable evidence must be given the people of the intention of the administration to at least try to hold down the soaring national debt as much as possible by striving for efficiency and economy in the nonpreparedness as well as in the preparedness efforts.

The people are beginning to realize that excessively high taxes will face this Nation for generations to come. They are beginning to see that these excessive taxes are made necessary as much by the squandering of public funds throughout the last 8 years as by the necessary expenditures for national preparedness. Excessive taxation is the most dangerous cause of grave discontent among peoples, and of the overthrow of governments.

Our people are becoming aware that economic confusion inevitably wil follow the end of the preparedness spending and the termination of the wars. This economic confusion will pervade the world, and may well be vastly more dangerous to the security and freedom of our people than the war itself.

These are the dangers which confront us. There is nothing to be gained by closing our eyes to them. There is less to be gained by abusing those who point them out and who seek remedies for them.

There are those who would like to brand all critics, all those who counsel caution and care, as cowards or traitors. That will gain nothing either for the Nation or for those who would force us into war. There are those who voice futility and say, "Yes; those dangers confront us, but it's too late to do anything about them now. We must go ahead and hope for the best." I repudiate any such theory. It is not too late for the American people to avert these dangers. It is not too late for the American people to demand of their Congress and their Government efficiency and economy. It is not too late for the sane-thinking, liberty-loving, patriotic Americans to do something about this.

We American people are Americans first and political partisans after that. Where the question of the national security is concerned, the American people always have risen above partisan politics. We will do so now. Men and women of every shade of political opinion are joined in an effort to keep this country from active participation in the ghastly wars of the Old World.

Free government is struggling for survival in America—not so much because of conditions in other parts of the world as because of conditions at home. It is true we are more or less affected materially by conditions in other parts of the globe, but it is also true we are the most completely self-contained Nation on earth.

We have the genius, the intelligence, the technique, and the capacity for the greatest production of everything of any nation in the world.

What is needed in this crisis is straightforward, intelligent leadership, the reestablishment of a national confidence which will unify the people in a single-minded effort for national preparedness. This can come only if those in high authority will concentrate their efforts toward keeping us out of this war instead of taking us in, and turn their attention to giving America a preparedness so powerful no nation or combination of nations will dare to attack us.

This can be achieved. Efficiency and economy are always practicable if an administration sincerely wants to achieve efficiency and economy. The people themselves can force this. Most of the American people belong to some civic organization or another, to some religious or educational group. In and through these groups, ready at hand, citizens can voice their demands and lend force to their will for peace and for unity, for efficiency and economy in the national preparedness effort.

It requires no courage to be popular It sometimes takes real courage to pursue the right course. But only the right course, the wise course, will preserve and perpetuate free constitutional government and personal liberty in this land of ours. Congress must see to it that the right course and the wise course are followed. We must not gamble with the security of America.

Write your Congressman and your Senators. Let them know you want no part in the perpetual wars of the Old World at this or any other time. Do it now, while there is yet time to save for the children of the future the freedom and the opportunity we have in the past enjoyed.

Oregon Strategic and Critical Materials

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

STATEMENT OF EARL K. NIXON, DIRECTOR OF THE STATE DEPARTMENT OF GEOLOGY AND MINERAL INDUSTRIES OF OREGON

Mr. ANGELL. Mr. Speaker, one of the problems facing us in our national-de-

fense program is securing the necessary strategic and critical materials, particularly those we have been accustomed to secure from foreign sources. I have long urged that our Government adopt a program having for its purpose the development of our own sources of supply of these much-needed materials. It has now been demonstrated that many deposits which are subgrades, with modern scientific methods and cheap hydroelectric power, may be profitably mined and utilized. We have large deposits of many of these materials in the West and with low-priced hydroelectric power developed on the Columbia River we could supply some of the needs for these materials.

United States Senator RUFUS C. HOLMAN recently held a meeting at Portland, Oreg., of the subcommittee of the Committee for Military Affairs of the United States Senate, which has been making inquiry into this whole subject. Previously, meetings of the subcommittee were held in the Capitol and many witnesses were heard. Mr. Earl K. Nixon, director of the State Department of Geology and Mineral Industries of Oregon, appeared at the Portland meeting and presented some interesting data and factual information with reference to the sources of supply of these materials in the Northwest, and particularly in Oregon.

Under leave heretofore granted, I include in my remarks the statement of Mr. Nixon, which is as follows:

STATEMENT OF EARL K. NIXON, DIRECTOR OF THE STATE DEPARTMENT OF GEOLOGY AND MINERAL INDUSTRIES, AT A HEARING IN PORTLAND, OREG., OF THE SUBCOMMITTEE ON STRATEGIC MINERALS OF THE COMMITTEE ON MILITARY AFFAIRS OF THE UNITED STATES SENATE

The statements and summaries I wish to make refer to the domestic production of strategic and critical raw materials or, more specifically, to the reasons for the current deficiency in such production. I shall make recommendations for the correction of the situation and trust that these recommendations may receive proper consideration.

First, I wish to present herewith for the RECORD some tables promised either by Mr. Allen or myself earlier in the testimony. Index maps to accompany the tables are being transmitted to Mr. Malone, as he requested.

Referring now to chromite, we submit the following tonnage figures covering Oregon deposits only, except as noted.

General location	Number of properties	Number of properties in estimate	Chromite	
			Probable ore	Possible ore
			Long tons	*Long tons*
Central Oregon	20	12	[1] 125,000	[1] 125,000 [2] 5,000
Southwest Oregon	170	7	[3] 20,000	[3] 75,000
Coastal area (sand)	(4)	5	[5] 80,000	[5] 1,000,000
Northernmost California	30	10	[3] 75,000	[3] 250,000
Total	220	34	270,000	1,455,000

[1] This includes ore running higher than 25 percent chromic oxide (Cr_2O_3).
[2] Metallurgical grade.
[3] Not listed.
[4] This material is black-sand concentrate of the beaches and back beaches of the Oregon coastal area, running more than 25 percent chromic oxide.
[5] These figures include both metallurgical grade and other ores down to 25 percent chromic oxide.

The above figures are derived mainly from an inventory of Oregon chromite ores made by the Oregon State Department of Geology and Mineral Industries in 1939 in anticipation of increased demand for the ores.

Referring now to manganese—an inventory of Oregon manganese occurrences recently made by this department indicates that there are some 80 localities where manganese-bearing materials have been found. Fifty of these are in southwest Oregon and the remainder in eastern Oregon. Only a few of these properties have produced any manganese ore commercially. Since the manganese ores or minerals, in most cases, are siliceous or of low grade, there has been little development or exploration of them. Consequently, we are unable to present any acceptable figures as to tonnage even in the "probable" and "possible" categories. It should be stated, however, that some tonnages of low-grade manganese ores, running 25 to 35 percent manganese, could doubtless be produced and would be produced if there were any market for such ores. Both chemical and mechanical concentration might be applicable to this type of material.

As to the zinc possibilities of Oregon, the tonnage figures in the following table are taken from an inventory recently made by the Oregon State Department of Geology and Mineral Industries covering properties in this State. Although between 25 and 50 properties in the Cascade Mountain area are mentioned in United States Geological Survey reports as carrying zinc in their ores, the figures summarized below include estimated reserves of only a half dozen of the more promising.

District	Calculated as contained metallic zinc		
	Proven	Probable	Possible
	Tons	*Tons*	*Tons*
North Santiam	7,500	20,000	75,000
Silver Peak	2,100	3,000	6,000
Bohemia	7,500	12,600	44,000
Total	17,100	35,600	125,000

The above estimate covers tonnages of Oregon zinc ores that run in excess of 5 percent metallic zinc. Some of the ores, as in the Silver Peak and Bohemia districts, carry substantial percentages of copper, lead, and also precious metals A number of additional properties, in which zinc is an important factor, would doubtless be opened up if there were a smelter in the lower Columbia River area to utilize the concentrates.

Speaking in general as to the difficulties that have beset the strategic-minerals phase of the national-defense program, it seems perfectly obvious to me that whether it be the Government or any large corporation or agency that is sorely in need of such commodities as chromite, manganese, et cetera, the agency in need must pay the price in order to obtain the product. The principal reason that these strategic minerals are not being produced in this country in sufficient volume is that too low a price is being offered to the producers. These strategic minerals come in small packages in nature. It is normal for the value of any desired product to be governed in part by its scarcity. The Government must produce these strategic products by subsidy or pay an adequate price to individual producers.

If I just had to have 500 saddle horses, I would round up four or five horse traders or horse buyers, send a couple to Kentucky, one to Missouri, one to California, or wherever they raise horses, provide these buyers with plenty of money, and tell them to get busy. Their only instructions would be, "Bring back saddle horses and put them in the corral." There would be no specifications as to whether they be 12 hands high, 16 hands high, double-gaited, five-gaited, or pie-faced. They must be saddle horses, not farm plugs, Percherons, or Shetland ponies.

That is the way the Government will have to go about buying and stockpiling some of these strategic minerals. The Metals Reserve Company cannot expect to sit in their offices in Washington and receive visits from time to time from prospectors and miners in Oregon and California who have 100 or 500 tons of chromite or manganese ore somewhere back on a mountainside. They might do it for iron ore or zinc or copper or some of the rest, but not for chromite, for example. It is a different kind of an animal. The strategic-minerals buying program has fallen down in part because of the failure on the part of those in charge to understand the facts as regards habit, distribution, and ownership of the strategic-mineral ore bodies and properties themselves and other facts pertaining to their economics.

In this emergency the consumers of these strategic materials may have to content themselves with considerably lower grade materials than they would like. They have done it before; they can do it again. They may have to change their methods to include using the metal instead of the ferroalloy since apparently the pure metal can be manufactured from these low-grade ores that we have. This idea applies especially to manganese and chromium.

Freight rates in southern Oregon and northern California are among the highest in the United States. Both truck and rail rates from the chromite areas to points of consumption are unusually high. This is difficult for eastern purchasers to understand. It is because we have mountains in this country principally, but even so the rate structures on strategic materials need looking into.

Had anything like a reasonable regard to the element of timing been employed by the powers that be through the years, much of the present embarrassment would have been obviated. Now that we see how critical is this element of timing there seems still to be a most regrettable apathy toward taking the immediate steps that unquestionably will be necessary to place the Government in anything like the safe position it would like to be in. A case in point is that the more important chromite deposits are in the high snow country; delaying a road program even for 3 months is most likely to defer any possibility of obtaining certain substantial tonnages of the higher grade chromite for nearly 12 months. The same applies to quicksilver in some places. The fatal effect of red tape and picayunish scrutiny of priorities covering supply of machinery and maintenance materials to the strategic mineral producers is obvious and is having its effect on the actual production of these materials.

Summing up then, we have the following specific recommendations:

1. Ore prices: A higher price must be paid for these strategic minerals or there will be an insufficient incentive to bring about adequate production by the multitude of small operators. (This applies primarily to chromite and manganese.) For chromite, we would suggest that the following minimum base price for ore at the mine should start some ore coming out—75 cents per long-ton unit for ore running 45 percent chromic oxide, and 1 cent per ton unit additional for each increase of 1 percent of chromic oxide. Thus 45-percent ore would bring $33.75 at the mine, and a 50 percent Cr_2O_3 ore would bring $40.

2. Roads: The prompt completion of a mine-to-market accessory road program by the Federal Government will be essential in getting out a satisfactory tonnage of some of the strategic minerals. It is as important to provide roads to get mining machinery and even equipment for exploration in, as it is to get the product out of the many inaccessible localities.

3. Purchasing system: The present Federal purchase system has been demonstrated as wrong. Individual producers are unprepared

to go back to Washington, sit down with the Metals Reserve Corporation and try to work out contracts for relatively small tonnages of ore. In other words, Federal buyers, each with full authority to negotiate, must go into the field and deal directly with the producers, stock piling the ores obtained in whatever quantities are supplied.

4. Ore specifications: Specifications for strategic minerals must be made more lenient in order that domestic producers can produce the types of domestic strategic ores that exist, rather than the types that consumers have been in the habit of receiving in the past mainly from foreign sources. The present specifications for screening, maximum sizes of chunks, and amount of fines could well be stricken out in the cases of chromite and manganese, at least. The specification for metallurgical grade of chromite ore might well be reduced to 44 or 45 percent Cr_2O_3.

5. Guaranties: Insurance in some form—short-term amortization of plant, relief from certain taxes, or otherwise, must be given to domestic producers in order to assure their interest in producing strategic minerals. Past experience involving cancelation of contracts is not a pleasant memory.

6. Import tariffs: Federal Government must recognize that its import tariff policy may act as a strong incentive for or deterrent against prospective strategic mineral production. The maintained tariff on quicksilver, for example, has been a factor in placing the domestic quicksilver industry in the strong position in which it is today. Import tariff cuts on manganese in recent years have had a disturbing effect on some who would have been domestic manganese producers. To remove import tariffs on all strategic commodities at this time in order to save a few dollars to the Government on their possible purchase of foreign ores would be false economy in the light of the effect that such a move would have upon domestic producers.

7. Priority red tape: The Federal Government, in allowing interminable delays through red tape in priorities, is handicapping especially the quicksilver producers who have great difficulty getting machinery and maintenance supplies. All strategic mineral producers should have the same priorities as consumers—A-1-A ratings.

8. Facts lacking: There is a lack of facts on the part of officials and consultants of the O. P. M. and others in Washington in regard to the supply of zinc ores in the Pacific Northwest. Furthermore, it was brought out at this hearing the there seems reason to believe that the wishes of a handful of large eastern zinc-smelter people have more weight with the O. P. M. in regard to authorization of an electrolytic zinc smelter for the Pacific Northwest than do the real needs of this section, as well as the critical need for new zinc-smelting capacity in the United States. We have been unable, so far, to break down the erroneous impression by O. P. M. that we have any important quantity of zinc in the Pacific Northwest. Whereas, as a matter of fact—it was brought out at the hearing that at no point in the United States at this time does there appear to be a more favorable point than the Portland area for a zinc smelter, considering cheap power, transportation, and availability of zinc concentrates.

9. Power needs: It was brought out forcefully at this hearing by Dr. Raver, Bonneville Power Administrator, who gave facts and figures, that the power program at Bonneville and Grand Coulee must be stepped up to meet industrial demands within the next 3 years.

10. Stock-piling subgrade: It is our opinion that the Government would be justified in stock-piling chromite ores at or near their points of production that run as low as 25 percent chromic oxide. Private interests will not do this. However, the Government could afford to, in order to anticipate the utilization of such ores by processes now completed or under study. We make the same recommendation for subgrade manganese ores of oxide type, running as low as 25 percent elemental manganese.

We further recommend that serious consideration be given to the matter of stock-piling zinc concentrates. They would have to be stocked under shelter to protect them from wind loss. Zinc shipping ore of smelting grade could similarly be stock-piled, although subgrade materials to be concentrated could not be stock-piled more than a year or 2 owing to their tendency to oxidize. A program of purchase and stock-piling by the Goverment of zinc concentrate in the Pacific Northwest would offer a strong incentive for the development of many mines now idle, and at the same time the accumulation of such reserves would help justify the installation of an electrolytic zinc smelter on deep water in this area.

11. Pilot plant: The matter of processes for utilization of subgrade domestic strategic minerals must be given serious and prompt attention. We haven't needed processes because in the past we could obtain ample supplies of high-grade foreign ores. Now we must utilize lower-grade domestic ores. Money should be appropriated for use not only by the Federal agencies but also by the State or even private agencies that have already gone some distance in developing such processes.

Appropriations for pilot plants and metallurgical process work should be promptly forthcoming to justify continued attention to the development of domestic subgrade strategic minerals.

12. Cooperation: There have been too little cooperation and exchange of ideas between the Federal technical agencies and the Office of Production Management in Washington, and the local State and private agencies in the strategic mineral-producing areas. Whereas the local Portland officials of the Bonneville Administration cooperated excellently with the local and State agencies in the Pacific Northwest, there is a distinct lack of such cooperation between the Washington headquarters of other Federal agencies and the western groups. Local agencies are usually well informed and can furnish acceptable information and details which should receive serious attention in Washington.

13. Freight services: Rail freight rates in some of the western strategic mineral-producing areas are among the highest in the United States. It was brought out at the hearing that a complete review and study of freight rates as they apply to the movement of raw materials should be made. Since the disparity in ton-mile freight between manufactured goods moving west and raw materials moving east has a bearing on the logical location of industry, this matter is an added reason for a review of freight structure.

14. Timing: We had better get serious on the question of timing on the entire strategic-minerals program. Some remedial measures must be taken now—not 3 months or 6 months from now. Conditions must be anticipated much further in advance. In this connection the master minds in charge of the defense program are handicapped by lack of facts on the conditions in regions remote from Washington. Many of these facts could easily be obtained if the opinions of individual producers, engineers, and public agencies, located in the area, were sought.

Throughout this hearing the question of giving better attention to the element of timing has been stressed by various witnesses. In the production of strategic minerals the time element is an especially important factor. We recommend that red tape be eliminated and short cuts taken at every possible point.

A Citizen's Peace Petition

EXTENSION OF REMARKS

OF

HON. JOHN M. VORYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

Mr. VORYS of Ohio. Mr. Speaker, the citizens' peace-petition committee, of which Dr. John Haynes Holmes, of the Community Church of New York, is chairman, and Miss Helen Alfred is secretary, is a nonpartisan, unsubsidized organization, the purpose of which is to organize public support of intercession by President Roosevelt in behalf of an early peace. I spoke last night from Washington over the Columbia network under the auspices of this committee, being introduced by Miss Alfred. I wish to read to you their petition, with its heading and their reasons for signing it:

CITIZENS PETITION FOR AN AMERICAN PEACE OFFENSIVE

Whereas as citizens of the United States of America we are opposed to American entrance into the present wars; and

Whereas as human beings we believe that everything possible should be done to stop the destruction of human values and the slaughter of men, women, and children which these wars entail: Therefore we urge the President of the United States to use the influence which he possesses as the elected representative of the American people for the cessation of hostilities and the achievement of a just peace.

Five reasons for peace offensive now

1. The war-weary, mourning masses of Europe, Asia, and Africa long for the end of wasteful wars.

2. The longer peace is delayed, the more chaotic the aftermath.

3. Return to a peacetime economy is the most certain way to weaken the foes of democracy with their production geared to war.

4. If the United States of America, as a nonbelligerent possessed of a vigorous, loyal people, is strong enough to aid in winning wars, it has sufficient influence and ingenuity to aid in ending them.

5. A Nation-wide demand by American citizens for peace will insure action by the President to induce warring nations to cease fighting.

Mr. Speaker, yesterday this House was almost evenly divided on the question of extension of the draft. We are divided on many questions, yet in this time of uncertainty and disunity we are all absolutely certain, and completely united, on two things. We all want peace; we all know peace is coming someday. Isolationists and interventionists differ on the best way for us to make peace more secure; an increasing number of people in both camps, or in neither camp, are convinced that, as a practical matter, if the war continues long enough, we will be in it, and our only chance of keeping out of the war is for the war to stop. We are all united, however, in wanting peace, for ourselves and the world, someday; and we know that, while war for us is not inevitable, peace is inevitable.

WHY GIVE HITLER THE INITIATIVE IN PEACE?

Yet we insist upon giving Hitler the initiative in peace, as in war. Anthony Eden, Lord Halifax, our own leaders are warning us, preparing us, against another Nazi peace offensive. Why do not we take the initiative? Why should not we take the offensive against Hitler now with our own peace proposals? The time is ripe for an American peace offensive now.

THE TIME IS NOW

We are not ready to fight now and the world knows it. We can send token forces of planes and ships and men; we, too, can take part in heroic evacuations, but we are just not ready for a military offensive. If we go beyond aid short of war, we may find ourselves in war short of aid.

On the other hand, we are getting ready fast and the world knows it. We are in a strategic position, now, before we go in, to launch an American peace offensive.

We are told this is not the right time. Once we are fighting, there never is a right time. If we are losing, peace talk sounds like surrender; if we are winning, peace talk sounds as if we were demanding a surrender; if there is a stalemate, peace talk sounds as if we were afraid of losing.

On the other hand, right now, when we are not ready to fight, but will be ready soon, we can lead the world in a peace effort, not of appeasement, not of defeatism or surrender, but of justice, for the world knows we are leading through strength and not through weakness.

We are ready now with potent weapons of peace—wheat, and cotton, and gold, and friendship. Used with courage and shrewdness these are almost irrestible weapons.

WE WILL NOT TRUST HITLER

The immediate objection comes, "You cannot trust Hitler." The answer is, we will not. We will not propose or accept a nonaggression pact dependent solely on Hitler's "honor." We will insist upon guaranties by both sides so that we will not have to rely upon Hitler's word, and Germany will not rely upon our word, or Britain's word. Terms could be arranged for impounding arms, planes, battleships, under joint or international control, pledging them as security, to keep the peace; strategic bases and positions could be put under similar control, other conditions could be arranged that would involve no injury or loss of prestige to any nation intending to keep its agreements, so that carrying out the peace would depend upon more than Hitler's mere promise.

WHY GERMANY WOULD AGREE

But we are told that Hitler would never agree to any such terms, or to any decent terms now. We have an epidemic of mind readers. People who cannot tell you what Hitler will do in war next week or next month or next year, can read his mind as to what he will do in peace now, and 10 years from now. They get it from something he wrote or said, although they say you cannot trust his written or spoken word.

I do not pretend to be able to read Hitler's mind, but I can see many reasons why he would not dare to refuse fair peace terms now. His people have had their fill of the glories of war this summer; their civilians have been bombed by the British; they are weary of the rationing, the casualties, the hard labor, the propaganda that goes with war; our possible entry brings up ominous memories of 1917–18. The mind readers may be wrong about Germany and peace.

Another reason for Germany to agree to peace is because they think their system will defeat us in peace. I do not. I believe in the fundamental efficiency of the American system in competition with any other. The propaganda book, You Can't Do Business With Hitler, gives an example which shows how we did do business with Hitler, to our advantage. With Barnie Baruch, I believe that our doing post-war business with Hitler would ruin him, not us. He may be the most successful leader of a godless totalitarian war economy but he can never hold out against a Christian democratic peace economy.

MORE THAN HITLER IS INVOLVED

We overpersonalize and oversimplify this struggle. "Beat Hitler" is a war cry, but it is not a foreign policy. If Hitler were to die tomorrow, if, in fact, he is now dead, the struggle is not over if his system stands. If, on the other hand, his system fails or is overthrown from within or without, then Hitler will not matter any more than the old Kaiser, who died recently, too insignificant to be hated any more. We used to hate Stalin, too, but his picture recently appeared with Harry "Lease-Lend" Hopkins in the paper as our great new friend and ally.

If, however, Hitler alone stands in the way of peace, we should tell the German people about it. If we are embarked upon a policy of dictating who shall be the rulers of other countries, we should at least be explicit. Do we demand Hitler's abdication or surrender or execution? How many besides Hitler are on our blacklist? Goering, Goebbels, Himmler? Rudolph Hess is already gone. We should be willing to state our definite demands and our reasons as part of our peace aims. If Hitler alone stands in the way of a just peace for 80,000,000 Germans and half a billion Europeans, perhaps the majority of all but 1 will eliminate him. On the other hand, we must be equally explicit about what we intend to do. A mere V campaign is not enough. Remember V stands also for Versailles, the treaty that followed victory last time. We must offer something better than a new Versailles as part of our peace offensive.

EVENTUALLY—WHY NOT NOW?

Some day we will have to do this: Think through what our peace aims really are. I have asked my interventionist friends to state just what they would do to Germany if we fought Germany and won, and those who are honest and farseeing, and who do not let their hatred and selfishness run away with their common sense and perspective will finally arrive at terms that would form a satisfactory basis for a peace proposal now. The danger is that once we get in, we could not talk to each other or to Germany; and if we went in and won, our hatred and pride and our weariness would overcome our common sense and foresight. This has happened before. We know that peace is not made wisely in the flush of victory. For this reason we do not want to see the peace dominated by a triumphant Germany, or Russia, or Japan, or Britain. We can make peace better now when there is no victor.

But some will say this would only be a truce. I do not think so, but suppose it were only a truce for a few years. Who would be the loser? We need those years to prepare. On the other hand, as Churchill said, Hitler's "machine cannot stand idle, lest it rust or fall to pieces." Delay is on our side.

Whenever we make peace, I hope that this time we will know that it is not perpetual, that it is only a truce, long or short, unless we wage peace as wisely and as bravely as we wage war.

OUR PEACE AIMS

What are our peace aims? Many thoughtful Americans are studying and discussing this.

Our State Department has a committee and a research section working on the economic phases. We have had vague and general statements from our President, with his four freedoms; our Vice President, with his Pax Democratica; Secretary Hull and his five economic points; Undersecretary Welles' broad proposal of "some adequate instrumentality * * * for * * * peaceful and equitable adjustments," guaranteeing disarmament and equal economic rights for all peoples.

All of the thoughtful American proposals, vague and various as they are, have one thing in common; they describe a world, an America, which is different. They recognize that some sort of world

revolution is going on, as a part of and cause of and result of this war. We are never going back to the "good old days." If America can think through just what this new way should be, and give it to the world, we can make this a better country, a better world. This is a labor of more than one man or group. It must be part of our peace offensive.

LAUNCHING THE OFFENSIVE

To formulate, launch, and carry through an American peace offensive will require Presidential leadership, but the President cannot do it alone. After Europe's experience with President Wilson, and in view of the unreliability of Executive statements in Europe and elsewhere, something more than Presidential action will be needed. We must have congressional authorization and commitments beforehand, and an informed public opinion behind the President and Congress.

THE PEACE PETITION

The purpose of the Citizens' Peace Petition Committee is to stimulate such a public opinion; to back the President in his peace efforts; not to dictate nor demand, but to "urge" him to use his influence toward the one goal on which we are all united, "the achievement of a just peace." I would urge every American citizen who is not just for war, not just for staying out, but for peace to sign this petition.

Taxes Under Social Security Act

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

STATEMENT OF AMOUNT OF TAXES PAID BY STATES AND TAX INFORMATION BY AMERICAN TAXPAYERS ASSOCIATION

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement which gives the amount, by States, of taxes paid in and the amount of benefits paid out of the unemployment trust funds, as of June 30, 1941:

Unemployment trust fund as of June 30, 1941

	Paid in by employers	Benefits paid out	Interest on excess	Balance in trust fund
Alabama	$39,229,843	$19,010,000	$1,127,540	$21,347,384
Alaska	2,265,625	1,113,378	73,198	1,225,444
Arizona	9,147,522	5,553,235	236,471	3,830,758
Arkansas	13,783,921	7,357,846	502,310	6,928,384
California	323,704,623	169,613,779	11,856,959	165,947,803

AMERICAN TAXPAYERS ASSOCIATION, INC.,
July 19, 1941.

BUSINESS IS BEING GOUGED BY SOCIAL SECURITY TAXES

TAX INFORMATION SERIES NO. 17

We were talking the other day with a businessman from New Jersey.

"The way Jersey employers are soaked by the 3-percent pay-roll tax for unemployment benefits is a crime," he said. "We're paying nearly five times what we should pay. Something ought to be done about it."

Next day we got the New Jersey figures from the Treasury Department. They covered the full period of operation of the social-security unemployment benefit program from February 1, 1936, when it became effective, to June 30, 1941, close of the fiscal year. Here's the showing.

Collected in taxes from employers	$187,595,000
Paid out in unemployment benefits	42,193,521
Excess tax over payments	145,401,429

The official figures backed up our friend from New Jersey. For every $1 paid in unemployment benefits in his State over the past 5 years, the Government had collected nearly $4.45 in pay-roll taxes. The accumulated excess ran to $145,401,429.

But that was not all. Under the law the excess must be invested in United States bonds. These are deposited in an Unemployment Trust Fund in the Treasury. They bear 2½ percent interest. The interest on the New Jersey excess amounted to $8,078,401. Added to the excess, it brought New Jersey's balance in the fund up to $153,479,880.

Thus, while employers were taxed 445 percent of benefit payments, the excess also helped swell the public debt. Under the law, the Treasury had to issue $145,401,429 in United States bonds to cover New Jersey's excess.

On those bonds the taxpayers must pay 2½ percent interest. Our New Jersey employers as part of the general public are taxed about 4½ times as much as necessary and then are taxed to pay interest on the excess. They are soaked in the first place and then are charged interest on being soaked.

This is a one-way form of so-called social security.

Looking at New Jersey's $153,479,880 balance in the trust fund, we did a bit of figuring. Suppose we assumed that this 3-percent tax were wiped out entirely, how long could benefit payments continue from the trust fund alone?

Disregarding all interest our calculation showed that the fund is sufficient to pay benefits equaling 3.63 times the amount paid in the past 5 years. On that basis payments could be made for 3.63 times 5 years. Or, to put it another way, for 18 years, 1 month, and 24 days.

That would carry us up to July 24, 1959. On that date the trust fund, without benefit of interest, would be exhausted. No tax, no interest, and enough in the fund to last till midsummer of 1959. Some fund.

So much for New Jersey. What about the other States? Are the employers elsewhere overtaxed? Are they piling up huge reserves and swelling the national debt? Are they being charged interest for being overtaxed in the first place?

They are. Everywhere. The situation is Nation-wide. It applies to every State.

For the eight most populous States, the official Treasury figures covering the full period of the law's operation—from February 1, 1936, through June 30, 1941—show the amazing situation:

State	Employers' tax payments	Interest on excess	Benefit payments	Balance in trust fund
California	$323,704,623	$11,856,959	$169,613,779	$165,947,803
Illinois	290,848,014	12,569,159	90,814,014	212,603,159
Massachusetts	174,665,000	6,093,118	90,712,726	90,045,393
Michigan	204,214,675	5,175,365	112,831,486	96,045,554
New Jersey	187,595,000	8,078,401	42,193,521	153,479,880
New York	533,034,264	15,703,073	312,157,977	236,579,360
Ohio	242,438,575	10,981,985	64,678,006	188,742,554
Pennsylvania	346,125,000	9,104,742	193,198,599	162,030,743
Total	2,302,625,151	79,562,802	1,076,200,508	1,305,987,449

For lack of space the tabulation covers only States where the tax has exceeded $100,000,000. We have the figures for all the other States and will gladly supply them for any State on request.

For all 48 States, the District of Columbia, Alaska, and Hawaii the Treasury showing is:

Taxes collected	$3,621,358,523
Benefit payments	1,549,975,841
Balance in fund	2,283,657,696

Interest on the excess amounted to $131,515,856 over the period.

In the fiscal year just closed employers were taxed more than double the amount of benefit payments—$892,023,224 to $433,242,841. To the fund was credited also interest of $48,952,550. The excess of deposits over withdrawals for the year was $507,732,933.

The public debt was increased automatically $507,732,933.

The tax, bear in mind, is not a general tax for general purposes; it is a special tax for a special purpose.

It is far too high. It should be cut substantially. It is unfair to the employer, to the employee, and to the general public, which pays it in the long run.

Inasmuch as it is a special tax, we believe it can be reduced. A cut to even 2 percent would yield more than is needed and at the same time reduce the employer's burden by one-third.

We are looking further into this tax with the definite view of going after a reduction. That means a lot of work. We will need help and suggestions.

What is your reaction, please?

The Mirage of Production

EXTENSION OF REMARKS

OF

HON. THOMAS H. ELIOT

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

ARTICLE BY MICHAEL STRAIGHT

Mr. ELIOT of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a timely and constructive article by Michael Straight, which appeared in the New Republic for July 28, 1941:

[From the New Republic of July 28, 1941]

THE MIRAGE OF PRODUCTION

On April 15, almost a year after the beginning of the defense program, Mr. Biggers, Director of Production of the O. P. M., promised that within a hundred days tanks, guns, and aircraft would be rolling out of the American factories.

On Tuesday of last week the 100 days of John D. Biggers were up. The facts about production seem to be these:

Ordnance: Production is almost criminally low. There is no significant production in ordnance at the present time.

Antiaircraft: The schedules call for great increases in production. But the schedules themselves are puny in relation to need.

Ammunition: The production of ammunition is pitifully small.

Aircraft: The production of aircraft is slowly creeping up, although a year has been wasted because, largely for reasons of prestige, stress was placed on fighter instead of heavy-bomber production. For the aircraft production which we have now we can thank not the War Department nor the N. D. A. C. nor the O. P. M. but the Governments of Britain and France, which ordered the plants and paid early for them.

Railway cars: New rolling stock is essential to the defense effort if we are to avoid a crippling shortage. We need 15,000 new cars a month. We are producing no more than 5,000 a month.

Tanks: The factories are just beginning to turn out tanks, and equipment is lacking for mass production.

Shipping: We are still nowhere near an all-out shipping effort, although the present low schedules are being doubled.

Lease-lend: In the President's progress report on lease-lend of June 10, it was stated that of $1,300,000,000 worth of Army and Navy equipment authorized for Britain, $60,000,000 has been given up by the War and Navy Departments for actual shipment.

In the new heavy-bomber program, the $4,000,000,000 ordnance program, and the new shipbuilding schedules, a vigorous effort is being made by the President to raise defense production. But we are still far from an all-out effort. The War Department is just beginning to think in terms of what is needed for victory.

Why has production stumbled so badly? Each industry has its own well-prepared answer. Why do we lack airplanes? Because we lack ordnance. Why do we lack ordnance? Because there aren't enough machine tools. Why aren't there enough machine tools? The machine-tool manufacturers blame it on the steel industry. The steel industry blames it on the metallurgical industries. The metallurgical industries blame it on the transportation industry. Transportation officials turn it back to lack of steel. Is this our "brilliant if pitiless" industry that General Ludendorff once praised so highly? It has not shown much brilliance; and if it is pitiless, against whom has this quality been mainly directed? The destroyers of democracy or those who are defending it?

The responsibility for our failure so far falls first upon the officials of the Defense Administration. Their sights were set too low; they never looked ahead. They had sufficient power to act on production, but they have, almost without exception, made no dent in the production picture. The officials of the O. P. M. in each industry division are the representatives of the industry in question. The consultant on steel has been the president of the Iron and Steel Institute. The Transportation Division is the personal property of the American Association of Railroads. The Paper and Pulp Section consists of men from the Paper and Pulp Institute. The Copper Division is run by representatives of the Kennecott Copper Co. These men are recruited from the same "noble army of controllers" that nearly wrecked England. Not consciously, not deliberately. They don't try to forward their own immediate interests. But they are in Washington principally to protect the interests of their own industries. They aren't deliberately selfish; they are simply incapable of thinking in terms of the public interest.

Are these men alone to blame? If only they could be blamed, there would at least be something at which to strike. But blows aimed at the officials of the O. P. M. glance off, hitting the entire administrative structure of the defense program. It is loose, illogical, haphazard, and destructive of time and energy. It resembles the earliest attempts at administration in the first World War. These attempts were costly then and they are more costly now. But apparently we have to go through the old process of refusing to be taught by anything but our own most recent mistakes.

There are three main administrative weaknesses in the defense structure. The first is the duplication of authority; the second is the misdirection of authority; the third is the absence of central direction.

The duplication of authority is extraordinary. There is a construction section in the Production Division of the O. P. M. There is a construction section in the Priorities Division of the O. P. M. There are construction units in the Price Administration Section, and the Civilian Supply Section of O. P. A. C. S. Then there is a construction and real-estate branch of the Supply Division of the General Staff of the War Department. There is a real-estate committee of the Procurement Division of the O. P. M. There is a Construction Division in the Office of the Quartermaster General, and a construction advisory committee under this division. There is also the Construction Division of the Navy Supply Division.

In raw materials there is the Materials Section of the Production Division of the O. P. M.; the Materials Section of the Priorities Division of the O. P. M.; the Materials Divisions of both sections of O. P. A. C. S., and the Raw Materials Division of the Army and Navy Munitions Board. All of these sections and divisions break down into almost identical units dealing with iron and steel, nonferrous metals, rubber, etc.

In finished products, there is the same duplication. There is the Aircraft, Ordnance, and Tools Branch of the Production Division of the O. P. M. There are the Aircraft and the Tools and Equipment Divisions of the Procurement Division, and the Machine Tools and Equipment Sections of the Priorities Division, each with their own subdivisions, which in turn have their exact counterparts in the Aircraft and Ordnance Divisions of the War and Navy Departments. The same is true of shipbuilding and of almost all the other items which enter into defense production. Of course, some work is done in each of these units which is not, and could not be, done elsewhere. But, in the main, officials of all of these divisions toil over the same estimates, inspect the same factories, pat the same workers on the back, and give the same hopeful stories to the press. They don't always fight. Sometimes it would be better if they did.

To add to this nightmare of divided authority, there are whole sections of defense, such as propaganda and economic warfare, in which there is no authority at all. We must export the arms that we produce before they can be used, but in addition to the O. P. M., O. P. A. C. S., and the War and Navy Departments, the Lease-Lend Administration, the Tariff Commission, the Maritime Commission, the Office of the Administrator of Export Control, the Division of Controls in the State Department, the Division of Commercial and Cultural Relations with the Latin Americas, and one or more divisions of the Treasury and Commerce Departments, as well as the Bureau of the Budget and the White House, all have a hand in untying and tying up the red tape before clearance for export is finally made. Most of these civilian agencies are constantly trying to increase their own powers at the expense of the others; the results are almost unbelievable.

From the duplication of functions in the defense administration the division of responsibility inevitably results. But, unfortunately, what responsibility there is is centered in the wrong agencies. The outstanding administrative lesson of the last war, which has been so strongly stressed by Bernard M. Baruch and other wartime leaders, is that while the Army and Navy must be solely responsible for determining what war equipment is needed and at what time, the responsibility for seeing that the equipment is contracted for and produced must rest with civilian agencies. Yet today it is the War and Navy Departments which bear almost the entire burden of obtaining defense production. They decide what is needed; they chose the plant sites; they pick the contractors; they draw up the contracts. Because they are inexperienced and ill equipped for the job, it is done slowly and inadequately. But the O. P. M. is permitted to do little more than approve contracts of more than $500,000 and give the manufacturer an occasional dig in the ribs after the contract has been signed and work has begun.

It is terribly hard for people outside of Washington to realize that the officials of the O. P. M., who talk so much, do so little, but it is true. The members of the Labor Division of the O. P. M. and the Mediation Board have their jobs to do and go their own ways. The other 1,400 employees of the O. P. M. sit at their desks all day and seem to be working hard, but what they are working at, what they accomplish, what would happen if a bomb went off and destroyed them all, nobody knows. While the Army and Navy run the defense program, the officials of the O. P. M. make speeches or simply sit "pinnacled dim, in the intense inane."

Once the O. P. M. was nothing more than a little advisory commission. Now it is a great hulk of a thing and it still lives by sufferance of the War and Navy Departments. It cannot initiate any policy without their approval. It cannot for long prevent any move which they care to make. If the O. P. M. were staffed with vigorous men, they would fight for the functions which are rightfully theirs but which the War and Navy Departments have assumed and are reluctant to give up. But instead, the O. P. M. is stuffed with businessmen who are primarily concerned with protecting their own interests, and with good fellows like Merrill C. Meigs, the Chicago publisher who wandered into the Aircraft Section of the O. P. M., of which he is now chief, through his hobby of taking week-end jaunts in his private plane. It is the same story in most of the other divisions. The Army has neither the knowledge nor the inclination to insist on subcontracting in defense contracts. But Robert L. Mehornay, chief of the Defense Contract Service Section of the O. P. M., has to be himself convinced of the need for subcontracting before he can convince anyone else. Never was so much withheld from so many by so few.

In procurement, a forceful administrator, Donald Nelson, has sought to obtain more power. He has still not received it. Procurement of equipment and commercial supplies for the Army is handled by the Quartermaster General. The contracts are reviewed in outline by Nelson's Procurement Division of the O. P. M. Since Nelson does not have any actual procurement responsibilities, and since many contracts are reviewed by the Production Division rather than by the Procurement Division, it might be expected that Nelson would at least be permitted to direct the general procedures of procurement. But the Under Secretary of War has his own committee to provide this function. The failure of this committee to perform its functions was presumably one reason why the inexperienced Quartermaster Corps made so many blunders in its purchases of lumber, shoes, woolen goods, and other products. Nelson was barely consulted in many of these purchases, just as Frank Knight was barely consulted in the last war. Nelson's lack of power led him to the point of resignation in the spring of 1941.

In the administration of priorities, the division of authority is carried to the point of absurdity. Take the case of copper. The copper producers state that their production for July will be, say, 100,000 tons. Of this, 80,000 tons are preempted for Government orders by the Army and Navy Munitions Board. The Board then determines the way in which the defense needs will be given preference within the 80,000 tons preempted. A priorities schedule is prepared in which A-1 rating is given, say, to cartridge casings, A-2 to shell casings, and so on. Amounts of copper are then allotted to each and the final schedule is sent to officers in the field who issue preference ratings to the manufacturers who use the copper. A priorities order is then issued by the Priorities Division.

The allocation of the 20,000 tons which is not preempted remains. It is handled not by the Priorities Division but in the Office of Civilian Supply in O. P. A. C. S., which is without power, and whose recommendations go back to the Priorities Division to administer. Given the kind of officials in the Priorities Division who prefer allocation to expansion, it was just as well that the allocation of civilian supplies was given to O. P. A. C. S. as an insurance that the views of the priorities officials would not be carried to their ultimate conclusion in the total elimination of civilian supply. Yet the present arrangement is not a real substitute for a centralized administration of priorities. The larger part even of civilian supplies is in many cases really for indirect military use, and a division of authority in allocation results in endless confusion.

The Office of Price Administration in O. P. A. C. S. suffers from the same illogical development. It would not have been set up outside of the O. P. M. if the O. P. M. had done its job. Prices, production, and priorities are so interdependent that they are almost inseparable, but today O. P. A. C. S. and the Production and the Priorities Division are as often as not working at cross purposes.

The officials of the O. P. M. have realized how serious the lack of coordination is, and they are today engaged in reorganizing the O. P. M. on an industry basis. In the new structure of the O. P. M., which may be reached within the next 2 months, Stettinius, Biggers, and Nelson will remain in charge of the Priorities, Production, and Procurement Divisions, and will retain small staffs to administer problems of general procedure. But the lower units of each division will be brought together on an industry basis. Each industry unit will deal with priorities, production, and procurement problems, but not with price and labor problems. The units will be divided into three groups, directed by Stettinius, Biggers, and Nelson. They will be divided in such a way that the industries in which problems of priorities are predominant will be placed under Stettinius; those in which production problems are predominant will be under Biggers; and those in which procurement problems are predominant will be under Nelson. But since priorities must be of increasing importance as the diversion of resources grows more widespread, Stettinius, as Priorities Administrator, will have direct entrance to all three groups.

Each unit will have attached to it two committees—a committee of businessmen within the industry which will be purely advisory, and a coordinating committee consisting of representatives of other Government agencies, including O. P. A. C. S. and the Labor Division of the O. P. M. Labor advisory committees will also be established and have already been partially organized in the electrical, rubber, and aircraft industries. Philip Murray, however, has denounced these committees as poor substitutes for the industry councils of his own plan in which labor and business representatives are given power to administer prices, production, and priorities. Murray recently described the labor advisory committees of the O. P. M. reorganization plan as "mere tinsel, mere window dressing," and advised C. I. O. officials to refuse to serve on them.

Whether or not the Murray plan is wiser, it is clear that the present reorganization is insufficient. It does not reallocate authority between the O. P. M. and the War and Navy Departments, and it does not integrate price policies with those of production and priorities; it is simply a reshifting within the O. P. M.; a move in the right direction and no more.

Any real reorganization of the defense administration must work toward three objectives: First, since the best organization will fail if it is staffed by poor personnel, the proved failures that remain in the O. P. M. must be cleaned out and replaced on the basis of strict adherence to the rule that, while advice must be expert, administration must be independent. A clean broom would sweep before it not only such men as Meigs and the spokesmen for special interests, such as Ralph Budd, but two of the three key figures in the O. P. M., Biggers and Stettinius. Biggers today may concede his past errors and promise that the next hundred days will not be like the last. "It is a characteristic of drunkards and other addicts," said the London Economist recently, "that they are perpetually on the point of turning over a new leaf; their latest aberration is always their last one. When this trait appears in the sober and responsible sphere of public policy it is even more deplorable."

Second, the O. P. M. must be transformed into a real ministry of supply, like that of the British, which has full responsibility for procurement and production.

Third we should be working toward the integration of authority under the still unformed Office of Emergency Management. The conservatives of America have understood this need for integration and they have filled the press with the clamor for a "defense czar," which is principally a subterfuge for an attempt to seize complete control of the administration and raise a figure to challenge even the President's authority. A real reorganization of the defense administration is the best defense we could have against the growing agitation of these groups.

"We have been borrowing time from the British," said Secretary Ickes on July 14, "but we have no right to borrow any more." If we stop deceiving ourselves by words like "defense"; if we speak instead of the final superb chance to smash Hitler that the Soviet resistance has given us, then reorganization is even more urgent as the precondition of swift, all-out action.

MICHAEL STRAIGHT.

ARTICLE BY EMILY K. HERRON, OF WINTER PARK, FLA.

Mr. PETERSON of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article written by Miss Emily K. Herron, of Winter Park, Fla., which article is entitled "That Perennial Florida Canal—An Indefensible Defense Project," which article is as follows:

THAT PERENNIAL FLORIDA CANAL—AN INDEFENSIBLE DEFENSE PROJECT

Once more, like the hydra of ancient legend, this many-times-slain project of a sea-level ship canal across Florida has squirmed into life in Congress. As might have been expected, it was carefully combined with a few other costly and unpopular schemes and presented in an omnibus bill for power-development work amounting to some half billion dollars, which was approved by the House Rivers and Harbors Committee on April 30, 1941. The now sacred plea of defense has been attached to this century-old project, but before Congress yields to that pretention investigation should be made of the assertions that the canal is being advocated merely for the reimbursement of a few foolish investors at a terrible price eventually to the State of Florida and to the country at large.

As a defense measure the case is decidedly feeble. It is generally recognized that Florida is in a strategic position for the protection of the Gulf of Mexico, Panama, and the Caribbean, and also is the State nearest to the Bahamas and West Indies, as well as to South America. Much traffic will be necessary by land, as well as by sea and air, for the transportation of food, war materials, and other supplies required by our airfields, Army camps, and ship harbors in south Florida. Yet a cross-State canal would make this important part of Florida into an island, connected to the mainland by only a dozen highway and railway bridges to span the almost 200 miles of waterway—by far the longest canal in the world. Not only would this huge ditch delay north and south traffic, but these bridges, 4 of them of the lift type, would seriously retard the average 119 transits that optimistic canal proponents expect to be made every 24 hours. Of course, travel for trains, trucks, tanks, and tourists would also be very seriously impeded; and this would be especially deplorable for the motor vehicles, as the 6 highway bridges would be 40 or 50 miles apart, and the ferries would have to take grave risks among those 119 daily transits.

In advocating completion of the canal the proponents have suggested that it would be possible for an enemy to bottle up the Caribbean and prevent access to the Panama Canal from the Atlantic by placing naval forces along the Florida Straits and the islands that extend from the tip of Florida to South America, thus forcing our fleet to sail around the southern end of that continent in order to get to the Pacific. Hence they claim that a canal across Florida would enable our warships to pass safely from one ocean to the other by way of Panama. While it appears extremely improbable that our Navy would allow such a situation to occur, if a powerful enemy should gain control of the thousand miles between Florida and South America, it is not likely that the narrow entrance to the St. Johns River would be left conveniently open for us, or that the Florida Canal would be spared from attack, or that it would be any easier to defend than are the Florida Straits. An enemy capable of bottling up the Caribbean with all those island hiding places for our ships and planes, could doubtless bottle up the Gulf quite as readily, and so prevent our ships from reaching Panama by way of the Florida Canal. However, that is a problem for our Navy to solve, and long before the canal could possibly be completed, our Navy will have expanded into a two-ocean fighting force. England has already granted us strategic island bases, and we shall soon be strong enough to help in defending her, as she is now valiantly helping to defend us.

The claim of greater safety for ships in the canal is contradicted by experienced sailors. The approved route for this waterway requires 27 miles of excavation through the underwater rock shelf along the Gulf coast. Altogether the canal is to have about 400 miles of jetties and embankments, with lighthouses, signals, bridges, etc., to be guarded night and day in case of war; and it is common knowledge that a single well-placed bomb, or even a little dynamite, could block all traffic for weeks.

The Board of Army Engineers stated in their official report that a ship canal "of adequate dimensions to pass the large anticipated traffic with reasonable convenience and safety should have a depth of 35 feet, increased to 36 feet in the rock sections and 37 feet in the Atlantic and Gulf entrances." The accepted plan, however, lessens by 2 feet the depth recommended in this expert advice. What the proponents want, evidently, is a canal from Jacksonville to the Gulf, and they imply that almost any kind of a canal will do. They even discussed in all seriousness some kind of an amphibian railway for the large ships, but Congress unkindly suppressed the suggestion before the public could toy with the idea. These same proponents also proposed a barge canal along the same route, if the completion of the ship canal were again refused by Congress, thus ignoring the cross-State lock canal for barges already in use further south in Florida. In further evidence of the flexibility of their ideas as to the kind of canal that they would accept, it has been stated that the ship canal will be changed from a sea-level to a lock type if insuperable difficulties are encountered during construction, as has been predicted by many geologists and engineers. The cost of a lock canal, however, would not only be excessive but the time lost in passing through the locks would eliminate, probably, any possibility of saving a few hours for the fast freighters now in use.

Aside from the vulnerability of a narrow waterway in wartime, there are always other serious hazards for large vessels, which were pointed out by marine experts at the hearings before the congressional committees. These are the dangers of grounding and collisions, as large ships in shallow and constricted waterways are very difficult to steer, and in passing each other have a tendency to draw together and collide. We are told that it would not be possible for our great battleships to traverse the canal; and while cruisers might perhaps manage it, a commander hardly would prefer to take such risks of damage and delay either in wartime or in hurricane time, when broad, deep waters are essential to safety. The winter fogs which often prevail in this section would be a further danger in a canal which follows two winding river courses.

In addition to the heavy cost of innumerable surveys for the canal, $5,400,000 has already been spent on construction from relief funds, and it is estimated that at least $197,000,000 more will be required for its completion; but those who know of the probable difficulties that would have to be overcome estimate the further cost at possibly two or three times that amount. Construction, however, would be only the beginning of a huge annual expense bill for upkeep of the lighthouses, pilotage, the constant dredging of this 200-mile channel, the repair of bridges, turning basins, and stilling basins (where rivers rush into the channel too rapidly). More bridges might be required, for which Florida must pay, as well as for any ferries; then there would have to be lighting at bridges and bends, continuous inspection of embankments and depth, and a thousand unforeseen details. All this, with increasing deterioration, will have to be paid for year after year if the canal is ever completed. Where is the money for it to come from? From Florida in particular, and from every taxpayer in the country in general to a greater or less extent. Assuredly the shipping companies will carry but an insignificant share of the burden, as no tolls can be charged, and, indeed, all the large potential users have consistently refused to pledge any use of the canal.

But worse than all this waste of money will be the suits for damages in the 100-mile-wide belt where the most eminent geologists in the country who have made a careful study of Florida's underground water system have predicted progressive contamination of the underground fresh waters by the rise of the underlying salt water when the water table is lowered in the section of porous Ocala rock, estimated to be 30 to 50 miles long, on the canal route. Even the geologist employed by the proponents, who tried to make the best of an obviously dangerous condition there, admitted that such damage would occur, though he narrowed the belt to 15 miles on each side of the cut. At the lowest estimate, this seems to mean that some 900 square miles in central Florida would have contaminated water for municipal and irrigation purposes. As this section includes vast citrus groves, the rich celery lands, and many other valuable crops, as well as lawns and gardens dependent on the fresh-water supply when the rains fail, as they often do, this would be a great calamity for the State's sources of wealth. Would an unwanted and little used canal—a hindrance to every kind of land transportation, the destruction of the beauty of two lovely rivers, and of the vast breeding ground of rare birds and other wildlife—be worth all this great sacrifice? Hear the ominous warning of the War Department's Board of Engineers for Rivers and Harbors:

"The Board finds that the responsibility for the indirect damage which might result from an impairment of water supplies is beyond the financial resources of any organized taxing district and appears to be beyond the constitutional power of the State. This Board believes that the Federal Government must face the onus of meeting claims for such damage if the canal is built."

What about Silver Springs, Florida's greatest natural wonder? Representatives of the United States Geological Survey have expressed their belief that these springs, which are about 3 miles from the canal route, will inevitably be lowered with the water table to sea level and will disappear forever from the surface. It is stated further that the sinking of 200 feet of cement wall, with which the proponents expect to prevent this, could not possibly close all the devious ramifications of underground channels in this porous-rock formation. The owner of the springs is quite undisturbed by this dire prediction, but his strange equanimity was explained when General Markham said at one of the hearings, as quoted in one of the official reports: "If we can't control the water we can buy Silver Springs for $200,000—for a paltry $200,000." May God forgive him, for Florida will not.

It is indeed incredible that intelligent persons are willing to ignore such warnings of disaster; but the history of this project, as related in the official reports and in the press, shows the utter disregard on the part of those who advocate the canal of all possible and probable, as well as of all certain, dangerous consequences of the proposed excavation. The first appropriation of $5,000,000 from relief funds was made without congressional approval and in direct opposition to the recommendation of the Board of Army Engineers who had put years of study into the surveys. Their report, however, presented December 30, 1933, to General Markham, then Chief of Engineers, was not made public until some months after the canal had been started, and even the members of the Senate Committee on Commerce, who were required to consider the project in connection with appropriations, were not permitted to see the report at that time. It transpired later that the concluding sentence was: "That the construction of neither a barge nor ship canal is economically justified at this time."

In explanation of the delay it was stated: "At the request of local interests, action on this report was deferred by the Board of Engineers for Rivers and Harbors to afford the proponents an opportunity to assemble and present further data in justification of the project." This disregard for all interests outside of those of the local landowners and other investors in the bond issue of the Florida Ship Canal Navigation District, who hope to gain financially through the vast increase of business that this huge construction project would bring to their section, has turned many thoughtful people against the canal, regardless of any other considerations. There has been considerable unorganized and futile opposition from many citizens of high standing among the central Florida growers, garden clubs, chambers of commerce, etc., but their protests have been made in vain to these very persistent proponents, whose chief reason at first was employment for the unemployed. Later on, in view of the greater cost of shovels over machines, the idea of employing vast numbers of unskilled laborers was dropped, and the cry of defense for Panama was broadcast. Common sense is destroying that idea, and now the plea is to provide employment after the defense emergency.

Mr. Citizen, are you going to do anything about this matter? We Americans, if and when the call of sacrifice comes, will offer our all to our country as willingly as our English cousins are doing, but we have no right to sacrifice to the whims of a little group of thoughtless and selfish people, Florida's future usefulness and her beauty.

The Unemployment Situation

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

LETTER FROM RON STEPHENS, ADMINISTRATOR, FEDERAL WORKS AGENCY FOR OKLAHOMA

Mr. WICKERSHAM. Mr. Speaker, some have pointed out that all laborers are employed, but I wish to call your attention to this letter:

FEDERAL WORKS AGENCY,
WORK PROJECTS ADMINISTRATION,
Oklahoma City, Okla., August 7, 1941.

The Honorable VICTOR WICKERSHAM,
Member of Congress, House Office Building, Washington, D. C.

DEAR CONGRESSMAN WICKERSHAM: Knowing of your interest in the unemployment situation in Oklahoma, we are giving you some figures with reference to employment on W. P. A. These figures are as of July 30, 1941:

Total number assigned to projects	28,225
Private employment	19,812
Awaiting assignment	32,829
Temporarily unavailable	4,828
Total case load	85,694

We wish to call your special attention to the number of W. P. A. workers shown to be in private employment. We have always made an earnest effort in the State to place persons on W. P. A. in private employment, and we feel that one of the most worthy enterprises that could be undertaken by W. P. A. would be the continued and renewed effort to strive to place the greatest number of workers in private employment.

Your attention is also called to the fact that even though we have 28,225 persons actually assigned to projects, we still have 32,829 persons certified and awaiting assignment to whom we cannot offer a job.

If you desire any additional information on this subject, please call on us.

Very truly yours,

RON STEPHENS,
Administrator.

America Needs All Her Strength

EXTENSION OF REMARKS

OF

HON. LAURENCE F. ARNOLD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

EDITORIAL FROM THE CENTRALIA (ILL.) SENTINEL

Mr. ARNOLD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Centralia (Ill.) Sentinel of August 9, 1941:

[From the Centralia (Ill.) Sentinel of August 9, 1941]

AMERICA NEEDS ALL HER STRENGTH

Sometimes we Americans forget one thing that sets us apart from every other country on earth.

It is this: We are a people made up of many peoples. In that lies strength, not weakness.

In European countries where there is a mixed population, one strain usually dominates. Others are always less than equal to this dominant strain, always made to feel that they fall short in an effort to adjust themselves to a mold. Most often they are whipped and jammed by force into that unwelcome mold; of late years those deemed not to fit have been simply murdered.

That is not the American way. Here there is no dominant strain. There is, perhaps, a majority strain, but it cannot be a dominant strain in the European sense as long as the rights of minorities are protected.

Minorities of racial, religious, cultural strains which differ from that of the majority are not made to feel that they are at best inferior imitations of the majority norm.

We glory in our differences and we feel that in them is strength, for each group has something definite to contribute. The sum of those contributions must be greater than any accomplishment by a single inbred group which shuts a lid down on the abilities of others. The thing that binds all together in the United States is not a phony racial doctrine, but the joyous and spontaneous loyalty of diverse peoples who have learned to live together, and found it good.

In the defense effort, equal opportunities to help should be extended so far as practicable to all, not as a grudging concession to a moral principle but as a practical recognition of the practical fact that all are equally needed.

The test is not, "Who are you?" but "What can you do?" It is wise and right that both in the military services and in defense industries, broadening opportunities should be gradually opening up—and they are—to Americans of colored blood. It is wise and right that America should not deprive itself—as Germany has done—of the loyal services of Jews and Catholics because of their race or religion. It is wise and right that America, fostering mother of a hundred races, religions, and peoples should call on all alike to defend her.

That is our strength. Let us use it.

How to Get Unity

EXTENSION OF REMARKS

OF

HON. ROSS RIZLEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

EDITORIAL FROM THE ENID (OKLA.) EVENTS

Mr. RIZLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from Enid (Okla.) Events of August 7, 1941:

[From the Enid (Okla.) Events of August 7, 1941]

HOW TO GET UNITY

It has long been held by the intellectuals that the American public is incapable of mature reasoning. This seems to be the basis for the plaint by many in the administration that the people are not awake to the emergency; that they do not realize the sacrifices necessary if the arms program is to succeed.

Even a casual contact with the "man in the street" reveals this is a misconception. In many ways the public is ahead of the administration.

This writer has talked with persons of various ages and occupations who, like himself, are by no means convinced of the wisdom of the foreign policy. But nearly everyone believed the time had passed to oppose this policy and thought that the Nation should unite to put over the arms program and to carry through to success the project upon which the President has embarked.

To be sure, there is a drag upon the effort to involve us in hostilities now, but it is not due to Wheeler, Lindbergh, Nye, etc., nor is it the result of isolationists as such. Even

here in the center of anti-European-entanglement sentiment, this seeming apathy is caused by confusion and distrust created by the administration of national defense.

When one considers a few of the specific sources of this confusion and distrust, one wonders that the arms program is progressing at all. Indeed, were it not for the patriotism of most Americans, it would have blown up long ago. For instance, the will of the people to support national defense is offset by:

(1) Lack of a responsible director of the whole program, causing interminable delays, waste, uncertainty.

(2) The administration's own insistence on placing national defense second to socialistic reforms, as demonstrated when Mr. Ickes allowed his enmity for the Aluminum Co. of America to deprive the Nation of 60,000,000 pounds of aluminum (remember the aluminum drive?).

This was further demonstrated by the revelations, of which Elmer Peterson's in Friday's Daily Oklahoman was the most dramatic, that the Government is continuing to build competing electric lines, requiring vast quantities of defense metals, regardless of demand.

(3) Continued heavy expenditures for nondefense purposes (these electric lines, for one thing) in the face of the biggest tax bill in history and with a foolish disregard for the shadow of economic disaster looming over us.

(4) Continued pampering for partisan political reasons of Communists and racketeers in the labor movement; thereby putting the whole defense effort in danger of sabotage.

(5) The actual endangering of the lives of American soldiers because strikes and administration failures have been permitted to cut the output of weapons.

(6) Refusal to play fair with the people, as shown by the year's draft limit although it must have been known that longer time would be required. Also the subsequent political handling of the program, casting doubts on the patriotism of most of the draftees and refusing to permit the release of the minority of draftees whose families or positions require them to return home.

Let these points be cleared up—as they can be in short order—and the administration will see such unity of purpose and such cooperation as it had not believed possible.

Extension of Military Service of Selectees

EXTENSION OF REMARKS

OF

HON. LUCIEN J. MACIORA

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

Mr. MACIORA. Mr. Speaker, while it may seem presumptuous for me to take issue with the War Department on a matter concerning defense, I conceive it to be my duty to exercise independent judgment based upon my own analysis of the available facts.

Extended service for selectees was asked on the theory that the emergency is greater today than it was when the Selective Service Act was passed. Then Germany was fighting on a single front, England was threatened by immediate invasion and had not received any assistance from us, and our defense production program was still in the drafting-room stage. Today Germany is fighting on two fronts, there seems to be no immediate prospect of invasion of England, the United States has supplied aid which has made Great Britain stronger than she has been at any other time since the war began, and our defense effort is producing at rapidly increasing tempo. The facts reject the notion that the emergency is greater than it was 1 year ago.

Another compelling reason for adhering to the 1-year training program is the circumstance that, despite increased production, we have not sufficient equipment for the men now in uniform, to say nothing of equipping a rapidly expanding Army. The men who will soon complete 1 year of training are subject to recall for 10 years. It is my considered opinion that it is better to have a huge body of men trained in the rudiments of military technique than to have fewer men who are skilled technicians. Should the emergency approach real danger, a vast body of partly trained men can speedily be assembled and molded into a fighting force.

Far from weakening our military power, such a program would give us the advantage of an army of fullest authorized strength, plus a reserve of invaluable worth. It was the existence of a strong reserve subject to speedy mobilization, rather than a huge standing Army, that gave both Germany and Russia their tremendous manpower.

General Marshall has testified that an army of present authorized strength is sufficient to defend the Western Hemisphere. Nothing that has happened to date could justify military operations by the United States elsewhere.

Underlying it all is the fact that we should not be anxious to create a professional army, but rather to meet an existing emergency.

For these and other reasons, I voted against extending the tour of duty of selectees beyond their promised 1-year period.

Production of Necessary War Materials

EXTENSION OF REMARKS

OF

HON. ED GOSSETT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

Mr. GOSSETT. Mr. Speaker, for more than a year we have carried on a serious economic war in an effort to avoid a shooting war and in an effort to preserve democracy. Our battle of the production line has not been completely successful. Even now this country is failing to make use of tremendous economic resources and is failing to use vast industrial facilities. Hundreds of small machine shops and manufacturing plants of the great Southwest have been totally ignored in the matter of producing vital and necessary war materials. These shops have been seeking Government business almost entirely without success. To keep in the compulsory military service of this country a million of her best young men and to fail to use all of her industrial facilities in the production of war materials and supplies is not only gross inefficiency, it is almost criminal neglect.

Under priority decrees many of these machine shops will soon be forced to close down; machine tools and skilled workmen will be idle. Are these firms and individuals to be ignored simply because they are small? Is the use of these rescurces to be denied this country in the hour of her peril? These facilities should have been in full operation in the production of war supplies many months ago. Still their cry for business and their ambition to help with the defense program gets a deaf ear from the O. P. M. and the responsible agencies of this Government.

Mr. Speaker, I insert in the record a memorandum just given me by a group of these small firms. Unless these facilities are immediately utilized, Congress should institute an investigation to find out why.

The Texhoma Engineering Co. was organized by leading northwest Texas manufacturers at the instigation of the Defense Contract Service, Office of Production Management, in order to group the facilities of both large and small machine shops, fabricators, sheet-metal shops, welding shops, etc., into a united manufacturing unit whose services could be put at the disposal of the Federal Government for national-defense work.

The organization has as its main object to do its part of national-defense work, but in order to accomplish this it is necessary that we be given the opportunity to bid on such work, either on prime contracts or subcontracts. There are several firms in our group who can act as prime contractors and, as a matter of fact, one of them has been awarded several prime contracts by the Ordnance Department. However, most emphatically we want the opportunity to bid on subcontracts that are now going to small shops in the industrial East and Middle West having similar equipment to that found in our small contract shops.

Secondarily, we organized because it is our understanding that unless we act collectively it is not probable that each individual firm will be given the consideration the collective group may command.

Thirdly, we organized in order to protect ourselves from labor migration and to obtain priorities for materials for the maintenance of our commercial work, so long as our services are not being used in the national-defense picture.

The active workers in this organization were drafted from their previous work for a trial period of 6 months; they were selected from among the active organizers of the group. S. T. Mendez, the managing engineer of the Texhoma Engineering Co., was formerly the vice president and general manager of the Wichita Engineering Co., one of the members of the group, and was granted a leave of absence for 6 months by that company. J. C. Boyd, Jr., secretary-treasurer for the Texhoma Engineering Co., is to devote at least one-half of his time to this work. He was drafted from his position as assistant manager of the Wichita Falls Chamber of Commerce and area coadviser, Office of Production Management. The organization is supported by its membership. The salaries of its employees are the same as those they were being paid by their former employers. In this manner the organization is a non-

profit company, organized solely for the purposes explained above.

A list of 36 members is attached hereto. We are enlisting the active collaboration and support of all interested in the industrialization of the South, in order to see that we are given the opportunity to bid on some of the things we can make.

TEXHOMA ENGINEERING CO. MEMBERSHIP, AUGUST 1, 1941

Name of company, location and classification

Abilene Machine Co., Abilene, Tex., contract shop.

Alamo Parts & Machine Works, Borger, Tex., contract shop.

Amarillo Welding & Machine Works, Amarillo, Tex., contract shop.

American Well & Prospecting Co., Corsicana, Tex., manufacturer.

M. V. Bigham & Sons, Lubbock, Tex., contract shop.

Borger Gas Engine & Machine Co., Borger, Tex., contract shop.

Bullington-Mason Co., Wichita Falls, Tex., insurance, bonds.

Clark Machine Co., Wichita Falls, Tex., manufacturer.

Dunigan Tool & Supply Co., Inc., Breckenridge, Tex., manufacturer.

Electra Machine Shop, Electra, Tex., contract shop.

General Machine & Supply Co., Wichita Falls, Tex., contract shop.

Gentry Welding & Machine Co., Lubbock, Tex., contract shop.

Gibson Machine & Tool Co., Borger, Tex., contract shop.

Graham Welding & Machine Co., Graham, Tex., contract shop.

Green Machinery Co., Plainview, Tex., manufacturer and contract shop.

Hardwicke-Etter Co., Sherman, Tex., manufacturer.

Hinton Manufacturing Co., Floydada, Tex., manufacturer.

Lubbock Steel Works, Lubbock, Tex., fabricator.

M. & V. Tank Co., Wichita Falls, Tex., fabricator.

John E. Mitchell Co., Dallas, Tex., manufacturer.

Panhandle Steel Products Co., Wichita Falls, Tex., fabricator.

Marvin Price Machine Shop, Vernon, Tex., contract shop.

Riley Machine Works, Burkburnett, Tex., contract shop.

Riverside Boiler & Welding Co., Wichita Falls, Tex., fabricator.

Star Machine & Foundry Co., Amarillo, Tex., contract shop.

Superior Manufacturing Co., Amarillo, Tex., fabricator.

Paramount Supply Co., Amarillo, Tex., supplies.

Taylor Wheel & Body Works, Wichita Falls, Tex., body builder.

Tarry Motor Freight Lines, Wichita Falls, Tex., transportation.

Texas Steel Co., Fort Worth, Tex., steel foundry and forgings.

Thompson Tool Co., Iowa Park, Tex., manufacturer.

W. M. Whitesides Machine & Metal Working Shop, Plainview, Tex., contract shop.

Wichita Engineering Co., Wichita Falls, Tex., manufacturer and contract shop.

Wichitex Machinery Co., Wichita Falls, Tex., manufacturer and contract shop.

Willborn Bros. Co., Amarillo, Tex., fabricator.

Wilson Manufacturing Co., Wichita Falls, Tex., manufacturer.

Total membership, August 1, 1941, 36.

Estimated value of machine tools represented, $5,000,000.

Estimated value of physical properties represented, $10,000,000.

Estimated number of employees represented, 2,500.

Shall We Abolish or Move the Soldiers' Home?

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

RADIO ADDRESS OF JACK KYLE, NATIONAL EDUCATIONAL DIRECTOR, REGULAR VETERANS ASSOCIATION

Mr. VAN ZANDT. Mr. Speaker, there is much discussion today concerning the location of the new War Department Building on the grounds of the United States Soldiers' Home.

For the benefit of Members of Congress I am inserting herewith a radio address delivered by Mr. Jack Kyle, national educational director, Regular Veterans Association, over radio station WINX, Washington, D. C., August 11, 1941.

Mr. Kyle in his radio address develops pertinent information concerning the United States Soldiers' Home, and speaking for the men of the Regular Army joins with many Members of Congress in opposing the desecration of this national shrine in honor of those who have served and will serve honorably in the Army of the United States.

The address of Mr. Kyle follows:

Ladies and gentlemen, we have read much of late on the proposition of doing away with the United States Soldiers' Home. Newspaper writers point out that the home grounds would be an excellent site for a new War Department and other Government buildings.

Do we want to abolish or move the Soldiers' Home? I think not.

One writer wants the space out there for new private dwellings. Let everyone know that the Soldiers' Home is private property, and that there is no law to compel one private owner to transfer his property to another individual.

The Soldiers' Home is a national shrine and deserves the same protection as the Arlington National Cemetery. It was bought and built with $154,391.23 of prize money levied on Mexico City by Gen. Winfield Scott, and it has since been maintained by the soldiers themselves—the men in active service contribute small monthly amounts toward its maintenance. At one time they had built up a fund of more than $5,000,000. Just recently the Federal Government took $2,000,000 from that fund for other purposes.

Every soldier in the active service looks forward to the day when he can come to Washington to enjoy the beauties of the city and at the same time rest in peace in his home.

In 1847 the Congress accepted General Scott's money and constituted the home. The Government thereby became the trustee of the soldiers.

We are now asked to subscribe to the principle that the Government should violate that trust. Why? Can you think of any good reason why we should abolish, or move, the home?

Nothing has been said as to the cost of converting the place to other uses. Did someone say something about waste?

One writer offers the suggestion that the home might well be moved to Virginia—whatever he means by moving. The same writer bitterly opposes a new War Department in Virginia. Can you figure that one out?

That writer also failed to give us any figures as to the cost of acquiring a site and the cost of putting up the new buildings, neither did he say who was to pay the bill.

Traffic surveys show that a large concentration of Government workers in that area would not be a solution to our traffic problems, rather congestion in residential areas would be inevitable and some rezoning to the discomfort of the present residents in adjacent areas would be necessary.

We must assume, therefore, that those who have so actively campaigned to disturb the home have not bothered to investigate or to obtain the available facts.

Perhaps you don't know it, but the National Capital Parks and Planning Commission stated just recently that the grounds of the home were not suitable for large buildings. The land is too rough.

The one thing hard for me to understand is why any civic-minded person would want to move the home out of Washington. You have a fair-sized pay roll out there you know. Perhaps the emergency has made us so prosperous that we have no need for a few hundred thousand dollars now and then.

The Soldier's Home represents one of our very early attempts at social security. In this connection, it might be well to point out that if the country had adopted a system of pay-roll deductions in 1847—as the soldiers did—we might not now have such agencies as W. P. A., P. W. A., C. W. A., and other alphabetical combinations.

Who are the men out at the home? They are the men responsible for our wealth. They are the men who fought the savage Indians; they are the men who gave their health on the frontiers; the men who chased Mexican bandits into their own badlands; they are the men who stood guard for us at salaries from $8 to $21 a month; they are the men who lived on corned beef, hardtack, and black coffee when they could get such food.

They are the men who helped to establish communications in the West; they are the men who opened that great expanse of wealth to eastern capital.

Who wants to disturb them?

In the home's cemetery lie buried heroes of the Civil War, the Spanish-American War, of Indian wars, and of a hundred campaigns and expeditions; men upon whom the country has generously bestowed its highest decorations for deeds of valor and bravery.

These men, for the most part, are men who were discharged from the service for disease, or injury sustained in the line of duty; their contributions have been responsible for the home's maintenance, and they ask only that they be not disturbed.

The Regular Veterans Association does not propose to enter the controversy as to where the new War Department should be located. We believe that the Department should have a free hand in selecting its site. No one better than the War Department knows what the country is up against.

Let me also say—and I do so without fear of contradiction—that there is not a general in the Army, not an officer, that would ask the Congress to violate its contract with the old soldiers. Army officers know the history of the home. In this connection I would like to point out that every commissioned officer in General Scott's army signed a petition to the Congress asking that the home be established; their successors will carry out their wishes.

Have you visited the Soldiers' Home? If not, you should. Drive out some time; talk to the old soldiers; they are a friendly lot and will extend to you a welcome hand. Find out from them what the home means to

every one of them. Let them tell you how much they appreciate living in our Capital. They are proud to be our neighbors.

Ladies and gentlemen, I should like at this time to quote a part of General Scott's Annual Report for 1847:

"Attention is invited to the subject of an asylum for the worn-out rank and file of the Army, to be supported by the Army itself by deductions, fines, and reversions. If there is anyone who deserves to have his pathway to the tomb made smooth and pleasant, it is the old soldier who was ever ready to sacrifice his life in defense of his country."

That other Army officers of the day shared the general's views is evinced in another part of the 1847 report: "While the Army under my command," the general wrote, "lay at Pueblo a part of the summer of 1847, a humble petition to the Congress in favor of an asylum on the same plan for the benefit of enlisted men was drawn up and signed by, I believe, every commissioned officer then present."

Another great soldier—Gen. U. S. Grant—said:

"I do not hesitate to say that it would be in the public interest for the Government to see to the maintenance of the home from public moneys; the men got but little pay while making the country safe for future generations; we might well show greater appreciation."

I hope, ladies and gentlemen, that the Congress will settle this question now, once and forever.

In closing, may I offer a word of advice to local newspapermen interested in the improvement of the city. The Soldiers' Home is not a problem—it has never been. Let them write about traffic control, slum clearance, transportation, rent control, the cost of living, and other major problems confronting our citizens. Why, they might even solve the parking problem.

In leaving you may I make a prediction? When the present emergency is over, those of us fortunate enough to remain in Washington, will hear nothing of the present crop of volunteer building experts. That Soldiers' Home pay roll will be a most welcome contribution to the community economy. We'll have plenty of floor space, too.

To the management of Station WINX we are grateful for this opportunity to present the case of the old soldier and I trust that these remarks may help somewhat to clear up a confused situation.

We Cannot Take Chances With Our Safety

EXTENSION OF REMARKS

OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

Mr. FORAND. Mr. Speaker, our vote on the resolution providing for extension of the term of service for the men in the Army may prove to be the turning point that will decide whether the United States will continue as a democracy, with its freedom and liberty, or become subject to the dictates, and the so-called new order of Hitler and his Axis partners.

We are faced with a grave responsibility. Either we must amend our laws so as to enable our country to have an Army that, due to its size and fitness to fight, will preclude attack by any enemy, or permit that Army to be disintegrated and half wiped out by the return of the men to their homes, thereby leaving the country improperly protected, and thus inviting the enemy to strike at us during the time that we would need to rebuild our armed forces.

The President, on May 27 last, declared an unlimited emergency. Gen. George C. Marshall, Chief of Staff of the Army, has informed both the Senate and House Committees on Military Affairs that the national interest of the United States is imperiled and that the circumstances require that the men now in the Army be retained for a period in excess of 12 months.

I feel very strongly, Mr. Speaker, that our decision as to whether or not this bill should pass must be predicated on the question of whether the national interest is imperiled.

I cannot, in conscience, answer the question in any other way than in the affirmative. Certainly our national interest is imperiled. It has been ever since the outbreak of the war in Europe and is, day by day, increasingly more imperiled as the war situation develops and the Axis Powers get nearer to us each time they conquer another country.

Right now, while this bill is under consideration, word comes to us that France has agreed to full collaboration with Germany; that Marshal Petain has entrusted full dictatorial powers in his immediate subordinate, Admiral Darlan.

The declaration of an unlimited emergency by the President affects everything but the military forces. It affects industry, capital, and labor. It affects the country generally. It is evident, therefore, that if we are in an unlimited emergency we must do everything possible to prepare our armed forces to face any situation that may arise. Unless we do so we may find ourselves in the same position in which some 13 other countries now find themselves.

There is evidence on every hand that Hitler is marching on. Italy and Japan are doing his bidding. Vichy, or unoccupied France, as it is referred to now, is under Hitler's lash.

Spain and Portugal, as well as north Africa, are within the realm of Hitler control. German agents, to the tune of some 2,000,000, are already in South America. Japan has already taken over control of Indochina, controls a part of China, threatens to take over Thailand, and is preparing to attack Siberia. In addition, it is the announced purpose of the Japanese Government to rule all of Asia, a large part of the Pacific Ocean, including that in which are United States possessions, as well as portions of British and Dutch possessions. The plan includes the entire southern Pacific down to and including the southernmost tip of Africa, so that she may control the shipping lanes and cut off our supplies of rubber, tin, iron and quinine, and other necessary supplies from the Netherlands East Indies. The plan also envisions occupation of Siberia, so that a real threat to our possessions in Alaska can be made.

This Japan is being prodded by Germany to do, so as to harass us and compel our fleet to devote more of its strength in the Pacific, thereby weakening our Atlantic defense and hampering the delivery of war materials to Britain.

Think what that would mean to us. We would be threatened on the Atlantic side by Germany and the groups she now controls and on the west by Japan's Navy, which is not to be ignored. We also would have to contend with that group of Hitler agents now in South America, the group that fomented the recent uprising in Bolivia and caused the renewed flare-up of border trouble between Peru and Ecuador.

Mr. Speaker, the American people do not want war. We want to do everything possible to prevent our becoming engaged in this war, and we want to keep war away from us. How can we do it? How can we assure ourselves against attack?

To my mind, the best approach to the goal we seek is to face the facts. If we do that, then we have but one choice. We must have a defense that will defy any enemy to attack us directly or indirectly. In order to have that defense, and have it ready for any emergency, we must not permit our Army to be half demobilized for even a day. It must remain intact.

General Marshall tells us, as we have already been told by the Secretary of State, and also by the President himself, that there are no plans nor desires on the part of the administration to prepare an American expeditionary force. Surely anyone who is at all familiar with military operations realizes that an army of 1,750,000, as requested by the War Department, would not be sufficient if an expeditionary force were in contemplation. That number of men is required for the defense of this country—to man the many bases that we have established to guard our shores, to garrison our American outposts, and to have a field army here in the continental United States. That number is necessary, our military experts tell us, to defend properly our country.

The United States is on Hitler's list. How soon or how he will strike at us depends upon his conquest of the other nations who appear on his list ahead of us.

Consider these facts:

Hitler in less than 4 years has taken over or conquered 13 countries. Here is his record since 1938: Austria, with 7,000,000 population; Czechoslovakia, with 10,000,000; Poland, with, say, 20,000,000—now he has it all, but I refer to his share on the partition in September 1939; Norway, with 3,000,000; Denmark, with 4,000,000; Holland, with 8,000,000; Belgium, with 8,000,000; France with 42,000,000; Hungary, Rumania, and Bulgaria, with 35,000,000 together; Yugoslavia and Greece, with 22,000,000 together—thus dominating and enslaving 159,000,000 people, partly by coercion and partly by military conquest. Adding the 70,000,000 in the old Germany, he now has under control about 230,000,000. Adding Italy with 44,000,000 population, the total is 274,000,000; and if he conquers Russia, even up to the Urals, he will have under him about 100,000,000 more, or a total of some 375,000,000 people.

Besides the countries mentioned there remain in Europe: Sweden, with 6,000,000; Finland, with 4,000,000; Switzerland, with 4,000,000; Spain, with 25,000,000; and Portugal, with 6,000,000; making about 45,000,000 more.

So, if, as General Marshall said, we must contemplate the possible overrunning by Hitler of Spain and Portugal, and remember that Sweden and Switzerland are at his mercy. We see that Hitler now has virtually all Europe in bondage. If he continues his schedule in Russia, he will have the complete domination of more than 500,000,000 people. Nothing like that has happened either in the modern or ancient world, nothing even approaching it. That is what we are facing.

I sincerely hope, Mr. Speaker, that we shall not be compelled to fight. That the war will end without the necessity of a clash of our manpower with that of the enemy. That is my hope, but no one can guarantee that it will be realized. We must, therefore, be prepared to resist any attempt that may be made to attack us.

My country is very dear to me. I appreciate what it has done for me and for my friends and neighbors. Yes; for every citizen of this country. For that reason I do not want to take any chances.

I would much rather be wrong in keeping our boys under arms and not need them than to release them now and find out later that by so doing I had placed my country at the mercy of Hitler and his partners, and for that reason, Mr. Speaker, I cast my vote in favor of the passage of this bill.

Report on Defense Highway Legislation

EXTENSION OF REMARKS

OF

HON. WILBURN CARTWRIGHT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

Mr. CARTWRIGHT. Mr. Speaker, the House Roads Committee met again Wednesday, August 13, and discussed at length the situation regarding legislation to provide for the construction and improvement of highways important to national defense.

Col. A. R. Wilson, of the War Department General Staff, and Commissioner Thomas H. MacDonald, of the Public Roads Administration, were present.

An earnest effort is being made to work out a new bill that will permit a reasonable rate of progress toward meeting the urgent needs for improved highway facilities, in the vicinity of centers of defense activity and on routes of strategic military importance throughout the Nation, for consideration after the recess of the House.

We do not want to go off half-cocked or add to the confusion by introducing a new bill now. It would be impossible to get any action by the House before the latter part of next month anyway, and by that time there may be important new developments in the situation.

A majority of the members of the committee still feel that it would be difficult to improve on the bill which was passed and vetoed. They feel that the accusations of "pork barrel" made about any part of the bill were very unfair and showed an utter lack of knowledge of the urgent and critical highway needs of the Nation, viewed solely from a national-defense standpoint.

Mandatory Joint Returns

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

LETTER FROM AMERIGO BOZZANI

Mr. VOORHIS of California. Mr. Speaker, seldom have I seen a more forceful and complete argument for mandatory joint income-tax returns than the following letter, coming, significantly enough, from one of the leading citizens of southern California:

ITALIAN-AMERICAN
DEMOCRATIC HEADQUARTERS,
Los Angeles, August 2, 1941.

Hon. JERRY VOORHIS,
Congress of the United States,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN VOORHIS: Giving our full approval to the logical measure of requiring husband and wife to file joint income-tax returns, we are convinced to express the wide popular sentiments of the immense majority of the citizens of the United States, being a well-known fact that only the very infinitesimal percentage of their families enjoy the favored opportunity of a yearly income above $4,000.

We feel confident that you will realize that, similar to other cases, the propaganda against this new measure is spread by the reactionary press, the chambers of commerce, the big corporation lawyers, and the multiple women's organizations representing the wealthy classes who always try to influence the legislators with their "Calamity Jane" predictions of families disrupted, of women considered as chattels, encouraging divorces, etc., etc.; as if conjugal unions or family ties were existing only for monetary conveniences disregarding any spiritual and moral conception which are the principal objects of matrimony.

It seems unconceivable that the well-to-do families, or prosperous married couples occupying two lucrative positions, and depriving small-income groups of much-needed modest work, should be so selfish and egotistical as to object to the payment of taxes according to their large earnings.

Acknowledging with the utmost gratification that your committee has shown it cannot be swayed by the small band of professional lobbyists and propagandists, we will welcome the day when the new measure will become a law, a just law based on the real democratic spirit of the Republic.

Your vote in favor will be sympathetically remembered by your constituents at the next polls when they will have the opportunity of reaffirming their confidence in you for the valid support you are giving to progressive legislation.

With the assurance of our loyal support, we remain

Yours very truly,
ITALIAN-AMERICAN
DEMOCRATIC HEADQUARTERS,
By AMERIGO BOZZANI, *Chairman.*

Feeding of Excess Wheat

EXTENSION OF REMARKS

OF

HON. JOHN W. GWYNNE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

Mr. GWYNNE. Mr. Speaker, the recent action in the Senate which would allow the feeding of excess wheat is naturally causing considerable concern in the Corn Belt. The conference report in limiting this provision to 1 year is, of course, some improvement.

Everyone is anxious to do everything possible to relieve the situation among the wheat growers. However, it should be kept in mind that the law relating to marketing quotas has been on the statute books for some time. In fact, when the referendum was held, the increased loan which carried with it the increased penalty was already in effect. In spite of that fact the wheat growers approved by a very large majority the application of a marketing quota. The noncooperators now find that they have on hand a quantity of wheat upon which a 49-cent penalty will be assessed if it is used. Of course, nothing in the law prevents the storing of the wheat, and the sale or feeding of it in a subsequent year if done in accordance with the provisions of the law.

The situation now existing is exactly what the law has always contemplated. The whole purpose of the farm program is to maintain prices at parity. In order to accomplish this purpose farmers are asked to keep their acreage within certain limits. The law has also another objective and that is to conserve the fertility of the soil for future generations. The main objective—the maintenance of a fair price—works to the benefit of every farmer, whether or not he be a cooperator. The cooperator pays for this benefit in reducing his acreage and in otherwise conforming to the program. To that he makes no objection, but why should the farmer who conforms be required to carry the obligation also of the wheat grower who does not conform? This wheat grower, after planting as many acres as he wishes and getting also the benefit of the better price, is given by this bill the right to feed his excess or illegal wheat. That this will displace a certain amount of wheat and corn grown by the farmer who is in the program is obvious.

I have always felt the necessity for unity among all the agricultural interests

in the country. Only in this way will farmers be able to secure a fair deal in this country, in which all the farmers are in the minority. Therefore we should be careful to stir up no unnecessary quarrels between the various agricultural sections of the Nation. The growers of corn, of wheat, and of cotton have more interests in common than they have in opposition. However, it is only fair to call attention to the fact that Iowa, for example, while admirably adapted to the growing of corn, is not so fortunate in the growing of cotton and of wheat. Our farmers very generally comply with the farm program. But if the noncooperating wheat farmer is to be allowed to accept the benefits of the wheat program and put the burdens on the cooperator, it is liable to reduce the participation in future programs of the Corn Belt.

Defense Maze Baffles Seekers of Information

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

ARTICLE BY MARCIA WINN

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Marcia Winn from the Washington Times-Herald of today:

[From the Washington Times-Herald of August 13, 1941]

DEFENSE MAZE BAFFLES SEEKERS OF INFORMATION—VISITORS FIND THEY CAN DO BETTER BY WRITING FROM HOME

(By Marcia Winn)

When the city of Washington originally was planned, one could stand on Capitol Hill and look down the broad vista of Pennsylvania Avenue to the White House. Now, by an irony that has become timely, that vista ends in the Treasury Building.

This fits in well with the theory of government expressed some time ago by Henry F. Ashurst, former Democratic Senator from Arizona. To get an appropriation bill passed, he advised his confederates, "Just add a nought. If you don't nobody pays any attention to it."

The add-a-nought school of Congress now goes merrily along its unimpeded way. With twenty-seven billions in defense contracts already let, the Capitol still foams with lobbyists, contractors, and visiting chambers of commerce, who hang their hats on the lowest pegs at home so they can reach up, clap them on, and hurry back to Washington to nail down a defense plant.

HOME-TOWN LOBBYISTS

Congressmen are besieged by home-town lobbyists who thought, until they reached Washington, that Congressmen were omnipotent. One harassed Democratic Congressman said he spoke for all with, "Wouldn't it be wonderful to be back in the days when all the party in power had to dispense was postmasterships?"

The defense muddle is a vertiginious one. It centers in the new Social Security Building, where the O. P. M. holds forth. The lobby of this building is of green marble. It contains shining escalators. It also has a large but neat sign, "O. P. M. Bureau of Information—Room 5525."

The reception room to room 5525 is full of assistant dispensers of information. An enormous banner, "Time Is Short," the official O. P. M. work slogan, hangs on one wall, just as it ornaments many portals in the building. "Keep 'Em Rolling," another slogan, hangs on another wall. The 18 new insignia for civilian defense buttons, geometrically red, white, and blue, hang on another.

A businessman came in then to ask where he could find some new agency.

"Um," said the giver of information, a girl, "I think that was Nelson Rockefeller's outfit."

NAME CHANGING

"Do you know where it is now?" he asked her.

"No"; she answered blandly. "They've just changed the name."

She then began to discuss the civilian defense insignia with another questioner. A committee of women had been set up to decide on uniforms, she said. "Who is on the committee?" "Well, Mrs. Roosevelt, and"—

Here she reached for the telephone to ask somebody else. That person didn't know. She asked another. Neither did he. She hailed a passer-by. He suggested she send for the minutes of the meeting, but added he thought Daisy Harriman (former Minister to Norway) and Anna Rosenberg (regional director of the Social Security Board for New York) also were on it. She sent for the minutes and riffled through them.

"I can't find it," she said at last. "But I know Mrs. Roosevelt is one of them. It's in here somewhere, but I haven't time to look."

A neat young man in a gray suit then came in with his brief case. He approached in humility.

"I'd like an organization chart."

"We haven't any," she said. "Where did you see one?"

"I've seen them all over the United States," he told her promptly.

"Oh, but they've all been changed," she assured him. "Everybody has different jobs. So they are going to get out a new chart."

"Isn't it revised yet?" the first man asked her.

"No."

"Well, can you mail me one?"

She could, in time, and would. She took his name and address. He was a brass and iron foundry man from Montana. "What do you want it for?" she concluded conversationally.

"So I'll know whom to write a letter to," he told her glumly. "I haven't been able to find anyone around here."

Endorses Demands of America First Committee

EXTENSION OF REMARKS
OF
HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

LETTER FROM CONSTITUENTS

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from the Van Doren family of Clarksville, Ohio:

MAPLE FARM,
Clarksville, Ohio, August 11, 1941.

Representative CLARENCE BROWN,
Washington, D. C.

DEAR SIR: We are glad to relate that the America First Committee are taking somewhat the same proceedings as our ancestors in 1700, when King William III would not listen to the people complaining about the Governor's intolerance. So today Franklin D. Roosevelt is pursuing same procedure as King William III of England; and therefore as members of the America First Committee, but having no other Van Dorens in our immediate family, we are writing you asking that you read this letter in the session of House of Representatives of the United States of America, and that we, with all other members of the America First Committee, demand no war, no A. E. F., no totalitarianism for America; also demand a national advisory referendum, a chance for the people to be heard before Congress decides the question of war or peace. Further, on behalf of my brothers and myself, we do not think it would be out of place to start impeachment proceedings against F. D. Roosevelt, the would-be dictator of the United States of America.

Yours for America first,
W. M. VAN DOREN,
ZENAS G. VAN DOREN,
ROSALIE L. VAN DOREN,
Daughters American Revolution.

Resolution of Ottowa County (Okla.) Unit of American Indian Federation

EXTENSION OF REMARKS
OF
HON. WESLEY E. DISNEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

LETTER AND RESOLUTION FROM OKLAHOMA CITIZENS

Mr. DISNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and accompanying resolution:

MIAMI, OKLA., *July 8, 1941.*

Hon. WESLEY E. DISNEY,
Member of Congress,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN DISNEY: Enclosed is a copy of a resolution unanimously adopted at a meeting of our unit in Miami, July 7.

Of course, the purchase of defense bonds will not be greatly augmented directly through our activity. We will, however, cause our membership to give thought to the grave problem now confronting our country and fit them for events to come of a really serious nature, if we are forced to enter actively into the European conflict as a matter of self-preservation of our way of life.

Some criticism has crept into hearings before Congress, in the past, touching the Americanism of the membership of this organization. We have been accused by Government officials, high in office, as being identified with the German-American Bund. Would it be asking too much of you to make the enclosed resolution a part of the CONGRESSIONAL RECORD? We are not seeking a controversy.

We merely wish to appear before the Congress and the public in our true light:

Loyal Americans, ready and willing, if need be, to sacrifice both life and property in the cause of our country.

Thanking you in advance, I am,

Sincerely yours,

L. R. WALKER,
President, Ottawa County Unit,
American Indian Federation.

Be it resolved by the Ottawa County Unit of the American Indian Federation, in special convened session in the city of Miami, Okla., this 30th day of July 1941, That—

Whereas our Nation is struggling against grave difficulties from within and abroad, constantly faced with increased financial commitments in its efforts to maintain national security and defend against those who seek its destruction; and

Whereas these are times when we each and all should sacrifice in the interest of all, to the end that liberty and the American way of life may endure: Now, therefore, be it

Resolved, That we, members of the Ottawa County Unit of the American Indian Federation, here and now pledge and agree to advance or take part in no program providing for new commitments or expenditures on the part of the Government at this time growing out of Indian claims. We should extend helping hands instead of hands to be helped; be it further

Resolved, That we decree and commit to the purchase of national defense bonds one-half of this unit's share of 1941 federation dues; also, that national dues paid into the Ottawa County unit treasury be retained therein and released to the national treasurer upon condition that 50 percent thereof be invested in national defense bonds. The credit of our Nation is the backbone of its defense; it is the duty of every citizen to sustain the Government: its credit must be kept strong. We urge upon every member of this unit the immediate payment of 1941 dues.

Unanimously adopted.

L. R. WALKER,
President, Ottawa County Unit,
American Indian Federation.

Attest:

C. K. CHANDLER,
Acting Secretary.

Sacrifice—the Watchword

EXTENSION OF REMARKS

OF

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

On House Joint Resolution 222, declaring a national emergency, extending terms of enlistments, appointments, and commissions in the Army of the United States, suspending certain restrictions upon the employment of retired personnel of the Army, making further provision for restoration of civil positions to members of the Army on relief from military service, and for other purposes.

Mr. COLMER. Mr. Speaker, as we listen to the debate upon this issue of such grave importance to the life, liberty, and happiness of millions of the Nation's most splendid young men, we can, I am sure, be pardoned if sometimes we wonder if some appreciate the gravity of the situation and the seriousness of the hour. As one member of this body who is fully cognizant of his own shortcomings and who does not arrogate unto himself all of the virtues of patriotism and courage, I have willfully refrained from giving voice to some of the thoughts which well within me and which now motivate me to make my humble contribution to the debate. This is an issue of utmost importance. The issue of whether these young men shall be compelled by their sovereign Government—through the agency of the Congress—to further undergo the trials and the hardships of a strenuous career of preparation to defend their country, or be permitted to return to the peaceful pursuits of life and the bosoms of their families, is no easy one to decide. It is a question which must be decided without sentiment on the one hand and beyond the pale of political expediency on the other. It must be decided upon the question of what is to the best interest of the country, however much we would prefer to grant the wishes—and no doubt in many instances the prayers—of the mothers and fathers of these young men. We must be oblivious to everything but the future welfare of our common country.

As one who has briefly experienced the tribulation of an enlisted soldier, and as the father of one, and possibly two, splendid sons who may be called upon to render such service to their country, I approach the subject of the continuation of this service by the youth of our land with no illusions but with a full realization of what such sacrifice means.

If I were possessed of the powers of a seer or, more practically, were conversant with all of the facts concerning world affairs and imbued with a full knowledge of what the future holds in store for us, naturally I would, under such fortuitous circumstances, be the better qualified to act more intelligently. But, unfortunately, like most Americans, I know not what the future may bring. I can only be guided by the wisdom of the past. Who is there in this body who can successfully deny that Mr. Hitler is motivated by the same arrogant ambitions which controlled the actions of Alexander the Great, Napoleon, and Kaiser Wilhelm in their quest of world domination? Who is there here today who can rise from his seat and tell us with positive assurance that Japan is not now on the verge of jumping off for further conquests in the Western Hemisphere? Who can gainsay that within another 6 months—aye, even within 30 days—the United States, even as unprepared as she is, may not defensively be engaged in all of the terror and sacrifice of a bloody, shooting war? Is it not a fact that all of the implications of the present situation point to an affirmative answer to these questions? Under all of the circumstances, can you and I as civilians, with the terrible responsibility which rests upon us as the final arbiters of this question, afford to gratify our own wishful thinking by permitting these partially trained young men to scatter to the four corners of the Nation? Can we afford to take that responsibility in view of the advice and positive admonition of the Commander in Chief of the Army, his Chief of Staff, the Department of State, and the experts who are more conversant with the facts and whose primary duty it is to see to it that the heritage of our forefathers—the American way of life—is defended and not further imperiled?

Mr. Speaker, I am one of those who has not approved in full, nor been thoroughly in accord with, all of the phases of our foreign policy. I have from the floor of the House when that policy was being formulated taken occasion to differ with it in some respects. I have thought that we have talked too much; that possibly we were sticking our collective neck out too far. But the question of whether we should defend the Monroe Doctrine, whether we should keep inviolate from aggression the Western Hemisphere, and whether we should adopt the lease-lend policy toward England are no longer issues for debate. Whether our foreign policy has been right or wrong, the fact remains that it is our policy, and for the welfare and preservation of this cherished heritage of our forefathers—the American Republic—we must face the issue as it is today. The challenge to America today is, Shall we permit this, possibly the last stronghold of democracy, to perish from the earth? It makes no difference that you and I would prefer to pursue the even tenor of our ways. Apparently it is no longer for us to determine what our course shall be; that has been determined by the mad man of Europe. That challenge is made to the young men of the Army whose immediate future we debate here today. That challenge must be successfully met by them lest this young Republic, the greatest embodiment of free government ever established by man, shall perish from the earth. Today that freedom is threatened; tomorrow it may be assailed; the day after tomorrow it may, like the governments of helpless Poland, Czechoslovakia, Belgium, France, and Greece, fall prey to the ambition of this man Hitler. I cannot but believe that these splendid young men, through whose veins courses the blood of the patriots of Bunker Hill and Valley Forge, Charlottesville, and Gettysburg, Belleau Wood and the Argonne Forest, are willing and eager to accept the challenge and as courageously meet the needs of the hour as did their illustrious forefathers.

But, Mr. Speaker, I also believe that these young men would approach their tasks and meet their sacrifices with lighter hearts and graver appreciation of the dangers of the hour if they had reason for a fuller realization that all other American citizens were just as courageously and patriotically ready to carry on in their contributions to the Nation's defense. These splendid specimens of young manhood are just as patriotic in their zeal to protect the Nation from impending disaster as any other class of citizens. But who is there on this floor or elsewhere who will deny that these boys have the same right to expect all other classes of American citizens to make equal sacrifices in the country's defense? What must be the reaction of

a young man who gives up a splendid position in civil life, carrying with it a handsome salary, to serve his country at $21 a month, enduring all of the hardships of weather, physical and mental strain, and other discomforts, in order that he might prepare himself in the art of war to bare his breast if need be in defense of his country, when he reads in the daily press of the shameful spectacle of industry and labor profiteering on his sacrifice?

Mr. Speaker, the situation is serious; the hour is grave. Franklin Roosevelt today could with propriety repeat what Woodrow Wilson, the great wartime President of yesterday, said: "We know not what a day may bring forth." The time has come for a full realization of the American people of the gravity of the hour. The time has come for sacrifice. The time has come for all Americans—young men who must fight the country's battles; industrialists who must prepare the sinews of war; and laborers who must build the guns, planes, and boats—to throw off their lethargy and indifference and awaken to the full realization of the fact that if we, too, would not become the victims of Hitlerism like the other democracies of the world we must as a united people make "sacrifice" the watchword of the future. Profiteering in industry and strikes in defense construction during a national emergency should no more be tolerated than desertion in the Army.

Mr. Speaker, I have supported the foreign policy of this administration. I have voted for the expenditure of billions of dollars of the taxpayers' money with which to build up this national defense and with which to combat Hitlerism. I voted for the original Draft Act because I thought it was the democratic and equitable way to secure an army. I shall vote for this legislation not because I want to but because I refuse to take the responsibility for the tragedy that might occur should I do otherwise. As one who for years earned his keep by the sweat of his brow, I have voted for all legislation aimed at the betterment of the laboring man since I have been a Member of this House. I am ready to compare my labor record with that of any Member of the Congress. I have always been fair and just in my legislative attitude toward capital. But I must confess that within the last few months, when I have beheld the sorry spectacle of capital profiteering in the ventures growing out of the threat to this country and have witnessed the unconscionable, and in many instances communistic, labor leaders bringing about a cessation of work on defense projects vital to the country's defense, I have been astonished and dismayed. This condition cannot prevail. An outraged public opinion will not much longer tolerate it. Mr. Speaker, I belong to that school of thought headed by the Commander in Chief of the Army and Navy, the illustrious President Roosevelt, who believes that the future of the country is imperiled and the necessity for preparation for the coming events is essential. But I disagree with that school which advocates that we can prepare for the critical hour by pursuing the even tenor of our way, with "business as usual" as a slogan, without disturbing our normal and peaceful pursuits of life, and without injury to some of the social reforms that have been gained. If the history of this war so far has demonstrated any one thing, it has demonstrated the fact that those nations which subscribe to that doctrine have fallen by the wayside and their peoples today are the slaves of Hitler.

Mr. Speaker, the Almighty God above, who is familiar with our every thought, knows that I harbor no desire for the entry of this country into this great world holocaust of war. On the contrary, if my foreign policy were summed up in a phrase it would be to prepare for such an eventuality and pray that it would never come. When the lease-lend bill was under consideration, it will be recalled that it was I who offered the amendment, which was finally adopted in a modified form, which would prevent these war materials destined for England from being carried in American ships. It was my thought then, and I think time will justify that thought, that such entry of our ships into the combat zones would result in their sinking by Germany and the involvement of this country in war. For more than a year I have advocated that hand in hand with our defense program should go our diplomatic efforts to keep this country out of war, at least until we were prepared to become involved in such a war. We were not prepared then, we are not prepared today, and unless the American people realize the full gravity of the situation and make the necessary sacrifices, we cannot be prepared for another 2 to 5 years.

While we in this country and France, in continental Europe, for the past decade were following the pursuit of building up a Utopian theory of the more abundant life, Mr. Hitler was turning the whole economy of the German people about the construction of a gigantic war machine. It makes no difference that you and I do not approve of either the machine or the means used to construct it. The fact remains that that machine has proved so successful that no nation or people have been able to stop it other than temporarily. The fact also remains that that machine is the marvel of military history. There is but one answer to that machine and the egotistical mania of the man Hitler in his desire to dominate the world. That is to build a machine that is superior to the German machine and to build that machine while we still have time to build it. The best assurances we can have that we will not need such a machine is to build it. But I repeat that if such a machine is to be built it must be built upon sacrifice. We cannot build it without the sacrifices which we call upon these young Americans to make by breaking their home ties for the hardships of intensive military training. We cannot insure the stability and future of this country and the American way of life with profiteering and strikes in vital defense industries. France tried that and the cemetery of nations is marked with the monument of France and the other nations who tried to combat the German military machine without such sacrifice. America must awaken and America must sacrifice if our people are not to be added to the list of Hitler's slaves.

ARTICLE FROM CHRISTIAN SCIENCE MONITOR

Mr. SPARKMAN. Mr. Speaker, under leave to extend my remarks, I include the following article which recently appeared in the Christian Science Monitor. In this article Mr. Strout gives a true and interesting picture of something great that is happening in this country in the progress of our defense program:

[From the Christian Science Monitor]

FROM TOURNAPULLS TO "PLEASE" NOTICES, THE STORY OF THE GREAT POWER PROJECTS AND THEIR PART IN EMERGENCY IS AN INSPIRING ONE, AND THE OBSERVER FINDS MUCH UPON WHICH TO RUMINATE

INSIDE AMERICA

(Fourth of 30 articles)

(By Richard L. Strout, staff correspondent of the Christian Science Monitor)

CHEROKEE DAM, TENN.—Every so often I discover what I would do if I had a million dollars. Here where the T. V. A. is building its big new Cherokee Dam, lickety-split, night and day—to pile up water, to make electricity, to make aluminum, to make airplanes, to aid national defense—I would drive a Tournapull. I would drive a Tournapull for the rest of my days.

You don't know what a Tournapull is? Well, I have watched one fascinated all day, and I don't believe I can describe it very well, at that. It is an immense earth-moving machine, a digger and tractor all in one, that lollops like a mad elephant all over the landscape on the biggest rubber tires I have ever seen, and first scoops up the red clay inside it with its hind end, and then hauls it with the Diesel motor in its forward end to where it should be dumped, and then dumps it. But that only begins to start describing it, and it only begins to tell the latest chapter in the inspiring defense story of T. V. A.

MADE IN PEORIA

This Tournapull thing is made at Peoria, Ill., by R. G. Le Tourneau, who is reputed to give 51 percent of all his company's earnings to the church. He is a deeply religious man and one of those authentic American individualists, like Henry Ford, who make the United States the most extraordinary and fascinating nation on earth. He travels by airplane, leads revival meetings, and makes Tournapulls. But this story is about the machine, and not the man.

The machine is a long, hump-backed affair, like a grasshopper, with a sort of dustpan bottom in the rear that lowers down and sim-

ply ploughs the earth up inside itself, usually with a supplementary tractor pumping behind. Its peculiar feature, which gives it its uncouth and unspeakably awkward gait, is that the engine is mounted in front on a see-saw arrangement over two enormous wheels, said to cost $2,900 apiece, projecting out into nowhere, like a horse's head, sometimes up in the air when it is gallumphing along with no balancing load in back, sometimes with its nose down, when it is rolling downhill with enough earth inside it to fill the living room of a New York apartment.

* * * * *

RECORD SPEED

With machines like this, not to mention elevating graders with trucks, the earth fill is going up at this power dam in record time. The dam was authorized by Congress July 31, 1940, work started next day, and it may be finished by December, or earlier, if these operators have their way.

The story of T. V. A., which is the most comprehensive laboratory of social and economic experiment in America, has been told many times, but there is a new phase in this defense emergency. You see it in the guards mounted at the seven dams already built and the four buildings. You see it in the rope that prevents you from tossing a bomb down on the little cement powerhouse many feet below on the grayish-white dam.

They take a lot of precautions here, as Public Safety Chief Thomas A. McKenzie explained to me. I asked him if there was any radicalism, and he said, "No," and added, sorrowfully, that that was one of his problems. "What?" I said. "Yes," said he, "the mountaineer workers, with their intense patriotism, wouldn't understand this radical double talk, which might be all right in New York, and might do something foolish to anybody uttering it." Fortunate Chief McKenzie, whose worry is what the Tennessee laboring man will do to the troublemakers rather than the other way round. It should be added that the T. V. A. workers are mostly trade unionists, and have a unique and apparently equitable bargaining arrangement with the Government.

This business of rushing more power for aluminum is inspiring from one aspect, and a sad and sorry story from another. It is another case of "too little and too late." It ties in with the whole vast T. V. A. experiment. Perhaps, under the circumstances, nothing else could have been expected. The T. V. A. authorities who warned Congress repeatedly from 1935 on that a power shortage would occur in a defense emergency are the ones now who are trying to make up the gap which Congress until the last minute declined to fill.

"INTERLUDE"

I suppose the changed public attitude toward T. V. A., and public ownership, tells better than any other one thing the difference between 1918 and 1941, the amazing 23 years which make up a neat little time capsule that every future historian of the United States is going to ticket with a chapter entitled, "Interlude." Muscle Shoals was intended to make nitrates for World War I but wasn't finished in time, and the cry went up to turn it over to private operation. Public operation, it was urged, would be "degeneration." Henry Ford offered to take the white elephant off the Government's hands in a 100-year lease. Calvin Coolidge wanted to sell it to the highest bidder. That was the official attitude 13 short years ago. Mr. Coolidge vetoed the first T. V. A. bill in 1928, Mr. Hoover vetoed the second T. V. A. bill in 1931; Mr. Roosevelt established T. V. A. in 1933. That was only 8 years back and yet it is doubtful if you could get 10 votes in Congress today to revoke the act and undo what Morison and Commager in their Growth of the American Republic call a candid acceptance of socialism in the realm of public utilities and a commitment to the experiment of a planned economy.

So time flies. It flies fastest of all in national emergencies.

In 1935 David E. Lilienthal appeared before the House Military Affairs Committee and urged that T. V. A. extension was imperatively needed for national defense. On February 29, 1940, he told a business audience in New York that a power shortage threatened in the defense picture. The speaker immediately following him, subsequently high in defense matters pertaining to power, insisted that the power supply would be adequate. It is the same sorry story that Washington has heard again and again. The country was assured there would be plenty of steel, plenty of power, plenty of aluminum. And today Boy Scouts go from house to house collecting pots and pans.

Until the emergency, the Aluminum Co. of America had a monopoly of aluminum production. At its Alcoa plant it had a contract with T. V. A. for 30,000 kilowatts of power, and at its own plants on the Little Tennessee, it could produce 70,000 kilowatts more, or 100,000 kilowatts all told. And yet it needed on an all-year basis 250,000 kilowatts to operate. What the company did, in order to get the cheapest possible rate, was to buy T. V. A. surplus power instead of making an advance contract for it. In ordinary times, if power were scarce it would simply shut down, until surplus power reappeared. With a tight grip on aluminum production, and aluminum selling at 27 cents a pound, it was able to operate this plant on a hand-to-mouth basis.

Richard Reynolds, head of the Reynolds Metals Co., principal fabricator of aluminum parts in the Nation, testified before the Truman Senate committee that in May 1940, he went to the chairman and directors of Alcoa, and voiced his alarm over the prospective aluminum shortage. Alcoa officials poohpoohed the idea. The facts seem to speak for themselves. It is hard not to feel that Alcoa was caught napping by the emergency.

But let us turn to a happier subject. Let us chronicle the intensely human story of how salesmen, whose every instinct is to get customers to use more electricity, are now patriotically urging them to buy less. In fact, let us deal with the unfortunate predicament of Wells M. Stanley.

For 13 years Wells M. Stanley has devoted every waking minute to furthering the sale of electricity by the Alabama Power Co. He is vice president in charge of sales. He has got up early and gone to bed late and all the time he has been thinking, "Wells M. Stanley, how can I sell some more electricity today?" He has seen electricity grow cheap in the mountain area. He and his salesmen, and the salesmen of other private utilities, as well as of T. V. A., rode and often walked miles to tell some farmer who was willing to spend $100 for lightning rods on his barn that electricity could be used also in the home. He and his sales force have personally toted out electric ranges to prove that you cook with the funny stuff in wires, and followed it up with refrigerators to show to doubting Thomases that the same stuff that will heat things up will cool them down.

And now, see what has happened. The world is upside down. Wells M. Stanley and all the other patriotic salesmen, private and public alike, have gone gratingly into reverse. Instead of staying up to midnight figuring how to get people to buy more electricity, they are planning how to cut sales down. They want the extra power to go into aluminum. You won't believe it unless you see it. Whole towns in this neighborhood are blacked out at night. Store windows are dark. I have a red-white-and-blue card in front of me as I write this, that is in every hotel bedroom, saying "please" and urging me to cut down on electric current.

Well, that's the present story of T. V. A.—From Tournapulls to "Please" notices. T. V. A. is supplying Alcoa with two to three times the power it contracted for, and rushing new dams; and private utilities are cooperating in every way. Of one thing you may be sure; this aluminum plant is going to be kept going if every home in the patriotic Southeast has to go back to candles.

If He Could Reach the Ostrich Minds

EXTENSION OF REMARKS

OF

HON. PHILIP A. TRAYNOR

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

EDITORIAL FROM THE WILMINGTON (DEL.) STAR

Mr. TRAYNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilmington (Del.) Star of August 10, 1941:

[From the Wilmington (Del.) Star of August 10, 1941]

IF HE COULD REACH THE OSTRICH MINDS

It is hardly likely that so sane and moderate, and yet so enlightening, an address as that made by Admiral W. H. P. Blandy at Carney's Point on Tuesday could open the eyes of the isolationist ostriches typified by Senator WHEELER, yet one wishes WHEELER and his like might read it, or better still, might have heard it.

The occasion for the address was the presentation of the Bureau of Ordnance flag and the Navy E pennant to the Carney's Point works of the Du Pont Co. for what Secretary of the Navy Knox called "a miracle of industrial production."

The parts of Admiral Blandy's address which seemed to us particularly impressive were the following:

"The basic reasons for our being in this race against time find their origin in the popular will of our people over a period dating from the first World War up to about a year ago. The popular reaction against further participation in any kind of war was widespread and deeply rooted. It is still so in relation to our accepting war as a policy for aggressive purposes. But since the more rapid expansion of the present European conflict we have been entirely willing to face realistically the matter of our own defense. And as we have turned our attention to this task the country as a whole has learned what military and naval men have always known, that the really effective weapons of defense are also the instrumentalities for wars of aggression. This is because the only true defense in war is to wage offensive warfare against the enemy.

"But, due to our revulsion of feeling against war and to our belief that war would never again come near us if we didn't go near it, we placed too much faith in treaties and not enough in ships and planes, guns and powder and shell, bombs and torpedoes. A small but determined group of men in high public places even believed that making and possessing munitions of war, or even the facilities to manufacture them, would cause wars, no matter which nation it was that was so engaged. Private companies undertaking such work were scourged and reviled by these men and branded as "merchants of death." I

suppose most of these zealots were well-meaning citizens, sane and sound in all other respects. But they didn't know the facts of international life. They couldn't believe that nations like Germany, Italy, and Japan would glibly sign a treaty today, to throw a pacifistic cloak over their real intentions, and then throw it off in the flash of an eyelash when it suited their purposes to do so.

"It is true that if, even now, we should continue to follow the teachings of such men, we will not have war. It is equally true that we will not have a country—at least not the country of free men and women that we know today—the country our forebears fought and died to establish and maintain."

Admiral Blandy, we think, describes the real opinions of the overwhelming majority of the American people. As a policy, we want nothing of war, but we intend to remain a free, democratic Nation or perish fighting to be so.

We Defend This Truth

EXTENSION OF REMARKS

OF

HON. EUGENE WORLEY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

EDITORIAL FROM THE OCHILTREE COUNTY HERALD, PERRYTON, TEX.

Mr. WORLEY. Mr. Speaker, I wish to direct the attention of the membership of the House to the following editorial which appeared in the Ochiltree County Herald published by Hon. Van W. Stewart, county Democratic chairman, at Perryton, Tex. I consider this editorial very timely.

[From the Ochiltree County Herald, Perryton, Tex.]

WE DEFEND THIS TRUTH

What are we arming to defend? What is it that we Americans hold so precious that we are willing to accept great material and physical sacrifices if need be to make sure that it is not destroyed?

Not just the good land we have here, or the wealth of useful goods and products that private enterprise has spread among the people of this country. Much as we value these, a better answer than that is needed. And Roy W. Moore, noted industrial leader, recently provided a sound definition of the heritage we intend to defend. Addressing the Commercial Law League of America, Mr. Moore described our American way in the following words:

"It is the way of liberty. It is the right of a man to think his own thoughts through and to express them decently in print or by word of mouth. It is the right of assembly and petition. It is the right of protection against tyranny of ukase and edict as opposed to the due process of responsible law. It is the right to choose that device of relations with the almighty spirit of life which best will nurture the individual's spirit. It is the right to choose those officers of governance who must truly represent the will and the conscience of the people, and to hold them to the responsibility of representation.

"And it is the right of the individual to engage in any decent occupation of his choice, and to follow it where he wishes, and to reap as his reward such returns as are in decency earned by his skill, his ability, his energy, and his effort."

The words are moving, because the force they describe is eloquent, too. Needing clear definitions of where we stand in the difficult world of today, we can all find in the above words a goodly part of that larger truth in which all Americans believe.

How Axis "Fifth Column" in Cuba Strikes at United States—The Complete Inside Story of How the Fascists Battle Democracy in the Americas

EXTENSION OF REMARKS

OF

HON. LAWRENCE J. CONNERY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

ARTICLE FROM CLICK MAGAZINE

Mr. CONNERY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the current issue of Click magazine:

[From Click for September 1941]

HOW AXIS "FIFTH COLUMN" IN CUBA STRIKES AT UNITED STATES—THE COMPLETE INSIDE STORY OF HOW THE FASCISTS BATTLE DEMOCRACY IN THE AMERICAS

Less than 2 hours away from Florida by plane, the Axis maintains an army and a field headquarters for spies, saboteurs, and Fascist propaganda agents. These forces, centered in Cuba, are mobilized to make serious trouble for the United States—and to seize control of Central and South America for Hitler.

Incredible? Of course, it sounds incredible. But Click sent a trusted investigator to Cuba to check this danger thoroughly. He wormed his way into the secret headquarters of the Falange and the Italian blackshirts. He checked the confidential files of the Cuban officials—who are fighting this menace. He stole sensational pictures from the Axis agents themselves, and, he came back with proof enough for anyone that Hitler, acting through the Italian blackshirts and the Spanish Falange, has a vast, dangerous machine in Latin America.

When Click's investigator spoke to Dr. Gustavo Gutierrez, Speaker of the Cuban House of Representatives, the Cuban statesman said, "We are prepared to act quickly. Since the Nazis and the Italians find it hard to operate openly through their own organizations, they work mainly through their puppet, the Franco Falange. We have made the Falange illegal in Cuba. They think they can still hide their Fascist plotting from us, but wait and see."

Scarcely had our investigator left Dr. Gutierrez, when the Cuban authorities made a sudden raid on a macaroni factory in Guanacoba. The factory was headquarters of the Falange. Seized in the raid were documents which proved that the Falange maintains an army in Cuba that includes a full infantry regiment, an artillery battalion, a cavalry squadron, engineers, and an aviation squadron of over 200 men.

Also seized in this raid were messages from the Cuban Falange to the Spanish Falange in Madrid—letters asking Serrano Suner, No. 2 Hitler puppet in the Franco cabinet, for more war materials for this Axis army on American soil. There were also letters from Post Office Box IPL 244, Hamburg, Germany, concerning German raiders off the coast of Brazil and German submarines in Cuban waters. Finally, there were large quantities of forged government stationery, forged passports (very handy for smuggling Axis agents into the United States), and plans of key public works.

To Cubans like Dr. Gutierrez this came as no surprise. But to Americans who think that the only Axis danger lies in Germany, Italy, and Japan, there is a very grave warning in these revelations. Hitler's Trojan horse in the Latin American countries takes the shape of the Falange Española, the Fascist Party of Spain.

Since the Falange, in Central and South America, has declared war on America, Click feels that Americans should know all they can about this new, secret Fascist Axis enemy which seeks to aid in our destruction.

Whether Franco stays in office as puppet dictator of Spain or not depends on whether puppet-master Hitler wins this war. Therefore the Falange, Franco's personal Fascist Party, is doing everything it can to bring about a Hitler victory.

To Franco, Hitler dangles an additional bait. Not only does Hitler promise to maintain the Franco dictatorship in Spain, but even, for services rendered, Hitler promises Franco the restoration of some of the former Spanish South American colonies to the new Imperial Spain. The services Hitler wants of Franco are performed by the Falange throughout the Western Hemisphere.

Service No. 1 is the creation of disunity in the Americas. At this task of setting brother against brother, inciting artificial race hatreds, and creating terrorist gangs to prey upon bewildered populations, Franco is proving an apt pupil of his Nazi masters. The center of all these New World Falange activities is in Cuba.

There the illegal Falange has 30,000 members. Working under the direct supervision of the Spanish and Italian Ministers—who in turn get their own orders from Hitler—the Falange is doing yeoman service in the Axis cause. Their program calls for the return of Cuba to Spain, the victory of Germany, and a complete break from the United States. They spread scurrilous attacks about the "inferior racial origin" of President Batista, and they distribute Fascist propaganda all over the hemisphere.

But the activities of the Falange do not stop at politics. Not only do they include organized violence—as we shall show—but they also include the smuggling of Axis agents with forged passports into all Western Hemisphere countries. More than one mysterious passenger has left a Spanish ship at Habana, been furnished with fake passports by the Falange, and then proceeded on to the United States in small fishing boats that put in at Florida shores. Sometimes these boats are spotted by Cuban anti-Fascists. In this case they often mysteriously blow up an hour after sailing.

The leading Quislings of the Axis Falange in Cuba are Senator Arguelles, Jose Rivero, and Raoul Maestri. The activities of these three are closely followed by Berlin.

Elicio Arguelles, elected to the senate as candidate of Menocal's party, organized the Comite Nacionalista Espanol de Cuba at the outbreak of the Spanish war in 1936—when Hitler and Mussolini sent their armies to guarantee the success of Franco's militarist putsch against the Spanish Republic. This organization spread propaganda and raised funds for Franco.

At the end of the war, in April 1939, it dissolved. Actually, it was absorbed by the Falange, which was then legal in Cuba.

A new organization, the Auxilio Social, took over the alleged functions of the old Comite. The chief of this organization—and of the Falange—was Genaro Riestra, the Spanish

Consul General. Early this year the Cuban Government decided to expel Riestra from Cuba. When the issue came up in the Cuban Senate, the one senator who led the defense of Riestra was Elicio Arguelles.

Habana's largest newspaper, Diario de la Marina, also defended Riestra. The paper is owned by Jose Rivero, fellow member with Arguelles of the Comite, the Auxilio Social, and the Falange. (In fact, both are leaders of individual secret Falange cells. Arguelles heads cell A–1; Rivero is leader of cell R–1.) Rivero's paper, which finds it profitable to pay lip service to democracy on page 1, is filled with Fascist propaganda on its other pages. During World War I, the pro-German stand of Rivero's paper got him into difficulties he would like to forget.

But far more interesting than either Rivero or Arguelles is Raoul Maestri, subeditor of Diario de la Marina, whose picture revealed so much when examined. German-educated and German-trained, Raoul Maestri is more than a Cuban leader of the Axis Falange. Maestri is the one-man brain trust of the Cuban "fifth columnists."

When the United States Minister invited Maestri to come to America as our guest and lecture on democracy and pan-American friendship, he probably had not the slightest inkling that Maestri's real work is the guiding of the Legion Nacional Revolucionaria Sindicalista, the military arm of the Falange in Cuba. The leaders of this group, the grayshirts, secretly meet with Maestri to plan their actions.

The nominal Caudillo of the grayshirts is a man named Marinas. The organization, which has a standard storm-troop structure, has its headquarters at 311 Mission Street in Habana. Those headquarters display the Falange and the swastika flags. Members of the grayshirts drill in a stadium owned by the Spanish firm, Galban Lobo. The son of one of this firm's heads is married to Rivero's daughter, Sylvia.

The illegal publication of the grayshirts, Accion Legionaria, shouts for a Nazi victory in this war. Its editors look upon Colonel Lindbergh as one of their spiritual leaders, and proclaim him as the real President of the United States.

Under Maestri's guidance, the grayshirt leaders are trying to form a mass movement named the Nationalist Workers Committee, embracing all of South America.

Crafty, ambitious, ruthless, Raoul Maestri is the man most likely to cause trouble for the democracies in Latin America.

Illustrations accompanying the article are described as follows:

ITALIAN MINISTER GIOVANNI PERSICO IS AXIS KEY MAN IN CUBA—BUT WHO IS THE BEAUTIFUL BARONESS LISETTE VON KAPRI?

PERSICO SPEAKS AT JOINT BLACKSHIRT-FALANGE MEETING

Sleek, oily, sharp-tongued Giovanni Persico, Italian Minister to Cuba, is the man who gives Hitler's orders to the Falange. It is to Persico that local Falange big shots come when they want to go over the head of Spanish Minister Espelius. And Persico will often aid them. One of them, who gave this secret picture to Click, will get in trouble when Persico sees it in print. At Persico's right hand is Prince Ruspoldi, the Italian Blackshirt chief. Note the flag of the Falange. This Blackshirt-Falange meeting was held in the Blackshirt office in Habana.

PERSICO TOOK THE BARONESS TO CUBAN AIRPORT

Last summer a beautiful brunette, Baroness Lisette von Kapri, suddenly showed up in Habana for a rest—during the hottest season. Persico, at whose office she received her mail, introduced her to officials of Ranchos Boyeros Airport as his secretary. An excellent flyer, she made friends with United States aviators flying planes to our base at Guantanamo. She brought a man named Otto Weh to the field for flying lessons, but Weh, a Nazi aviator, outflew his teachers. Finally Cuban authorities warned all naval and civil aviators to shun her or face court martial.

BARONESS VON KAPRI NOW LIVES AND FLIES IN UNITED STATES

Cuban authorities stopped Cuban flyers from talking to the baroness, and soon she went to the United States. She is now at Roosevelt Field, Long Island, mixing with American flyers near a key Army air base. Martin Harris took these pictures of her and sold them to us in good faith as a story of a typical modern woman flyer. The baroness, who is now applying for American citizenship, is far from being typical. Not only has she been personna grata to Axis emissaries in this hemisphere but her various stories of her origins clash too violently for comfort.

Dr. Raoul Maestri, editor of Habana's largest paper, was lecturing in America as a guest of the United States when Click's investigator called at his office, asked for his photo. While Maestri's secretary left the room, our man lifted the photo you see below.

The smudge of retoucher's water color that attracted our investigator's eye was rubbed with a damp cloth. This revealed what Maestri was hiding—the pennant bearing the emblem of the Falange. Maestri, guest of America, is actually a Falangist chief.

Jose Rivero toasted Musscilini with the Italian and German ministers when they gave him an Italian medal. Publisher of Habana's largest paper, Diario de la Marina, he poses as a friend of America. The picture below was removed from his own files. It shows Rivero, third from left, with a group of Fascist officers of Franco's army in Burgos during the Spanish War.

Bearded Gen. Mario Menocal, ex-President of Cuba is the Machiavelli of Cuban politics. His son, Raoul, holding his arm, is mayor of Habana. Holding Raoul's arm is Senator Elicio Arguelles, a relative of General Menocal and co-Quisling with Rivero of the Cuban Falange. Below you see Arguelles at his desk under a picture of Franco. The arrow points to swastika.

Italian Prince Camilo Ruspoldi is head of the Italian Blackshirts (Fascisti) in South America. He makes his headquarters in Habana, where he is frequently closeted with Spanish Minister Espelius, who betrayed the late Spanish Republic while in its service.

Fiery Genaro Riestra until early this year was Spanish consul general in Cuba, and also chief of the Falange and the Auxilio Social. In addition to directing the Fascist drive, he also raised funds for Franco. Cuba, like Mexico, finally threw him out for subversive activities.

Documents show the true nature of the Falange in Cuba. 1. The application for membership in the Falange includes questions about military service. A translation of the Falangista oath appears on it. 2. When the Falange was rendered illegal, it hid behind the false front of an alleged charity organization, the Auxilio Social. First head of Auxilio Social was Spanish Consul Genaro Riestra. 3. "The noble ally" is how official literature of the Falange describes Adolf Hitler. "I swear loyalty and absolute submission to all the chiefs of the movement. * * * I swear to give my life, if it is necessary to fight with arms, to the cause of the Traditionalist Spanish Falange and of the J. O. N. S. and of the Caudillo (Franco)."

Curtailing of Nondefense Appropriations

EXTENSION OF REMARKS

OF

HON. WESLEY E. DISNEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

ADDRESS BY HON. WESLEY E. DISNEY, OF OKLAHOMA

Mr. DISNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech made by me on June 3 last before the Tax Foundation:

Many of you have read the story told by Kipling in his Jungle Book about the little boy Mowgli who was raised in the wolf family. When all the members of the jungle decided to leave upon the invasion of the wild dogs, whose prowess was due to their traveling in packs of from 200 to 500 per pack, Mowgli decided to stay and defeat them. Those of you who have read the story know that he did not use an elephant, a lion, or a tiger for this purpose; they had already fled. He used the little stinging people—bees, wasps, and hornets—no one of which could have had any effect whatsoever alone, but through the cooperation of several million of these tiny creatures the great scourge of the jungle was put to flight.

Our Nation has brought to the average man the greatest luxuries and comforts known in the history of the world. If you wish to save this established form of government from the destruction of unlimited inflation, socialism, or dictatorship, it cannot be done by calling upon the elephant, lion, or tiger, such as our industrial giants, financial leaders, or great statesmen. No one of these great powers alone can save our system of commerce, industry, and living. Like Mowgli, we must call upon the millions of little people, each one of whom will be powerless alone, and must get them behind the great needs of today. I know of no organization better equipped to educate, influence, and arouse the millions of little people to the necessity of their taking part in these great problems, not the least of which is eliminating $2,000,000,000 of unnecessary governmental expense—than the organization which I have had the honor of addressing tonight.

When Secretary of the Treasury Morgenthau appeared before the Ways and Means Committee to open the hearings on this year's tax bill, he recommended to the committee that the Congress raise an additional three and a half billion dollars in taxes. The enormous size of this tax bill so impressed the Secretary that he recommended very definite savings in nondefense expenditures to the extent of a billion dollars. His language was that of genuine statesmanship. He said:

"We are now awake to the need * * * to make this country safe and strong. We have not, however, kept pace with events in our thinking about defense and nonrelief spending. We have remained curiously static in our conceptions of what to spend on those things not directly connected with defense. Ordinary traffic must now get to one side to let planes and tanks and guns have the right-of-way. Other traffic can be permitted only if it does not obstruct the national purpose.

* * * * *

"We have not reexamined all of those expenditures that have been sort of grafted onto the Government during the last 10 years. We go on just the same."

Obviously, the Secretary of the Treasury was alarmed, because we had before us the 1942 Budget, amounting to $19,000,000,000. He hoped that by current taxes—an additional tax bill—we could raise two-thirds of this amount and borrow the other third. Since that date the President has recommended to the Congress Budget estimates which will run the 1942 budget figure up to $22,169,000,000—nearly $5,000,000,000 more than the estimate in his January 3 message to Congress. Now Mr. Morgenthau wonders if we don't need a still bigger tax bill.

Secretary of Commerce Jesse Jones has stated that our national debt, as a result of the war, will climb to $90,000,000,000. Some think that it will be more, even exceeding $100,000,000,000. Our national debt is at present $47,600,000,000 with additional deficit debits of $12,800,000,000; and the State and municipal debt is approximately $20,000,000,000.

It has been stated on good authority that our 1942 fiscal deficit will exceed $10,000,000,000.

In the face of these enormous figures the Treasury Secretary suggested saving a billion dollars. I later suggested means of cutting nearly two billions from the current Budget. Both seemed a mere bagatelle when compared with a year's expense of twenty-two billions.

Defense is mandatory. Its expense must be met. Many nondefense items can wait if they are ordinarily necessary.

It will be well to take a view of our fiscal history in order to correctly approach the subject. In the last 40 years extravagance in government has been tolerated by the people. It has constantly grown in volume. The responsibility for such expenditures, great or small, rests primarily on the administrators of government, but ultimately on the whole people of the Nation.

Governmental expenditures fall roughly into two groups. The first includes payments for government per se; that is, the protection of life and property. This represents the cost of primary or fundamental functions of government. The second group is mainly for the support of social welfare activities of government. Roughly we might state that the first group of expenditures represents 25 percent and the second group 75 percent of what we spend on government.

Unusual expenditures in government have grown steadily in the past two or three generations. For instance, expenditures of State government increased 437 percent from 1903 to 1922. The passage of the sixteenth amendment to the Constitution of the United States, the income-tax amendment, marks the beginning of the epoch of increased expenditures for government of all types and kinds and of easy acquisition of money by the Government from the taxpayer. Its enactment really marks the date of the great spending era in America. You will remember that Governor, now retiring Chief Justice, Hughes vetoed the resolution in the New York Legislature ratifying the sixteenth amendment because he was afraid the rates might reach as high as 10 percent.

The sixteenth amendment took the lid off spending, so far as the Congress is concerned, and the Federal Government began to spend heavily. The State and local governments followed suit, so that we find that while in 1916 total Federal expenditures were $1,034,000,000, at least one department spent more than that much money annually in the budgets of recent years.

Within 10 years after that, during the era from 1923 to 1932, the annual Federal Budgets ran between three and four billion dollars.

A Federal Budget of $1,034,000,000 in 1916. In 1940 it reached almost $9,000,000,000, exclusive of the emergency defense budget. If the last quarter of a century has produced such results, what may we expect in the next 25 years? That is, if we expect to continue to think of money with relation to our fiscal policies?

The exact figures are available for the year 1938 for Federal, State, and local expenditures. They run like this: The grand total was $18,300,000,000, divided as follows: Federal $7,691,000,000; State $4,358,000,000; and municipal, $6,150,000,000. In that year our total national income was $64,000,000,000. A quick calculation based upon these figures shows that almost a third of the people's money went to government—and that in times of peace.

Remember that three-fourths of this money spent, went not for the primary purposes of government, for the protection of life and property, but for social welfare. This vast fiscal growth of the Federal system is largely accountable to the growth of administrative or bureaucratic public administration. The growth of boards, bureaus, commissions, and departments has necessarily been attended by the vast expenditure of tax money.

For illustration, in 1916 as I have said, the total Federal Budget was $1,034,000,000, yet since 1937 the budget of the Department of Agriculture has vastly exceeded the whole Federal Budget for 1916.

In 1928 the Congress spent $845,000 for the franking privilege at Government expense. The executive departments spent 6 millions. Ten years later the Congress spent $737,000, but the taxpayer paid for the franking of free mail by the executive department the staggering sum of $39,000,000. The publicity departments, and each division has one, must have spent much money in preparing the material to frank out.

These are but illustrative of the general trend. It might interest you to know that the fiscal year 1940 saw the traveling expenses of the Government reach $99,000,000 plus. Our national symbol, Uncle Sam, rode high, wide, and handsome that year, but the fiscal year 1941 will see him spending $150,000,000 for traveling expenses. The first 4 months of this fiscal year showed a Federal travel bill of $47,000,000.

We in the Federal system cannot retrench as against the defense program. Even the waste and extravagance necessarily attendant on a large and speedy program such as we are embarking on will be tolerated by the people. So our only recourse is to attack those expenditures which are not related to or attendant on defense.

There are no signs that the States and municipalities intend to cut their budgets in behalf of the taxpayers who are to be burdened with this fearful national-defense program.

The old slogan, "Soak the rich," is ceasing to be realistic even for the purpose of demagoguery. If the Government took every dime of all individual net incomes in the United States over $50,000 in 1938 it would have collected only $1,056,222,000. If the Government had taken all the net incomes above $5,000 in 1938, the yield would have been $6,702,582,000—less than that year's annual current Budget. If we soaked both the rich and the middle-class taxpayers and took all their net income, the Government would raise just about enough money to pay the current annual expenses.

Remember, again, that only one-fourth of this money spent goes for the primary objectives of government—the protection of life and property. A colloquy at the hearing before my committee between a member of the committee and the college president I have referred to brought the suggestion from the member that the economies the college man was calling for could not be accomplished unless the local interests should cease putting pressure upon the Congressman. The college president very properly replied in substance, "During the spending psychology of the recent years, each community assumed that the Government has already planned to spend several billion each year for the purpose of creating prosperity and, therefore, reasoned that it was up to them to get as much as they could of the Federal largess for themselves. Now that we are in a different era, where economy and saving are paramount, I believe that if Congress will take the initiative, not only state that the reduction of unnecessary nondefense expenditures is imperative but actually use the knife and pare these expenses to the bone, the communities will probably say Congress is right in taking this step during the emergency, and we must do all that we can to assist in this economy wave and must refrain from embarrassing our Congressman by requests for expenditures.'"

Returning now to the prime object of this address—the curtailing of nondefense appropriations. A curious phenomenon is arising: Every bureau and department of the Government whose existence or whose appropriations are threatened by the demand to go all out for defense, and to trim nondefense items, has evolved some type or scheme or system to prove their necessity or worthiness as defense projects. The N. Y. A., due for a cut of about ninety-two millions if Secretary Morgenthau's advice were followed, secured a "defense budget" of about $157,000,000.

It will not do to say that these nondefense agencies can be transformed into defense agencies. They cannot by a wave of the hand be given attributes and functions they lack. They are subject to all manner of local, State, and Federal political influences. Their administrators cannot say "No" as a practical matter. The Army can—and by the very compulsion that is involved in the Army organization—prevent any type of logrolling that is necessarily involved in the relief agencies. The Army can and does enforce the $21 a month wage upon the draftees. Actual defense projects necessarily imply Army organization and compulsion. It would be playing with defense to permit these relief agencies to pretend to be defense agencies.

There is hardly a single function of government at present that cannot be colored with some defense characteristics. But real money needs to be spent on real defense, unless this whole thing is simply a great, good-natured drama with an overweaning desire to please the audience.

The Secretary of the Treasury was specific in his suggestions. He did not mince words nor dodge the issue. He suggested that N. Y. A., C. C. C., and W. P. A. appropriations could probably be trimmed or disposed of and for agriculture could be drastically reduced; and he recommended a careful study of other functions of government with a view to saving the money spent on them, and the use of it for defense. Immediately all the forces of departmental propaganda went into action. Defeatism and futility were the chief weapons. "It just can't be done" was the principal argument. The Secretary's suggestions were made to the Ways and Means Committee which, under the rules of the House of Representatives, has no jurisdiction over appropriations. Immediately it was said that the Ways and Means Committee was helpless, although it claims to be the most powerful policy committee in the House. That atmosphere has pretty well settled down over Congress—that nothing can be done about it. But every individual Member admits that something ought to be done.

W. P. A., C. C. C., N. Y. A. were all organized for relief. Yet now they are claiming to be defense projects. They are creatures with overlapping functions and conflicting jurisdictions. Three great overheads are maintained for these institutions; all relief departments. But, for illustration, the president of a little college in Arkansas solemnly

told the Ways and Means Committee that the average income of the individual in Arkansas was $255 and of an average family in Arkansas $909. He emphatically stated and proved to the committee that for the cost of one boy in a C. C. C. camp he could give four boys in his college a year's education. How failure to economize can be justified cannot be explained to an American taxpayer. It is insolence to attempt it.

These bureaus, boards, commissions, departments, and divisions grow and grow like the Rose of Sharon. Each head of a subdivision is working industriously to justify his division's existence, to be promoted in salary, and to enlarge the jursdiction, scope, and appropriation of his division, be it big or little. It is easy to say that Congress "just ought to cut them out." I wouldn't be personal for the world, but you businessmen know the difficulty involved in disposing of a department in your corporation, or even of firing a deserving stenographer, or maybe one not so deserving. During the depression an oil company's board of directors decided to retrench. The board concluded that the retrenchment was mandatory and that a certain department must go. A resolution was passed dispensing with the geological department, disposing of the employees, and eliminating their salaries. One hard-headed director said this didn't do the job. The other members inquired why. He replied, "We've got to sell all the desks, typewriters, rugs, lamps, cuspidors, and get them clear out of the building. If we don't, in 3 months some of us will see those offices filled up again with employees."

If it is this difficult in a private business, do you not realize how much more difficult it is in government, under political pressure, with Uncle Sam a sort of magic Santa Claus paying the bill?

To pass a $3,500,000,000 tax bill and cut no expenditures will come home squarely to the taxpayer with the $2,500 salary, who has been paying $11 taxes, it and when this amount jumps to $72; to the $5,000 taxpayer, now paying $110, if when his taxes jump to $506; to the $10,000 taxpayer (as for instance a Congressman), if when his annual Federal tax jumps from $528 to $1,628.

Especially will this come home since these taxes are retroactive to January 1, 1941, and most especially when excise taxes to the amount of nearly $1,000,000,000 are being raised on many of the necessities of life these taxpayers buy. These are the Treasury's proposals in the present tax bill. We may have to adopt these proposals. Then there are the so-called hidden taxes which the Twentieth Century Fund says run to large amounts annually for the individual.

The 1942 fiscal year Budget totals $6,675,000,000 of nondefense items. Of that sum, fixed charges, like interest on the public debt, pensions, and so forth, amount to $2,716,000,000. The balance of $3,959,000,000 could be reduced in part and eliminated in part For instance, various aids to agriculture are budgeted for $1,061,600,000. I would cut that to $500,000,000, especially since agriculture should do well under the defense-spending program, and agriculture will get much indirectly from the lend-lease appropriation.

W. P. A. is budgeted for $1,034,000,000. The President has recommended a cut of $109,000,000. I would reduce it to $500,000,000.

General public works should be reduced to $250,000,000 from the $502,900,000 budgeted.

Aids to youth, represented by C. C. C. and N. Y. A., should be eliminated saving $362,600,000. These two relief agencies, even though we retain the W. P. A., should be eliminated, because they do not represent defense and do not represent any type of relief that could not be taken care of by the $500,000,000 for W. P. A. which I have suggested.

The magnitude of the defense program in its general aspect staggers the imagination. As I have stated, our national annual income in 1938 was $64,000,000,000. If in the near future, as Secretary Jesse Jones says, we are to have a national debt of ninety and maybe one hundred billion, and a State and local existing debt of $20,000,000,000, the disbalance baffles any fiscal student, even any prophet. We might ask, "Whither are we going?"

Remember that the Congressman nowadays is the errand boy of the Frankenstein called the executive department. His ability as statesman is gaged by his prowess in procuring Federal largess—Federal projects.

One of the most vocal advocates of economy of Government has been the United States Chamber of Commerce. It has been heretofore militant on all occasions on this subject and has drawn the fire of the spenders. However, you members of that great organization or of local chambers of commerce, know that it is composed of chambers of commerce all over the Nation. We have heard much about minority groups—I think pressure groups, if you please. It can hardly be contradicted that during the era of spending that has gone on in the last few years, local chambers of commerce have been among the heaviest contributors to pressure upon their Congressmen. Pressure to get things from the Government for the locality, and pressure to keep them after they are gotten. Yesterday the President suggested $125,000,000 for defense roads. Probably tens of thousands of letters will flow to the Congress from local chambers of commerce showing definitely that these roads ought to be located in their vicinities and the feeder roads headed in the direction of the local chamber of commerce should be added. Nobody ought to fool himself about this pressure weighing heavily with the Congressmen.

This is not intended to be mere ranting about the cost of Government, nor the learned display of taxpayers' figures. It is rather intended as an approach to the consequences of the outline detailed. Several observations may be made about these fiscal circumstances.

First, the thoughtful student of government should be impressed with the tremendous growth of power in the executive department in recent generations, as evidenced by the figures adduced. It amounts to turning over the purse to the executive branch of government and the necessarily attendant obsolescence of the legislative department. Then, too, the immense influence of a highly financed executive department gives it all power over every activity of the citizen as well as decisive control over the judicial system and the final direction of the legislative department. It will not do to say that America is going the way of all the republics and to let it go at that. America has the brains and should have the will to reevaluate its three branches of government. Modern history clinches the argument for this necessary step.

Another important consideration is the welfare of the Nation after this emergency is over. It is not unreasonable to suppose that a cessation of defense activities after the emergency will slump our national income as much as ten to twenty-five billions of dollars. With the return of soldiers to civilian pursuits and the loss of defense employment to others, we can visualize vast unemployment. Then, for the first time in the history of our country, we will come into a depression with a monumental public debt staring us in the face. I may emphasize its possibility when I tell you that Leon Henderson said before the Ways and Means Committee the other day that by May 1942 we would be spending $2,000,000,000 per month for defense.

If we do have a debt of $90,000,000,000, as Secretary Jones has said, the interest on that debt would range around $3,000,000,000 a year. From 1923 to 1932, our total national expenses had a range of about that same figure. In those equally serious days to come, where will we turn for financial relief if we are not wise enough to economize now to the extent of one or two billion dollars per year on altogether nondefense items? Do we not have the wisdom to look that far ahead? Will not the thinking people of America awaken?

With the necessity of vast sums then for relief, where will the money come from? In what shape will the Government's credit be? Will not some string-band statesman suggest the devaluation of the gold content of the dollar, holding out to the people as a prize the twenty-two billions of gold we have stored, and convince them that by proper manipulation it could be made to represent eighty or one hundred billion dollars in Government credit and spending power? When he has succeeded in those blandishments, what will be the value of the savings of the people, their investments in things of value, their years of thrift in accumulating life insurance?

The press says that England looks forward to a "social readjustment" after the war. We have seen all values wiped out in Germany, France, Italy, and Russia, or, at least, reduced to a fraction of their original value. France devaluated the franc and Germany the mark. They all moved into some form of socialism, where individual initiative, private ownership, the stirring of ambition through financial incentive went down the road of modern barbarism in those countries. Those inflationary movements in our sister nations were preceded by, or accompanied with, various forms of socialism.

I hope and trust that through Government control we will be able to prevent a destructive inflation, but is the hope realistic when we see a system of priorities that will so scarcen the people's goods that consumer demand will outrun production; when we observe that every strike is settled on the basis of increased wages, with no apparent thought of its ultimate effect; when we see scarcity and increased prices in all manner of manufactured and raw materials arising on every hand; when we see production held down by penalty under a wage-hour system; and when we see the possibility that individuals and corporations may follow the "business as usual" attitude of the Government instead of thrift, economy, and the paring to the bone of nonessentials? If we do have such inflation, the inevitable drift is toward the socialism England so complacently contemplates—the socialism that made the people, in their sweat of agony in France, in Germany, in Russia, and in Italy, turn away from their legally constituted authorities, yearn for and finally demand a dictatorship which ultimately took charge of them, their families, their religion, their private fortunes, and their very future hopes and aspirations. Are not the seeds we are sowing those of home-grown fascism and nazi-ism, which we so much fear and despise?

The ancient civilizations of the world in turn flourished, gradually declined, and disintegrated. If there is one thing that history teaches in unmistakable terms, it is that nations, like individuals, prosper according to their right thinking, and that the idolatrous exaltation of a material sense of power and intelligence inevitably leads to decay and downfall. Dictatorship is that idolatrous exaltation of the material sense of power.

This day will pass. Moral might is stronger than all the guns and ships fashioned by the hand of man.

Disappointed with all his worldly achievements, Napoleon in his solitude, in deep contemplation, said, "Alexander, Caesar, Charlemagne, and myself have founded empires. But upon what did we rest the creation of our genius? Upon force. Jesus Christ alone founded His empire upon love; and at this moment millions of men would die for Him." Pitted against an alert, free, active world public opinion, the rampage of the present-day forces of evil cannot endure. Their

predecessors failed upon the rock of the unseen spiritual forces asserted by mankind.

Democracy is the highest spiritual idea of mankind as related to Government. True democracy is alert, active, and awake. True democracy rests in the bosom of the individual citizen. He is king in his own right if he but assert it. From his activity comes the strength of his Government, the symbol of his concept of democracy.

In the insane asylums it is an accepted scientific fact that one of the first signs of returning sanity on the part of an inmate, is his expressed ability to cooperate with other inmates and attendants. Those that are completely insane think only of their personal welfare, and do not cooperate. In our own country there has been too much of each community looking out for its own interest, in making its demands upon the Federal Government. This is because the individuals who compose the communities have each thought only of their own interest. The individuals and the communities seemed to have had a slogan "Every other community is getting what it can, so let's make certain we get ours." This is exactly the attitude of the inmates of the asylum who are completely insane, having no thought for anything but themselves. If the various individuals and communities that comprise this great Nation can be educated and influenced to cooperate for the common good, which would, of course, include economy in government, would it not be a welcome sign of returning sanity? Marshal Petain, after the French debacle, said, "After our victory in 1918 we became a comfortable, pleasure seeking nation. We asked for more than we were willing to give. We refused to accept responsibility. Now we are in distress."

Pennsylvania Turnpike Succeeding as Toll-Road Experiment

EXTENSION OF REMARKS

OF

HON. WILBURN CARTWRIGHT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

LETTER FROM HON. WALTER A. JONES, CHAIRMAN, PENNSYLVANIA TURNPIKE COMMISSION

Mr. CARTWRIGHT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from Hon. Walter A. Jones, chairman of the Pennsylvania Turnpike Commission, which contains an interesting report on the operation of the great Pennsylvania Turnpike between Harrisburg and Pittsburgh as a toll facility.

The letter referred to is as follows:

COMMONWEALTH OF PENNSYLVANIA,
PENNSYLVANIA TURNPIKE COMMISSION,
Harrisburg, August 12, 1941.

Hon. WILBURN CARTWRIGHT,
House of Representatives
Washington, D. C.

MY DEAR CONGRESSMAN: Confirming my conversation with you this morning about the results of the operation of the Pennsylvania Turnpike for July, I beg to repeat that we actually collected and put in the bank from tolls $359,368.70. To this amount must be added approximately $30,000, which will be received from the oil and food concessions for the month, making a total of approximately $390,000 for 1 month.

The point I wish to stress is that, contrary to all other statements, this piece of superhighway through the mountains of Pennsylvania, which begins 15 miles from Pittsburgh and ends the same distance from Harrisburg, has been accepted by the motoring public and proves that they will gladly pay for the use of highways that will provide such safety features as elimination of grade crossings and interference of red lights.

In addition, I repeat that the bonds with which this project was financed have been accepted by the public and today are selling at a very decided premium, and it is my opinion that other defense highways could be built by the sale of revenue bonds.

With very kindest regards, I am,

Sincerely,

WALTER A. JONES, *Chairman.*

William Edgar Borah

EXTENSION OF REMARKS

OF

HON. JAMES V. HEIDINGER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

ADDRESSES BY HON. EVERETT M. DIRKSEN, OF ILLINOIS, AND HON. DWIGHT H. GREEN, GOVERNOR OF ILLINOIS

Mr. HEIDINGER. Mr. Speaker, the late Senator William E. Borah, of Idaho, was born and reared on a farm near Fairfield, Wayne County, Ill. Sunday, the 29th day of June last, was the seventy-sixth anniversary of his birth, and on that afternoon several thousand people of Wayne and adjoining counties assembled in the courthouse yard in Fairfield to do honor to the memory of this great American.

Two tributes were delivered to William Edgar Borah on this occasion, one by the Honorable EVERETT M. DIRKSEN, Member of Congress from the Sixteenth Illinois District, and the other by the Honorable Dwight H. Green, Governor of the State of Illinois.

Under leave to extend my remarks, I include these two addresses:

ADDRESS BY HON. EVERETT M. DIRKSEN, OF ILLINOIS

Today we gather for remembrance. It is one of the divine and ennobling attributes of life.

What tragedy it would be if humankind were not endowed with the gift of remembrance. What a dismal world it would be if each moment were to be blacked out forever and forever as quickly as it was spent. What a thing of frustration all human existence would be were it impossible to exercise this divine gift and recall some lilting song or the refrain of some vigorous and stirring hymn. How empty life would be were it impossible to recall from the recesses of the mind the caress of some precious hand now cold and lifeless or the beauty of a soft whisper. How futile all life would be if it were impossible to reconstruct the inspiration of a gentle voice, or act of kindness, the encouragement of a golden smile, or of a noble deed. How empty, indeed, would be each life were it impossible to conjure up in remembrance some great and good person whose soul is now marching in that shadowy procession in the bivouac of the dead.

Life would be a thing of futility and frustration were we devoid of that enriching power to reach into the inexhaustible storehouse of memory and bring forth in remembrance an old friend, an old neighbor, an illustrious son of Fairfield, of Wayne County, of Illinois, to do him honor, to live again with him in the fellowship of the spirit and to reappraise his work. Today we are assembled not only in tribute to his memory but in thanksgiving for this God-given attribute which brings luster and hope to the whole design of living.

Time brings perspective. The fleeting years temper the severity of human judgment and help to impart accuracy to our appraisal of human achievement. Somehow as we march up the ladder of time, rung by rung, its mellow judgment enables us to brush away the superfluous and the inconsequential and to see more clearly the broad and substantial pattern by which a human personality made a deep impression upon the affairs of mankind.

Perspective teaches the unimportance of death. Who will care to remember the day on which his noble spirit took its flight from this earthly domain? Who remembers or cares to remember the day on which the living genius of Lincoln was terminated by an assassin's bullet? Who remembers or cares to remember the day when the living grandeur of Washington was converted into the imperishable marble of eternity?

What is important is that like other men of vision, wisdom, and courage William Edgar Borah lived. To us it is important that he labored with head and hands; that he gave of a generous talent to mankind; that he was a living and vibrant instrument of human progress; that he assisted nobly in directing the chariot of human progress into the sun-bathed valleys of a better living. Truly time serves well as it gives quality to our judgments.

Here in this humble town it was ordained that he should come to the Republic and become a creature of destiny.

Let us climb aboard the transport of fancy and go back to the winter of 1865 when the family of William Edgar Borah was humbly tilling the soil of Wayne County.

The whole Nation was bleeding from a bloody war.

Our own beloved Lincoln, out of a troubled soul, was beseeching God for guidance in that anxious hour.

In February of that year the shackles were for all time stricken from the slaves.

As the resurrection of spring came upon the land in April and all was green and still, Richmond fell.

In the second week of that same month and same year Lee surrendered his sword to Grant.

But 5 days later the awful tragedy of assassination stilled the genius of Lincoln and gave him to the ages.

But a few months later Borah was born on the same soil that fostered and nurtured the deathless Emancipator.

He was born in that era when a great issue involving the life and destiny of the Republic was being disposed, and somehow the inspiration of that rugged and historic era was born in his veins. Through his lifetime he faced the great issues confronting the Nation without a substitute or compromise.

In those days which followed the World War, when the United States Senate was fighting every effort to place this country in the League of Nations, even a foe so bitter and implacable as Henry Cabot Lodge, then serving as chairman of the Foreign Relations Committee of the United States Senate, was in a mood to consider a substitute proposal. To Borah, it was a fight which involved high pinciple and there could be neither compromise nor substitute.

In a later generation when another President attempted to affect the composition of the Supreme Court by a legislative proposal, the foes of this measure began to weaken and to seriously consider a substitute measure. It was the resolution and determination of Borah which not only discouraged that effort but kept the fight on high ground and made it one of the outstanding controversies in the history of the Republic.

His education in Fairfield and at Enfield Academy was but the beginning of 40 years of preparatory effort and training for the fruitful career which was to follow.

I think of his early years in this humble and quiet country and of the elementary preparation which he here received as not unlike that of David of old. When David was upbraided by his brothers for coming to camp to engage in combat with Goliath, he calmly announced that he slew a lion and a bear which had raided the father's flock. It was his preparation for the great encounter which was to follow. It was here that Borah made preparation for the encounters which were to mark several generations of our national life.

Here close to the soil he builded a physique, a resiliency, and a vigor which was as durable as the soil itself.

From the ineffable and majestic symmetry and harmony of Nature with which he was surrounded, he found the inspiration for his matchless eloquence.

Here as on the prairies of Kansas and the plains of Idaho, on the very frontier of democracy, was fashioned his deep affection for the common people and their problems.

In the innate righteousness and simplicity of the people in whose midst he was born, in the fundamental equities which he absorbed as a student of the law, in the disposition of controversies both in and out of court, he laid the foundation for an abiding reverence for the law and the Constitution which became the lodestar of his life. It was his design for living. It was his code of human progress; and in later years we see him again and again in his impassioned defenses of law and order.

Here he early learned that life without a cause is like a vessel without a rudder. Yea, more like a vessel without motive power. He learned that a deep and abiding cause generates zeal and becomes the design for a vigorous life. He learned that a cause provides strength and that it becomes Nature's best antidote for the gospel of defeatism and despair. Truly he was a man of many causes.

After two generations of preparation dealing in basic and elemental values, he sprang like a warrior, full-panoplied to the people's forum and for a third of a century thereafter addressed himself with vigor, with determination, with courage, with faith and high hope to the common welfare of the land he so passionately loved.

Permeating it all was his great spiritual devotion and the depth of his religious conviction.

On one occasion with almost explosive force he observed to a well-known member of the press who had called at his office, "Of course, there is a God. This would be truly a hell of a place to live in if there were no God."

He gestured toward the majesty of the Capitol, to its verdant lawn and to the trees as they awakened to the resurrection of the springtime and then demanded, "How could you explain all this if there is no God?" I am not certain about this manifestation but I am certain that a divine conscience rules humanity—rules all this.

It was no inept appelation that he should become known as the Lion of Idaho. To see him in action on a momentous issue with eyes flashing fire, with rich and resonant cadences carrying truth and conviction, with shaggy hair which flowed back from his forehead, with superb courage and zeal—truly he was the great Lion of Idaho.

Today, as we lift our eyes and see a world that is alight with the flames of conflict, it is peculiarly fitting that we should memorialize one who was so long preeminent in the field of foreign relations.

His consuming hope was for peace and disarmament for the entire world and for freedom from alliances by this country.

In 1920 he was the first to launch a vigorous attack upon the Treaty of Versailles. He pointed out that dictators are the spawn of a treaty filled with inequities. He said it was cruel and would bring sorrow in its wake. Over and over he reaffirmed that its inequities would awaken the reckoning power of retribution. Again and again he proclaimed, "You will not get disarmament in Europe until those conditions are corrected."

Truly he was the Lion of Idaho as he resisted every effort to enroll this Nation in the League of Nations. When Woodrow Wilson appealed to the people for support for his League program and swung through the Nation on a speaking tour to enlist national interest, Borah was one of three Members of the United States Senate to tour the same areas.

Borah spoke everywhere and portrayed to the people the danger of becoming embroiled in the affairs of Europe. Like a crusader fired with holy zeal, he carried his gospel to the people. Everywhere he hurled his clarion warning that entry into the League meant injustice, slavery, and war. Then came the ringing challenge, "And to this you ask the Republic to become a party." The record of that controversy is writ in large and indelible letters upon the pages of our history. The effort to project the United States of America into the League failed.

I recall the personal thrill of sitting close to him as he opened the argument in opposition to the amending of the Neutrality Act. It was in the autumn of 1938. Age had robbed the voice of some of its richness. His hair was thinning, but he was still the ancient Borah, the great crusader fighting in the holy cause of keeping this Nation free from the entanglements of Europe. Even today as the way is dark and confusion abounds on every hand the wisdom of Borah still offers the brightest hope of saving this representative democracy and our civilization.

Under seven Presidents he was a defender of the ancient faith and never waivered in his espousal of those causes which were for the benefit of the common man. He fought valiantly for a more abundant life and for the forgotten man long before those words became catch phrases in the lexicon of American politics.

Having had to carry his senatorial cause to the people in 1907 because of the situation which prevailed in the legislature of his adopted State, it was but natural that he should be in the forefront of a movement to elect Members of the Senate by a direct vote of the people.

He was ever wedded to the principle that taxes should be paid in accordance with ability to pay and after a generation of effort saw that principle incorporated in the organic law of the Nation.

In those days immediately preceding the World War he took an active part in the creation of the Federal Reserve System and never lost interest in the fascinating subject of monetary reform and fiscal policy.

One need but read the record of the last 40 years to observe that the name of Borah looms large in the unceasing fight to curb monopolistic practices.

Labor will be ever indebted to him for the support which he rendered in the creation of a separate Department of Labor and in the creation of a Children's Bureau.

For two generations his praises have been sung by the farmers who till the lush and fertile acres of this land because they counted him as a steadfast and loyal friend.

It was so eminently fitting that his strenuous life should close shortly after the greatest controversy of his career as he gave direction to the struggle to save the Supreme Court of the United States.

He saw in the high tribunal the salvation of our whole system of representative government.

He looked upon it with its tempered wisdom as a check on the Executive and the Congress.

He regarded it as an indispensable part of the system of constitutional government.

Not since Daniel Webster has there been an apostle of the Constitution and a defender of our system to equal his passionate defense of the Constitution and all that it implies for the American way.

It was he who kept the opposition to the President's proposal on high and nonpartisan ground and made it an American issue.

It was he who insisted that every party advantage be sacrificed in the fight.

It was he who rejected the blandishment of a substitute in the form of a constitutional amendment and vigorously insisted that there could be no compromise. It was he who encouraged the retirement of one of the sitting Justices in order to ease the tension and improve the prospect of winning this great battle for the preservation of the American Constitution.

It was he who insisted that the report to be filed in connection with this measure should stand as a complete repository for the students of American government who in generations to come might examine it with pride and pay tribute to those who stood as defenders of constitutional government.

It was he who felt the great swell of patriotic pride in a job well done for the common man and for every citizen of the land when by a vote of 70 to 20 the bill was recommitted to the committee.

In this epochal American struggle we behold Borah as a defender of the ancient faith.

His greatest attribute was the zeal and the earnestness with which he crusaded for causes which he deemed to be in the interest of America but with it all he was a consummate political strategist.

Theodore Roosevelt as President of the United States caustically criticized him on occasion. President Taft had his name removed from the social list of the White House. He was often at odds with the seven Presidents under whom he served and each respected his integrity and his formidable qualities as an adversary.

On numerous occasions candidates for the Presidency undertook to give him assurances concerning great issues before the country but always he insisted that the only forthright policy for them to pursue was to make their promises and their pledges openly to the people. It was this simplicity and faith and this devotion to the people which made him a political strategist whose influence dots the pages of history.

Today we pay our humble tribute to his memory and raise our voices in thanksgiving because he lived and made a great contribution that mankind should have life more abundantly.

It is so eminently fitting that we should meet at the scene of his birth on a Sabbath afternoon and ask the age-old question, "If a man die, shall he live again?"

We dip into the pages of Holy Writ and see Job, the patriarch, in all his affliction, surrounded with his friends, Zophar, Eliphaz, and Bildad, and out of the agony of spirit we catch the echo of Job's question, "If a man die, shall he live again?"

For countless generations that question has arisen from the minds and the hearts of men who seek an answer.

For countless generations a great and ennobling faith has chorused the affirmative while cynicism answered in the negative.

We need but lift our eyes like Ishmael of old and find the answer everywhere about us.

We see it in the continuity of the trees and flowers. We see it in the resurrection of every vernal spring.

It is an axiom of Nature that nothing shall be added to the creation and nothing shall be destroyed.

Man but takes the material provided by a generous providence and transmutes it into a multitude of different forms. He cannot create neither can he destroy, and, from the evidences of continuity which press upon our every sence, we find both reassurance and that "if a man die, he shall live again."

The spirit of William Edgar Borah still lives and points the way to an unfinished work. His soul has moved on to a higher plane of duty and bids the living to carry on.

We can find inspiration in that New Hampshire soldier who passed to his reward in 1862 before the destiny of an undivided nation had been determined. He was a soldier in that struggle. On the humble marker of his last resting place one will find this epitath: "This side of my monument I dedicate to the sacred cause of liberty and union. May they be preserved forever." Truly here is encouragement and inspiration for us to carry on in those larger causes for human happiness which may not be determined in our lifetime.

Today, as we reverently memorialize the life and achievements of a great soldier in the cause of human welfare and reach out for hope and for substance to sustain a faith which sometimes weakens from the impact of confusion and despair, we can do no better than to echo the spirit of that great message from the ninth verse of the first chapter of Joshua: "Have not I commanded thee? Be strong and of good courage; be not afraid, neither be thou dismayed: for the Lord thy God am with thee withersoever thou goest."

ADDRESS BY GOV. DWIGHT H. GREEN

This is indeed a notable occasion in which we have joined today, and I am more than happy to have been invited to share the pride which must be that of every citizen of Fairfield. In fact, not only should Fairfield be proud, but entire Wayne County can well pay tribute to a statesman who reflected glory upon his birthplace. In the late Senator William E. Borah, whose seventy-sixth birthday anniversary we have gathered to commemorate, the entire Nation found its greatest champion of true Americanism. Senator Borah represented Idaho, the State of his adoption, but Fairfield and Wayne County never relinquished their claim on him as favorite son.

In Senator Borah was reflected the indomitable courage of the pioneers of Illinois. Back of his many battles on the floor of the Senate for the preservation of American principles and ideals, was the spirit which fired his ancestors to hew a great empire out of waste and wilderness. All Illinois can well exult in the success that made Senator Borah an outstanding and unforgettable figure in American history.

The story of the life of William E. Borah is a magnificient story of Americanism. One of the greatest constitutional lawyers in the annals of bench and bar, he devoted his entire public career to safeguarding the Constitution of the United States, which he believed to be the greatest human document ever written for the welfare and protection of man. Any encroachment upon the Constitution was a challenge which brought Senator Borah into the battle, regardless of party or politics. Great orator that he was, he stands forth with the men in earlier American history, and with Abraham Lincoln, that other great son of Illinois, as a statesman who could not be swerved from his beliefs.

Imbued with devotion to the concepts of liberty left to us as a heritage from our forefathers, his faith in America as the imperishable home of freedom involved him in bitter battles which at times threatened his political prestige. Throughout the controversies over the League of Nations, the World Court, and the packing of the Supreme Court, Senator Borah led the fight to keep his country out of foreign entanglements and away from violations of constitutional traditions. No promises of political rewards could weaken the sincerity of his patriotic purpose.

I would liken Senator Borah to those great men in American history who shaped the destiny of a new-born Nation. A short time ago, I was reading James Madison's Journal of the proceedings of the Constitutional Convention in Philadelphia, at which our Government was created, and I know that Senator Borah must have read it too. Running like a golden thread through every meeting of that historic gathering, was the conviction that ours would be a Government in which all men would share its duties. Great thinkers in that body based their plea for free government upon the assumption that the ablest and best-qualified men should be chosen for public office, and that each citizen should recognize that he had the personal privilege and duty of putting his talent and his effort back of those whom he had elected. That was the concept of government by the people, as the founders of our Nation saw it with remarkable clarity, and that was the concept of government by the people which William E. Borah carried in his heart and soul. That is the concept upon which the very existence of our Nation depends, and from which there must be no deviation now.

The great son of Illinois, and Senator from Idaho, possessed those cardinal articles of faith which form the faith of all liberty-loving Americans. The greatest of these articles was his belief in basic human rights. The ringing declaration of the founders of our Nation that "all men are created free and equal" to him was a living principle, as fundamental as any law of Nature. His whole career was based on the firm belief that government is free and that it belongs to the people, and that it is the people who must make that free government work. His life was a living sermon that government is the people's servant and that theirs is the right of freedom and opportunity upon which no agency dares encroach.

The man whose memory we honor today held to one inviolable principle. So that our republican form of government shall not die, he believed that no elected official should place himself above the fundamental law. He saw that the end of such a road would be dangerous, for he knew that the placing of all the power within the reach of the Executive could bring dictatorship.

He was the prototype of another immortal American, Benjamin Franklin. It was Franklin who said that a frequent recurrence to fundamental principles is absolutely necessary to preserve the blessing of liberty and keep a government free. This great patriot, whose principles were reflected upon the floor of the Senate by the Senator from Idaho, believed that it is not only necessary to recur frequently to these principles but at all times to defend them. They must be defended, he said, not only against the avowed enemies of liberty but against those who in their zeal for some particular advantage forget and abandon the convictions without which there can be no liberty. It might have been the voice of Franklin—and of all the other founders of our Nation rolled into one—when Senator Borah declared his belief that there is no conviction so vital to the American people as the conviction that no one, anywhere, or at any time, shall have a monopoly on unlimited power. We Americans know that it is upon this conviction that the Republic rests.

Later this week we shall observe another anniversary of the birth of our Republic. It is the deepest regret of all of us that Senator Borah could not be among us to join in celebrating the birthday of the Nation he loved so dearly. But in the same spirit that he would show were he with us, we can renew our own faith in the American form of government and again declare our allegiance to the Constitution which has made American citizenship the most priceless heritage in the world. If, in these days of uncertainty and fear, we need strength and courage, let us do as Senator Borah would do, and turn to the Constitution for protection for our birthright of freedom. Its ideals are as sacred now as they were when they were written. They guarantee that government shall represent the will of the people, and they assure each person the just fruits of his labor. They are the supreme defender of men's rights, liberties, and property. They protect any government which is humane and incorruptible. They are timeless and eternal.

Senator Borah, in the many years he devoted to unselfish public service, saw our Nation become the mightiest and most glorious on earth. This is so because he, and others who followed his precepts, never forget those principles of representative government which are the sinews of our national life.

The problems which he helped to solve still confront our Government, and these problems demand, and must receive, the participation of our ablest citizens. In this peacetime crisis, we must summon every loyal heart and mind into service. The call for unselfish devotion to the needs of good government is as imperative today as the call to arms has been at any time in our Nation's history. Our lives and futures, and those of generations yet unborn, depend upon retention of government by the people. It is only in this manner that we can preserve our republican form of government.

Government by the people has died before in history, and is dying now in other lands. This shall never happen on this continent in our generation, or in those to come. I beg you to believe that no price we have to pay to prevent this would be too high.

Treatment of Canadian Soldiers

EXTENSION OF REMARKS

OF

HON. WALTER C. PLOESER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

LETTER FROM CANADIAN MILITARY ATTACHÉ

Mr. PLOESER. Mr. Speaker, I am introducing this letter to show the comparative situation in the treatment of Canadian soliders and the American soldiers:

WASHINGTON, D. C., *July 25, 1941.*

Mr. JOSEPH LEIB,
National Press Building,
Washington, D. C.

DEAR MR. LEIB: Your letter of the 22d instant addressed to the Minister has been referred to this office for reply.

The basic pay of a Canadian soldier is $1.30 per day.

In addition to this, there is provision made for a soldier's dependents. If a soldier makes an assignment of $20 per month to his wife or dependent, the Canadian Government will

provide an additional dependent's allowance of $35, making a total of $55 per month. Provision is also made for a dependents' allowance of $12 per month for each child up to and including two.

I trust this is the information required and would ask you to please advise me if I can be of any further assistance.

Yours very truly,

H. F. G. LETSON,
Brigadier, Military Attaché,
Canadian Legation.

Can There Be Labor Peace?

EXTENSION OF REMARKS
OF
HON. MICHAEL J. KENNEDY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

EDITORIAL FROM THE NEW YORK HERALD TRIBUNE

Mr. MICHAEL J. KENNEDY. Mr. Speaker, I wish to bring to the attention of the Members of the House the following editorial entitled "Can There Be Labor Peace?" appearing in the New York Herald Tribune of Tuesday, August 12, which I consider a very simple and straightforward presentation of the issue.

The necessity for unity within the ranks of labor has increased a hundredfold with the increasing needs of our national-defense program. It has therefore been a matter of growing concern to those of us who have watched the schism separating the ranks of 8,000,000 organized workers grow ever wider. It would be a great catastrophe for organized labor, through internal dissension, to lose any of the tremendous gains that have been made within the last 25 years. The working men and women of this country are certainly entitled to look to the leaders of both factions of the labor movement for peace and a friendly spirit, which would contribute so much to the happiness and contentment of all members of organized labor. The eradication of communism and racketeering in the ranks of the labor movement in America could be eliminated very easily by harmonious leadership. With the eradication of these two evils the future success of labor would be assured. The editorial follows:

[From the New York Herald Tribune of August 12, 1941]

CAN THERE BE LABOR PEACE?

Peace between the C. I. O. and the A. F. of L. is so much to be desired from every point of view that one is inclined to put aside rumors of renewed efforts to that end as being in the realms of wishful thinking. That we should see the end of jurisdictional labor disputes, of divided representation for labor on every board and commission on which labor is entitled to representation, has seemed in the last 4 years a more and more distant possibility. Yet now added to the fact that unity is in the interests of labor itself is the imperative need for national unity. Unity is, indeed, essential to the cause of labor because of public impatience with interruptions of defense production by jurisdictional strikes, an impatience that can easily develop into uncompromising reaction. The report is that William Green expects to resign in October from the A. F. of L. presidency, possibly to be succeeded by Daniel J. Tobin, and that if Philip Murray should consent, in the interests of peace, to remove himself as C. I. O. head, efforts would be made by a mediator respected by both sides—Senator JAMES M. MEAD is mentioned—to bring about a compromise of the differences between the two factions.

There are factors which make for the possible success of such efforts. There is Tobin himself, an outstanding proponent of reunion. He has defied the A. F. of L. leadership to call for a rank-and-file revolt in both great unions to compel peace between them In January 1940 he wrote: "Less than one dozen men on both sides are responsible for the division of 8,000,000 organized workers Let the workers ask themselves why 8,000,000 organized workers should allow a few men to keep them separated." John L. Lewis, the most unbending foe of compromise, has at least ostensibly stepped down, and has, moreover, through his stand on the election and on defense cooperation, lost most of his former prestige. If Mr. Green actually intends to resign, then the two most important of the dozen men who stand in the way of peace will be out of the way. The next most important man is Mr. Murray, who is so closely associated with Lewis policies that his succession to the C. I. O. presidency is considered to cancel the effect of Lewis' resignation. Any reasonable effort to end the labor feud has the backing of the administration and, there is little doubt, of the most intelligent of the union rank and file. The public, discouraged by the bitterness of the schism, has its fingers crossed, but there is nothing it would like better than to uncross them.

Army Morale

EXTENSION OF REMARKS
OF
HON. EARL WILSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

EDITORIAL FROM THE MADISON (IND.) COURIER

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Madison (Ind.) Courier of August 11, 1941:

[From the Madison (Ind.) Courier of August 11, 1941]

ARMY MORALE

Observers of America's new draft army report that there is a lack of fighting spirit among the men recently sent to camp under the Selective Service Act, and a seeming ignorance of what the war is all about.

The Army is criticized for failure to instill in the young men a desire for conquest and a determination to win regardless of the costs.

Probably the hunt for the reasons for this condition should not be confined to the Army but an investigation should be made of the conditions under which the embryo soldiers were reared and under which they have lived for the past 10 years.

Until the World War American Armies were made up of volunteers and the units formed from the several States, and those forming them were in the ranks because they were convinced that it was a duty to give their service.

A pride of organization grew up and a rivalry existed between the various units and that, together with a continuity which is lacking in the present-day Army, made for efficiency.

The spirit of former years which encouraged men to do for themselves rather than appeal to the Government is now lacking in civil life and the multitude of State and Federal regulations which hamper individual efforts has done much to break down initiative and encourage a condition which is far from the best for a fighting army.

As more and more restrictions are placed upon American life there seems to be less and less difference between conditions in the New and Old Worlds and boys and men can see but little use in the struggle.

Breaking down of morale comes from closed shops, a third-term draft which many believe phony, and from the lack of efficiency in the national administration.

Before young America can be aroused to a fighting spirit there must be an end to broken promises in Washington, and a return to the former beliefs that an individual makes his own bed and should be content to lie in it.

Reception Given by the Grand Duchess of Luxembourg to Consul George P. Waller, Friday, August 8, 1941

EXTENSION OF REMARKS
OF
HON. SOL BLOOM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

ADDRESSES BY HER ROYAL HIGHNESS THE GRAND DUCHESS OF LUXEMBOURG; THE HONORABLE ADOLF A. BERLE, JR., ASSISTANT SECRETARY OF STATE; AND GEORGE PLATT WALLER, CHARGÉ D'AFFAIRES AND UNITED STATES CONSUL TO LUXEMBOURG

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein addresses by Her Royal Highness the Grand Duchess of Luxembourg; the Honorable Adolf A. Berle, Jr., Assistant Secretary of State; and Mr. George Platt Waller, Chargé d'Affaires and United States consul to Luxembourg, at a reception at the Luxembourg Legation, Friday, August 8, 1941, in honor of Mr. Waller, who returned to the United States on the steamship *West Point:*

INTRODUCTION BY THE HONORABLE HUGUES LE GALLAIS, MINISTER OF LUXEMBOURG

As Minister of Luxembourg to the United States, I have the high privilege and honor to introduce my most gracious sovereign, Her Royal Highness the Grand Duchess of Luxembourg.

ADDRESS BY HER ROYAL HIGHNESS THE GRAND DUCHESS OF LUXEMBOURG

On the occasion of this reception for Mr. George Platt Waller, Chargé d'Affaires and consul of the United States to Luxembourg from 1931 to 1941, I am happy to be able to tell the American people that this official of their Government has won the devotion

and the admiration of the entire population of the country in which he was stationed. Mr. Waller succeeded not only because he represented a great friendly power, but because he is a man of stout heart and strong character who with unrelentless will did what he could for the people amongst whom he lived for 10 years. He liked them, and they liked him; he was their friend and protector. Mr. Waller was also an impartial and clear-seeing witness, not only of the crimes committed by the German invader against the liberties and sacred rights of the Luxembourg people, but also of their unanimously courageous attitude against the oppressor. I thank Mr. Waller with all my heart for this testimony given before American public opinion and the entire civilized world. It gives me a legitimate right to be proud of my people, who heroically are enduring a terrible fate whilst awaiting the hour of liberation. Mr. Waller has won the eternal gratitude of the Luxembourgers, and they are waiting to tell him so themselves—and how impatiently. They are fully convinced and have absolute faith that with the help of Almighty God, Great Britain and her allies will win this war and a just peace.

INTRODUCTION BY THE HONORABLE HUGUES LE GALLAIS, MINISTER OF LUXEMBOURG

Our next speaker will be the Honorable Adolf A. Berle, Assistant Secretary of State, whom I now have the honor to introduce.

ADDRESS BY HON. ADOLF A. BERLE, JR., ASSISTANT SECRETARY OF STATE

We meet today in the hospitality of the Grand Duchy of Luxembourg, a state which, through the endless changes of European history, has given an example of devotion to freedom and independence. Let it stand as a symbol of the many small nations which have mightily contributed to the life of Europe.

Though this small country is today submerged by irresistible force, we know beyond question that the processes of force can create no lasting result. Though its civilian population is literally enslaved, its mind and heart will not and cannot be broken.

An invading army has seized its territory. A conqueror, claiming to establish a "new order," has put its young men to work at forced labor; and has taken its girls from their homes, has forced them into German industry, and proposes to make them, if possible, mothers of alien children. This is the grim reality behind fine phrases about a "new order."

Yet there is no shadow of doubt that the nations of Europe and the people of Europe, great and small, wait only for the opportunity to break the chains of this temporary barbarism and to reestablish the laws and customs of civilization.

My Government is happy in the knowledge that the lot of the people of Luxembourg has been in some slight degree alleviated by the representative there of the Foreign Service of the United States, Consul Waller.

It is the plan of this Government, when the tide of barbarity shall be rolled back, to turn the full measure of its economic strength to bringing help, relief, and sustenance to the tens of millions of families in many countries who are now hungry, cold, homeless, sick, separated, or in prison by the ruthless act of a group of tyrants.

Out of the shadows there emerge the outlines of the world to come.

In it, small nations will be able to live in freedom and in peace, in a family of nations ruled by law which respects the right of the weak as well as the strong. The basis of existence must be national. But a necessary condition must be a general accord under which all countries are assured of participation in the economic life of the world, and under which all races are assured the right to live in conditions of equality and self-respect.

Modern life has provided the tools, the capacity, and the transport which can assure freedom from want. It has created the communications which can guarantee freedom of information and of science. It can and must create the law which gives freedom from fear.

In the day of reconstruction the voices of those who suffer now will not be forgotten. We are bold to think that the sorrow of the present is the prelude to a coming age more secure, more brilliant, more gracious, and more free than any we have yet seen.

INTRODUCTION BY THE HONORABLE HUGHES LE GALLAIS, MINISTER OF LUXEMBOURG

I have the honor to present my dear colleague and friend, Mr. George Platt Waller.

ADDRESS BY GEORGE PLATT WALLER, CHARGÉ D'AFFAIRES AND UNITED STATES CONSUL TO LUXEMBOURG

Royal Highnesses, Excellencies, ladies and gentlemen, and my beloved friends in Luxembourg, coming out of the "valley of the shadow" into the sunshine of freedom, breathing again the air of that liberty which Luxembourg has lost for a time, I am almost blinded by the radiance and serenity which still—thank God—illuminate my beloved country. I lack words adequately to express the emotion with which I am stirred by the gracious and touching welcome which Your Royal Highnesses, your Minister, and the Grand Ducal Government have bestowed upon me. In great truth and deep humility I can only say "Non sum dignus." What little I have been privileged to do for my country and the Grand Duchy of Luxembourg has been done with all my heart, and oh, how little it has been in comparison with all that I would have done had I been able. Was it not Browning who said "But a man's reach should exceed his grasp, or what's a Heaven for?" And yet, when I recall the glories of the soul which have blossomed under the plowshare of adversity, I am uplifted and edified by the example of the patriotism burning in each Luxembourg breast, and I feel that this suffering has not been in vain, and that your subjects always loving you and cherishing Your Royal Highness's sacred person as the symbol of their independence and the incarnation of their national unity, now feel for their sovereign a passionate affection verging on the mystical, a dynamic devotion such as has never before animated a people. I need but cite the message which I was entrusted to bring to you: "Tell our sovereign that we remain steadfast; tell her that we thank God that she is safe and is guarding the flame of our independence on a national altar across the seas. Tell her that we will not allow her foot to touch the ground when she returns with our liberty and happiness. Say unto her that we will carry her on our shoulders from Rodange to Luxembourg."

Another message, delivered to me at great peril scarce 3 weeks ago, says textually, "Before quitting our dear country, I beseech Your Excellency in the name of all Luxembourgers true to their democracy, and above all, loyal unto death to Her Royal Highness, her family, and her government, that in spite of all vicissitudes and the persecutions wreaked upon us by the oppressor, we will ever remain faithful and true. Be our interpreter near your great President, to thank him for the moral support with which he has armed us and fortified us in unstinted measure up to this day. Thank him, whom we consider our liberator-to-be. To this great man, and to the American Nation, all our thanks, all our sympathy. Useless to talk here of our sufferings. Your Excellency knows them better than anyone else."

My task has not been hard, because I loved it. I shared the love and trust of a noble people, their sorrows were my sorrows, and their hopes and fears were mine. I come forth inestimably richer for the experience. If the people of Luxembourg are in the valley of the shadow; if the sunlight of liberty and independence has been taken from them, nevertheless, Ma'm, like our blessed dead, they wait in sure and certain hope of a glorious resurrection.

St. Lawrence Waterway and Power Development

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1941

STATEMENT OF JOHN L. LEWIS, PRESIDENT, UNITED MINE WORKERS OF AMERICA

Mr. BENDER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement by John L. Lewis before the Committee on Rivers and Harbors:

I represent the United Mine Workers of America, an industrial trade union, devoted to the advancement of the economic welfare of the men who mine the Nation's coal. While primarily concerned with the development of the bituminous and anthracite industries, our union is also dedicated to the preservation of American ideals and American enterprise; all of our efforts being confined to true democratic processes.

Long ago, the United Mine Workers publicly declared its acceptance of a democratic form of government embracing capitalism. This acceptance was made in good faith. The United Mine Workers have since, on occasion, been forced to assume the lead in insisting that government and industrialists act in intelligent concert—behave like statesmen and industrialists should in the conduct of our American way of life. We are proud of the fact that the United Mine Workers have, on numerous occasions, been able to demonstrate the practicality of trade-union participation in formulating policies for the common good of all Americans.

We believe that all economic planning should be predicated on an honest appraisal of all undertakings, and the decisions eventually rendered designed to reflect the greatest good to the greatest number.

It is such common-sense reasoning that prompts the United Mine Workers at this time to register its united opposition against the present proposed development of the St. Lawrence project, for any and all the purposes that its proponents assert are based on the necessities of the times.

It is common gossip in the congressional halls, and admitted in editorial comment, that the proposed St. Lawrence project, would be "kicked out the window," without ceremony, if a sane appraisal and simple economic yardstick could be utilized to determine its merits.

Rejected in 1934 as being totally unnecessary for either power or commerce, it is here again in a new dress—patriotism, war-time defense. It is being propelled by all the adjectives known to the seasoned campaigner, plus all of the war-time facilities of an over-recruited, high-powered publicity staff.

The waterway is being paraded as a war-time defense "must project."

The methods of intimidation being employed by its sponsors, are designed to enlist and force patriotic pressure, to wilt the opponents, alleging that our foreign foes,

real or imaginary, must not learn of any disunity in the great preparedness program. The new dress of defense necessity is calculated to lift the proposal from the mire of the monstrous and uneconomic and make those, who know better, accept it as an essential arm of national defense.

The United Mine Workers do not propose to be taken in by political pitchmen operating under the cloak of defense needs.

Frankly we do not believe this project has any economic warrant in fact.

The United Mine Workers have a combined membership of 600,000 members employed in anthracite, bituminous and the by-product processing coke plants.

In 1929 the bituminous industry produced 534,000,000 tons of coal; in 1940, 453,000,000 tons, a decrease of 81,000,000, or 15 percent. The anthracite produced in 1929, 65,000,000 tons, which decreased to 51,000,000 tons in 1940, or 21 percent.

COAL EFFICIENCY

American industry enjoys the cheapest coal free on board the mines of any nation in the world.

No other American industry has had its product so thoroughly and so skillfully tested by combustion engineers, chemistry and scientific research to determine economical usage to the extent that coal has been examined.

Fuel consuming efficiency reduced from 170 pounds in 1920 to 115 pounds in 1939 the coal required to haul 1,000 gross tons of railroad freight a car-mile. American coal-burning roads saved in actual pocket cash on the proportionate freight hauled, comparable with 1920 costs, during the 14 years ending with 1939, the huge sum of $704,000,000, more than $50,000,000 the year due solely to improved fuel efficiency.

Kilowatt-hour coal consumption was reduced in the same period from 3.2 pounds to 1.4 pounds—56.2 percent. Modern steam plants generate a kilowatt-hour on 1 pound of coal.

In the manufacture of steel the amount of coking coal necessary to produce a ton of pig iron has been reduced since 1918 from 3,577 pounds to 2,865, or 20 percent. At the same time byproduct coke plants have increased the recovery of byproducts 18.2 percent.

Industrial plants and households, through the adoption and installation of improved equipment—stokers for the most part—have likewise recorded savings from 15 to 50 percent. In the 4 years 1937-40, the labor cost of bituminous production decreased, on the same wage rates, 18 cents the ton. The economies registered in improved combustion of coal usage, plus the fact that the man-day production of the American coal miner has been steadily increasing, due to improved mechanized mining methods, constitute an impressive march of progress—a noteworthy contribution to lessening the cost problems of fuel and power of American industry and domestic households.

In the light of these outstanding achievements, we do not believe that the coal industry should be singled out and penalized by foolhardy and unnecessary uneconomic competition, fostered by either the Federal or State Governments, and financed without warrant from the scant ready money held by the taxpayers of the Nation.

During the past 15 years, the pathway of the coal industry has been rather difficult. It was a strong breed of determined men who found new capital, and kept the industry going, despite the fact that the industry could not show the loan pattern—3 years' earning record—required by the banking fraternity as a prerequisite to plant loans.

The industry is prepared today to do its part in meeting all of the fuel requirements of the Nation. The courage that was required to keep the industry financed and developed during the lean days is ready, willing, and anxious in fact to prove that coal is geared to meet the needs of the Nation, even on a greatly expanded wartime basis.

I do not wish to burden the committee with the manifold problems of coal. I do want to impress upon the committee the fact that following the last World War the coal industry paid a terrific price for its efficiency. The overdevelopment resulting to meet wartime needs was of such magnitude that competition ruinous in scope developed in the early twenties and continued through 1927-30 when the Nation was enjoying its alleged greatest period of prosperity. Simply stated, the coal industry was in economic chaos when the Nation was wallowing in prosperity.

We have succeeded in restoring economic order in the industry. Under the Guffey Coal Act we are making great progress toward the elimination of cutthroat competition, that in the past bankrupted stockholders, impoverished mine workers, and entire mining communities. We are hopeful that under the regulatory arrangement between the Government, the coal operators, and mine workers, in which the public is protected by a consumer counsel, financed by a tax on the industry, the industry will achieve stabilized conditions.

It is with a full realization of the poverty and misery that beset the coal miners of the Nation through the long depression period, and which extended in coal from 1925 until now, that we are prompted to be alert and opposed to any unnecessary displacement of coal for production of power and heat.

What good? What benefits can we hope for if the Government joins with us on the one hand to stabilize the industry and then immediately sets about to displace coal for the generation of electricity and builds a waterway as an inducement to foreign coals? Foreign production enjoys subsidies from European governments, both as regards production and transportation. There can be no question but that the eventualities of this war as regards international trade and finance will be such that bigger and better subventions will be the rule in many foreign coal-producing nations. The Canadian market is made to order for such an uneconomic onslaught.

Canada is geographically linked to American coal. It is a natural American market. American coals used by Canada are, for the most part, transported in part or full by water transport.

A deepening of the St. Lawrence Channel cannot possibly help American coal in lowered transportation costs. It will help foreign coal delivery to additional Canadian ports and save connecting rail hauls.

I want to point out to the committee that following the last war it was the great hope of the American coal industry that we would be able to develop markets in Central and South America to which we had shipped coal for the first time during the emergency.

What a lesson in coal marketing American coal operators learned.

The discovery was made that British and German diplomacy had in its grip all of the influential business leaders and socialites in these nations. They owned the docks and the lighters, and, despite the fact that under normal freight charges American coal could be delivered cheaper, we could not meet the exorbitant docking and lighter charges, commissions of cliques, and return loads, all of which spelled finis to American coal-selling efforts. These conditions have not been removed, regardless of what our "Pollyanna" trade emissaries report.

It is a paradox that it is at times cheaper to run a coal mine at a measured loss than to close it down. A factory can be locked up, a watchman employed, and all expenses pared down to taxes and the watchman's salary. It is different with a coal mine. Steam must be maintained. Water must be pumped daily. Roadways and roof must be kept in good condition. Rock and slate falls must be cleared.

These maintenance costs mount into a sizable cost per ton. Foreign mines, especially English, have higher maintenance costs based on comparable wage rates. Add the advantages of waived royalties, subventions on production and transportation, and you have the answer as to why it will be possible for foreign coals to be marketed at a loss in the Canadian markets. Especially so, when return loads of wheat, and manufactured articles are to be had, and on a basis that borders on barter.

We may as well get another fact fixed in our minds, now as well as later. From the present outlook, Canada will emerge from this war period better equipped to compete with the United States in many new fields of manufacture. We have already lost our wheat and other grain markets to Canada, Australia, and the Argentine. Canadian wheat is now selling for 30 cents the bushel under American wheat; Argentine wheat 50 cents under, while Argentine corn is going at 26 cents the bushel, against our price of 73 cents. All of the wheat-growing countries are burdened with heavy carry-overs. The Rome Institute, world-wide wheat authority, asserts that European crops, after 2 years of war, will be normal and meet all requirements in 1941.

The only future hope we have of selling wheat and grains to other nations lies in our continued export subsidies, which must be upped and upped beyond the point of reasonableness. Otherwise we are out. The same will be true of lard, edible oils from cottonseed and soybeans, meat and canned goods, and all other commodities.

The St. Lawrence waterway will be an invitation, a new peril, in the barter game for other countries to unload whatever they have for whatever price or trade arrangement that can be negotiated, in order to maintain exchange money and rates. Let's not mistake this certainty.

THE TAX TAKE

While other nations waive royalties, grant subventions to their coal industries, American coal stands on its own resources, and pays from 75 cents to $1.26 the ton in direct and hidden taxes, varying with the point of delivery, and on industrial and domestic sizes. In the Chicago market, the greatest coal-consuming area in the world, domestic coals pay an average in direct and hidden taxes of $1.26 the ton. All of the above taxes are exclusive of income taxes on the part of the producing company, distributing agency, retail dealer, and employees. These taxes are based on the 1940 tax rates, levied by all the taxing authorities, ranging from property tax to sales tax. You gentlemen of the committee are quite aware that 1941 will register tax-rate increases and that the take will grow bigger and bigger in the immediate future.

Reduced to kilowatt-hours, the tax take means that on a basis of from 1 pound to 1.40 pounds of coal being required to generate a kilowatt-hour, that each kilowatt-hour produced by coal nets in tax revenue from one-thirtieth to one-twelfth of a cent in taxes for some tax agency.

The tax alone from the railroad freight-dollar on coal ranges from 20 to 30 cents the ton.

Public utilities consumed 53,000,000 tons of coal in 1941, which netted a minimum of $39,000,000 in taxes. The total tax for bituminous coal in 1940 was at least $475,000,000, which includes domestic sizes and sales taxes levied thereon.

Instead of creating another billion-dollar obligation upon which the already overburdened taxpayers will have to pay interest charges—an investment upon which they will receive no taxes in return, and which will

never be self-liquidating—why not use coal to provide whatever additional electric power may be required?

You gentlemen of the committee will undoubtedly agree that we are going to need more and more taxes to pay the carrying charges on the debt that is piling up.

The hidden and direct taxes levied on coal produced and sold are by no means all the taxes derived from the industry. For let it be known that the strong arm of the tax collector stretches out to "pluck"—again by direct and hidden taxes—at least one-fifth of all the wages paid mine workers, supervisory and clerical forces, as well as all other salaries necessary to the operating and distribution set-up, that must be met out of the moneys received from coal sales.

The wage load for all parties to the pay roll in coal, except the retailers, will average around $1.75 the ton. Roughly, this would mean that in the spending of their wages the men employed in the coal industry would supply the tax collectors with approximately 35 cents the ton. On 453,000,000 tons of coal the outgo wage-spending taxes would total $175,000,000, which added to the four hundred and seventy-five million of other direct and hidden taxes makes a grand total of $632,50,000.

American tax coffers benefit by the levy of all these taxes on all coal exported to Canada. From the ten to fourteen million tons shipped to Canada annually, our tax agencies are enriched from eighteen to twenty-two million dollars.

Right here I would like to make an inquiry. Why is it that public officials, hell-bent on fighting public utilities, seldom, if ever, think in terms of municipal or Government steam-power generating plants—with coal as the basic fuel—when they launch these sporadic attacks on utility rates?

Is there something about the political proposal of using coal to generate electricity that makes the proposition of Government ownership and operation lose its appeal?

Certainly there is at hand sufficient engineering opinion to warrant the installation of coal-powered steam plants, as against all other fuels, as well as most water-power developments, as being the most economical of operation and the least expensive of construction. There can be no question as to coal being the most economical north of the Ohio and east of the Mississippi Rivers.

SPENDING HAS A LIMITATION SOMEWHERE

Somewhere along the line of endeavor we must face the sad realities of present-day spending. The unthinking may be misled by propaganda that attempts to convey the notion of our never-ending ability to keep up our spending spree. But the history of the world, the history of this Nation, belies such a fallacy. Our Federal Government is now spending one-fourth of the national income.

Spending great sums of money—borrowed money—will increase employment, but it will not produce stability, nothing self-liquidating. In the end, the workingman will pay the cost. There will be no fooling as to where the pay-off will come from.

There is no use deceiving ourselves about fiscal miracles. Especially when they are touted as the "real McCoy" by war-production sponsors to salve the public of newly discovered economic protective measures, based upon an additional grant of legislative authority.

The aftermath of the present war may find the whole world on a semibarter basis, which might last for many years to come. We may be forced into an international gypsy horse-trading economy—who knows?

EMPLOYMENT

For every ton of coal displaced by water power, one man loses a day's work. Such are the findings of those who have ferreted the economic loss in employment. The finding is based on research by coal associations tracing the employment involved in producing, transporting, and distributing coal to the ultimate consumer. The ratio is higher in anthracite.

There is a great hue and cry at present about the 2,000,000 man-days alleged to have been lost in defense industries during the first 6 months of 1941. What about the loss of 13,000,000 man-days if our Canadian coal markets are lost for good? Will those same anxious folks, who publicly criticize now, these same folks whose concern about the public welfare lies dormant for the most part between wars, be as insistent and appealing in the cause of employment for the men who stand to lose from five to fifty million man-days the year, if the St. Lawrence turns out to be all that its sponsors prophesy?

Shall we purposely plan to increase unemployment? Shall we provide the makings to multiply the woes of the workingman when the war is terminated?

Properly and thoroughly unmasked, the pending St. Lawrence project will not stand the light of careful and penetrating examination.

Nobody seems to know whether Canada is going to ante or not. Canada can renege without impairing its honor. There is nothing in the proposal that makes it compulsory, forcing Canada to take part, or to spend any money. In fact, those who should be in the know assert that Canada is just a party to the proposal at this time as a wartime favor—window dressing in order that the project's sponsors might be better fortified to befuddle the American people.

Furthermore no one seems to know what the ultimate cost will be. There cannot be at this time a rigid control of prices on materials and services. We cannot halt for the building time required the inflationary trend in prices. Prices are steadily mounting and will continue upward gyrations. Engineering dreams and fancies recognize no boundaries or limitations when they hook the public purse as a backlog angel.

COST OF COAL IN MANUFACTURE

Political discussion of water-power developments and the general attack on utilities have confused the public mind as regards the cost of coal in the production of electricity, as well as all other American manufacture. Industrialists and railroads always emitted a loud yelp about coal prices being increased a few cents the ton. Generally speaking, the public has been misled into believing that a 10-cent-the-ton increase free on board the mine on coal means many dollars increase in the selling price of an automobile and proportionate price advances on all other manufactured articles.

Ten years ago, the Edison Institute admitted that if all the coal consumed in the generation of electricity, plus freight rates averaging around $4.50 the ton delivered, were eliminated as a cost factor on household consumers' electric bills, that the annual savings to the average householder would not be more than $1.20 annually.

The cost of coal, to coal-burning railroads, is only 3.8 percent of gross revenue. In automobile manufacture, the cost is .0019 percent to the wholesale selling price; agricultural implements, .0038 percent, and in steel, less than 4 percent of the selling price. Eliminating steel and cement, the composite cost of coal for all manufactured products for the Nation as a whole is only .0054 percent of the average wholesale selling prices.

This showing of infinitesimal cost of coal for fuel and power utilized in manufacture and in heating, lighting, and transportation, should, in our opinion, invite far-visioned statesmen and industrialists to aid in the development and enlarged use of coal. Certainly, the basic industry of coal offers to American transportation, to American working men, directly and indirectly, so much employment, and tax revenue to the multiple tax collecting agencies, that American economy can ill afford to do anything which will stymie its progress.

PROPAGANDA AND PRESSURE

The stupidity of Government-agency propaganda in support of the St. Lawrence project, and the method of presentment, is almost unbelievable.

I want to take this occasion to partially analyze the silly statement introduced by Chairman Olds, of the United States Power Commission, just as Secretary Kennedy, of the United Mine Workers, began to testify before this committee. It was well-timed and in line with all other propaganda attempts of certain Government branches to discredit all persons offering unfavorable testimony against the waterway project.

The United Mine Workers insist that electricity generated by the St Lawrence project will displace coal. We contend that for every 2,000 kilowatt-hours produced by this project, 1 ton of coal will be displaced.

We further insist that the power to be generated by this project can be produced more cheaply by coal in steam plants.

The Cloakroom

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

Mr. LAMBERTSON. Mr. Speaker, boys in camp, if you cannot write your Congressman, be sure to write your mother.

The House nearly saved the country, even if the country did not want to be saved.

The one-fifth who are for war call the four-fifths who are against war the "fifth column."—Lindbergh.

The Japs fail to get Mr. Hull's idea of aggression after seeing our extension to the Northeast and the West and our threat to the Southeast.

The 202 is a hint to the world that we have the semblance of a democracy yet, and that George Washington still lives in the hearts of many.

I give this promise to Kansas First District people: That if Willkie heads the Republican ticket in '44 my name will not be on it. I can slop hogs again.

Our bowing out gives the freezing in of cotton and wheat and gives back to the grower without penalty the average yield and the right to feed the surplus.

The fact that a third of the opposition to the extension of Army service was from the east side of the center aisle should be an answer to the charge of partisanship.

The 15-year-old, unshaven son of Congressman ERYSON speaks with the Governor and an ex-Governor of South Carolina in behalf of his father at joint meetings for the senatorial election September 3.

It comes from good authority that 60 chaplains are to be sent to Iceland. Regulations now call for 1,200 men per chaplain. Do you suppose the Crown Prince or any of his brothers will winter there?

The Canada Parliament has adjourned and gone home. They have only a 4-

months' conscription and only for home duty, and they have declared war. England is praying for the prodigal son down here to return and do some fighting.

The United States

EXTENSION OF REMARKS
OF
HON. SAM HOBBS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

POEM BY HORACE C. CARLISLE

Mr. HOBBS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following poem by Horace C. Carlisle.

THE UNITED STATES

Here's to the North—the imperial North—
Rich in resources of wonderful worth—
Out from whose ports pass perpetually forth
Ships to all parts of the civilized earth,
Bearing our multiplied products afar—
Widening business and furthering trade—
And bringing back, free from perils of war,
Earth's foreign treasures in endless parade.

Long has the North, 'neath Old Glory unfurled,
Fondly been favored, indeed, by the fates—
Thru her the foreign commerce of the world
Follows the lead of the United States;
For she, responsive, with millions untold,
From her secure, inexhaustible chest,
Thru her own Wall Street, has largely controlled
Trade in the East and the South and the West.

Here's to the North—the imperial North—
When peace is threatened by rumors of wars,
Bravely, but cautiously, rushes she forth
Under the gleam of the Stripes and the Stars;
Yet, at the feet of the Goddess of Peace,
Humbly and meekly she watches and waits—
For, all her power and prestige would cease,
Should peace depart from the United States.

Here's to the East—to the cultural East—
Loveland of learning, and Eden of art—
Pride of the preacher and prophet and priest—
Made for the mind, and designed for the heart—
Here, through the years, have America's youth,
Treading the trails that the masters have trod,
Drunk from the unfailing fountains of truth—
Fed from the eternal tables of God.

Here education's flag first was unfurled,
Laughing illiterate folly to scorn—
Here in the wilds of the young western world
Young education's school system was born.
Though intellectual progress advanced
Slowly at first, her advancement was sure,
For her high standards were richly enhanced
By her life motto, "Live, learn, and endure."

Here's to the East—to the cultural East—
Intellect rules in this wonderful realm—
Wisdom through knowledge is greatly increased,
Always, when character's hand holds the helm.
When universities learn to put, first,
Character's charm—the true fixer of fates—
Crime in high places, despised and dispersed,
Will cease to be in the United States.

Here's to the West—to the great boundless West—
Wonderful section, too vast to be known—
Richly endowed, and abundantly blessed
With Nature's choicest creations in stone—
Here fruits and flowers, trees, grasses, and grains—
Animals, reptiles, fish, insects, and birds—
Prairies and deserts, and mountains and plains—
Are too sublime to be pictures in words.

Civilization has barely begun
This wonder region of wealth to explore—
All she is doing, like all she has done,
Leaves the big problem unsolved, as of yore.
Whole generations have sprung up, and passed,
Going the way all the others have gone,
Since the great West—inconceivably vast—
To the first pioneers came to be known.

Here's to the West—to the great boundless West—
Measureless in her prospective advance—
Wonderful bargain, the biggest and best—
Most of it bought for a pittance from France.
Long as continues mankind to increase—
Long as posterity's seed propagates—
There will be room for more lovers of peace
In the great West of the United States.

Here's to the South—to the sweet sunny South—
Known as the Union's insep'rable child—
Home of the songs from prosperity's mouth,
On which the fates have so frequently smiled—
Land where the voice of variety speaks
Into existence all shades of design,
Purposed by Nature, which anxiously seeks,
Through each creation, to please Divine.

Fanned by the breath of the simmering breeze,
Sifting along through the sun's silver gleam,
Tremolingly whispering songs to the trees,
Soft as the silence of memory's dream—
Sure as the ebb and the flow of the tide—
Smoothly the South in her majesty moves
On toward eternity's time-end divide,
Led by the spirit which justice approves.

Here's to the South—to the sweet sunny South—
Section where summer instinctively dwells;
Where kindly words flow from many a mouth,
Fresh from the heart's inexhaustible wells;
Where, truly, faith, hope, and charity rest;
Where hospitality opens her gates;
Where all is brightest and sweetest and best—
This is the South of the United States.

Here's to the States—to the United States—
Greatest Republic existent on earth,
On whom the world in expectancy waits
For safety signals and counsels of worth.
Long may she live as the safeguard of peace,
Leading the fight for suppression of wars,
Over the world may her prestige increase
As she lifts higher the Stripes and the Stars.

Until the grave claims its last lonesome guest,
Buried, unseen, without prophet or priest,
Until the sun sinks at last in the west,
Never again to arise in the east,
Until the moon has been changed into blood,
Until the ocean has scattered his bars,
Until the sky has collapsed with a thud,
May we be true to the Stripes and the Stars.

Here's to the States—to the United States—
Half of whose greatness will never be told.
Time, in her station, apparently, waits,
That she may never, no never, grow old.
On past the better, and up toward the best,
Is her one slogan, approved by the Fates,
Sung through the North and the East and the West—
And through the South of the United States.

—*Horace C. Carlisle.*

Three South Dakota Editors Have Their Say

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

Mr. MUNDT. Mr. Speaker, well over 50 percent of America live on the farm or in communities of 5,000 people or less. To understand the true heart of America and to keep in tune with the sound thinking of people who form the real backbone of this great Republic, therefore it is necessary to know what is in the hearts and minds of the vast majority of Americans who are not city dwellers. Probably the best way to know what these Americans are thinking and feeling these days is to examine the hometown papers which they read.

For the information of the Congress and the country, Mr. Speaker, I call attention herewith to three editorials on the international situation published by the able editors of three of our typical weekly newspapers of South Dakota. The first is from the pen of Al J. Adams, of Sisseton, S. Dak., who presents a thought-provoking editorial on the four freedoms:

[From the Sisseton (S. Dak.) Courier]

THE FOUR FREEDOMS

There has been a great deal said about the "four freedoms" outlined by President Roosevelt some time ago, freedoms which embrace privileges for which every intelligent human being must long. These four freedoms include freedom of speech, freedom of religion, freedom from want, and freedom from fear. They are freedoms which all of us must endorse, although there has yet no way been found by which all of them may be enjoyed by every person, even in the freest country in the world. Freedom of speech and freedom of religion we all have. Freedom from want and freedom from fear have not yet come to all of us. The economic state of the Nation during the past dozen years indicates how true is this statement.

But the discussion of the four freedoms has become so general that they bid fair to take the place of President Wilson's Fourteen Points enunciated during the last World War—and forgotten as soon as the Armistice was signed.

The four freedoms are eminently desirable for everyone, everywhere. But they cannot be put over by a crusade of knights in shining armor. They cannot be assured for people everywhere through the droning of bombers and the booming of cannon.

War always brings, not the four freedoms but the four destroyers—death, famine, pestilence, and collapse.

The four freedoms have never been forced upon any people by force of arms. We fought the last war to preserve democracy for the world. The result was communism in Russia, nazi-ism in Germany, fascism in Italy, and a dozen or more little dictator-

ships scattered over the continent of Europe. Our involvement in the war did not destroy the freedom of speech and the freedom of worship which our Constitution guarantees, but it certainly, in the long run, contributed nothing to our freedom from fear.

Joining in a crusade to enforce the four freedoms on a continent where human life and material wealth are now being destroyed day after day, would not establish the four freedoms over there but would endanger them in America. Freedom of speech and freedom of religion might survive unless we forgot the reverence due our Constitution, but certainly freedom from want and freedom from fear would be assured us by joining in European military adventure.

Mr. Speaker, the second editorial is written by J. G. Nordseth, editor and publisher of the Emery Enterprise. Like other South Dakota editors, Mr. Nordseth has no liking for nazi-ism, fascism, or communism, and like most editors of the State he disapproves of any program or subterfuge which would again cause our boys to fight and die on foreign battle fronts.

[From the Emery (S. Dak.) Enterprise]

A NEW A. E. F.?

It is becoming more and more evident that despite preelection pledges, we are drifting nearer and nearer to a shooting war. The United States, with Great Britain, has assumed joint control of Iceland. It is revealed that American workmen are busy helping to construct bases in northern Ireland. Our patrol boats are said, on good authority, to have dropped depth bombs of warning to German submarines.

It has been recommended by our military authorities that the law be repealed limiting the service of draftees to the Western Hemisphere. It is said that the circumstances may suddenly arise when it will be necessary to send these boys to foreign lands. In view of all this it may be well to recall an address made by President Roosevelt on October 26, 1939. He is quoted as stating:

"In and out of Congress we have heard orators and commentators and others beating their breasts and proclaiming against sending the boys of American mothers to fight on the battlefields of Europe. That, I do not hesitate to label as one of the worst fakes in current history. It is a deliberate setting up of an imaginary bogeyman. The simple truth is that no person in any responsible place in the national administration in Washington, or in any State government, or in any city goverment, or in any county government, has ever suggested in any shape, manner, or form the remoteat possibility of sending the boys of American mothers to fight on the battlefields of Europe. That is why I label that argument a shameless and dishonest fake."

Since the address from which this paragraph was taken was delivered at the New York Herald Tribune forum, a year before the 1940 election, it cannot be dismissed as campaign oratory, and we are not inferring that the President would desire this to be done. And in a fireside chat delivered December 29, 1940, the President was quoted in press releases as stating:

"There is no demand for sending an American expeditionary force outside our own borders. There is no intention by any member of your Government to send such a force. You can, therefore, nail any talk about sending armies to Europe as deliberate untruth."

We take the President at his word.

The third editorial is from the Hamlin County Herald-Enterprise, owned and edited by Casper Nohner, of Hayti, S. Dak. Like most South Dakota editors, Mr. Nohner owns and operates his own newspaper and has to answer only to his own conscience and conform with his own convictions in determining his editorial policy. Mr. Nohner is a true American with courage to speak his convictions and with a background of information which gives weight to his opinions.

[From the Hamlin County (S. Dak.) Herald-Enterprise]

President Roosevelt, in his plea for retention of selective-service men beyond their 12-month training period, declared Monday that the danger to the United States today was infinitely greater than it was a year ago. He did not say how the danger had become aggravated over the year, but he had no need to. All who heard him or read his statement knew that the situation can be laid at the door of a foreign policy that has done nothing to keep the Nation out of Europe's embroglio and instead has done everything to put us in. Nor did the President indicate in his speech the extent of the Nation's progress in preparedness. He did not say how much of the newly produced defense equipment was going to our own defense and how much was being diverted to Britain, or whether any real effort was being made to arm ourselves adequately to meet any threatened invasion.

It would seem that if the emergency is so acute as to require us to break our pledge to the service men then also it should be our primary effort to look to our own immediate preparedness first. The truth is that contrary to American desires or interests the Nation has been edged inch by inch into war the while our people have been kept in the dark or deluged as to the administration intentions, until now we stand upon the threshold of war, confused, disorganized, and largely unprepared but nontheless committed to contribute American manpower and resources to another futile effort to swing the balance in Europe's age-old economic struggle. When the full story of our undercover activity to involve the Nation is finally told, it will prove a sordid, disillusioning tale, indeed.

Mr. Speaker, no board of directors or business policies determine the editorial content of the weekly newspaper of America. Mostly owned by the men who edit them, they reflect the sentiments of their communities and of their editors with candor and clarity. It is a good practice for all of us these days to read the home-town newspapers which circulate in the homes of well over half the citizens of America. They may not be as sensational or as famous as the great metropolitan newspapers but in the aggregate they are read by a great many more people and their editorial influence is undoubtedly greater than that of the impersonal papers of metropolitan areas.

Germany Improving Danube for Military Purposes

EXTENSION OF REMARKS

OF

HON. JOSEPH J. MANSFIELD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

LETTER FROM S. WILLSON RICHARDS

Mr. MANSFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

THE MARINE NEWS,
New York, N. Y., July 7, 1941.

The Honorable JOSEPH J. MANSFIELD,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: You will be interested, we are sure, in this further information with respect to the great value the efficient Germans place in waterways.

In the April 30 issue of the Scandinavian Shipping Gazette, which reached us almost 6 weeks late, it is stated that—

"The port of Vienna is to be made a center of greater shipping activity. Before the war only about 1,000,000 tons of cargo was handled via the port of Vienna, but now large quays are under construction. The requirements caused by the war and future plans have given rise to the great Danube projects. Next to the Volga River, the Danube is the longest river of Europe, its length being 2,900 kilometers (the Rhine being 1,320 kilometers). The Government of the Reich has purchased 3 Danubian shipping companies, so that they now dispose of about one-sixth of the total Danubian lighter fleet of 1,500,000 tons. Many lighters are under construction, only 2 types being used—one of 1,000 tons, the other an oil lighter of 800 tons. The river is being regulated, its smallest depth being only 2 meters, where it will be dredged, and rocks are to be blasted away so that the depth will be 2½ meters. The most dangerous point in the Dan be is the fall through the Iron Gate—the pass in the Transylvanian Alps between Vienna and the Black Sea. Here an enormous lock will take the speed off the fall and at the same time the current will be utilized by an electric-power station to produce 75,000,000 kilowatts. Another project is for a waterway to the coal fields of upper Silesia, so that the lighters can go up the Danube with grain from the Balkans and return with coal. The new canal is to go from the upper Oder in upper Silesia almost to Vienna, and it is to be finished in 3 or 4 years."

We reaffirm that America has the greatest potential inland and intracoastal waterway system on earth; development and expansion could make it a priceless national asset.

Yours very truly,

S. WILLSON RICHARDS, *Editor.*

Tolerance and National Defense

EXTENSION OF REMARKS

OF

HON. CLYDE L. HERRING

OF IOWA

IN THE SENATE OF THE UNITED STATES

Thursday, August 14, 1941

ADDRESS BY CHAPLAIN MAURICE S. SHEEHY

Mr. HERRING. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address by Lt. Comdr. Maurice S. Sheehy, chaplain of the Naval Air Station at Jacksonville, Fla., delivered over the Columbia network on August 9, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My apology for speaking at a moment when feelings are at a high pitch, when people who love peace are called either pro-Nazis or warmongers, depending upon the means by which peace is to be assured, is simply

this: Five times during the course of a few weeks it was my duty, as their chaplain, to assist young men terribly injured face the possibility of death. It is not a pleasant thing to see a young man die, even when he dies in the noblest of all endeavors. When his concern in dying is chiefly for his loved ones and his country, then death is not such a dreadful visitor. Two of these young men did not die. Undaunted by their broken bones, they now eagerly await the hour when they may return to their squadrons. Dorothy Thompson a few days ago wrote a panegyric of the youth of England in the R. A. F. May I recall in passing that we have the same heroic mold in our own backyard.

Loyalty to these young men and to the cause they serve impels me to speak tonight. If the spirit of the young men of the naval air station at Jacksonville is typical, as I believe it is, our youth will not fail America.

But the question which disturbs me is: Are the American people loyal to those who are risking their lives for its security?

There is no need to circulate inane questionnaires among these young men asking such questions as "Do you want peace or war?" They all want peace. But they all have read of the march of Nazi legions closer and closer to this hemisphere, and they have heard that almost 20 nations have lost their sovereignty within 2 years. The words of Vice President Wallace uttered at Burlington, Iowa, 10 days ago find an echo in most of us:

"Only by developing our might to the utmost; only by demonstrating through every action and attitude that we are completely willing to go to war if necessary, is there any chance for that peace which we so earnestly desire. * * * The preservation of liberty depends upon us. We must not fail."

The greatest threat to our defense program is not now the obstruction of production lines or strikes or the possible sabotage of ships or planes. More important than these is what is going on in the minds and hearts of our youth. The great threat to their morale lies in the confusion and the indifference of certain segments of our people. This condition recalls the words of Pope Pius XII in his Easter message of 1939:

"How can there be real and solid peace while even men with a common nationality, heedless of their common stock or their common fatherland, are torn apart and kept asunder by intrigues and dissensions and the interests of factions?"

A few days ago that brilliant journalist, Walter Lippmann, wrote an article on Colliding Opinions. In it he recognizes the fact that the present world conflict is a war not only of force but of ideas. He roughly divides the conflicting parties of our country into two categories; first, those who point the finger of suspicion at the leaders of our Government as if they were tricking us into war, and, second, those who interpret the march of aggressor nations as the real threat to the security of this Nation.

I am not entirely free to choose as between these two schools of thought. I am a member of the faculty of the Catholic University of America. Recently the rector of the university proclaimed a policy to which I give wholehearted assent:

"In civil affairs, the university is pledged to fullest cooperation with the Federal authorities set up by the people for their constitutional government. * * * Those in authority, executive, legislative, and judicial, are charged with the most grave responsibility. We can have no part with those who doubt that this grave responsibility is carried by those in power with conscientious and untiring effort to fulfill their mandate from the people."

May I recall that it was the duly elected legislators who, after long and serious debate, summoned from their homes and loved ones almost 2,000,000 young men? Had not the conscription law been passed, we would have no voice in world affairs, no obstacle to impede the dagger aimed at our very life. And our Nation would be as a house built upon sand.

May I go a bit further than did Bishop Corrigan in his admirable statement. Ours is one of the few decent governments left in the world. True, in our past history there have been some ugly pages, our treatment of the Indian and the Negro, our seizure of territory by force almost a century ago, our hasty involvement in the Spanish-American War. But today this country has no plan of territorial thievery, no lust for conquest, no desire to execute the suggestion made recently that we ape Hitler in setting up puppet governments.

Our decency as a nation is mirrored in our condemnation of the international piracy of Japan, Italy, and Germany. The same held for Russia, whose illicit alliance with Hitler begot the war, as I recalled over this network in November 1939. Communism is a stench to those who love freedom. The people of Russia have been ignorant of those fundamental truths on which lasting civilization is built. But they are now, at this moment, defending their homes and their children. Communism has been given a rebirth in the world by Hitler who has given unity of effort to a nation fast falling into decay.

Our national leaders in their effort to protect America have had a foreign policy thrust upon them not of their own choosing. We Americans abhor the thought of clasping a bloody hand. But we can and do sympathize with the purpose of those defending their native land.

I repeat that ours is a decent Government. Our national conscience has never been more sensitive than it is at present. We have been honest. We make no pretense of neutrality. We have been generous to a fault. We have been courageous. Our youth will give more than years if necessary to protect those freedoms which are dearer than life.

One of those freedoms was stressed by President Roosevelt on January 4, 1939, in his message to Congress:

"Storms from abroad directly challenge three institutions indispensable to Americans, now as always. The first is religion. It is the source of the other two—democracy and international good faith. Religion, by teaching man his relationship to God, gives the individual a sense of his own dignity and teaches him to respect himself by respecting his neighbors."

Are these words idle oratory? If you think so, read The Persecution of the Church Under the Third Reich, or the series of articles appearing recently in the Florida Catholic on the brutal suppression of religion by the Nazis in Poland. More inhuman bestiality has never been recorded than that perpetrated by Hitler's legions, whom he suddenly calls to a so-called holy war with communism. Let him who is without sin cast the first stone.

Within our camps men of all faiths—Catholic, Protestant, and Jewish—are working side by side in their consecration of duty. Is it too much to ask that those not in the service do likewise?

The finest example of interfaith unity begotten by this war has been manifest in England. Dare I recall, without being called a warmonger, the five points outlined by Pope Pius XII for a just and honorable peace on Christmas Eve 1939?

The first is the right to life and independence of all nations, great and small.

The second is the cessation of the race for armaments.

The third is a juridical institution to guarantee the fulfillment of treaties.

The fourth is respect for the rights of racial minorities.

The fifth is acceptance of the law of God, and of the spirit of justice and universal charity as the basis for international relations.

Needless to state, Germany ignored—nay, even refused—to permit these conditions of peace to be printed. "The right to life and independence of all nations." Why, that would mean that Poland must be free, and Denmark, and Norway, and Albania, and Greece. So the Nazis suppressed this message.

In England, this message did appear. There Protestant leaders, recognizing its merit, initiated, along with that great prelate, Cardinal Hinsley, the organization known as the Sword of the Spirit. The Established Church of England, the Free Churches, and the Catholic Church joined in proclaiming the principles of a true and lasting peace.

Has not the day come for all Americans—Baptist, Methodist, Presbyterian, Episcopalian, Lutheran—for all, Protestant, Jewish, and Catholic to declare publicly their allegiance to these principles? United in the Sword of the Spirit, under the God from whom comes all freedom, we can do two things: We shall give the dictators pause for meditation; and we shall give the young men in our camps the inspiration of a united and devoted support.

As a Catholic, I am saddened by those organs of hate which have enrolled themselves under the leadership of anti-American forces. Some so-called religious papers are so bitterly opposed to our Government that it is incredible that they should long be allowed to vomit their spleen upon the youth of our land. One paper, stealthily and furtively, has begun a campaign to besmirch the good name of a bishop, among the priests of his own diocese. Recently a group of allegedly Catholic laymen publicized a message sent to all the bishops, impugning the good faith of one who also sustained the proposition that our foreign policy was based firmly on moral law. I wonder why that committee did not dare to publish the responses of the members of the hierarchy?

We Catholics have been taught to render to Caesar the things that are Caesar's and to God the things that are God's. I do not pretend to be an official spokesman for the church in this country but I do say most emphatically that the rank and file of both the leadership and the followership of the Catholic church is solidly behind our Government in its effort to stop the onrushing tide of Nazi tyranny. Catholic loyalty is not expressed merely in words. Secretary of War Baker pointed out in the last war that the number of Catholic volunteers was far greater than the proportion of Catholic numbers. In the naval station where I am privileged to serve as chaplain, the same holds true. In behalf of these young men, and as their pastor, I wish, since he is getting many messages, to address a few words to our Commander in Chief:

"Mr. President, receive from us the tribute of our prayers and our loyalty. In your hands today may lie the hopes of the human race. We know that you, who have consecrated from the moment of its inception your Presidency to the God of justice will not fail us. We are but a handful of the millions who give you richly deserved support. In this critical hour, we believe that no hearts are more loyal to our country than Catholic hearts, that no tongues speak more sincerely its praises than Catholic tongues and we Catholics who love our country next to our God, with strong and willing hands, under your leadership, will protect by our lives if necessary, its laws, its institutions, its liberties. God be with you in this hour."

Joint Tax Returns

EXTENSION OF REMARKS
OF
HON. WESLEY E. DISNEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

Mr. DISNEY. Mr. Speaker, there has been so much confusion and false propaganda on the proposal to require husband and wife to file joint tax returns that I believe a restatement of the proposition for the record may be useful. To state it quite simply, the issue is that of tax payment as against tax avoidance—tax favoritism for a few as against tax equality for the many.

The substance and much of the form of my speech on the floor of the House on August 1 is contained in these remarks.

The problem is not technical or hard to understand. Stated quite simply, it is this:

In any of the 48 States husbands and wives can give income-producing property, like real estate, stocks and bonds, and so forth, to each other, thus dividing their property between them for the avoidance of surtaxes.

In the community-property States, 8 in number, husband and wife may divide their salaries and personal earnings and thus avoid surtaxes. In the other 40 States this cannot be done.

In no State does the proposal affect an income of less than $4,000.

The practical effect in figures is this: Suppose a husband is earning $5,000 in a community-property State and gives his wife one-half of his salary. The tax on the $5,000 would be $308 and the tax on the two $2,500 items would be $275, thus accomplishing an avoidance of $33, which the other taxpayers have to take up—both income-tax payers and excise-tax payers. This cannot be done in the other 40 States.

If a man's salary is $10,000, there is a tax of $1,166. Divided equally with his wife into two $5,000 items, the tax is $880, a tax avoidance of $286, which the other taxpayers have to take up.

If his income is $50,000, the tax is approximately $20,000. Divided equally with his wife the tax is about $13,000, leaving a tax avoidance of $7,000, which the other taxpayers have to take up.

As I said, this can be accomplished on salaries and personal earnings in community-property States, but not in the other 40 States.

But in all the States the income-producing property can be transferred between the spouses, a gift tax paid only once, and thereafter the legal avoidance of taxes goes on each year. To use the same examples, if the husband with the $50,000 income from real estate, stocks, and bonds, and so forth, decides to avoid surtaxes, he can give half of it to his wife, pay the gift tax only once, and avoid $7,000 per year in taxes.

Another phase of this situation, making for tax favoritism and legal tax avoidance, is this:

If husband and wife have income, say, of equal amount of $25,000 each and the husband—or wife—takes a net loss of $25,000 for a given year, they may make a joint return, and the one spouses's loss of $25,000 may be offset against the other spouse's income of $25,000 and they pay no tax whatever. The proposal for joint returns for all husbands and wives would close this tax-avoidance loophole.

The Secretary of the Treasury has stated that since 1932 gifts to the amount of at least $7,500,000,000 have been made in the United States. People do not give their money or income to strangers, so, obviously, this $7,500,000,000 in gifts is chiefly composed of family transfers, making possible tax avoidance. The Treasury estimates that the tax avoidance is $323,000,000 annually.

Who gets the benefit of this tax avoidance? The figures show that 5.77 percent of the people make separate returns, so this small percentage benefits. Who takes up the slack? Who stands the loss? Of course, the other 94.23 percent of income-tax payers, as well as the vast army of excise-tax payers, pay the taxes which the 5.77 percent legally avoid under the present law. The proposal for joint returns for husband and wife cures this situation.

I share the view expressed in this debate on the subject of nondefense appropriations. In my opinion, Secretary Morgenthau's advice to cut out a billion dollars on nondefense was sound. If this had been done, many rates could have been made substantially lower and some excise taxes on the people's goods left off. No one in a position of powerful authority made the slightest effort to put the advice of the chief fiscal officer of the Nation into action. I made such a motion in the Ways and Means Committee, but since the Ways and Means Committee has no jurisdiction on such appropriations a point of order was properly sustained. Under the rules of the House, amendments for cuts in appropriations cannot be offered in this bill in the National Congress, even in the case of an emergency as great as war. The whole Budget is not intelligently considered. The Appropriations Committee spends the money as it pleases without regard to the Ways and Means Committee, which is required to raise it. The two committees are poles apart. As has been said by the press on the subject of the point of order, it appears that "saving is not germane to spending."

Mr. SUMNERS of Texas. Mr. Speaker, will the gentleman yield for an observation?

Mr. DISNEY. I yield.

Mr. SUMNERS of Texas. Mr. Speaker, the gentleman has yielded to me, and I want to direct the attention of the Committee to the fact that the gentleman is speaking of the fact that there is not a proper coordination between the committee that raises the revenue and the committees that have to do with the expenditure of the money. I beg my colleagues to pay attention.

Mr. DISNEY. My other remarks on this subject will be very brief, because I want to go into the subject of mandatory returns by husband and wife.

Congress appears to be the only place on the face of the earth where the spending organization is completely divorced from the tax-raising or income-producing organization. Up to the time of the War between the States the Ways and Means Committee raised the money and spent the money. Since that time we have had the Appropriations Committee, on the one hand, spending the money, and the Ways and Means Committee, on the other hand, raising the money, and the composite brain of the Congress has nothing to do with any intelligent coordination between these two committees under the rules of the House and the rules of the Senate. Something ought to be done about it.

I remember quite well when the distinguished gentleman from New York [Mr. TABER] offered an amendment to cut the W. P. A. appropriation to $500,000,000. Seven of us out of 435 in this House stood up to support him on it. Likewise, many other instances which we all know about.

Now, coming back to this subject of mandatory joint returns. There has been such a welter of confusion engendered with all the propaganda spread that I feel the proposal should be restated. I hope the Members have read this report. It is enlightening, and it is specifically definite on this subject. I think I can explain it.

Succinctly the issue involved is: Shall 5.77 percent of the people filing tax returns be permitted to file separate returns, thereby defeating surtaxes, and shall the remaining 94.23 percent of the people filing tax returns continue to be required to take up the slack and pay the taxes—along with the other taxpayers—which the 5.77 percent avoid? This is the sole issue in this controversy. The issue is the age-old issue between tax-paying and tax avoidance, between those who pay their taxes and those who legally avoid a portion of the general taxation.

To understand this problem clearly you must know the facts. In 8 States—1 of them my own—earned income, such as salaries and wages, may be divided between husband and wife, and surtax thereby avoided. In the remaining 40 States assignments or gifts of salary or wages—even by antenuptial agreement—cannot be legally recognized for the avoidance of the surtax under the Federal statutes. This arises by reason of the community-property laws of 8 States; but in all 48 of the States division of income-producing property, like land, stocks, and bonds and royalties, and so forth, are and must be under the present law accepted by the Federal Treasury, even though the specific purpose of division of the property is for legal tax avoidance. To state it concretely, in community-property States a single individual with a $10,000 salary would pay a tax of $1,166, but in the community-property States the husband may divide this $10,000 salary with his wife, or the wife divide hers with the husband, and they each pay a tax on $5,000, or both pay a total of $880. thus avoiding

$286 in taxes, while just across the State line in a non-community-property State a husband and wife similarly situated cannot divide the husband's salary and cannot legally avoid paying the $1,186; but in all States income-producing property may be divided and similar tax avoidance be accomplished.

The process of the division of property for the avoidance of surtaxes is simple. Husband or wife gives to the other spouse income-producing property, pays the gift tax, and the income may then be separately reported and high surtaxes avoided. Since 1932 taxable gifts and tax-free gifts have amounted to about $7,500,000,000, and the committee feels that a great portion of this amount involves family transfers.

Who takes up the slack? Who pays the bill? Who pays the taxes thus avoided? Who, if this measure fails, will pay the $323,000,000 involved? Who will pay the taxes avoided by the 5.77 percent of the folks filing tax returns? Reason becomes arithmetic, and we are confronted with the bald injustice that the 94 percent of the taxpayers take up the slack, they pay the taxes for the tax avoiders. They, and the folks who have hidden taxes upon hidden taxes heaped upon them, such folks who do not take advantage of separate returns and the people who do not file returns, the smaller taxpayers who pay the excise taxes, will pay the bill for the 5 percent.

Now we must inquire whether or not this proposition is morally right. I urge upon you, if you have not already read them, the nine reasons stated on pages 13 and 14 of this report, where it is stated:

It is the opinion of your committee that division of income between husband and wife as a tax-saving device has no equitable basis. It results in an unequal distribution of the tax burden as between families similarly situated. The joint-return proposal will overcome the inequities referred to and will result in a more equitable distribution of the tax burden. It appears proper to treat husbands and wives as taxable units for purposes of the Federal income tax.

I recall that in the discussion of the social-security bill, our distinguished floor leader the gentleman from Massachusetts [Mr. McCORMACK] many times referred to the family as a unit. That is the principle upon which depends the Social Security Act under which we are now operating—that the family is the unit.

Let me cite you an instance. Your attention was distracted from this first paragraph in the committee's nine suggestions why this should be the law, referring to the differentiation in the tax burden as between families similarly situated.

A certain gentleman upon hearing this proposal said to me—and this is directed to the special attention of the gentlewoman from Massachusetts [Mrs. ROGERS]—"I make $40,000 a year. I earn it. My wife has a $6,000 income from investments which she inherited. Are you going to make me pay her taxes?"

I said, "The proposal is not that. She pays her own taxes and you pay your own taxes in proportion to the total income. That is the basis upon which it is figured."

"Won't my wife have to pay more taxes?"

"Yes; some," I replied. "We are going to calculate both of your taxes on the basis of your total income of $46,000."

He replied, "That is unfair and unjust."

I said, "What about the gentleman who lives down the street from you, in the next block, whose wife has no independent income, but who himself earns $46,000 a year? He pays on a $46,000 base. Does he not have to pay his taxes, both normal and surtax, on the $46,000 base, while you and your wife, by your divided returns, avoid some surtaxes?"

Finally he said to me, "I see the justice and the propriety of this proposal. My wife's income certainly adds to the family income. To do as we have been doing is unfair to the man with the $46,000 income down the street, whose wife has no independent income."

Let us go to the other extreme. About the same time I had an interview with a marine sergeant from Tulsa stationed out here at Quantico. He told me that out of his salary of $66 a month, $6 went to the support of his widowed mother, $25 was the lowest rent he could find for a place to keep his wife and two babies, and the milk bill for his little family amounted to about $10 a month.

I asked him what he got out of his salary, and he as pleasantly as the rich man replied, "Cigarette money; but I have my wife and babies."

We have a precedent for this proposal, a precedent that is based on our form of civilization, a precedent springing from another Anglo-Saxon nation, a nation of the same language, with like customs, a democratic nation, a nation with laws like ours in most respects. England has had this provision since 1914 and has found its practical effect is to prevent legal tax avoidance and to make for tax equality, that it prevents a small number of people from having a tax advantage over the larger portion.

The report of the Royal Commission appointed to investigate this subject in 1920 reads in part as follows:

The aggregation for income-tax purposes of the income of husband and wife is not dependent upon any medieval conception of the subordination of women, nor is it a question of sex disability, since either partner can claim separate assessment and separate collection. The incomes are aggregated because the law of taxable capacity is the supreme law in matters of taxation, and taxable capacity is, in fact, found to depend upon the amount of the income that accrues to the married pair, and not upon the way in which that income happens fortuitously to be owned by the members of the union. It is beyond question that in the immense majority of cases where the wife has separate means she contributes to the common purse, either by actual merger of her income with her husband's, or by bearing expenses which in less fortunate households fall upon the husband.

We have given a great deal of time and attention to this subject and have considered with the utmost care all the arguments that have been put before us, and we have been forced to the conclusion that the grievance complained of is more vocal than real, in other words, that it is a grievance rather than a hardship. We therefore recommend that the aggregation of the incomes of wife and husband should continue to be the rule.

With reference to this twaddle about loss of women's rights and that this provision will put a premium upon divorce and a penalty on marriage, that it would cut down the birth rate and so forth, the Royal Commission dignifies that argument by one sentence as follows:

The statement is also made that the method of assessment imposes a penalty on marriage.

Of course, we are not bound by what England and Canada do, but we should be impelled by the dictators of common sense, fair play, and justice between man and man, between taxpayer and taxpayer, rich and poor alike.

It may be claimed that the civil law gives certain rights. This is the law in France and I think in Spain.

I do not want to be tedious, but I do want to redirect your attention to these nine points raised by the committee. Surely you will not overlook reading them.

The second point is—

It removes the discrimination under the present law against earned income in favor of investment income.

That is what it is, a discrimination when in 40 States you cannot divide your income with your wife and in 8 States you can.

Our distinguished friend the gentleman from Ohio [Mr. JENKINS] yesterday took the side of the 5-percent group. but on page 6469 in Chairman DOUGHTON'S address you will find that in Mr. JENKINS' great State of Ohio, out of 330,967 tax returns, 12,565 filed separate returns. In other words, 3.7 percent in Ohio got the tax advantage, the 12,000 are enjoying a special tax privilege that the other folks are paying for, the others who filed returns and those who are paying only excise taxes. Ninety-six and three-tenths percent of the 330,000 in Ohio had to contribute more taxes in order that the 12,000 might enjoy their privilege of tax avoidance.

I wonder now why our good friend from Ohio, and others similarly situated, will not heed the warning that is contained in these figures and in the figures shown at page 16 of the report, which gives the information to you with respect to every State of the Union. You only have to look at the table to find it.

In my own State of Oklahoma these are the figures: Out of 32,542 returns filed by income-tax payers in 1938, 1,680 filed separate returns. In other words, 5 percent got a tax advantage against the other 95 percent, and against the payers of Federal excise taxes and State sales taxes.

As another specific instance, Chairman DOUGHTON received a letter from a widow that teems with the personal element. I take the privilege granted by him to read it. This ought to interest you ladies, as well as you men, and it ought to interest everyone who is interested in plain, square, fair justice between taxpayers. I will read the letter:

I am a widow—I have been for 2 years. The income that was "ours" and returned separately, at my husband's death became "my" income and was shot immediately into the higher bracket. This, although there was no longer any earning capacity in our family. Both my children are minors. I note that probably I can expect exemption for only one

child in the tax scheme. This, too, although there is not any longer any earning capacity or prospect of any better income or living by virtue of the fact that my husband is dead. It seems to me that if a widow can accept, without complaint, and gladly because of the necessity, such increase in her taxes, two people spared each other's love and companionship can adjust their living to the necessity of their country. If they were not fortunate in having a much more than average living, they would not have the tax to pay.

As for those couples who threaten divorce if their incomes are combined for tax purposes, I hope the Government in all sincerity will tell them to get their divorces. Neither their children nor the spirituality of their country will be served by the continued mating of two people held together by such ignoble motives. The satisfaction will be small should they admit it, or the spending of the dollars saved to themselves by failing their country in this, its hour of need.

As for the poor man who dreads his wife knowing what his real income is—and there have been some instances like that suggested to the committee—he must be pretty miserable already and much as a humane Congressman would like to keep from increasing his misery by forcing an exposé of his valiant efforts to provide for his family's future, I should think his plight would have to be his sacrifice to his country.

Mr. Speaker, the suggestion is made by the gentleman from California [Mr. BUCK] about two sisters. Each acquired by inheritance or gift from their father a certain amount of money. One of them is married to a husband who is making a large income. The other is single. The single daughter will be taxed only upon the income from the $20,000 which she inherited, while the married daughter will pay an income tax on the income from the $20,000 she received plus the earnings of her husband. Has not the married sister a greater ability to pay than the single sister? She not only has the income from the $20,000 but she also has that of her husband, who is earning a substantial income. The taxable capacity of that family is much greater as compared with the taxable capacity of the single sister, whose only income is from the $20,000. I can well understand that the single sister would be willing to assume a greater tax burden, if she could be placed in the same status with her married sister. Suppose her husband has millions. Furthermore, why should a family of that taxability be favored over a family where all of the income is earned by the husband? To go back to the illustration about the $46,000 man, why should that family be favored in that manner? Existing law places the other family in a much less favorable status. Yet each family has the same tax-paying ability. We certainly should not treat families differently because of the way the income happens to be happily or fortuitously obtained by the members of this union.

Mr. Speaker, I have more material than I shall be able to use in the time allotted to me. The gentleman from Texas, Judge SUMNERS, whose opinion we all rely upon on legal matters, inquires as to the constitutionality of this proposal.

He wants to know, has the Federal Government the power to pass this kind of a statute?

Do the State constitutions and statutes prevent and make unconstitutional this proposed exercise of power by the Federal Government?

It has been pointed out that the constitution of some of the community-property States make provision for the community-property system and declare that that system is forever the law by the basis of property laws regarding husband and wife within that State. It is urged, further, that any Federal enactment which does not give proper weight to the provisions of such State constitutions and laws under the Federal Constitution would be unconstitutional.

Now, have any of you recently read the sixth article to the Federal Constitution? It reads like this:

> This Constitution and the laws of the United States which shall be made in pursuance thereof, and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land; and the judges in every State shall be bound thereby, anything in the Constitution or laws of any State to the contrary notwithstanding.

An illustration of the supremacy of the Federal Constitution and the revenue laws and under which particularly pertains in this regard, as a parallel, may be found in the Burk-Waggoner case, a Texas case.

Now, it was said yesterday that to pass this upsets all the law in the community-property States; the law of wills, and so forth. The gentleman from Washington [Mr. MAGNUSON] rather amplified on that subject. But it does not do that. This is only for Federal tax purposes. It disrupts no other rule of law. For Federal tax purposes the Federal law, in my judgment, is supreme.

For instance, in the Hamel case, involving the sale of oil under royalty contract, under the law of Texas that was a sale of the oil in place. The taxpayer took the view that the capital-gains tax was all he was required to pay. The department took the view that this was in the nature of royalty income and subject to income tax. The Supreme Court held with the department's view, to the effect that this was income. It did not have to set aside the law of Texas, holding that this was a sale of oil in place. It remained the law for State purposes, and still is the law; but for Federal income-tax purposes the law of Texas was superseded by the Federal income-tax law.

The Supreme Court in another case made this discussion:

> The power of Congress so to tax associations is not affected by the fact that, under the law of a particular State, the association cannot hold title to property, or that its shareholders are individually liable for the association's debts, or that it is not recognized as a legal entity. Neither the conception of unincorporated associations providing under the local law, nor the relation under the law of the association to its shareholders, nor their relation to each other and to outsiders, is of legal significance as bearing upon the power of Congress to determine how and at what rate the income of the joint enterprise shall be taxed.

Mr. SUMNERS of Texas. Will the gentleman incorporate the citation in his remarks?

Mr. DISNEY. Yes. That is Two Hundred and Sixty-ninth United States Reports, at page 110.

This decision demonstrates in like fashion that community-property laws of the various States cannot in any fashion restrict the Congress of the United States from determining the rate at which a married couple should be taxed.

The Supreme Court, in an increasing variety of cases, has called attention to the fact that the unity of family may be recognized by Congress as such in Federal revenue acts. The Supreme Court has gone further than is proposed in this bill, for it taxes the husband's income which belonged to his wife, merely because he possessed some control over the property from which that income was derived, although such control would not permit him to obtain that income.

After the Robbins case in California, holding that a wife did not have a vested right in the community property, but only a mere expectancy, the legislature passed the law giving the spouse a vested right.

Let us go further on that suggestion. Let us suppose that New York passes a community-property law. Oklahoma passed it in self-defense, because wealthy people were leaving and going to Texas to avoid paying taxes. She passed it in self-defense, avowedly. It was so discussed in the legislature. Let us suppose that New York, the richest State in the Union, then Pennsylvania, and on down the line, Ohio, Illinois—let us suppose they passed community-property laws; then you would not be getting enough Federal income tax to run this Government 6 weeks.

Mr. SUMNERS of Texas. Mr. Speaker, will the gentleman yield for a suggestion.

Mr. DISNEY. I yield.

Mr. SUMNERS of Texas. I think we would all like to have in continuity the gentleman's discussion of the constitutionality of this legislation, which he was engaged in. We have great respect for his opinion, and I hope the gentleman will state it without interruption.

Mr. DISNEY. Apparently, I am not able to proceed that way.

Mr. SUMNERS of Texas. The gentleman is just too polite, that is all; do not yield to us.

Mr. DISNEY. Keep in mind this, please: This proposal does not tax the husband on the wife's income; it merely joins the income of both to measure the rate of taxation. The only Supreme Court case that bears out any contention that this tax is unconstitutional is the so-called Hooper case, *Hooper* v. *The Tax Commission* (284 U. S. 206). Read the report, and you will find this case thoroughly dissected. This case did not turn upon a Federal constitutional question; it turned upon the question of the constitutionality of a statute passed by a State legislature attempting to lay a tax upon the husband for the wife's income. That is what was involved, but that is not involved here. The Hooper case was squarely upon the question whether the State could make you pay your wife's taxes. That is the turning point in that case, and the report thoroughly discusses that feature. The attempt of the Wisconsin law was to make the husband pay the wife's taxes, and vice versa. This proposal does not in any way, shape, or form make that attempt.

Generically, the sixteenth amendment puts into effect an excise tax. That is what the income tax is in substance, an

excise tax, because it is generically an excise tax doing away with geographical and proportionate distributions. When it becomes an excise tax, then becomes involved the right of Congress to classify taxpayers, and if it is done in a reasonable manner without discrimination, it does not violate either State or Federal constitutions or Federal processes. We can tax lawyers under the excise process in one way, tax doctors in another way. We can tax one businessman in one way and a different type of business in a wholly different way, provided, as between the men, women, and corporations of the class, we do not discriminate between members of the class. That is the test, and the very widest range is given to legislatures and the Congress in their determinations how they shall classify taxpayers.

Mr. SUMNERS of Texas. Mr. Speaker, will the gentleman yield?

Mr. DISNEY. I yield.

Mr. SUMNERS of Texas. Does the gentleman want us to understand that the Congress can levy a different income tax on doctors from the tax they levy on lawyers?

Mr. DISNEY. The illustration, maybe, is unfortunate, but the gentleman will agree that we have the right to classify taxpayers so long as we do not discriminate between the individuals of a class. Is not this the general rule, I ask the gentleman: That so long as the legislature, the council, or the Congress does not discriminate between the individuals of a class, it is not violative of the constitutional prohibition against discrimination?

Mr. SUMNERS of Texas. The gentleman is correct.

Mr. DISNEY. But we may discriminate between classes. I do not think any lawyer will disagree on that proposal.

There is no attempt in this provision to interfere with the property laws of any State. This bill merely takes the husband and wife together as a taxable unit for Federal tax purposes. In my opinion it does not interfere with the property rights of the States at all.

The question as to whether or not the Congress may make its Federal income-tax laws turn upon State laws is a question for the Congress to decide. In the community-property case of Poe against Seaborn, which will be relied upon by opponents of this measure, the Supreme Court held that the present Federal income-tax statute was not specific enough to permit the taxation of all the community property to the husband because the wife had a vested interest in half of the community property. The court interpreted the present Federal statute as taxing income only to the owner thereof and its ownership was fixed by law. In other words, the Court substantially said in Poe against Seaborn that Congress had not gone as far as it could go. But the Court has pointed out in any number of cases that the Congress may or may not follow the State law in determining whether or not a person is liable for an income tax. In fact, the Supreme Court in the Harmel case, cited in the community-property case of Poe against Seaborn, is authority for the statement that State laws may control only when the operation of the Federal taxing act, by express language or by necessary implication makes its own operation dependent upon State law. In this proposal we are treating the husband and wife as a taxable unit, exactly like the Federal law treats some partnerships as corporations for Federal tax purposes, although they are recognized only as partnerships under State law.

Mr. Chairman, let me read this citation from the case of Poe against Seaborn:

> The case requires us to construe sections 210 (a) and 211 (a) of the Revenue Act of 1926 and apply them, as construed, to the interests of husband and wife in community property under the law of Washington. These sections lay a tax upon the net income of every individual. The act goes no further, and furnishes no other standard of definition of what constitutes an individual's income. The use of the word "of" denotes ownership. It would be a strained construction which, in the absence of further definition by Congress, should impute a broader significance to the phrase.

In other words, in my judgment, this paragraph is tantamount to the Court saying that if the Congress had gone further it would have been sustained.

Mr. Speaker, let us take a look at the practical effect of this proposal. I wash the Members would look at page 17 of the report. You will find this very practical thing confronting you. We might not be compelled to go to the personal income-tax schedule to take up the slack of $323,000,000, but there is where we would most likely have to go. We might be compelled to go there. If you look at page 17 of the report, you will find that on this $10,000 income at $1,166, if we have to go over to schedule B, then the tax on the $10,000 income would be $1,628.

On the $2,500 income, which under the present tax law would be $30.50, under the new bill it would be $71.50. The $3,000 income tax would jump from $85 to $151. The $4,000 income jumps up to $312. The $5,000 income from 308 to $506. That is what confronts you. You are not going to add additional excise taxes when we have already levied excise taxes to the extent of a billion dollars. We have gone apparently as far as we possibly can on corporate taxes.

The only place we can go is to additional income taxes. The best illustration I can cite to you is that taxes on your own income will jump from $1,166 to $1,628, and all down the line the situation will be proportionate. You are not going to do that. You are going to make the 5.77 percent of the people do like the 94 percent of the people, make them file their tax returns as the 94 percent of the people do, and not give them the tax advantage over this vast array, this vast army of other taxpayers less able to pay. Justice and right demand that we pass this provision in this language.

Go with us in our hunt for $323,000,000 lost by this tax avoidance. Any member of the committee will tell you that the consideration invariably leads to higher personal income taxes, with a proportionate jump, as I have suggested, from $1,166 on a $10,000 income to $1,628, and maybe even higher taxes than that, with a new tax bill next year. You are not going to be able to avoid this thing.

Do I need to say more in a demand for equality of taxation, for right between taxpayer and taxpayer? You can take this list of States and see that the very few who have been so insistent in opposition and conjuring up this propaganda against this proposal are inevitably those who are seeking an advantage, who are legally entitled to an advantage under existing law, and who have been getting an advantage that 5.77 percent as against the 94 percent. They have an advantage not only over the 94 percent of those who make returns, but they have an advantage over those who are paying hidden taxes, that vast army of small excise-tax payers, in addition to the 94 percent of those who make tax returns.

Mr. BUCK. Does not the gentleman realize that we can pick up $160,000,000 of taxes, or half of what this proposition would bring in, from a tax on gasoline, and that there are a good many other taxes which could be imposed?

Mr. DISNEY. You try to pass a gasoline tax through this House and put the burden on the gasoline users. Is not that a fine argument to bring before the House? Put the burden on the people who are already paying gasoline taxes almost as high as 10 cents per gallon in some States—splendid, unselfish suggestion.

The gentleman is trying to leave the implication that I am for this proposition in order to avoid increased gasoline taxes. Gasoline taxes are not any more important to me than to any other Member of the House, although I am from an oil-producing State.

You go hunting through the avenues of taxation for more revenue and you simply wreak more injustice on the persons who have been paying hidden taxes to the amount of millions of dollars a year. One pack of cigarettes a day costs the taxpayer $21.60 a year in taxes.

Let us talk about gasoline taxes. Down in Tennessee, when you buy 10 gallons of gas, you have to leave at the filling station almost a dollar bill in addition, for taxes. You are not going to do any such silly thing as put an additional tax on gasoline. It could not pass the House. You are going to have to go to personal income taxes, lowering the exemptions and creating additional hardship, but where you are going to hit hardest is on the average—the middle-class—incomes; and all for the benefit of whom? A small group—5.77 percent—who want an advantage over the 94 percent and an advantage over those who do not file any tax returns.

Not only do the income-tax payers have to stand the gaff with this tax avoidance by this small group, but this group takes its toll from every citizen who pays Federal excise taxes on his automobile, his tires and tubes, his jewelry, refrigerators, sporting goods, matches. The toll is taken from the excise taxes he pays on his tobacco, his liquor, his radio, his phonograph, musical instruments, electrical appliances, business machines, rubber products, and his furs. The housewife pays excise taxes on washing machines and on her toilet preparations. Telephone and telegraph bills carry an excise tax. In most States the citizen is confronted with a myriad of sales taxes. This huge tax largess is extracted from the average citizen and the $323,000,000 of the amount collected is a toll taken

from the 95 percent of the taxpayers in favor of the small group of 5 percent who avoided taxes by filing separate returns.

This service of self-interest cannot be justified on moral grounds. Tax favoritism is becoming increasingly unpopular. This proposal rectifies a gross inequity.

The Churchill-Roosevelt Peace Aims

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 14, 1941

Mr. MUNDT. Mr. Speaker, as stated in the short speech I made at the beginning of today's session, I feel that the Churchill-Roosevelt statement of peace aims which was released to the public this morning should be encouraging to those in America who oppose our entrance into the wars of Europe, Africa, and Asia but who believe the vast influence of our position should be used to end this war on terms of equity and justice to all peoples of all lands. Our influence in helping to point the path toward a just and ordered world after the war is likely to be more effective and permanent as a nonbelligerent than it would become were we to be actually engaged in the shooting and destruction of the war.

HAVE LONG FAVORED STATEMENT OF AIMS

It is obviously still too soon after the publication of the Churchill-Roosevelt statement to evaluate properly the respective merits of its separate proposals. But it is not too early to consider the possibilities which might grow out of this statement of objectives, stated in generalities as they are and necessarily must be at this early stage, in the thinking toward peace, which has been so tardy in getting under way in both this country and Britain. Either this statement will be used as a back drop before which to consider our future activities with regard to the international situation, or it will presently sink into obscurity again except for occasional reference material for public speakers, editors, columnists, and radio commentators In the former case there is much for which to hope and also much against which we must be on guard. In the latter case the statement will not be significant enough to have much effect, if any, on the destiny of human affairs.

As a member of the Foreign Affairs Committee who has frequently advocated in public speeches, dating back as far as one entitled "America, Wake Up and Live," delivered in New York City May 18, 1940, that it is important that serious thinking and public discussion be devoted to the question, "What would you have follow the fighting?" I am encouraged by the fact that this preliminary, albeit highly generalized, statement of objectives has been set up for consideration by the peoples of the world. It is at least a first authoritative proposal for a basis for bringing order out of bloody chaos; it will doubtless lead to other proposals from other belligerent or nonbelligerent authorities. All of which leads to constructive thinking and world progress, and out of which may well come a meeting of minds which can do vastly more to rehabilitate the world and lead to permanent peace than any possible clashing of armies.

In discussing the desirability of thinking and acting toward peace and America's responsibility to do its utmost to end the war equitably rather than to expand the war endlessly, on Wednesday, May 21, of this year, over the Columbia Broadcasting System, I stated in part in my radio address on America's Rendezvous With Destiny:

> With something less than total war and something more than just our private peace, we can help restore order to a war-torn world. Not by a peace of appeasement or defeat. Not a peace between a bloody victor and a bleeding victim. Not a peace of mutual exhaustion and despair, nor a peace based on the fickle promises of any men or set of men. We can, however, help to set in motion the machinery for a planned and permanent peace based on reason and justice, on common sense, and sound economy.

Again on Sunday night, June 8, of this year, in an American Forum of the Air program broadcast over the Mutual Broadcasting System, in a debate between Congressman VORYS, of Ohio, and myself, of the Republican minority on the House Foreign Affairs Committee, in opposition to Congressman GORE, of Tennessee, and Congressman ELLIS, of Arkansas, on the question, Should the United States, while continuing its preparedness program, take the leadership in an effort to bring about peace? I said:

> We believe that America can best serve God and humanity—as well as self—by doing its level best to end this war before the war expands so that it threatens to bring an end to Christian civilization itself. We hold that the United States, while continuing its all-out defense drive, should also make an effort to set in motion, while it can, the machinery to bring about a just and permanent peace.

Mr. Speaker, I am more firmly convinced of the validity of these arguments in behalf of this country's lending its great potency for good to the development of a just and equitable peace than I was more than a year ago when I began publicly to advocate that we not only prepare our own defenses and give aid short of war to our foreign friends but that we also devote ourselves to trying to bring an end to this war which will come soon enough to save freedom and civilization from destruction and which will be sound enough to be as permanent as it should be just.

Therefore, Mr. Speaker, it was with real satisfaction and renewed hope that I heard the Churchill-Roosevelt statement on peace aims this morning. I can remember the bitter denunciations which I received at times from overzealous war advocates for even daring to propose that America should give a thought to what we would have follow the fighting until the fighting was over and a full and total victory won. It is not pleasant to be called an appeaser or a defeatist simply because one dares to suggest that an America at peace can better serve humanity than an America at war. But excitable people sometimes cannot refrain from excessive criticisms. In all events, it is now refreshing to know that both Mr. Churchill and Mr. Roosevelt are among those who realize that perhaps a peace offensive can bring a victory sooner and more satisfying than sole reliance upon a war offensive. I do not believe that even the most intemperate members of the war-now crowd will accuse either Mr. Churchill or Mr. Roosevelt of being appeasers or defeatists. It is hoped their joint statement will, therefore, also have the effect of stimulating more serious thinking and less scurrilous talking in America.

Mr. Speaker, I have said earlier in this speech that if the Churchill-Roosevelt statement is to be used as a back drop before which to consider our future activities with regard to the international situation, it provides much for which to hope and also much against which we must be on guard. Let me briefly elaborate upon what I have in mind in this connection.

There is, indeed, much to hope for from such a statement. Pursued and developed as a peace objective and as the basis for establishing considerations to end this war, it may offer humanity an unprecedented opportunity for ending its quarrels and its bitterness and for working out a program of international goodwill and amity which will mark a new high in international human conduct. I hope America will unite in considering this statement on such a basis and in pursuing its implementation through peaceful methods. On such a basis this statement can become an additional silver thread to help weave America together in a unity of purpose and of understanding. Along these lines lies a great hope for America and for all the world.

BUT AMERICANS MUST REMAIN ON GUARD

Mr. Speaker, it must not be overlooked, however, that there is in this statement the possibilities of perversion by warminded groups which can present great danger to this country. It is important, therefore, that Americans remain on guard, lest what might be a great instrument for betterment become a device for plunging us into the greatest catyclysm of war the world has ever seen. Some impatient people with better idealism than judgment, and some selfish interests who seek some advantage for themselves through war may now be tempted to use this Churchill-Roosevelt statement of peace aims as an enumeration of war objectives. They may now try to urge Americans to send their sons and their treasure to foreign wars, to risk their own security and gamble their liberties and independence by putting this country into a two-ocean war on three foreign continents in order to project the objectives of this statement upon the entire world at the point of the sword after a great and exhausting war. Along these lines of thought and action lies a great danger to America and to all the world.

Mr. Speaker, I do not want America to enter another war on foreign fighting fronts to project its methods, its ideals, or its political philosophy upon the rest of the world by the futile system of emerging victorious from a long and bloody

war. I do not want it to assume that entering a ruinous war is an essential prerequisite to having influence at the final peace table. I do want my country, however, to use its influence and its potency, in methods other than participation in an outright war to the end that a victory without vengeance and a peace without passion may serve to grace the peace terms which will finally terminate this awful war. I believe that the joint Churchill-Roosevelt statement points a path, however vaguely, toward such a destination. Let us not permit them to be perverted by war makers and zealots into becoming the battle front behind which interventionists might push this country closer to involvement in the war. Let us remain united as we now are in our opposition to war and in our support of any sound program to supplement the material assistance we are now giving Britain and China by adding our great will for peace to that of the millions of people of every land who desire this war to end and thus helping to bring about a just and early peace while we continue our preparedness program without abatement. While preparing for the worst, Mr. Speaker, let us hope, and pray, and work for the best.

Mr. Speaker, one other point. I believe it important to emphasize, today, that the three best informed men in America on European conditions are united in their opinion that this country should not enter the war. I refer to our three former Ambassadors to the respective posts of Great Britain, France, and Belgium. Former Ambassador Joseph P. Kennedy to Great Britain, former Ambassador William C. Bullitt to France, and former Ambassador John Cudahy to Belgium have each one stated definitely and separately, beyond all peradventure of question or doubt, that he is positively and completely opposed to this country's entrance into the present war.

Mr. Speaker, let us remember who these former ambassadors actually are. They are first of all great Americans. They are oustanding members of the Democratic Party. They are the personal selections of President Roosevelt, himself, to serve these foreign posts and to keep this country informed about what is actually going on behind the scenes in Europe. They are, in fact, the three best informed men in this country to speak on European conditions. They have seen with their own eyes the evidence upon which they base their conclusions. Theirs is no witch's gossip or common hearsay—these three men speak with the voice of authority since they and they alone have been in position to know all the facts from first-hand knowledge. America paid for the services of these men to represent us in Europe, and to give us honest and intelligent advice concerning European affairs. We would now do well to ponder carefully the conclusions of these three eminent authorities on world affairs.

Speaking before the House Foreign Affairs Committee, as reported in the printed House hearings on the lend-lease bill, Mr. Kennedy repeatedly stated his opposition to our joining in the fighting of this war. On page 294 of the printed hearings, I asked Mr. Kennedy whether he thought we should keep out of the war. His reply was, and I quote his words:

> We should not go in. Therefore we must stay out.

He stressed his opposition to our joining the war again and again during the hearings. On page 297, I asked him whether he thought that our entrance into the war would change our democracy to some more centralized form. He replied:

> Yes, sir. There are lots of reasons why I do not think we want to get into war, and that comes down on the list.

On page 298, Mr. Kennedy said:

> I said Saturday if you have war we are either all the way in or we are all the way out, and the idea that you can be in the war and not use your manpower I admit is a very, very thin reed to hang onto. If you get into war, you can make up your mind that the boys are going sooner or later.

Now let us turn to the testimony of former Ambassador Bullitt, who represented the United States both in France and in Russia. On page 626 of the same set of House hearings on the lend-lease bill, I asked Mr. Bullitt, who was appearing as a voluntary witness before our committee, the following question:

> Now, Mr. Ambassador, may I ask you this: Even with the aid to England contemplated in our present program of the passage of H. R. 1776, in the event even then England should show signs of collapse, would you still say America should stay out of the war?

Mr. Bullitt's reply was definite, positive, and unevasive. He said:

> I should.

Now, Mr. Speaker, last Saturday night over the radio former Ambassador John Cudahy to Belgium spoke to the Nation from Milwaukee. I quote a portion of his remarks as reported by the press on August 10. Mr. Cudahy said:

> The time is ripe for a feasible peace proposal. * * * I was one of those who advocated the election of President Roosevelt, and I was convinced then, as I am convinced now, that President Roosevelt can and will keep this country out of war. He promised to keep us out of war. I am certain President Roosevelt will never forget that promise. I believe he can and will keep that promise if you, the people, will keep your heads—

Mr. Speaker, I am sure that remark was addressed to certain well-known interventionists who mostly operate out of the city of New York—

> if you will stand by him against the war party; if you will but counsel and sustain him in the cause of peace.

Mr. Speaker, there you have the unanimous testimony of the three best-informed Americans on foreign affairs, the three men the President himself selected to find out the facts and to counsel us in our foreign relations. Surely no man can honestly claim, in the face of this evidence, that it is only the uninformed or the ill-advised who unite in a determined crusade to keep America out of the fighting.

I might add that Hanson Baldwin, military analyst of the New York Times, the Nation's largest Democratic newspaper, adds his opinion to that of our three former Ambassadors. In his new book, United We Stand, he, too, stresses again and again the important fact that America must remain out of this war.

Mr. Speaker, we all join in the prayer and the hope that Britain will succeed in her gallant fight against those who threaten her shores. We all want to see Hitler defeated and his methodology denied. We want freedom to spread as rapidly and as widely as it can, and we want tyranny in every land to vanish as completely and as quickly as possible. But our entrance into a fighting war on distant continents is likely to do much more to spread totalitarianism by adding America to the countries practicing its futile philosophies of supercentralization than to spread freedom throughout the world. However, a peace offensive directed to the peoples of Europe and Asia has vast possibilities of accomplishing the goal which we unite in coveting. A peace offensive, honestly stated and sincerely supported, can give new hope to the conquered peoples of Europe which will stiffen their already admirably stubborn resistance to aggression. A peace offensive based on what would be a just and equitable peace will do more to drive a wedge between the Axis governments and the Axis peoples than all the bombing planes in Christendom. Hitler has a great military machine with which to fight opposing armies, but he is ill-prepared to fight the invasion of eternal truths and great ideals. Once the people of Germany and Italy and Japan can be made to understand that they have more to hope for and to live for from the early ending of this war and the adoption of decent rules of international human behavior than they have to hope for from fighting increasingly costly battles, all the propaganda machines of Europe cannot drive their armies to successful combat. Thus a peace offensive may well do for the world what a war offensive, if this country were to join it, might seriously retard—a sincere peace offensive might break the morale of the dictated peoples and give them cause to hope for peace without vengeance and for a future free from slavery imposed by their own leaders or superimposed by their conquerors.

"By something less than total war and something more than just our private peace," America has a challenge today to come to the rescue of a stricken humanity. I pray God the Churchill-Roosevelt statement may be used as an instrument to work toward that exalted goal.

Address of Dean Manion on World Affairs

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

ADDRESS OF DEAN CLARENCE MANION OF THE UNIVERSITY OF NOTRE DAME LAW SCHOOL

Mr. LUDLOW. Mr. Speaker, Prof. Clarence Manion, dean of the University

of Notre Dame Law School, a distinguished citizen and scholar, speaking at a meeting at the World War Memorial in Indianapolis on August 5, delivered an address on foreign affairs that is attracting widespread attention. By unanimous consent of the House I present his address for printing in the CONGRESSIONAL RECORD, as follows:

If it were not for its stark, tragical consequences for the American people, our present hysterically wild waltz to war would be one of the most comical transactions of world history. Because the gyrations of their own delirious war dance have made them dizzy, the interventionists apparently think that the walls of the world are really caving in upon them and that those of us who have refused to join their "crisis carousal" are both deaf and blind. A strong dose of fact and logic would clear the hotheads of the war party, but unfortunately, they have no taste for such a realistic cure. Here are some of the high lights in the contest between the facts of the situation and the fancy of the interventionists:

We are asked to fancy that Finland is the enemy of the United States, when the fact is that Finland is the only European country that has persisted in fulfilling all of its financial obligations to this country.

We are asked to fancy that Finland is an aggressor nation, when the fact is that she is merely recapturing her own territory, the Russian theft of which we denounced from every American platform and through every American printing press 2 years ago.

We are asked to fancy Russia as an enemy of aggression, when the fact is that Russia gladly split every acre of German territorial swag and up to 2 months ago was a treaty-bound member of the Rome-Berlin-Tokio Axis.

We are asked to fancy that our peril of invasion is greater now than it was a year ago, when the fact is that the Axis has been broken across the middle in the last 12 months and Hitler is now mired to his waist in the invasion of a country with whom he was closly allied 1 year ago.

We are asked to fancy that Iceland, Dakar, Cape Verde Islands, and Ireland are outposts of American defense, when the fact is that the occupation of such places by the United States has no more justification than the get-there-first policy that we have condemned Hitler for employing.

We are asked to fancy that our aid-to-Britain program demands our steel, our entire factory capacity, our gasoline, and complete foreclosure of our normal South American trade, when the fact is that, war or no war, British manufacturers are now taking over our South American customers, supplying them with British-made copies of American machinery, and censoring our mail at Trinidad in order to determine just what orders American manufacturers are now unable to fill. This fact was disclosed to the American press last June 30 by James S. Kemper, of Chicago, former president of the United States Chamber of Commerce.

We are asked to fancy that in taking over ports in French Indo-China with the consent of the recognized French Government, Japan was guilty of unjustifiable aggression against the peace of the United States, when the fact is that if our occupation of Iceland was justified in the interests of American defense, then certainly the occupation of French Indo-China was justified in the interest of Japanese defense.

We are asked to fancy that our hate and fear of communism is in no way compromised by our present all-out aid to Russia, when the fact is that if Hitler loses the Russian War, Russian communism must necessarily win it, and millions of Communist saboteurs all over the world, including the United States, will come out of their rat holes with red flags of revolution in their hands.

Our Communist "hate-and-help" policy is perhaps the most intricate of all the involved and dizzy whirls now called for by the leaders of the American war dance. If it means anything, it means simply that we must help communism win its war with Germany so that we may then be free to fight communism to the death without the embarrassment of having to make common cause with Adolf Hitler. It means that when we start battling communism after we have helped communism to eliminate Hitler, we will be much better prepared for the battle by reason of our $100,000,000,000 debt and the presence of thousands of Communists here whom we will have coddled, financed, and encouraged in the meantime.

The interventionists tell us that appeasement is a horrid word. They would have us believe that appeasement to end a war is wrong, but appeasement to keep a war going is perfectly all right. For instance, we are now told that in order to save British and Dutch possessions in the Pacific, we were justified in appeasing Japan for 2 years by furnishing American gasoline for bombers that brought death and destruction to our valiant and democratic friends, the Chinese. In other words, so that a Japanese war might not begin against British Singapore and the Dutch West Indies, it was necessary that the Japanese war against our friends, the Chinese, should be made to continue.

The war partisans have had 2 years in which to educate the American people to the interventionist point of view. During that time, they have had the radio commentators, 90 percent of the newspaper columnists, the movies, newsreels, and thousands of paid British propaganda experts to help them, but at least 75 percent—and probably 85 percent—of the American people are still unconvinced. In spite of the most sustained and most adroit propaganda barrage ever laid down upon a people anywhere, the American public—east, west, north, and south, continues to be emphatically against our involvement in this war. Regardless of the merits of the respective sides of the war against peace argument, all admit that the American people want this country to stay at peace. If we really believe in democracy, then let us demonstrate the sincerity of our belief by respecting the democratic priaciple of majority rule and obey the people's mandate to stay out of this war.

For years, LOUIS LUDLOW, the distinguished Congressman from this Indiana district, has advocated a constitutional amendment giving the people the right to vote upon the question of war or peace for the United States. If that amendment had been passed when the Honorable LOUIS LUDLOW first introduced it, we would not be trembling uncertainly on the brink of war today. If our young American manhood can be sent to die on foreign battlefields against the wishes of 75 percent of our people, then what right have we to praise democracy and condemn dictatorship?

When the European war began, we had the choice of three courses of action—the first, second, and third gear of the American war machine:

1. We could remain neutral and prepare to defend ourselves against anybody.

2. We could resolve to save England and so keep an independent Britain between us and a possible German invasion.

3. We could resolve to smash and destroy Hitler and Hitlerism at whatever cost.

Officially, we adopted the first course by the passage of the Neutrality Act. From that point we were deliberately eased into position No. 2. We were led to believe that the defense of Britain was the defense of America. That No. 2 policy was later implemented and abetted by the Lease Lend Act. Up to a few weeks ago, that is as far as we were asked to go. If our job was to keep an independent Britain in the Atlantic, our job is done. Even the wildest interventionists now admit that Britain is saved. If Hitler couldn't destroy Britain last spring, he certainly cannot do so now.

It would seem, therefore, that we could now think once more of ourselves alone and prepare our own defense as such. But no; the interventionists now clamor for a shift into the high gear of our war policy—the destruction of Hitler and Hitlerism. They want to be there for the kill. They want to enjoy the peace feast and watch Joe Stalin take back the four freedoms from the aggressor, Finland.

In order to save Britain as a bulwark of American defense, we have appropriated $40,000,000,000, dislocated American industry, threatened the country with a rigid dictatorship of priorities and prices, and conscripted 900,000 American young men from their jobs and their homes. This should be enough. Nevertheless, we are now asked not merely to guarantee the independence of Britain and the British Empire but to underwrite the complete destruction of Hitler and Hitlerism. We are asked to pledge ourselves to follow that purpose through the length and breadth of Europe and Asia—across the Alps, through Suez, at Gibraltar, wherever the opportunity for foreign war and foreign death for American boys offers itself.

In the current issue of the rabidly interventionist Life magazine, Hanson Baldwin, military expert for the New York Times, says that this Hitler-destroying excursion will cost us $300,000,000,000, but, he says: "The monetary sacrifice is the smallest evil. The burden of victory would be largely American. Victory would cost heavily in blood. We cannot conquer a continent without wholesale death. We probably could not keep, except in rough outline, the American way of life. We would be a harder, tougher but more regimented and less free people. Our standards of living would be depressed. Inevitable economic and political dislocation might confront us. These are the costs."

These are not the words of Colonel Lindbergh or Senator WHEELER. These are the words of the military expert of the interventionist New York Times, the same man who said in the August and July numbers of the Reader's Digest that we can achieve realistic hemisphere defense without foreign bases and without stealing the so-called stepping stones from Europe, such as Iceland, the Cape Verde Islands, and this regardless of whether Hitler captures the British Fleet or not.

But I solemnly charge that those cunning leaders who are calling the turns for the American war dance have another objective beyond the destruction of Hitler and Hitlerism. When we reach the end of the bloody, bankrupting, demoralizing trail which leads to the grave of Hitlerism, we shall be asked to surrender the independence and sovereignty of the United States. The last objective of the interventionist program is the establishment of a world state. They hope to merge our now solvent, free American Republic with the bankrupt political structures of the Old World and substitute for The Star-Spangled Banner an international anthem, perhaps the Russian Internationale.

When we shall have let our blood and spent our substance in the world conquest of Hitlerism, we shall be too weak to resist the final push. A shooting war will be the beginning of the end of the United States. If you are interested in preserving this, the last citadel of freedom on earth, if you want life, liberty, and the pursuit of happiness in the full God-given measure set out in the American Declaration of Independence, then keep America independent by keeping the United States out of the pitfall of involvement in this foreign war.

Roosevelt-Churchill Statement on War Aims

REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 14, 1941

Mr. CASE of South Dakota. Mr. Speaker, for some time a great many of us have been asking for an expression of the war aims of the democratic countries. Today a joint statement was issued signed by the President of the United States, Mr. Roosevelt, and the Prime Minister of England, Mr. Churchill, representing the United Kingdom.

For myself I welcome this statement of aims. It makes history. It points away from war and toward peace. I ask unanimous consent that the Roosevelt-Churchill statement as released today may follow these remarks in the RECORD.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

The statement referred to follows:

JOINT ROOSEVELT-CHURCHILL STATEMENT ON WAR AIMS

The President of the United States and the Prime Minister, Mr. Churchill, representing His Majesty's Government in the United Kingdom, have met at sea.

They have been accompanied by officials of their two Governments, including high-ranking officers of their military, naval, and air service.

The whole problem of the supply of munitions of war, as provided by the Lease Lend Act, for the armed forces of the United States and for those countries actively engaged in resisting aggression has been further examined.

Lord Beaverbrook, the Minister of Supply of the British Government, has joined in these conferences. He is going to proceed to Washington to discuss further details with appropriate officials of the United States Government. These conferences will also cover the supply problems of the Soviet Union.

The President and the Prime Minister have had several conferences. They have considered the dangers to world civilization arising from the policies of military dominaton by conquest upon which the Hitlerite Government of Germany and other governments associated therewith have embarked, and have made clear the stress (steps) which their countries are respectively taking for their safety in the face of these dangers.

They have agreed upon the following joint declaration:

"Joint declaration of the President of the United States of America and the Prime Minister, Mr. Churchill, representing His Majesty's Government in the United Kingdom, being met together, deem it right to make known certain common principles in the national policies of their respective countries on which they base their hopes for a better future for the world.

"First, their countries seek no aggrandizement, territorial or other;

"Second, they desire to see no territorial changes that do not accord with the freely expressed wishes of the peoples concerned;

"Third, they respect the right of all peoples to choose the form of government under which they will live and they wish to see sovereign rights and self-government restored to those who have been forcibly deprived of them;

"Fourth, they will endeavor, with due respect for their existing obligations, to further the enjoyment by all states, great or small, victor or vanquished, of access, on equal terms, to the trade and to the raw materials of the world which are needed for their economic prosperity;

"Fifth, they desire to bring about the fullest collaboration between all nations in the economic field with the object of securing for all improved labor standards, economic advancement, and social security;

"Sixth, after the final destruction of the Nazi tyranny, they hope to see established a peace which will afford to all nations the means of dwelling in safety within their own boundaries, and which will afford assurance that all the men in all the lands may live out their lives in freedom from fear and want.

"Seventh, such a peace should enable all men to traverse the high seas and oceans without hindrance.

"Eighth, they believe that all of the nations of the world, for realistic as well as spiritual reasons, must come to the abandonment of the use of force. Since no future peace can be maintained if land, sea, or air armaments continue to be employed by nations which threaten, or may threaten, aggression outside of their frontiers, they believe, pending the establishment of a wider and permanent system of general security, that the disarmament of such nations is essential. They will likewise aid and encourage all other practicable measures which will lighten for peace-loving peoples the crushing burden of armaments.

"FRANKLIN D. ROOSEVELT.
"WINSTON S. CHURCHILL."

Suits for Violations of Federal Antitrust Laws by the Petroleum Industry

EXTENSION OF REMARKS

OF

HON. GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES

Thursday, August 14, 1941

COMPILATION BY DEPARTMENT OF JUSTICE

Mr. GILLETTE. Mr. President, I have before me a compilation of suits which have been commenced by the Department of Justice for violation of the anti-monopoly and antitrust acts, with a list of the defendants. The matter exceeds the space limitation for printing such matter in the RECORD under the rule, and it is accompanied by a statement of the Public Printer showing that it will require 4⅔ pages. I offer the statement, together with the estimate of the Public Printer, and ask unanimous consent to have it printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Since the termination of the N. I. R. A. in May 1935, 13 separate actions have been brought by the Federal Government against several hundred individuals and corporations of the petroleum industry for alleged violations of the Federal antitrust laws.

Chronological order follows:

Date of filing return	Action	Court	Parties
July 28, 1936	Criminal No. 11296	U. S. District Court for the Western District of Wisconsin	*United States* v. *Standard Oil Co. (Ind.) et al.*
Nov. 6, 1936	Criminal No. 11342	do	*United States* v. *Socony-Vacuum Oil Co., Inc., et al.*
Dec. 22, 1936	Criminal No. 11364	do	*United States* v. *Socony-Vacuum Oil Co., Inc., et al.*
Do	Criminal No. 11365	do	*United States* v. *Standard Oil (Ind.) et al.*
Nov. 14, 1939	Criminal No. 14149-M	U. S. District Court for the Southern District of California	*United States* v. *Gen. Pet. Corp. of Cal. et al.*
Feb. 19, 1937	In Equity No. E. 84-321	U. S. District Court for the Southern District of New York	*United States* v. *Ethyl Gasoline Corp. et al.*
May 30, 1940	Indictment No. 16205	U. S. District Court for the Northern District of Georgia, Rome Division.	*United States* v. *Hiram W. Evans et al.*
Sept. 30, 1940	Civil Action No. 182	U. S. District Court for the District of Delaware	*United States* v. *Phillips Petroleum et al.*
Do	Civil Action No. 183	do	*United States* v. *Great Lakes Pipe Line Co.*
Do	Civil Action No. 201	U. S. District Court for the Northern District of Indiana, Hammond Division.	*United States* v. *Standard Oil Co. (Ind.).*
Do	Civil Action No. 8524	U. S. District Court for the District of Columbia	*United States* v. *American Petroleum Institute.*
Jan. 31, 1941	Criminal No. 32597	U. S. District Court for the Northern District of Illinois, Eastern Division.	*United States* v. *The Wayne Pump Co. et al.*

Department of the Interior news release of July 12, 1941, announced appointment to membership on district committees of 204 persons to "advise and consult * * * on matters relating to the proper coordination of the activities of the petroleum industry for national defense."

Of the 205 persons appointed to positions on these oil committees, 134 or 65.4 percent are persons individually who either have been found to be violators of the Federal antitrust laws or are now being sued as violators of those laws and their advice will be effective if not controlling, in determining the disposition of suits now pending against some of these very men.

Following is a list as to position, and past record and affiliation with corporations.

SUMMARY OF FOLLOWING LIST

Total number of persons named to committees, 205; 100 percent.

Persons individually, and persons connected with corporations or associations having been found violators or now being sued as alleged violators of Federal antitrust laws, 134; 65.4 percent.

ANTITRUST RECORD OF PERSONS NAMED TO COMMITTEES FUNCTIONING UNDER PETROLEUM COORDINATOR JULY 12, 1941

Adams, K. S.:	
Positions under Petroleum Coordinator: District 2.	Member, Production Committee.
Private positions:	
American Petroleum Institute	Director.
Phillips Petroleum Co	President and director.
Alco Royalties Corporation	Vice president and director.
Great Lakes Pipe Line Co.	
Phillips Pipe Line Co.	
Southern Phillips Corporation	Director.
Antitrust record:	
American Petroleum Institute	Civil 8524 (Sept. 30, 1940); defendant; pending.
Phillips Petroleum Co	Criminal 11364; nolo contendere (June 2, 1938); fined $15,000. Criminal 11365; guilty verdict (July 19, 1938); fined $5,000. Civil 182 (Sept. 30, 1940); defendant; pending. Civil 8524 (Sept. 30, 1940); defendant; pending.
Alco Royalties Co	Civil 8524 (Sept. 30, 1940); defendant; pending
Great Lakes Pipe Line Co	Civil 183 (Sept. 30, 1940); defendant; pending.
Phillips Pipe Line Co	Civil 182 (Sept. 30, 1940); defendant; pending.
Southern Phillips Co	Civil 8524 (Sept. 30, 1940); defendant; pending.
Adams, K. S.	Do.
Ball, Amos:	
Position under Petroleum Coordinator: District 2.	Member, marketing committee.
Private positions:	
American Petroleum Institute	Member, marketing committee
Standard Oil Co. (Indiana)	Vice president and director.
Antitrust record:	
American Petroleum Institute	Civil 8524 (Sept. 30, 1940); defendant; pending.
Standard Oil Co. (Indiana)	Criminal 11364; nolo contendere (June 2, 1938); fined $15,000. Criminal 11365; nolo contendere (June 2, 1941); fined $5,000. Civil 182 (Sept. 30, 1940); defendant; pending. Civil 8524 (Sept. 30, 1940); defendant; pending.
Ball, Amos	Criminal 11364; nolo contendere (June 2, 1938); fined $15,000. Civil 8524 (Sept. 30, 1940); defendant; pending.
Brown, J. A.:	
Position under Petroleum Coordinator: District 1.	Chairman, General Committee.
Private positions:	
American Petroleum Institute	Director and member executive committee.
Socony-Vacuum Oil Co., Inc	President, director, and member executive committee.
Antitrust record:	
American Petroleum Institute	Civil 8524 (Sept. 30, 1940); defendant; pending.
Socony-Vacuum Oil Co., Inc	Criminal 11364; nolo contendere (June 2, 1938); fined $15,000. Criminal 11365; guilty verdict (July 19, 1938); fined $5,000. Civil 8524 (Sept. 30, 1940); defendant; pending.
Brown, J. A	Civil 8524 (Sept. 30, 1940); defendant; pending.
General Petroleum Co. of Calif	Criminal 14149-M; nolo contendere (Aug. 1, 1940); fined $4,500. Civil 8524 (Sept. 30, 1940); defendant; pending.
General Petroleum Co. of Nebr	Civil 8524 (Sept. 30, 1940); defendant; pending.
General Pipe Line Co	Civil 8524 (Sept. 30, 1940); defendant; pending.
Gilmore Oil Co	Criminal 14149-M; nolo contendere (Aug. 19, 1940); fined $4,500. Civil 8524 (Sept. 30, 1940); defendant; pending.
Weil, A. L	Civil 8524 (Sept. 30, 1940); defendant; pending.
Carnes, J. W.:	
Position under Petroleum Coordinator: District 1.	Member, marketing committee.
Private positions:	
American Petroleum Institute	Do.
Consolidated Oil Corporation	Vice president.
Richfield Oil Corporation of New York.	Director and chairman of board.
Richfield Oil Corporation.	
Rio Grande Oil Co., Inc.	
Sinclair Refining Co	Vice president and director.
Great Lakes Pipe Line Co.	
Antitrust record:	
American Petroleum Institute	Civil 8524 (Sept. 30, 1940); defendant; pending.
Consolidated Oil Corporation	Do.
Carnes, J. W	Criminal 11364; nolo contendere (June 2, 1938); fined $15,000. Criminal 11365; nolo contendere (Dec. 12, 1940); fined $5,000. Civil 8524 (Sept. 30, 1940); defendant; pending.
Richfield Oil Corporation of New York.	Civil 8524 (Sept. 30, 1940); defendant; pending.
Richfield Oil Corporation	Criminal 14149-M; nolo contendere (Aug. 1940); fined $4,500. Civil 8524 (Sept. 30, 1940); defendant; pending.
Rio Grande Oil Co., Inc	Civil 8524 (Sept. 30, 1940); defendant; pending.
Sinclair Refining Co	Criminal 11364; nolo contendere (June 2, 1938); fined $15,000. Criminal 11365; guilty verdict (July 19, 1939); fined $5,000. Civil 8524 (Sept. 30, 1940); defendant; pending.
Great Lakes Pipe Line Co	Civil 183 (Sept. 30, 1940); defendant; pending. Civil 8524 (Sept. 30, 1940); defendant; pending.
Colley, R. H.:	
Positions under Petroleum Coordinator: District 1.	Member, general committee, chairman, refining committee.
Private positions:	
American Petroleum Institute	Director and member executive committee.
Atlantic Pipe Line Co	Vice president.
Atlantic Oil Shipping Co	Vice president and director.
Buffalo Pipe Line Corporation	Do.
Keystone Pipe Line Co	Do.
Atlantic Refining Co	President and director.
Antitrust record:	
American Petroleum Institute	Civil 8524 (Sept. 30, 1940); defendant; pending.
Colley, R. H	Do.
Atlantic Refining Co., The	Do.
Keystone Pipe Line Co	Do.
Atlantic Oil Shipping Co	Do.
Buffalo Pipe Line Co	Do.
Currey, Peter:	
Position under Petroleum Coordinator: District 1.	Member, production committee.
Private positions:	
American Petroleum Institute	Director.
South Penn Oil Co	President and director.
Tide Water Associated Oil Co	
Antitrust record:	
Currey, Peter	Civil 8524 (Sept. 30, 1940); defendant; pending.
South Penn Oil Co	Do.
Tide Water Association Oil Co	Do.
American Petroleum Institute	Do.
Dodge, H. W.:	
Positions under Petroleum Coordinator: District 1.	Member, General Committee; chairman, Marketing Committee.
Private positions:	
The Texas Corporation	Vice president.
The Texas Co. (Delaware).	
The Texas Co. (California).	
Great Lakes Pipe Line Co.	
Goodyear-Wende Oil Corporation.	Director.
Indian Refining Co	Vice president and director.
The Texas Co. (Delaware)	Vice president and general sales manager.
American Petroleum Institute	Member, marketing committee.
Antitrust record:	
Dodge, H. W	Criminal 11364; nolo contendere (Jan. 6, 1941); fined $1,000. Civil 8524 (Sept. 30, 1940); defendant; pending.
Texas Corporation, The	Civil 8524 (Sept. 30, 1940); defendant; pending.
Great Lakes Pipe Line Co	Civil 183 (Sept. 30, 1940); defendant; pending.
Texas Co., The (California)	Criminal 14149-M; nolo contendere (Jan. 15, 1941); fined $4,500. Civil 8524 (Sept. 30, 1940); defendant; pending.
Texas Co., The (Delaware)	Criminal 11364; nolo contendere (Jan. 6, 1941); fined $14,000. Civil 8524 (Sept. 30, 1940); defendant; pending.
Goodyear-Wende Oil Corporation.	Civil 8524 (Sept. 30, 1940); defendant; pending.
Indian Refining Co	Do.
American Petroleum Institute	Do.
Donnell, O. D.:	
Positions under Petroleum Coordinator: District 2.	Member, General Committee; chairman, Production Committee.
Private positions:	
The Ohio Oil Co	President.
American Petroleum Institute	Director, treasurer, and member, executive and production committees.
Antitrust record:	
Donnell, O. D	Civil 8524; defendant; pending.
Ohio Oil Co., The	Criminal 11364; nolo contendere (June 2, 1938); fined $15,000. Civil 8524; defendant; pending.
American Petroleum Institute	Civil 8524; defendant; pending.
Ferguson, W. H.:	
Position under Petroleum Coordinator: District 4.	Member, General Committee
Private positions:	
Continental Oil Co	Executive vice president.
Great Lakes Pipe Line Co.	
Rocky Mountain Pipe Line Co	President and director.
The Boston-Wyoming Oil Co	Vice president and director.
Chappell Oil Co	Do.
Continental Pipe Line Co	Vice president.
Fort Collins Producing Co	Vice president and director.
Merrico Royalties Co	President and director.
New Mexico Pipe Line Co	Do.
The Standard Shale Products Co	Vice president and director.
American Petroleum Institute	Director and member of marketing committee.
Antitrust record:	
American Petroleum Institute	Civil 8524 (Sept. 30, 1940); defendant; pending.
Continental Oil Co	Criminal 11364; nolo contendere (June 2, 1938); fined $15,000. Criminal 11365; guilty verdict (July 19, 1938); fined $5,000. Civil 8524 (Sept. 30, 1940); defendant; pending.
Rocky Mountain Pipe Line Co	Civil 8524 (Sept. 30, 1940); defendant; pending.
Boston, Wyoming Oil Co., The	Do.

Ferguson, W. H	Do.
Hanks, G. J.:	
Positions under Petroleum Coordinator: District 1.	Member, Production Committee.
Private positions:	
Tide Water Associated Oil Co	Vice president and director.
Bradford Transit Co	President and director.
Tidal Pipe Line Co	Vice president and director.
Antitrust record:	
Hanks, G. J	Civil 8524 (Sept. 30, 1940); defendant; pending.
Tide Water Associated Oil Co	Do.
Bradford Transit Co	Do.
Tidal Pipe Line Co	Do.
Hill, George A.:	
Positions under Petroleum Coordinator: District 3.	Member, General Committee; chairman, Production Committee.
Private positions:	
American Petroleum Institute	Director, vice president (for production), member of executive committee, and chairman of production committee; committee on well spacing.
Houston Oil Co	
Antitrust record:	
American Petroleum Institute	Civil 8524 (Sept. 30, 1940); defendant; pending.
Hill, G. A	Do.
Jones, C. S.:	
Positions under Petroleum Coordinator: District 5.	Member, general committee; chairman, transportation committee.
Private positions:	
American Petroleum Institute	Director.
Richfield Oil Corporation	President and director.

Jones, C. S.—Continued.	
Private positions—Continued.	
Reservoir Hill Gasoline Co	President and director.
Rio Grande Oil Co., Inc	Do.
Antitrust record:	
American Petroleum Institute	Civil 8524 (Sept. 30, 1940); defendant; pending.
Jones, C. S	Do.
Richfield Oil Corporation	Criminal 14149-M; nolo contendere (Oct. 14, 1940); fined $4,500. Civil 8524 (Sept. 30, 1940); defendant; pending.
Reservoir Hill Gasoline Co	Civil 8524 (Sept. 30, 1940); defendant; pending.
Rio Grande Oil Co., Inc	Do.
Kennedy, H. J.:	
Positions under Petroleum Coordinator: District 2.	Member, marketing committee.
Private positions: Continental Oil Co.	President.
Antitrust record:	
Continental Oil Co	Criminal 11364; nolo contendere (June 2, 1938); fined $15,000. Criminal 11365; guilty verdict (July 19, 1938); fined $5,000. Civil 8524 (Sept. 30, 1940), defendant; pending.
Great Lakes Pipe Line Co	Civil 183 (Sept. 30, 1940); defendant; pending.
Kennedy, H. J	Criminal 11365; nolo contendere (June 2, 1941); fined $1,500.
Klein, H. T.:	
Positions under Petroleum Coordinator: District 1.	Member, Transportation Committee.
Private positions:	
American Petroleum Institute	Director and member, American Petroleum Industries Committee.
The Texas Corporation	Executive vice president and director.
Texas Production Co. of Nebraska	Director.
Goodyear-Wende Oil Corporation	Do.
The Texas Co. (Delaware)	Vice president and director.
Indian Refining Co	Director.
Seaboard Oil Co. of Delaware	Do.
Antitrust record:	
American Petroleum Institute	Civil 8524 (Sept. 30, 1940); defendant; pending.
Klein, H. T	Do.
Texas Corporation, The	Do.

A Threat to Defense

EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 14, 1941

EDITORIAL FROM JACKSON (MICH.) CITIZEN-PATRIOT

Mr. MICHENER. Mr. Speaker, pursuant to the permission granted me to extend my remarks in the RECORD, I include an editorial from the Jackson (Mich.) Citizen-Patriot. This newspaper stands out among the other newspapers in Michigan for the straightforward and understandable character of its editorials.

There has been considerable discussion on the floor today about the St. Lawrence seaway project. The people in the section of Michigan from which I come are divided upon the advisability of authorizing this project at this time. However, I feel sure that this newspaper has correctly appraised the public sentiment in its editorial, which is as follows:

[From the Jackson (Mich.) Citizen Patriot]

A THREAT TO DEFENSE

There perhaps may be honest doubt as to the value of the St. Lawrence seaway. High authority speaks on both sides of that issue. But there is no such doubt about the Florida ship canal which was first proposed as a made-work project to give the unemployed and idle something to do. That made-work need has long since passed.

Even after the digging had started on the big ditch, Senator VANDENBERG was able to defeat the plan by demonstrating how useless and impractical such a waterway could be, and by pointing out the real damage it would do to that section.

It was thought that the Florida ship canal was deader than a smoked mackerel; but here it is back again, a very lively corpse in our national-defense program.

With the St. Lawrence seaway, it is tied into the rivers and harbors bill, the most outrageous pork bill on any recent congressional calendar. There are other doubtful projects in this bill, including the Tennessee-Tombigbee Canal, which has been defeated for years on the same grounds as the Florida Canal. But of them all the $200,000,000 Florida ditch is probably the worst, because of the actual facts and arguments that already have been produced against its completion.

The really serious feature of its reappearance now is that the huge spending project comes at a time when the Nation is urged to make sacrifices in civilian production to promote war efforts, to invest money in Government securities, and to think of the country's needs ahead of selfish interests.

Such requests are right and proper in the face of world conditions; but appearance of this Florida project will cause many citizens to question the sincerity if not the honesty of those Members of Congress who would foist such a useless expense on the Nation when the country's best informed economists are at a loss to invent ways and means to raise the money to pay for our actual defense needs.

Bill To Curb and Prevent Monopoly

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 14, 1941

Mr. PATMAN. Mr. Speaker, I have today introduced a bill proposing to separate manufacturing from retailing in order to curb and prevent monopoly. It is as follows:

[In the House of Representatives. Mr. PATMAN introduced the following bill, which was referred to the Committee on Interstate and Foreign Commerce and ordered to be printed. A bill to prevent manufacturers of products from offering for sale and selling the same at retail in certain cases, and for other purposes]

Be it enacted, etc. That for the purposes of this act the word "manufacturer" shall be deemed to include a person partnership, association, or corporation engaged in the production or manufacture of commodities, which commodities such person, partnership, association, or corporation is also engaged in offering for sale and selling in commerce, as commerce is defined in section 4 of the Federal Trade Commission Act, to wit, an act to create a Federal Trade Commission, to define its powers and duties, and for other purposes, approved September 26, 1914, to wholesalers, jobbers, or retail dealers.

SEC. 2. For the purposes of this act the words "customer of such manufacturer" shall be deemed to include only a retail dealer who at any time already is established in the business of offering for sale and selling to consumers commodities produced or manufactured by such "manufacturer" as hereinabove defined.

SEC 3. It shall be deemed to be an unfair method of competition in commerce, within the intent and meaning of section 5 of said Federal Trade Commission Act, for a manufacturer, as defined hereinabove, to offer for sale and sell at retail to consumers any of the commodities produced or manufactured by such manufacturer, where the effect of so offering for sale and selling such commodities at retail to consumers may be substantially to lessen competition between such manufacturer and his customers or tend to create a monopoly in such line of commerce or to injure, destroy, or prevent competition by a customer or customers of such manufacturer, as customer is hereinabove defined.

SEC. 4. The Federal Trade Commission is hereby empowered and directed to prevent manufacturers, as hereinabove defined, from using such unfair method of competition, as hereinabove defined, in commerce.

SEC. 5. Whenever the Commission shall have reason to believe that any manufacturer is using such unfair method of competition, as hereinabove defined, and it shall appear to the Commission that a proceeding by it in respect thereof would be to the interest of the public, it shall proceed to prevent the same in the same manner and by the same procedure as provided by section 5 of an act of Congress approved September 26, 1914, entitled "An act to create a Federal Trade Commission, to define its powers and duties, and for other purposes," as amended. The provisions of said section 5 and of sections 9 and 10 of said act, as amended, shall apply, for purposes of enforcement of the provisions of this section, as fully and with the same effect in law as though said sections were fully and literally incorporated herein. The circuit courts of appeals shall have the same jurisdiction to review the orders of the Commission and to enforce the same and shall review and enforce the same, as provided by said section 5. All courts of the United States shall have jurisdiction to carry out the provisions of sections 9 and 10 of said Federal Trade Commission Act.

SEC. 6. This act shall take effect immediately after its approval.

The Sinking of the "Robin Moor"

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, August 14, 1941

OPINION BY JAMES W. RYAN

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a legal opinion by James W. Ryan on the Sinking of the *Robin Moor*. I have obtained an estimate of the cost of printing the opinion, which is $236.25.

There being no objection, the opinion was ordered to be printed in the RECORD, as follows:

THE SINKING OF THE "ROBIN MOOR"

The action of German submarines in sinking the *Robin Moor* and drowning the six American Red Cross nurses on the British ship, and the *Maasdam*,[1] has revived the issue on which the United States entered the World War. It has also raised a broader and more serious issue, because up to the time the United States entered the World War there had been no sinking by a submarine of an American or other neutral vessel (like the *Robin Moor*) on the high seas outside a publicly declared submarine zone or blockade area. The *Robin Moor*, which was unarmed, was sunk on May 21, 1941, in the South Atlantic about half way between Africa and South America. Eleven survivors, after spending 18 days in an open lifeboat, were picked up by a Brazilian steamer and landed at Pernambuco. The remaining 35, after spending 13 days in lifeboats, were picked up by a British vessel and landed at Capetown. The vessel's cargo contained no implements of war, munitions, or other absolute contraband as defined by international law. The principal part of the cargo was destined to civilian British purchasers in British South Africa, and the remainder to civilians in Portuguese East Africa. Some of it was potential "conditional contraband" under international law, that is, it would have been contraband if it had been "destined for the use of the armed forces or of a government department of the enemy state."[2]

When the chief officer of the *Robin Moor* protested against her being sunk, the commander of the submarine replied that there were supplies on board the *Robin Moor* "for my country's enemy, and, therefore, I must sink you."[3]

The manifest listed 459 motorcars and trucks, 959 50-gallon drums of lubricating oil, 30 15-gallon drums of lubricating oil, 141 cases of shotgun shells, 4 cases of metallic cartridges, 12 .22-caliber sports rifles, and 6 gas masks for workers in refrigeration plants.[4]

Other materials carried were steel rails and bars, cotton piece goods, women's silk dresses, leather, candy, overalls, medicines, safety razors and blades, mechanical hand tools, lawn mowers, garters, toys, ready-mixed paints, flashlights and batteries, galvanized barbed wire, soap, fly swatters, canned beer, rubber bathing caps, storage batteries, roasted coffee, bar solder, radio receiving sets, preserves in glass and tin, fountain pens, women's underwear, refrigerating machinery, fishing tackle, insulated copper wire, cereals, zippers, cigarettes, pictures, smoking pipes, shoe polish, petroleum jelly, typewriters, knives, radio parts, radio tubes, rubber tires and tubes, and cough drops.[5]

On the German contraband list, clothing, foodstuffs, fodder, beverages, tobacco, and materials used in their manufacture, are conditional contraband. Arms, ammunition, warships, military aircraft, tanks, chemical substances for military purposes, military clothing, means of communication, fuels, lubricating oils, gold, silver, machine tools, and means of transportation and their component parts destined for enemy territory or the enemy forces, are absolute contraband.[6]

1. PROVISION FOR SAFETY OF SURVIVORS—TREATY WITH GERMANY OF NOVEMBER 23, 1936; AND ARTICLE 74, GERMAN PRIZE LAW CODE, EFFECTIVE SEPTEMBER 3, 1939

The London Naval Treaty of 1930, part IV, Rules of Submarine Warfare, article 22, requires warships to "not sink or render incapable of navigation a merchant vessel without having first placed passengers, crew, and ship's papers in a place of safety. For this purpose the ship's boats are not regarded as a place of safety unless the safety of the passengers and crew is assured, in the existing sea and weather conditions, by the proximity of land, or the presence of another vessel which is in a position to take them on board." This is an absolute prohibition, applicable to every type of merchant vessel, enemy as well as neutral, under all possible circumstances. Forty-four countries, including all of the leading naval powers, are parties to this treaty. The United States signed on April 22, 1930, and Germany adhered on November 23, 1936.[7]

The German Prize Law Code of August 28, 1939,[8] provides in article 73 that captured neutral vessels may be destroyed if they have made forcible resistance, were aiding the enemy, were proceeding in convoy, or cannot safely or expediently be brought to port. Other neutral vessels may be destroyed if their condemnation would be expected as a certainty, or if to bring them to port would expose the capturing vessel to danger or might prejudice the success of its enterprises. But (art. 74–1) "The destruction of vessels in accordance with articles 72 and 73 is admissible only if the passengers, crew, and papers of the vessel have been brought to a place of safety before destruction. * * * Ship's boats are not to be regarded as a place of safety unless the safety of passengers and crew under the existing conditions of the sea and weather is assured by the proximity of land or the presence of another vessel which is able to take them on board."

When the *Lusitania* was sunk, on May 7, 1915, without proper provision having been made for the safety of the American citizens on board, the United States Government protested to the German Government that "it was contending for nothing less high and sacred than the rights of humanity," and that only the "actual resistance (of the *Lusitania*) to capture or refusal to stop when ordered to do so for the purpose of visit could have afforded the commander of the submarine any justification for so much as putting the lives of those on board the ship in jeopardy."[9] In *The Lusitania* (251 Fed. 715), the court held that the owners of the vessel were not liable for the loss of life and property because they were due to the "illegal act" of the German Government.

On November 29, 1915, Germany promised, with respect to neutral vessels captured as prize, that all possible care would be taken for the safety of the crews and passengers. "Consequently, the persons found on board of a vessel may not be ordered into her lifeboats except when the general conditions—that is to say, the weather, the condition of the sea, and the neighborhood of the coasts—afford absolute certainty that the boats will reach the nearest port."[10]

On May 6, 1916, Germany agreed not to sink either enemy or neutral merchant vessels "without warning and without saving human lives, unless those ships attempt to escape or offer resistance."[11]

"The untenable excuse put forward was that these ships were carrying contraband. But this begged the question by assuming, first, that there was contraband on board without making any search, and secondly, that the exceptional circumstances existed which alone justify sinking a ship for the carriage of contraband; nor would it in the smallest degree answer the charge of killing innocent persons. We need not repeat the emphatic condemnation of such practices by the Conference of Washington, 1921–22."[12]

At the Naval Conference at Washington in 1921–22, the five naval powers signed a treaty which reaffirmed the rules of international law in regard to the search and seizure of vessels by warships, including submarines, and the making of proper provision for the safety of those on board, and declared that "any person in the service of any power who shall violate any of those rules, whether or not such person is under orders of a govern-

mental superior, shall be deemed to have violated the laws of war and shall be liable to trial and punishment as if for an act of piracy and may be brought to trial before the civil or military authorities of any power within the jurisdiction of which he may be found."[13]

"It should be added, in connection with the World War practice, that Germany never seriously asserted a general right to destroy neutral vessels without placing all the persons on board in safety; the indiscriminate sinkings in war zones and elsewhere were said to be justified on the grounds of retaliation and self-preservation."[14]

During the World War the United States emphasized that measures of reprisal put into effect by belligerents must not affect injuriously the rights of neutrals.[15]

Discussing the legality of submarine warfare as retaliation, the United States had said that "a belligerent act of retaliation is per se an act beyond the law, and the defense of an act as retaliatory is an admission that it is illegal."[16] The United States "cannot for a moment entertain, much less discuss, a suggestion that respect by German naval authorities for the rights of citizens of the United States upon the high seas should in any way or in the slightest degree be made contingent upon the conduct of any other government affecting the rights of neutrals and noncombatants. Responsibility in such matters is single, not joint; absolute, not relative."[17]

2. DESTRUCTION OF NEUTRAL PRIZES, TREATIES WITH PRUSSIA OF 1799 AND 1828, ARTICLE 2 OF DECLARATION OF PARIS OF 1856, AND CAPTURE BECAUSE OF CARRIAGE OF CONTRABAND

The *Robin Moor* case is much like that of the *Knight Commander*. The *Knight Commander* was a neutral (British) vessel which was sunk on the high seas near the entrance to Tokyo Gulf by a Russian cruiser on July 24, 1904, during the Russian-Japanese War because the commander of the cruiser believed that some of her cargo was contraband.[18] She was under charter to an American company and was bound to Japan with a cargo of railroad material, bridge material, machinery, and various articles. Before the sinking all persons on board had been removed. Her destruction was described by Mr. Balfour in the House of Commons as "entirely contrary to the practice of nations."[19] In the House of Lords, Lord Lansdowne said that the sinking was an "outrage" and that "a very serious breach of international law had been committed by the captors. * * * Under no hypothesis can the Government conceive that a neutral ship could be sunk on the mere fiat of a cruiser's commanding officer, who assumed that the cargo of the vessel included articles which were contraband of war."[20] The Russian Government gave assurances that the practice would be discontinued, but refused to pay a pecuniary indemnity and also refused to submit the matter to the Hague tribunal for arbitration. Another instance of the same kind occurred afterward, however, when a Russian warship sank the British vessel, *St. Kilda*, while carrying cotton to Japan.[21] In answer to the British protest the Russian Government said that the previous assurances still held good and that "the present case was an isolated one, probably due to misunderstanding and the disorganization of the Russian naval forces in the Far East," and promised to order the offending cruisers home. A Russian court also awarded compensation to the vessel and cargo owners. The United States Government sent a note to the Russian Government with respect to the sinking of the *Knight Commander*, stating that the carriage of contraband did not in itself justify the sinking of the vessel, but that it was not prepared to maintain that a prize might not be legitimately destroyed in case of "imperative necessity." It further said that it would "view with the gravest concern the application of similar treatment to American vessels and cargoes."[22]

On January 28, 1915, an American vessel, the *William P. Frye*, bound from Seattle to Queenstown with a cargo of wheat, was captured and sunk on the high seas by a German cruiser. The United States protested that this was a violation of the treaties with Germany of 1799 and 1828. Germany denied that it was a violation and further contended that the capture was justified because the cargo, being destined to fortified ports, was conditional contraband.[23] Apparently the wheat cargo on the *William P. Frye* was destined to a naval base in an area in which active naval operations between the armed forces were in progress or was to be controlled in distribution by a government department of the enemy state. The United States therefore preferred to base its protest against her sinking on the Prussian-American treaties rather than on the general international law rule on the subject.[24] Germany disagreed with the American interpretation of the treaties.[25] The United States declared that it regarded the Declaration of London as not in force.[26] It said, however: "On the other hand, if we assume that the cargo was noncontraband, the destruction either of the cargo or the vessel could not be justified in the circumstances of this case under any accepted rule of international law."[27] Germany asserted that the Declaration of London was declaratory of international law, and said: "It is not disputed by the American Government that, according to general principles of international law, a belligerent is authorized in sinking neutral vessels under almost any conditions for carrying contraband,"[28] but declared that orders were given not to destroy American ships with conditional contraband, reserving "the right to destroy vessels carrying absolute contraband wherever such destruction is permissible according to the provisions of the Declaration of London."[29] In reply to the latter note, the United States declared: "Without admitting that the Declaration of London is in force, and on the understanding that the requirement in article 50 of the declaration that 'before the vessel is destroyed all persons on board must be placed in safety' is not satisfied by merely giving them an opportunity to escape in lifeboats, the Government of the United States is willing, pending the arbitral award in the case, to accept the Declaration of London as the rule governing the conduct of the German Government in relation to the treatment of American vessels carrying cargoes of absolute contraband."[30]

In regard to the sinking of the American vessel *Leelanaw* carrying absolute contraband (flax), Germany explained that the commander was unable to take it in "without exposing the submarine to danger or impairing the success of the operations in which he was engaged," but that he placed all persons and ship's papers in safety and "therefore acted in conformity with the principles of international law."[31] In a later note Germany declared that she shared the view that all possible care must be taken for the security of persons on board the vessel destroyed who "may not be ordered into her lifeboats except when the general conditions—that is to say, the weather, the condition of the sea, and the neighborhood of the coast—afford absolute certainty that the boats will reach the nearest port."[32]

The treaty of July 11, 1799, between Prussia and the United States,[33] provides, in articles 12 and 13 that as the principle of free ships make free goods has not been sufficiently respected, the parties agree to cooperate in obtaining agreement to it by all of the other maritime powers, and in case either engages in war with a third power "to prevent all the difficulties and misunderstandings that usually arise respecting merchandise of contraband, such as arms, ammunition, and military stores of every kind, no such articles, carried in the vessels, or by the subjects or citizens of either party to the enemies of the other, shall be deemed contraband so as to induce confiscation or condemnation and a loss of property to individuals. Nevertheless, it shall be lawful to stop such vessels and articles, and to detain them for such length of time as the captors may think necessary to prevent the inconvenience or damage that might ensue from their proceeding, paying, however, a reasonable compensation for the loss such arrest s all occasion to the proprietors, and it shall further be allowed to use in the service of the captors the whole or any part of the military stores so detained, paying the owners the full value of the same, to be ascertained by the current price at the place of its destination."

The treaty of May 1, 1828, between Prussia and the United States,[34] provides, in articles 12 and 13, that articles 12 to 24 of the treaty of 1799 are revived, and that the parties also engage to treat again in the future "to insure just protection and freedom to neutral navigation and commerce" and "at the same time advance the cause of civilization and humanity." The German prize court held that, in view of these treaty provisions, Germany must indemnify the American owners of the *William P. Frye* and her cargo.[35]

German warships captured and sank the Dutch merchant vessels *Medea* and *Maria* during the World War, and in reply to the Netherlands protest of April 3, 1915, that "the

destruction of a neutral prize is an act that international law has never sanctioned," took the position that the vessels were carrying conditional contraband, and were, therefore, authorized to be captured and sunk by the Declaration of London, which corresponds "in substance with the generally recognized principles of law," although not formally ratified.[36]

On April 2, 1916, on the high seas, a German submarine captured and sank a neutral (Norwegian) vessel, the *Arena*, and contended in justification that she was carrying contraband of war, and that her proximity to enemy forces at the time of capture made recapture possible and, therefore, required that she be sunk. The supreme prize court at Berlin awarded damages, however, to the owners of the noncontraband part of the cargo, consisting of paper, title to which had not passed to the English consignees.[37]

In the case of the *Cyzne*, the German-Portuguese arbitral tribunal held Germany liable for the sinking of a neutral Portuguese ship whose cargo consisted of pit props, which, although destined to an enemy country, was not absolute contraband.

After the Russian-Japanese War, a proposal was made for the adoption by agreement of a new rule of international law authorizing the destruction of neutral prizes when found carrying such contraband goods as arms and munitions in very large quantities, and it is impossible to take her into port, so that to release her would be tantamount to allowing the fighting resources of the adversary to be increased.[38] This proposal was made by Russia [39] and Germany [40] at The Hague Conference of 1907, but was opposed by Great Britain [41] and the United States,[42] who supported on grounds of humanity and justice the existing rule that neutral prizes which cannot be taken in for adjudication must be released, the United States pointing out [43] that the present construction of warships offered little accommodation for persons removed from captured vessels, and exposed them—noncombatants—to the dangers of battle.

At the London Naval Conference (1908–09) the Russian and German proposal was renewed but was strongly opposed by Great Britain and Japan who urged the absolute immunity of neutral prizes from destruction.[44] A compromise proposal was finally arrived at and embodied in a series of rules in articles 48 to 53 (fourth chapter) of the so-called Declaration of London of February 26, 1909.[45] It recognized the general rule of nondestruction and the duty of bringing in for adjudication, and the fundamental right of the neutral to a trial before a prize court, but also recognized that in exceptional cases a captor may destroy the neutral prize if he can prove that she was confiscable, and that she could not have been brought in without "danger to the safety of the warship or to the success of the operations in which she is engaged at the time"; [46] but before destroying her provision must be made for the safety of all persons on board and the ship's papers "which the parties interested consider relevant for deciding on the validity of the capture" (art. 50); and the owner of the destroyed innocent neutral goods on board must be paid compensation (art. 53).

Owing to the nonratification of the Declaration of London, however, it does not have binding force.[47] The compromise rules in the Declaration of London have been criticized as having no basis in the practice of nations in the past, and on the grounds that danger to the capturing warship and interference with the success of its operations are words of perilous ambiguity; that liability to condemnation for carrying contraband is a fact which can only be ascertained by a judicial inquiry; and that publicists speaking of destruction for carrying contraband had in mind only cargoes of absolute contraband such as arms and ammunition and never meant to justify destruction for carrying other cargoes which are not contraband under international law but are only contended to be contraband by a unilateral and unlawful extension by a belligerent of the categories of contraband.[48]

At the outset of the World War both Great Britain and France refused to recognize the Declaration of London as stating either international law or a working rule to be observed temporarily by agreement, and the other nations followed their lead. Accordingly, the rules of international law or customary law as they existed before the Declaration of London alone remain applicable, but the declaration agrees with them in certain respects.

Under settled international law as it exists at the present time, therefore, military necessity and readiness to pay compensation, although they may be pleaded in extenuation when a neutral prize is destroyed, cannot be considered a legal justification. If military necessity alone is pleaded, without offering to pay compensation, the aggrieved neutral would be warranted in taking most drastic action against the offending belligerent; indeed, if repetition of the offense were threatened, it would be compelled to do so as a matter of self-preservation in order to maintain the safety of its crews, passengers, vessels, and cargoes engaged in lawful commerce on the high seas outside areas in which naval or military engagements are in progress.

The carriage of contraband is not unlawful, and therefore the *Robin Moor* legal situation is not affected by the fact (which evidently from the American shipowner's records does not exist) that she may have had on board some contraband. It has been settled international law for centuries, and was recognized by the Hague Convention of 1907, that the carriage of contraband by a private merchant vessel is neither unlawful nor a breach of neutrality by the neutral government whose flag the vessel flies.

The fact that part of the cargo on the *Robin Moor* was destined to a belligerent port and was therefore owned by nationals of the belligerent or by non-Americans because of the requirements of the Neutrality Act, 1939, does not affect the matter.

"The modern rule of the law of nations is, certainly, that the ship (a neutral) shall not be subject to condemnation for carrying contraband articles. The ancient practice was otherwise. * * * But this rule is liable to exceptions: Where a ship belongs to the owner of the cargo, or where the ship is going on such service, under a false destination or false papers, these circumstances of aggravation have been held to constitute excepted cases out of the modern rule, and to continue them under the ancient one." Under the modern rule "the carriage of contraband works a forfeiture of freight and expenses, but not of the ship." [49]

"In the case of absolute contraband it is necessary to prove only that the goods have a destination for the enemy country or territory occupied by the enemy. In the case of conditional contraband, however, there must be proof that the goods are destined not only for the enemy territory but for the use of the armed forces or of a government department of the enemy state. For example, munitions of war or army uniforms (being of the nature of absolute contraband) would be liable to condemnation as good prize if it were shown that they had a destination for the enemy territory. But railway material or fuel (being of the nature of conditional contraband) could not be condemned merely upon proof that they were destined for such territory. Being only conditionally contraband, they could be condemned only if a further destination for the use of the armed forces or government of the enemy could be proved.[50] The distinction between combatants and noncombatants is the basis for this distinction between absolute and conditional contraband." [51] The distinction between conditional and absolute contraband represented a compromise between belligerent claims to stop trade and neutral claims to carry it on, "either of which, if carried to its logical conclusion, would have destroyed the other, being in this particular like most other legal rules." [52]

In the year 1918 in the case of the *Pomona*, II Entsch. 147, the Supreme Prize Court of Germany held that carriage of conditional contraband on a neutral ship did not justify capture unless there was ground for believing that it was destined for use by the enemy's Government or military forces.[53] It further held in the cases of the *Villareal*, II Entsch. 317, and the *Papelera*, I Entsch. 334, that the owners of noncontraband enemy goods on board a neutral ship which was illegally sunk by a German warship were entitled to indemnity; and in the case of the *Draupner*, II. Entsch. 162, that damages were recoverable for illegal destruction of a captured neutral vessel.[54] But Germany asserted the right of attack by submarine without visit and search if the neutral vessel was believed to be carrying contraband.[55]

"As regards the sinking of neutral prizes, Great Britain has always maintained that the right to destroy is confined to enemy vessels only, and this view is favored by other powers. Concerning the right to destroy captured neutral vessels, the view hitherto taken by the greater naval powers has been that, in the event of it being impossible to bring in a vessel for adjudication, she must be released." [56]

The prize courts in Great Britain have said that this is the settled rule of international law.[57]

Law, vol. 7, pp. 522–523.

"The majority of jurists and publicists who have dealt with the subject regard the prohibition as absolute, and consequently hold that where the suspected or offending vessel cannot be taken into port, she must be released whatever may happen to any contraband cargo on board." [58]

"This practice had been adopted by certain other countries, for example, Holland and Japan, but adoption in time of peace has sometimes been followed by a different regime in time of war. (Cf. Japanese Regulations governing Captures. * * *) The majority of the great maritime powers—e. g., France, Germany, Russia, the United States—are in favor of the more rigorous course of destroying neutral prizes at sea if they cannot be brought in without risk to the captor." [59] But although they (including our own Government on a few occasions) may have favored such a rule, the fact is that "There is * * * no clear record of destruction of a seaworthy neutral vessel not alleged to be guilty of unneutral service prior to the Russo-Japanese War. Moreover, many treaties prescribed treatment of neutral vessels inconsistent with their destruction * * *." [60] And although Russia sank five British, one Danish, and two German neutral prizes during the Russo-Japanese War, it paid damages for doing so with respect to five of them, and the others were strongly protested, and our Government made one of the protests.[60] Since the Russo-Japanese War the only destruction of neutral vessels has been the clearly unlawful destruction by Germany during the World War and in the present war,[61] allegedly based on a right of retaliation because the other belligerent had also been acting unlawfully.

On October 9, 1914, the Acting Secretary of State said: "The practice of nations in the past, stated generally, has been to sink prizes of war taken on the seas if either the ship or any part of her cargo was neutral property only when military necessity made this course imperative. * * * It is not to be presumed, however, that the German Government will refuse to grant indemnity for neutral property which has been lost in such manner and which would otherwise have been restored by a court of prize." [62]

In the memorandum on armed merchantmen of March 25, 1916, the Department of State declared: "In the case of a neutral merchantman, the right to sink it in any circumstances is doubtful." [63]

The United States Naval Instructions Governing Maritime Warfare, of June 30, 1917, article 94, authorized the destruction of neutral vessels captured as prize in case of "imperative necessity." [64] Those instructions terminated on the signing of the Armistice and peace treaty; and on November 23, 1936, the United States and Germany agreed by treaty that there should be no right under any circumstances to destroy a neutral prize when the lives of the civilians on board would be endangered or destroyed.

The German Prize Law Code of August 28, 1939 [65] provides: "Article 73. (1) Captured neutral vessels may be destroyed if: 1. They were captured because of proceeding under enemy convoy, forcible resistance, or aid to the enemy, and, 2. It appears to be inexpedient or unsafe to bring them to port. (2) By way of exception neutral vessels which were captured for reasons other than those named in paragraph 1, No. 1, may likewise be destroyed if: 1. Their condemnation would be expected as a certainty, and, 2. To bring them to port would expose the vessel which captured them to danger or might prejudice the success of the enterprises on which it is engaged." See, also, article 74, quoted above.

Such codes are merely orders by one nation to its own naval officers.

"It may be that destruction of neutral prizes is excusable in exceptional cases as between the captor and his own government, but compensation should always be forthcoming except when the neutral ship has become impressed with an enemy character as by incorporation into the service of the belligerent." [66] "To a neutral, on the other hand, destruction can only be justified under any circumstances by a full restitution in value. *The Felicity* (2 Dods, 381); and see *The John* (2 Dods, 336); *The Leucade* (Spinks, 221); *The Thea* (1 H. and B. 96); *The Tetartos* (1 H. and B. 166)." JAMES W. RYAN.

Grand Coulee Dam Eighth Wonder of the World

EXTENSION OF REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 14, 1941

Mr. LEAVY. Mr. Speaker, for centuries the people have been more or less familiar with the seven wonders of the world. There has even been some dispute as to what the seventh wonder actually is. The seven wonders of the world are listed as follows:

First. Pyramids of Egypt.

Second. Garden of Semiramis at Babylon.

Third. Statue of Zeus at Olympia.

Fourth. Temple of Artemis at Ephesus.

Fifth. Mausoleum at Halicarnassus.

Sixth. Colossus of Rhodes.

Seventh. The Pharos lighthouse of Alexandria or Walls of Babylon.

This year the United States Government is completing Grand Coulee Dam, which has been frequently and appropriately referred to as the eighth wonder of the world. As the years go by it will attract the attention of millions of people, and millions will stop to view it and marvel at its size and beauty. Grand Coulee Dam will be distinguished from the other seven wonders of the world by reason of the fact that it will serve mankind through the years upon a scale far surpassing any service gotten from structures previously erected by man. It will be not merely something great to look upon but its usefulness for constructive human happiness will result in creating a vast new electrical empire in a region that has heretofore been but sparsely populated, and in earlier days looked upon as a place of little promise.

Just now the installation of the first of the 18 giant generators is being completed. Each generator will be of the same size and capacity, and each, like the dam itself, will be the greatest of its kind ever designed and built by man. The dam and the generators were conceived, planned, and built for the purpose of making this a better world to live in, and for the production of those things that add to human welfare and happiness. It is undertakings such as this that convince the rest of the world that the United States is truly a great Nation.

Recently there appeared in the Seattle Post Intelligencer, under date of August 3, an article written by Dan B. Markel, special writer, giving a graphic description of what this first giant generator is and means, and I take pleasure in making it a part of the CONGRESSIONAL RECORD. The article follows:

[From the Seattle Post Intelligencer of August 3, 1941]

COULEE WILL START GIANT GENERATORS—108,000 KILOWATTS OF POWER TO BE UNLEASHED SOON

(By Dan B. Markel)

Picture 150,000 wild horses stampeding down a steep 18-foot lane, plunging faster than a mile a minute in a headlong furious mass.

Suddenly the lane narrows and curves in an increasingly tightening spiral, but the foaming wild horses rage on and on until they lunge against a 1,500-ton obstruction.

Under the impact the obstruction moves, revolves, trapping the wild horses, and robbing them of their energy as the giant wheel whirls faster and faster, 120 revolutions per minute, 130 miles an hour.

ONE HUNDRED AND FIFTY THOUSAND HORSEPOWER

The equivalent of the 150,000 wild horses will roar down a lane of concrete and steel, inside Coulee Dam, some time next month. They will crash against the largest turbine wheel ever built, turn the largest shaft ever constructed, set in motion the largest rotor ever assembled, spin it against the largest stator ever designed, and turn the 150,000 horsepower into the greatest amount of electricity ever produced in one generator, itself a third larger than any heretofore built.

The 150,000 wild horses will become 108,000 kilowatts of power.

COULD SUPPLY SEATTLE

That is more power than is used by all the homes, shops, mills, stores, and factories combined in the industrial, electrically minded city of Tacoma.

It approximates the power that City Light normally pours into Seattle.

The 108,000 kilowatts is the power that one giant generator at Coulee will produce next month.

A month later another generator that would supply another Tacoma will go into operation, another 150,000 wild horses tamed and put to work.

And a month after that another generator, capable of powering a third Tacoma, will go on duty. Then more and more until in all 18 generators, with a power supply for 18 Tacomas, with the strength of 2,700,000 stampeding horses, will be in action for Washington industry and, incidentally, for national defense.

FIVE DNIEPROSTROYS

With one generator completed progress on two others is well along. The three alone will produce as much power as all the American plants at Niagara.

[67] Viscount Tiverton, Prize Law (London, 1914), p. 21.

A fourth will bring the total to an equal of the maximum output at Muscle Shoals. And five will produce more power than the largest hydroelectric project outside America, the famed Dnieprostroy plant in Russia.

When complete with its 18 generators, Coulee will equal five Dnieprostroys.

Everything at Coulee is the biggest in the world, from the single generator finished now that appears like a colossal red cheese above the powerhouse floor, its turbine that will trap and harness the wild horses buried in 60 feet of concrete, to the giant cranes that flip 350 tons of metal through the air with the easiest of grace.

TEST GIVEN

The finished generator was tested recently, in anticipation of formal inauguration of its operation. But the great 1,500-ton monster suffered initial misfortune.

Maj. S. E. Hutton described that misfortune with a nontechnical analogy.

"When you buy a new car the dealer cautions you not to drive it too fast," he commented. "The dealer knows that, like any complicated piece of machinery, it has to be broken in gradually. If you took your new car and drove it 60 or 80 miles an hour the first few miles, you'd have bad luck. Something inside would go or be damaged.

"That's what happened here. The young fellows who put the generator through its first test simply let it out a little too fast. And, as a result, a bearing burned out."

A SLIGHT DELAY

Major Hutton said that the damaged generator would be remedied and the generator will perform as efficiently as though no accident has happened, and that the only real harm was in the delay the mishap caused.

A veteran will be put in charge of the next test, he indicated.

The Westinghouse Electric Co. is building the generators and its oldest veteran is on the job at Coulee. He is Edward Hartmuss.

In his overalls, his tousled gray hair falling over steely blue eyes, Hartmuss appears just another workman as he leans over the rail of an 8-foot turbine pit, puffing at a stubby briar which is probably, and fittingly at Coulee, the strongest in the world.

Next month Hartmuss will have put in half a century with the Westinghouse Co. in various parts of the world. Boulder, Niagara, Wilson—wherever great power projects have been built and his company has done the job, there has been Hartmuss and his pipe.

"I had kind of counted on retiring next month," he said. "I'm a Pennsylvania Dutchman, and I sort of planned to go back to my old home there and relax. But this job's so big I hate to quit, so I'm going right on working."

Hartmuss climbed down a ladder and clambered sprightly around a rotor his crew is assembling.

"There are 12,632 sheets of lamination, each sheet weighing 35½ pounds, and an eighth of an inch thick, bolted together with 1,080 bolts, each 83 7/8 inches long," he explained.

"To these are fastened 60 magnetic pole pieces with alternating north and south poles. It is 576 inches from pole piece to pole piece, each weighing 2¼ tons. Traveling 130 miles an hour and passing in front of the stator, magnetic current in the iron and electricity in the windings of the stator."

Hartmuss could have added that every piece comes separately and the rotor is built from the ground up.

Assembled, these giant rotors, largest in the world, weigh 597 tons each.

But putting the fourteen-thousand-odd rotor parts together is child's work compared to assembling the stator. The stator has 175,000 laminations. A lamination is a thin metal sheet. Coulee stators are 37 feet in diameter, weigh 274 tons, and are worth $300,000 apiece.

Over the revolving rotor and the stationary stator will go a 160,000-ton end bracket and casing.

To summarize, 150,000 wild horses will plunge into a 294-ton turbine costing half a million dollars. This will turn a 200-ton shaft 74 feet long and nearly 44 inches wide 120 revolutions a minute.

TWO HUNDRED-TON TRANSFORMERS

This will turn the 597-ton rotor inside the 274-ton stator at a speed of 130 miles an hour, and electricity will be born, 108,000 kilowatts of power.

For each generator there must be constructed three 36,000-kilowatt transformers. The tanks of each weigh 24 tons, the core and coil 47 tons, and the 14,500 gallons of insulating oil that goes into each tank weighs 54 tons.

Twelve feet wide, 19 feet 10 inches long, and 29 feet 5 inches tall, the transformers, like everything else at Coulee, are the biggest in the world.

Mr. Speaker, in the foregoing article a graphic word picture has been given of the new giant, to serve mankind, that has just come into being. There are 17 additional giants of the same type, kind, and character that will come into being to render continuous service for 24 hours in every day and 365 days in every year for scores of years yet to come, providing always, that we can keep America a free Nation of free men. In fact, in actual service to humanity, both present and future, this new "eighth wonder of the world," Grand Coulee Dam can and will give constructive, useful service to this generation and generations yet to come, far surpassing the combined service of all the so-called seven wonders of the world.

In contrast to the seven enumerated wonders of the world, Grand Coulee Dam was not erected by unwilling hands driven by the lash of the conqueror's whip or the slave driver, but is a monument of construction, to free American labor, where 6,000 men toiled willingly and gladly for 6 years, under the most ideal working conditions and receiving as their reward a fair and just wage. The men who built this giant were all members of the American Federation of Labor, and from its very beginning down until this day there never was the slightest difficulty between the workmen and their employer.

Already hundreds of thousands of tourists are coming to view Grand Coulee Dam and doubtless through the years the number of those who travel the beautiful highways that lead into the dam will far exceed the aggregate of those going to visit the ancient seven wonders of the world, because people much prefer to view that which is vibrant, living, and useful, rather than that which is dead, or a selfish monument to mark the existence of some conceited, selfish human being, whose foolish vanity prompted the erection of most of the seven wonders of the world.

Preachers and Perils of War

EXTENSION OF REMARKS

OF

HON. HENRIK SHIPSTEAD

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, August 14, 1941

TALK BY W. B. RILEY

Mr. SHIPSTEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a talk delivered in the pulpit of the First Baptist Church, Minneapolis, Minn., July 20, 1941, by W. B. Riley, on the subject, Preachers and Perils of War.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

Some of us believe that it is still true; as true as it was in Ezekiel's day, that in times like these there rests upon the prophet of God—

THE OBLIGATION OF WARNING

"If the watchman hear the sword and blow not the trumpet, and the people be not warned; if the sword come, and take any person from among them, he is taken away in his iniquity; but his blood will I require at the watchman's hand" (v. 6).

This Scripture clearly suggests at least three matters of moment:

First. "At the approach of the sword the watchman should speak."

That is why I am here this morning. That is why this text is taken. That is why I will probably say before I have finished this discourse things with which all will not agree, but things on which I shall strive, at least, to voice what seems to me to be God's will.

In 1914 I saw rise, from practically the same source, a war that deluged the world in blood. I witnessed then the political performance of employing a catch phrase in vote control. It was Wilson's candidacy for the second term, and the slogan was "He kept us out of war." Then when in his second term he led us into it, the slogan changed—it was a war to "make the world safe for democracy" and a "war to end war." Look at those slogans now.

Such propaganda influenced our people sufficiently to draw America into the swirl, and when the war was ended thousands of our boys were buried to the profit of nobody, hundreds of thousands of others of them were languishing in the hospitals, where to this good hour many still suffer and groan, dying daily; and the billions of money that we loaned to the participants were lost forever to America but had to be recouped from the lean pockets of taxpayers. The result was that by the time of 1929 America entered upon a period of depression that wiped out thousands of firms, 10,000 bankers, reduced to the point of need millions of businessmen, and flung the flotsam and jetsam of society upon the benevolence of the Federal Treasury.

Meantime, the nations that involved us and borrowed from us prospered as never before in their history.

I visited England in 1929, and visited her again in 1936, and I never dreamed that any nation could pass from need to luxury in so short a time.

As for Germany, the other great contestant, she has amazed the world by the amassed fortune invested in war machines—the like of which 60 centuries have not known.

To me experience is a teacher. I am not biting on the propaganda bait that would put my Nation again into this Old World conflict; I am not in sympathy with the President's proposition to defend democracy in every quarter of the world, while neglecting its proper defense on the soil of the United States. I am against permitting gangsters to capture controlling positions in labor unions, dictate to the Government itself, while retaining as Secretary of Labor an individual known to be sympathetic with "pinks" and "reds."

The recent turn in the tilt between Germany and Russia has swept instantly away the last vestige of argument left to our hospitably inclined spendthrift, for if ever there was a nation which stands against the four liberties for which he was fighting only a fortnight ago, that nation is the present Russia and its Bolsheviki reign. And yet we are informed daily by the press that there is a growing disposition to make good on past compliments to that government, and cultivate closer fellowship with this murderous Philistine, this outlaw among nations, whose rulers have not even had compassion upon their own people but have slaughtered them by the millions for the crime of insubordination to Bolsheviki will.

To many of the most thoughtful men in America it was bad enough to propose by the lease-lend bill to back any needy government in the world that laid the least claim to democracy; but how on earth that backing can be readily extended to the most outstanding enemy of individual freedom the world has ever seen, to the sworn opposer of Christ, to the nation that not only denies God but brazenly defies Him, is past the comprehension of some of us and so contrary to our love for Christ that no national law nor individual threat could keep us silent.

It was bad enough to know that during the year of 1940, at which time Russia was threatening to communize the world, having its eyes upon America as its chief country of conquest, and was even directing organizing forces in our land to the end of bloody revolution, that our Government should have sold to that country $8,000,000 worth of cotton for the manufacture of explosives, $14,000,000 worth of copper to be converted into war materials, and enough leather to make shoes for more than a million men of her army.

Mark you, this was at a time when Russia was yet flirting with Germany, all of which makes it appear that the sudden reversal (which was not according at all to their plan, but which has been forced upon them by German attack) becomes the first semblance of excuse that our President, or any warmonger, could present for their behavior.

Second. The safety of his people should be the prophet's first concern.

The text says: "I have set thee a watchman unto the house of Israel" (v. 7).

We had to wait the twentieth century to find an egotist who thought he had been set as a watchman for the wide world. It may sound very narrow in these days of loose thinking and boastful speech about "the brotherhood of man" to say that one is more interested in his own nation than he is in those across the sea, or more concerned for the members of his own family than he is in the houses of the Hottentots; but some of us are personally willing to lay ourselves open to that very charge, and even claim Scriptural backing for the same (1 Tim. 1:8).

I haven't a drop of German blood in my veins. I have never set foot on German soil, and never even had a German sweetheart, or crony companion; I have closed my eyes to every line of German propaganda preaching of today; every single close relative that I have, living outside of America, is on English soil; some of the most delightful visits of my life and some of the dearest friends I have made are on British soil; and yet I say frankly to you that I am more solicitous to see my own land safe than I am to save even Britain. If that is not patriotism, then my dictionary will have to be rewritten.

It is not yet 25 years since we aided her in the last victory and were politely dismissed with criticism of our delayed arrival and left in the lurch to the tune of $6,000,000,000, promised and unpaid; and we were but slightly consulted on that "world adjustment" that is now confessedly the occasion of the new revolution.

I pray daily for the final and effective defeat of Germany and her allies; but I think daily of my children, grandchildren, and great-grandchildren—at night in my waking hours I think of the millions of young men who are not prepared to meet God, and the blood of their unsaved souls might be upon my skirts if I warned not against war. So far as lies within my power, I would leave to present youth of my day an inheritance something akin to that which was bestowed upon me by my forefathers—peace instead of war, national prosperity instead of national bankruptcy, incident to the fool endeavor fight at the world ends all appointments and thereby unfit ourselves absolutely for that defense of our own country, for which we are completely sufficient, if we but consulted home interests first.

Mud slinging at people who do not speak our shibboleth nor go our exact path in politics is common now and according to the protocol plan. Here is an instance. My preferred candidate for mayor was elected. One writes: "Now that you got your underworld man Kline in, you and the underworld can rejoice. You will, no doubt, crawl back into your den and be satisfied."

Another one says: "Don't you know anything about all the racketeering, gambling, and houses of ill fame that are running wide-open day and night? We all know those bad places would not or could not exist without protection; big moneys are being spent for their protection. Who gets that money? Doubtless you must get your share, otherwise you would not be so willing to uphold this dirty system that now exists." On local and national questions dare to think and act your convictions and you become the mud slinger's target. But let them shoot. Some of us will speak on.

A recent America First speaker, who is, in my judgment, one of the noblest of patriots, said: "A refugee who steps from the gangplank and advocates war is acclaimed as a defender of freedom. A native-born American who opposes war is called a "fifth columnist.'"

In my judgment, the list of noble Americans that might be justly put into Who's Who in America would contain no greater names than those of ex-President Hoover; ex-Presidential Candidate Landon; ex officio friend of Roosevelt, Hugh Johnson; and the ex-idol of America, Charles Lindbergh.

If the day does not again come when these men and their logical advice is appreciated, it will be because America will be so far lost in her former ideals that the very mention of a democracy will meet with mockery only.

I yield to no man in my sympathy for Chamberlain, who, peace loving as he was, thought that, by placating Hitler, he could get by the German enemy without war. My warmest sympathy has gone out to him as mistaken but well-meaning.

I yield to no man in admiration of Churchill. I think he took over a task that seemed hopeless, and, by his very determination and tenacity, has exhibited a courage that is all too rare in this age of cowards; but I am not at all in line with those who believe that when the European war is over Germany will have strength enough left, after whipping all others, to cross the thousand miles of sea and make short work of my America.

To me such a thought belittles my land; and such an argument is born of propaganda and nurtured from the bottle of hysteria.

I can readily conceive that hundreds of thousands of the fair youth of my country could be slaughtered on foreign shores, thousands of miles from the home base; and for a cause in which their country is but slightly involved; but I cannot conceive that Hitler, or any other European potentate, could cross the seas, land armies on our shores, and conquer those lads at home base.

I am not in the least disposed to call by black names the men who so believe; many of them are doubtless my equal; and some of them my mental superiors; but I have a mind that simply does not function that way. Exactly opposite to what Will Rogers used to say, "All I know is what I read in the newspapers." If it were, I should still have some reliable information. I should still know that "Britannia rules the waves"; I should still know that she owns India, Australia, New Zealand, a great portion of Egypt, large sections of Africa, all of Canada and islands many.

Now that Russia has added her land and people to this conflict, nearly one-half the earth's surface and a population of many hundreds of millions are subject to England's call and cooperation. Why not let them use their own millions of men and money?

What a strange situation when America, who had nothing to do with this war, and has no business in it, to be conscripting men by the millions and voting money by the billions, when Canada, a part of the Dominion of England, conscripts nobody and boasts to tourists, "Our land has plenty; come feast and enjoy yourselves."

I do not deem it my obligation as a minister to correct the thinking of even my own auditors; but I do accept the prophet's obligation of sounding the alarm against war, into which we are being sucked as a chip in a whirlpool.

It would be useless to speak after the affair is over. There are thousands of men now who can tell us where we made our mistakes in 1914–18. Such information is worth nothing. It is not after the war is past but while it is coming that God's prophet must lift up his voice. William Jennings Bryan dared to do it and took the contempt of many in 1917. But now, his sanity is esteemed and his Christian testimony is untarred.

Treatment of Italians Detained by the American Government

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, August 14, 1941

ARTICLES FROM IL PROGRESSO ITALO-AMERICANO

Mr. REYNOLDS. Mr. President, on numerous occasions I have commented on propaganda and activities designed to promote disunity among our people. In

this connection, there has been called to my attention a most significant and praiseworthy example of how such efforts are being thwarted within the ranks of a large group of foreign-born citizens.

A short time ago a dispatch from Rome, Italy, to the New York Times told of the harrowing tales brought to Rome with regard to the persecution of Italians in the United States. Obviously, such dispatches create adverse feeling abroad and dissatisfaction among native-born Italians at home. Immediately following this dispatch, the Il Progresso Italo-Americano, published by Generoso Pope, an Italian-born citizen of this country who has won universal respect for his strong adherence to American ideals, undertook to demonstrate to Italian readers that the facts do not warrant such tales as those being told in Italy for the purpose of promoting disunity here at home. In other words, here we have an example of a foreign-language newspaper utilizing its columns to promote Americanism, unity, and solidarity among one segment of our population which might be particularly susceptible to such propaganda unless it were discredited, as it has been so well done.

No one has been more alert to the need for national unity than I have. I have consistently opposed and will continue to oppose the harboring of criminal aliens and a break-down of our immigration system. But by the same token, I am most sympathetic to foreign-born who accept and follow American ideals. Thus I would like to take this opportunity to commend Publisher Pope for his public service in discounting misstatements of fact from abroad and I ask unanimous consent to insert in the RECORD brief excerpts from the findings of the Il Progresso Italo-Americano.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

(The following is a story which appeared in Italian in Il Progresso Italo-Americano and the Corriere d'America today. It is a personal investigation of the treatment being given to Italians now detained by the American Government. Mr. Pope sent Reporter Gene Rea to Ellis Island to prove that a story which appeared in Italian newspapers in Italy was false. We think you may be interested in publishing the findings of this investigation. Il Progresso Italo-Americano.)

A special dispatch to the New York Times appeared in yesterday's newspaper stating a report from Rome purporting to explain the conditions of Italians in America. According to this report, Italians were treated "bestially" and "with lack of any feeling of humanity on the part of Americans."

Mr. Generoso Pope immediately instructed your staff writer to investigate the conditions of those Italians stranded here in America.

The following report is an eye-witness account of the conditions existing at Ellis Island, where more than 50 Italians are being detained:

"Your staff writer visited Ellis Island this morning. He made no arrangements with any authorities, nor did anyone know that he was going to visit the island. No preparations were made to meet him, and no functioning authority had any inkling that he was going to investigate the conditions of Italians being detained there.

"It was a surprise visit and the conditions existing at the Island at all times were found exactly as they are. He had no difficulty obtaining permission to visit the rooms, recreation centers, dining room, and sleeping headquarters. When he appeared at the office of the District Director of Immigration, Mr. Byron Uhl greeted him warmly and said that he could investigate any part of Ellis Island he chose. Though there is a strict rule against photographers taking pictures, Mr. Uhl waived the ruling aside and permitted our staff photographer to take pictures of the men being held. Mr. Uhl assigned Mr. Forman, deputy in charge of inspection, to show the writer around. At no time did Mr. Forman interfere with the work of investigation.

"There is no persecution of Italians at Ellis Island. There is no bestial treatment of Italians at Ellis Island. There is no concentration camp and no whip or guns or rough guards. The Italians who are being detained are treated with respect and with utmost consideration. No one seeks to punish them. No one has orders to abuse them. Ellis Island is not a jail. There are no criminals at Ellis Island. The men who have been brought to Ellis Island have not been brought here indiscriminately. They are men who have entered the country illegally and are being detained until their status is ascertained. The Government of the United States is not seeking to put anyone in concentration camps. The Government of the United States is treating all those detained at Ellis Island—there are some 450 of them—with the utmost care and regard for their human rights. All the officials at Ellis Island sympathize with those detained. They are doing everything in their power to help them. All social welfare agencies are contributing to the well being of those detained. They get good food and healthy, sanitary quarters. They are allowed to have as many visitors as they want, and it is important to note that the Italians are given the greatest liberty of all groups—as the days of visit are Monday, Wednesday, and Friday, while those of other groups are only on Tuesday and Thursday. The Government of the United States bears no ill feelings toward these Italians. And this is proven by the facts.

"Your writer spoke freely with most of the men held at Ellis Island. No burly guard stood by to overhear the conversation. No officer told any of the men what they could say and what they could not say. The men said exactly what they felt. All of them wanted to become citizens of the United States. No one showed any desire to return.

"Giacomo Cirri, one of those detained said: 'I like this country. I want to live here. I have spent more than 10 years in America and I would like to become an American citizen. But I have no money to pay for the bond that would set me free, and so I must stay here.'

"Did they talk of politics at Ellis Island?

" 'Politics?' he asked. 'I know nothing of politics. We are workers, not politicians.'

"We asked him a pertinent question: 'Are you treated like prisoners?'

"He shook his head emphatically: 'Absolutely not. We have all the freedom we want. They're good to us here. They listen to our problems and they try to help us. No, we're treated very fairly and honestly. But, of course, we'd like to be at home.'

"Another man we spoke to was Oliviero Ciero, who is 50 years old and comes from the Province of Naples. He has been in America for more than 14 years, having come here in 1927 on the *Duilio*. He has never returned to Italy, and worked at the railroad exhibition at the New York World's Fair of 1940. He has been confined at Ellis Island for 8 weeks.

" 'We are treated all right,' he says. 'But most of us would like to return to our homes. We haven't got the money to pay for the bonds that would set us free.'

"What did he do to pass the time away?

" 'Well, we take walks outside and we play cards and talk. The officials treat us good.'

"Augusto Ricina, who is 29 years old and who came to this country illegally 2½ years ago, said that he had been working as an electrician.

" 'I want to be an American citizen,' he said. 'And I wish there was some way I could be a citizen. If there were an opportunity of my becoming a citizen, I would gladly do anything to get my papers. But they say that there is no law that can make me a citizen.'

"Felice Vercelli, said that he has lived 30 years in America, that he had been deported and then had come back. He said that there was no maltreatment of the Italians at Ellis Island and that the officials tried their best to help them. He has a wife and two children living in America and he would like to become a citizen. He said that he would have become a citizen, but that he was afraid he would be deported again because he came here illegally and that is the reason he could not apply for citizenship.

"The youngest to be held at Ellis Island is Sallustro Del'Re, a 17-year-old boy. He was a bus boy on the *Brennero* when the men were taken in custody by the Government. All his family is in Italy, but he expressed a desire to remain in America because he likes it.

"Rinaldo Celli, 32-year-old barber of Hempstead, L. I., said that he had given himself up to the authorities because he had come here illegally. He had gone to Canada and then entered the United States. He, too, would like to become a citizen. He said that he was treated fairly and without prejudice.

"Fioreggio Sabatini, a 21-year-old waiter on the *Ado-O* arrived just the other day at Ellis Island from New Orleans. He was full of smiles and said that there wasn't anything wrong with the treatment being given him. He said that he had broken his leg at New Orleans while playing soccer and that he would like to get some medical treatment. Your staff writer immediately spoke to Mr. Forman, who sent the young man without a moment's delay to the hospital, where he is now being taken care of.

"And every single man that your staff writer interviewed had the same story to say. Each one disproved the lie that was published in the Rome, Italy, newspapers pertaining to 'criminal treatment' of those detained. Each one stated that they would like to become American citizens if they could. Each one said that they were being treated with courtesy and care.

"We visited the sleeping headquarters of everyone. They have showers and group bathrooms. They have a recreation porch that measures 100 feet by 80 feet which overlooks the bay. They get excellent food and get more than one extra portion if they want it. Here is a sample of what they eat—this is the menu for today, Friday. For breakfast, boiled cream of wheat with milk, fresh peaches, bread and butter, and coffee. For lunch, clam chowder, baked codfish with butter sauce, boiled potatoes, green peas, bread and butter, iced sponge cake and coffee. For the evening supper. Swiss cheese with cole slaw, stewed apricots, bread and butter and tea.

"They receive expert medical care. The D. A. R. supplies them with material with which the men occupy their time in making ornamental wallets, belts, sweaters etc. The officials have given them a boccie alley to play during the afternoon hours.

"And so, after a thorough inspection, there was nothing to prove the story that these men are being maltreated. Instead, we went away, confident that the Government of the United States is treating them with every consideration possible."

Following the story of the investigation of Ellis Island by Il Progresso Italo-Americano,

we are now sending you the first of a series of articles by our especially assigned reporter on the condition existing at Fort Missoula, Mont. These investigations were prompted by a statement made in Italy and sent to the New York Times by their Rome correspondent in which it was stated that the Italians are being mistreated in America.

"Your staff correspondent has found no concentration camps here in this beautiful setting in the mountains of Montana, where 993 Italian seamen and world's fair employees are being detained by the Government of the United States.

"For the past 4 days, after making an airplane flight from New York, your correspondent has investigated all the conditions of the camp and found no case where any one of the men was treated other than with human consideration and sympathy.

"Fort Missoula, situated 3,200 feet above sea level, is not a prison camp. There are no criminals here. Consisting of some 10,000 acres of Government land, it has all the characteristics of a summer resort. There are no machine guns to guard the men, nor more than a mere handful of immigration officials to patrol the huge camp. So beautiful is the setting that the Italians have named it Bella Vista. Fort Missoula has turned into a regular Italian city. It is probably the first time in the history of any nation that a completely foreign city has sprung within its borders.

"The 993 men are governed by their own officials Capt. Alessandro De Luca, former chief purser on the steamship *Conte Biancamano*, is the mayor of Bella Vista.

"He has a staff of 20 men, former officials of the various Italian ships, who are helping him. They have a consul representing each group from all the ships—1 man represents a hundred or less.

"There is a church, with Father Bruno, also a member of the ship, who is their chaplain.

"They have a hospital here, also, which is cared for by three doctors, Dr. Cuomo, Dr. Venturini, and Dr. Borbika. They have their own cooking system, their own sanitation system, and their own recreational group.

"In other words, this town which has sprung up since May 1941 is composed entirely of Italians. They have their own work and serve their own selves. Speaking with the men, they have stated that they are treated very well, although it is their wish that they can return to their families. Speaking with Mr. N. D. Collaer, who is the chief inspector at Fort Missoula, he said, 'On the whole the men are very good; they try to cooperate wholeheartedly with us. We have had no occasion to find fault with them. they are a very nice bunch of people.'

"The camp here has about 30 buildings. Each man is given a sanitary bed to sleep in. They have well-kept recreational grounds.

"When your correspondent was here many of the men were playing boccie, soccer, and tennis. A number of them were taking long walks around the enclosed area.

"On Sunday the whole camp paid tribute to the memory of Bruno Mussolini who was recently killed in an airplane crash, by refraining from participating in any form of activity. In the morning they went to mass in a newly constructed recreational center which has been called Bella Vista Ship. Father Bruno said the mass.

"The United States Government is doing everything in its power to make the stay of these men here a pleasant one. Mr. Collaer has already requisitioned for some $10,000 worth and more of clothing to supply the men for the winter months. Much money has already been spent to buy them small things, such as cigarettes, etc.

"It is estimated that each man will receive $15 worth of clothing just for the next few months.

"The men try to forget that they are being detained here by applying themselves to various forms of recreation, artistic work, and concert playing. They scheduled to have a city concert on the 16th of August. All social organizations in Missoula are cooperating to make this concert a huge success. The money that will be realized from this concert will be given to the men here.

"They are having a craft display in Missoula where the immigration officials have helped them open a store, at which they can sell whatever they make. The money from this will go to the welfare fund of Bella Vista.

"As your correspondent has investigated all these conditions, he has found that the guards are appreciative of the men. Mr. Collaer himself is trying to make the stay of the men as pleasant as possible. The men are cooperating with the Government program.

"These are but a few of the findings your correspondent has investigated.

"In further articles we will publish the lives of these men in camp, their various activities, and the government and the city they have built here in Missoula, which they call Bella Vista. We will have a photograph depicting their stay."

Lindbergh Gets Worse

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Thursday, August 14, 1941

EDITORIAL FROM LAKELAND (FLA.) LEDGER

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in the Lakeland Ledger, of Lakeland, Fla., of August 11.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Lakeland (Fla.) Ledger of August 11, 1941]

LINDBERGH GETS WORSE

Charles Lindbergh's smug tirade Saturday night against the administration drew teutonically guttural cheers from the hopelessly biased Cleveland audience and served more emphatic notice upon believers in Americanism that an expert in aviation is uttering some lamentably inexpert views on affairs international.

His voice had the usual ring of sincerity, and his reasoning had its usual half-fascinating appeal to individuals who are not analytical thinkers, but all his argument, as usual, was based on a false premise.

He is making the tragic mistake that people in a dozen countries have made. He is assuming with pontifical self-assurance that Hitler is not interested in us. He is assuming that what happens in Europe is of no concern to the United States, and his preposterous assumption is based on conditions that existed 100 years ago. He is overlooking entirely the speed and proximity which modernity has given to international intercourse. He has failed to take cognizance of the fact that what affects one major nation today affects all nations. All the nations are a neighborhood today. The so-called splendid isolation of the sixteenth century remained with the sixteenth century.

Lindbergh seems to be gaining more followers, and that is an alarmingly bad sign of division which sows the seeds of revolution. How can supposedly sane people fall under the spell of Lindbergh's superficial thinking, when a malicious Hitler, who has broken promise after promise, continues to extend his choking grasp across the world?

It is a matter to be seriously pondered.

Lindbergh asks with puerile eloquence what has happened to freedom, and in the very asking imposes upon the freedom which this incomparably free democracy allows.

Lindbergh asks what has happened to representative government in the United States.

He ought to ask what will happen to this democracy if its constituents continue to tolerate such unpatriotic talk in these crucial times when utmost unity is needed to prepare for the wave of Hitlerism which so plainly threatens these shores and all the decencies of modern civilization.

Why doesn't Lindbergh have something to say about Hitler's record?

Why doesn't Lindbergh reveal at least a spark of indignation over the wholesale death, destruction, poverty, disease, and suffering Hitler has spread over country after country?

Why doesn't Lindbergh take note of the fact that Hitler is a lone aggressor, with no clearly enunciated program of peace and reconstruction?

Why must Lindbergh's speeches be only a continuous harangue against the people of his own democracy?

Why doesn't he offer something positive at this moment when positive thinking and positive action are essential?

He states what he is against but consistently fails to state what he is for.

He says he is against war.

So is every sane human being.

He says he is opposed to United States participation in the war.

Most Americans are opposed to participation now, because they do not believe that this country is adequately prepared for a shooting war.

But that does not mean that alert Americans are ready to adopt Lindbergh's smug, and complacent attitude and wait for Hitler to bring the war to these shores.

Lindbergh makes the specious charge that representative government has disappeared in the United States, because this country is sending supplies to England and Russia.

Those supplies are being sent with the high hope that the representative government which exists in this democracy may not perish.

Lindbergh prates grandiloquently of the constitutional guaranty of free speech but he blandly overlooks the fact that the right of free speech imposes the obligation of intelligent speech.

Free speech within itself is nothing. Children speak freely. The citizen who exercises his right to speak freely must pay deference to the government which safeguards his right to speak freely.

If Lindbergh still is sincere, he is taxing the patience of Americans who still would like to be charitable in their attitude toward him. If he still is sincere, he is basing his thinking on premises impossibly remote from reality.

Lindbergh talks about the "war party."

It is possible that he still is mired in the Presidential campaign of a year ago? Is it possible that he is looking toward the next Presidential campaign?

His use of the word "party" is incriminating; it strongly indicates that his thinking is restricted by political boundaries.

If Lindbergh is merely trying to make the minority heard, he is proceeding in a manner entirely unacceptable to Americans who are intelligently interested in the security of democracy.

The Republican Record

EXTENSION OF REMARKS
OF
HON. SOL BLOOM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 14, 1941

EDITORIAL FROM THE NEW YORK TIMES

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a most interesting editorial entitled "The Republican Record," which appeared in this morning's issue of the New York Times:

[From the New York Times of August 14, 1941]

THE REPUBLICAN RECORD

Since the beginning of the war there have been four votes in Congress on questions of critical importance. These votes came on repeal of the arms embargo, on passage of the lease-lend bill, on adoption of the Selective Service Act, and on the proposal to extend the period of training under that legislation. Every one of these measures was of vital importance to the defense of the United States. Every one of them was of intense interest to our friends and enemies abroad: To the Latin-American nations which count on our assistance in case of trouble; to the democracies of Europe and Asia which are fighting in defense of their own freedom; to the dictators who believe that democracy is out-of-date—bewildered, disunited, and ripe for plucking.

The record shows that every one of these four measures was adopted solely because the President received the support of a large majority of his own party. Not one of them would be law today if the decision had been left to the Republicans in Congress. The tally of Republican votes runs as follows:

On repeal of the arms embargo—
Senate: 8 in favor, 15 against.
House: 21 in favor, 143 against.
On the passage of the lease-lend bill—
Senate: 10 in favor, 17 against.
House: 24 in favor, 135 against.
On adoption of the Selective Service Act—
Senate: 7 in favor, 10 against.
House: 46 in favor, 88 against.
On extension of the period of training—
Senate: 7 in favor, 13 against.
House: 21 in favor, 133 against.

The Republicans in Congress have achieved, in short, a perfect record of opposition to these measures recommended by the President, by the Secretary of State, and by the Army's Chief of Staff.

It is true that the Republicans in Congress have received less cooperation from the President than they were entitled to receive. He has failed to take them into his confidence as fully as he should. He has made the enormous mistake of not consulting their leaders in advance of the submission of such important measures as the lease-lend bill. It is also true that it is the duty of the Republicans to vote according to their convictions and their own best judgment, and no doubt some of them have been sincerely opposed on principle to the adoption of these measures.

But when all this has been said it is impossible to dismiss the element of plain party politics from votes so heavily one-sided as these. Crisis or no crisis, the Republicans in Congress are still fighting Roosevelt, still jockeying for position, still trying to write a record which they can turn to profit if and when there occurs that long-delayed reaction on which they have built their political hopes.

This may be legitimate strategy in time of peace. But in time of crisis the record they are actually writing is one that will help them only if the Lindbergh-Wheeler version of the war is right and the Lindbergh-Wheeler prophecies come true. This is a fact which a great many rank-and-file Republicans throughout the country must find distasteful.

Alaska International Highway

EXTENSION OF REMARKS
OF
HON. ANTHONY J. DIMOND
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 14, 1941

TELEGRAM FROM CITIZENS OF ALASKA

Mr. DIMOND. Mr. Speaker, one of the best statements which I have seen concerning the immediate and pressing need of the construction of a highway to connect the States with Alaska is embraced in a telegram dated July 25, 1941, addressed to the President by the Fairbanks Chamber of Commerce of Fairbanks, Alaska, and endorsed by the Fairbanks Post of the American Legion, the Fairbanks Igloo of the Pioneers of Alaska, and the Juneau Chamber of Commerce, Juneau, Alaska.

Copy of the telegram follows:

Alaska only continental possession United States that cannot be reached by rail or road. Except by sea or air completely isolated. Absolutely dependent upon vulnerable sea lanes for all needs either for peace or war. In event of successful blockade would be forced to surrender in 60 days. War situation more menacing daily to Alaska. Alaskans hourly more apprehensive. Alaska so strategically vital that expenditures to defend it have necessarily been out of all proportion to population significance. Therefore feel we are living in area that may well become battlefield for initial invasion of America. With fall of Russia seemingly imminent, control of northeast passage and Siberia in danger seizure by Japan or Germany, we must have alternative supply line for Alaska. Effect of destruction of shipping already felt here. Current expenditures for transportation within Alaska useless as solution to isolation. Apparently nothing being done to solve basic military requirement of supply. Without such solution roads, railroads, and air bases within Alaska will merely facilitate conquest by enemy if Alaska cut off by sea. Dangerous inconsistency construct roads within Alaska and ignore potential route of supply to Alaska. Sea only present means sending heavy ordnance, tanks, mechanized military equipment to Alaska. Three commercial ships ran aground Alaskan waters last year, one Government transport, *Kvichak*, complete loss ship cargo three lives.

Alaskan highway provides solution. Would permit supplies reach Alaskan interior in 60 hours. Automotive transport fill gap created by withdrawal ships from Alaskan waters. Route parallels line of flight, rendering possible construction, maintenance, and supply air bases and emergency fields. Only 125 miles from coast would enable protection coast by land-based planes.

We informed your attitude negation based on four points. First, other more important needs. Second, difficult terrain require eighty millions expense 5 years time complete. Third, impracticable keep highway open year around. Fourth, Canadian cooperation uncertain.

We submit following:

No current project more basically important to Alaska than Alaska Highway. Highway no longer conjectural. Previous opinions based on airplane reconnaissance disproved. Official engineers representing Canadian and American commissions traversed length of project afoot. Made detailed estimates and gathered scientific meteorological information. Their reports show route lies in simple terrain, with no considerable obstacles. First 600 miles this end furnish cheapest construction conditions in history Alaskan road building. Exacting military specifications place cost 24-foot graveled surface road at $25,000,000 maximum. Snow conditions more favorable than in any northern United States. Highway easily kept open year around. In authoritative opinion Canadian and American engineers project can be completed in 2 years without economic loss account haste, or 1 year, if critical emergency necessitates.

Premier British Columbia active supporter project. Premier of Canada recently voiced earnest desire see highway built.

General Buckner, in charge all military affairs Alaska, endorsed project thus: "With this highway, we would not be thrown out of Alaska."

Understand State Department has endorsed project.

In view foregoing cannot understand delay year after year. Need too critical, possible consequences delay too terrible permit further postponement.

If known to hostile powers Alaska had efficient alternative means transportation, incentive to invade Alaska largely removed.

Isolation of Alaska is invitation to invasion.

Can you assure us detailed surveys will start this year so that construction will begin?

Extension of Military Service

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 14, 1941

TELEGRAMS FROM MASSACHUSETTS CITIZENS

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegrams:

BOSTON, MASS., *August 12, 1941.*
HON. JOHN W. MCCORMACK,
House Office Building,
Washington, D. C.:

We, the undersigned officers of the Massachusetts State C. I. O. Industrial Union Council, urge your vote for extension of military service for a minimum of 12 months. We are convinced the safety of the Nation is involved,

and we would regard failure to extend service as a national disaster.

Joseph Salerno, president; Albert J. Fitzgerald, secretary-treasurer; Mariano S. Bishop, Joseph J. Kelleher, Jesse Prosten, Fred Pezzini, Daniel F. Gallagher, John Chupka, William Burton, Frank Lerman, vice presidents.

BOSTON, MASS., *August 12, 1941.*
Congressman JOHN W. MCCORMACK,
House Office Building,
Washington, D. C.:

General Marshall's advice and warning should be heeded. Urge your vote for extension of military service. Its defeat would constitute a national menace. The Army should be maintained at maximum efficiency during the national emergency.

CHESTER GRANT,
Commander, Massachusetts Division,
American Legion.

Extension of Military Service of Selectees

EXTENSION OF REMARKS
OF
HON. JOHN H. FOLGER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 14, 1941

Mr. FOLGER. Mr. Speaker, everyone regrets the necessity of keeping our men in camp in training beyond the 1 year we had desired, if not hoped, would see substantial improvements in the status of the democracies of the world. But, alas, it has not been so. It is not so. What has taken place? It is not what we think has happened or will happen. We know what has happened. We ought to know what is happening and be fairly well able to prophesy what is likely to take place.

What countries are left save England and the Western Hemisphere? Where is France? Where is Greece? Where is Poland? Where are the Lowland Countries? Where are Belgium and Holland? Show me any country not now, in one way or another, overrun by the Nazi power or defending itself against Nazi attack. Only the Western Hemisphere; and here we find definite steps taken by the Nazis to overthrow governments to the south of us, looking to the time when Spain and Portugal will be by them occupied as springboards to pounce upon our South American neighbors with the further certain plan already laid to possess our own land. Why should we think they have not this in mind as part of their program? I ask, What business is it of theirs that Peru and Ecuador should spring at each other's throats? It is not denied that this was the Nazi propaganda. Why should the Nazi power interest itself in the overthrow of the Government of Bolivia? Their designs on the Western Hemisphere are just as plain as the daylight is plain. And by the Western Hemisphere I mean our own United States of America, as well as Canada, Mexico, and the South American countries.

Take our boys out of training? What a thought at a time like this! I would like to see them home; you would, their fathers and mothers, of course, would. But what can they do at home for their fathers and mothers and their country compared with the security furnished by their remaining in training against invasion of our own land? They can most likely furnish to the objects of their love and devotion greater evidence of the genuineness of such love and devotion by equipping themselves to defend their loved ones and their homes. Indeed, they are themselves American citizens of the highest type, and it is true that they defend themselves against not possible but probable danger by conceding the wisdom of their continued training under the authority of their country's order. This is to them, perhaps—yea, indeed, no doubt a secondary consideration, for it is for their country and their loved ones they most surely prepare.

One has recently written: "To govern is to foresee." And, in that, made this very true observation: "We live in a world in which aggressors have abandoned international law, disregard all treaties, and strike out if and when it pleases them, counting complete secrecy and total surprise as the first essentials of success in total war."

Contemplate Adolf Hitler. What other than a superior power can cause him to desist or even keep him from our own shores? Will considerations of right do so? Can we put faith in his word that he will not or that he does not intend to do so? You know what the answer is.

What do the exigencies of the times and the occasion require of everyone of us? I answer, our utmost, our all. We cannot—and I mean we Congressmen, we soldiers, we fathers, mothers, or sons—take any steps to demobilize, interrupt, or disintegrate our Army, our Navy, or air forces. This would be foolhardy and a distinct disservice to our soldiers themselves as well as to our country. I believe that the greatest guaranty against actual war is thorough preparedness.

Another thought occurs to me: What consideration should we give to the man in the White House who hates war? Pity the man who would say that in sarcastic vein. I shall not be one to add to his sorrow or intensify his suffering. This is one of the considerations for my position on the extension of the Selective Service Act, for I believe that he knows, I believe the Secretary of War knows, I believe the Secretary of the Navy knows, I believe the Secretary of State knows, and I believe General Marshall knows. And, indeed, it is not hard for each one of us to know.

It will never be laid at my door that I have neglected or refused to do anything in my power to aid in the defense of our country or our country's freedom. To me, political expediency, in this crisis, is a hateful thought. And, moreover, I do feel that he who shall be deemed entitled to commendation will be he who spares nothing in the defense of our freedom and democracy, now so violently threatened.

Air Mail Pick-Up Service—A Necessity and a Convenience

REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 14, 1941

Mr. PLUMLEY. Mr. Speaker, it is a long road that leads from the day of the horseback mail carrier to rural free delivery, and now comes the end of the first year of the air mail pick-up service which is no longer in an experimental stage. It has come to stay. It has demonstrated its usefulness, practicability, and feasibility as a means and method of transporting mail with expedition.

The air mail pick-up service recently completed its first year of operation on a permanent basis as a regular part of the country's domestic air-transportation system. Over 92 percent of the regular schedules completed, approximately 693,727 flying miles with over 32,000 pick-ups, was the record without a serious accident and with the loss of not a single piece of mail or express. That is some record.

Can they fly in the winter? My friend David W. Howe, of Burlington, Vt., calls my attention to the fact that the Postmaster General said at the end of the first year of experimental flying:

> The operation has been carried on during one of the worst winters in recent years. Notwithstanding that fact, a very high percentage of performance has been maintained. * * * It is the recommendation of the Post Office Department that permanent service of this type be established.

A NATIONAL ASSET

Richard Dupont has been a pioneer in endeavoring to interest the Government in the expansion of the service. Mr. Howe has cooperated with him. They are thinking of the service not only from a business standpoint but also from a standpoint of national defense.

Mr. Dupont recently said:

> If all these routes were in operation, they could provide advanced training and invaluable flying experience for at least 1,700 men a year—fledglings from the civilian-pilot-training program. It is exactly the kind of flying that will make these youngsters better military pilots. You don't get anywhere in the air just by wishing, you know. You have to do it.

The Civil Aeronautics Administration is to be congratulated and complimented for its cooperation with the United States Post Office officials who have made the experiment a success.

AN UNLIMITED FIELD

It is difficult to appreciate just what and how much this useful service will be made to mean as it is gradually extended to cover the Nation. It is already recognized as one of the most notable achievements in modern air transportation, and

the field for further development is almost unlimited.

VERMONT'S NEEDS

Every section of Vermont eventually should be served. It should be made possible for every one of the counties to enjoy the facilities afforded. At first it is to be expected the needs of the business centers will be attended to and looked after. Especially during these days those areas contributing to national defense or involved in it directly or indirectly should be included.

I have urged the Department to make some arrangement to accomplish that purpose. White River Junction, Newport, St. Johnsbury, Montpelier, Barre, Burlington, Rutland, Springfield, Windsor, Brattleboro, and other places in Vermont should immediately be included in the schedule.

VERMONT'S CONTRIBUTION

While it is not my purpose to enlarge upon the subject at any great length, I happen to have been reading a recent issue of the Fortune magazine covering the activities of the Nation's machine-tool industry in the Springfield, Vt., area. While I knew something of the amount of work being done, I was surprised to learn that out of Springfield, Vt., last year came some twenty-two millions worth of machine tools or about one-twentieth of the entire output of the United States. Fortune goes on to say—

There are three main shops in Springfield making these tools. One is the Fellows Gear Shaper Co., rising like a fortress at the northern end of town at the edge of the Black River; one is the Bryant Chucking Grinder Co.; the third and the oldest is the Jones & Lamson Machine Co., maker of turret lathes, Fay automatic lathes, and thread grinders. All are high-speed production tools of modern industry. J. & L. turret lathes compete with Warner & Swasey and Gisholt as the handy men of United States mass production; the Fay has a virtual monopoly on finning the cylinder barrels for Wright and Pratt & Whitney aircraft engines; the thread grinder, among other jobs, threads the ends of those barrels to tolerances that go down to .0005 of an inch.

SIXTEEN MILLION DOLLARS' WORTH OF MACHINES

Last year Jones & Lamson sold $9,000,000 worth of these exquisite, massive machines, which weigh from 3 to 14 tons, which cost from $4,000 to $16,000. This year its sales will probably be over the $16,000,000 mark. For a company that lost money in every year from 1930 through 1934, emerged from that period with surplus depleted by $1,000,000 and with only $6,000 of borrowed cash in the bank, such a recovery is pleasant indeed. Yet it is a boom that the management and the owners of Jones & Lamson regard with certain legitimate misgivings. Looking out at night from their homes on Cherry Hill on the brightly lighted shops, they recall the days of 1933 when these same shops were dark, when employment was down to 120 men as against the 1,600 employed today. They know that wars can generate a worse debacle. Yet Jones & Lamson has definitely taken the plunge. Not only is it running on overtime shifts, getting 161 hours of work per week out of a possible 168 hours from every vital machine on its floors, but it has also increased floor area by 55 percent since 1939, is at present pouring the concrete for a further 25-percent expansion under a $1,300,000 facilities contract with the Government. And in doing so it becomes a fair case history of how one of the medium-sized toolmakers has adjusted itself to the larger demands of defense.

And the air pick-up service is a contributing factor to national defense to the extent that it helps them get the vital, confidential, and necessary correspondence to the addressee at the earliest possible moment.

AIRPORTS NOT NECESSARY

It is not necessary that any town or city to be served shall have an airport or have to establish an airport in order to get the service. The service does not need an airport in order to function and operate.

I am advised that in order to do the best they can at present to cooperate with the Government, the mail is transported from Springfield to and from Albany, N. Y., by auto in order to take advantage of the pick-up system. This fact should be an argument for the establishment and installation of the system in Vermont at the earliest possible date.

It has been demonstrated that sufficient postal revenue is produced to defray the out-of-the-pocket cost of the service to the Government.

Those responsible for expanding this service to its *n*th degree are entitled to and should have the support of Congress—and now.

Intervention for Peace

EXTENSION OF REMARKS

OF

HON. FOSTER STEARNS

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 14, 1941

EDITORIAL FROM THE CHRISTIAN SCIENCE MONITOR

Mr. STEARNS of New Hampshire. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Christian Science Monitor of August 12, 1941:

[From the Christian Science Monitor of August 12, 1941]

INTERVENTION FOR PEACE

The radio plea of John Cudahy for a peace proposal from President Roosevelt well illustrates the difficulties of aloofness. For while the former American Ambassador to Belgium attacks "the war party" and "interventionists" with one breath, in the next he urges the United States to intervene to obtain peace, and says it should be in the language Hitler understands—the "language of force."

The fact is that the war has shown most Americans that there is no such things as comfortable isolationism. Many who formerly thought America could wash its hands of Europe now urge action to restore order in the world. There might be less bitterness in the discussion of America's relation to the war if it were recognized that the real issue is whether the United States shall act alone or with Britain.

Mr. Cudahy urges intervention to bring about peace. That is the aim also of those who advocate more active resistance to Hitlerism—using men as well as materials if necessary. Mr. Cudahy apparently means that the United States should propose a peace settlement and—since "you tell me the word of Hitler is worthless"—enforce it. Isn't that a larger role than the interventionists or "cooperationists" urge for America? Isn't it the logical result of "isolationist" thinking when faced by the fact that America cannot live unto itself?

America may well ponder what kind of peace it wants and what it should do to obtain peace. Events are proving that the United States must take some share in obtaining and maintaining peace.

Roosevelt's Peace Program

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Thursday, August 14, 1941

ARTICLE BY JAY FRANKLIN

Mr. PEPPER. Mr. President, I ask unanimous consent to incorporate in the Appendix of the RECORD a rather remarkable anticipation of the declarations which were announced today from President Roosevelt and Prime Minister Churchill, appearing in the September issue of the magazine Click under the title "Roosevelt's Peace Program." The author of the article is Mr. Jay Franklin.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Click of September 1941]

ROOSEVELT'S PEACE PROGRAM

(By Jay Franklin)

(Editor's note: Jay Franklin, the noted political writer, credited with creating the phrase "New Deal," has written this authoritative article for Click with knowledge gained from long work in Government circles, as well as from his studies of the speeches of President Roosevelt. He has usually been phenomenally accurate in his predictions of administration moves.)

The world may or may not find it possible to finish World War II without America's taking part in the fighting, but the world will find it impossible to establish a world peace without America's having a leading role at the peace conference. This is partly because President Roosevelt is the acknowledged leader of the democratic forces of mankind, but also because the peace will find the United States the greatest single industrial and economic force left in the world. In 1919 the world tried to make peace on political terms. Woodrow Wilson went to the Paris Peace Conference with a program based on his famous though now forgotten Fourteen Points, and, as is also forgotten, was very successful in imposing these points on both victors and vanquished. This second World War or world revolution—and it is both—can only be settled along social and economic lines. This means that, whatever the outcome of the fighting, the world will need America's consent before any settlement can be regarded as binding or durable. As both the arsenal and granary of the democracies, and as the greatest single group of free people supporting democratic ideals, the United States must be either the turkey or the carver

at the international thanksgiving dinner which will follow this bitter harvest of the grapes of wrath.

So, when, as, and if President Franklin D. Roosevelt sits down at the peace conference to redesign the world, he will have no 14 points up his sleeve. The President himself has pointed out that during the last war we not only learned what to do but learned what not to do. Among the things not to do was the attempt by Woodrow Wilson to rearrange political boundaries in order to cure a situation which was basically social and economic.

Mr. Roosevelt is primarily concerned with the economic and social and moral contents of a world order: Territorial and political demands will be considered as incidental details.

His object is to achieve the sort of world order in which America can live and prosper in peace. For that, he relies upon freedom and democracy both between and within nations.

As early as January of 1939, he warned of the need to "ward off sudden attack against strategic positions and key facilities" and as the menace grew has named some of these strategic points: Greenland, Newfoundland, Iceland, Canada, the Azores, Bermuda, the West Indies, the Cape Verde Islands, Brazil, Cuba, Panama, Mexico, Alaska, Ireland, Great Britain, Dakar. But he has emphasized that the object is to keep Hitlerism "away from any point in the world which could be used and would be used as a base of attack against the Americas."

In speech after speech he has emphasized that a world-wide system is needed to preserve the peace. And he asked: "Can we continue our peaceful construction if all the other continents embrace by preference or by compulsion a wholly different principle of life?"

The basis for self-respect is internal freedom. Perhaps the best brief statement of what this means was given by Roosevelt in his January 6, 1941, message to Congress: "Equality of opportunity for youth and others. Jobs for those who can work. Security for those who need it. The ending of special privileges for the few. The preservation of civil liberties for all. The enjoyment of the fruits of scientific progress in a wider and constantly rising standard of living." That this theory was a basic part of his foreign policy had been indicated when he remarked: "I would ask no one to defend a democracy which, in turn, would not defend everyone in the Nation against want and privation."

Resolute announcements that America's object was peace were accompanied by proposals to "quarantine" the aggressors and of American willingness to lay down our lives for our liberties. This in turn led to the policy of aiding the victims of aggression, of which the lend-lease law is the latest expression.

The end itself is most clearly stated in the message to Congress of January 6, 1941, but was foreshadowed as far back as December 1935, when Roosevelt said at Notre Dame University, "There can be no true national life either within a nation itself or between that nation and other nations unless there be the specific acknowledgment of, and the support of organic law to, the rights of man. Supreme among these rights we * * * hold to be * * * freedom of religious worship." In December of 1940 he said that Hitler's proposed "new order" is "not a union of ordinary, self-respecting men and women to protect themselves and their freedom and their dignity from oppression."

Then came the "four freedoms," which are the heart of Roosevelt's peace program:

(1) Freedom of speech and expression everywhere in the world.

(2) Freedom of every person to worship God in his own way everywhere in the world.

(3) Freedom from want everywhere in the world.

(4) Freedom from fear anywhere in the world.

Five months later the President added one more freedom. On May 27, 1941, he said, "Yes; all freedom—meaning freedom to live and not freedom to conquer and subjugate other peoples—depends on freedom of the seas. All of the American history—North, Central, and South American history—has been inevitably tied up with those words 'freedom of the seas.'"

ROOSEVELT'S FIVE POINTS

1. The Atlantic and Pacific approaches to the Americas shall not be in hands unfriendly to the Americas.

2. A world-wide system for maintaining peace, embodying automatic aid to the victims of aggression, shall be established in order to rid the nations of fear and threats of violence.

3. All nations shall guarantee, to the best of their ability, civil liberties, freedom of speech, and freedom of religion, to their peoples.

4. World-wide economic pacts shall be promoted to aid in the redistribution of wealth and opportunity in order to rid the world of want.

5. The seas must be kept free for peaceful commerce under the guaranty of the navies of the democratic nations.

Extension of Service of Selectees

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, August 14, 1941

EDITORIALS FROM THE WASHINGTON POST AND PHILADELPHIA ENQUIRER

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the RECORD an editorial from the Washington Post entitled "National Insurance" and an editorial from the Philadelphia Enquirer entitled "Our Armed Forces Kept Intact," having to do with the passage by both branches of Congress of the joint resolution extending service under the Draft Act.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Post of August 14, 1941]

NATIONAL INSURANCE

Now that the Army service-extension bill has been passed by both Houses of Congress, the controversy which it aroused cannot be too quickly forgotten. The wide differences of opinion as to the necessity of keeping selectees in the Army after their first year of training were dramatically emphasized by the 203 to 202 vote of the House in accepting the bill. That almost even division largely explains why Congress wasted so much time in disposing of a simple measure. But the decision has now been made. Congress has acted wisely, even though the margin of wisdom was dangerously thin on the House side. Our problem now is to drop the controversy completely and get on with the essential work of strengthening our defenses.

Fear was often expressed in the course of the debate that enactment of the bill would seriously affect the morale of the new Army of selectees. Now that the issue has been decided this argument appears particularly unfortunate, for it is a slur upon the patriotism of the young men who have been drafted for military service. No doubt many of these young men will be disappointed at the prospect of spending 30 months instead of 12 in the Army. But they will not shrink from the obligation which their Government has placed upon them. Their loyalty, their willingness to sacrifice for the national security, and their acceptance of the decision of Congress as to what our defense requirements are may be taken for granted. For the decision has been made in the traditional American way and hearty compliance with it is the first step toward the defense of democracy.

It is worthy of note, too, that in acting to protect our national interests Congress did not ignore the welfare of the individual selectee. As Chairman MAY, of the Military Affairs Committee explained to the House, the bill merely fixes a higher ceiling upon the period during which citizen soldiers may be called upon to serve. In the past, he pointed out, "the Army has followed a policy of discharging men as soon as they are fully trained to make way for others." There is every reason to believe that a similar policy will be followed in the coming months, unless the United States is drawn into "shooting war." It must be recognized, of course, that actual participation in the war would cut off all exit from the Army and at the same time greatly accelerate the induction of new recruits.

The House bill also makes it mandatory for the Secretary of War to release all soldiers whose retention would, in his judgment, subject them or their wives or dependents to "undue hardships." That safety valve appears to leave the Army ample discretion as to what selectees shall be retained, while at the same time putting it under definite obligation to make adjustments in case of real hardship. Then, too, men serving for more than a year will receive an extra $10 a month as partial compensation for their extra sacrifice. So it should not be made to appear that Congress has acted unreasonably. Obviously it did consider the interests of the men who are training to defend their country, but it was compelled by the very nature of its responsibility to give greater weight to the safety of the Nation. The same consideration will undoubtedly sustain the high morale of the Army and it may well be emphasized to bring about more unity of purpose among civilians.

[From the Philadelphia Enquirer]

OUR ARMED FORCES KEPT INTACT

House approval of the service extension bill, though gained by the hair-line margin of one vote, insures the Nation against the disastrous breaking up of its new Army at a crucial time.

As the measure in its final form differs from the Senate-passed bill only in minor details, there is hope that the upper Chamber will accept the House changes, thus avoiding possible conference conflicts and another vote in the House. The measure then could be placed before the President for his approval.

Main features of the bill, as amended, are these: It would keep National Guard men, drafted men, and Reserve officers in service for 18 months beyond the 12 months provided by existing law; it would lift the limit of 900,000 on the number of draftees who may be in training in 1 year; it provides means for the release of service men with dependents; it adds $10 a month to the basic pay after 1 year.

To many the fixing of a specific time limit for service will seem a mistake. However, the extension as agreed to keeps our present forces intact and removes from our military

authorities the nightmare of an army suddenly dispersed at a critical time. To send these troops home, their training incomplete, and start over again from scratch trying to build up a military machine from fresh inductions would impose an impossible handicap upon our Army heads.

Had extension been ruled out, America's prestige inevitably would have suffered. Aggressors abroad would have gloated over our self-inflicted weakening. Our neighbor republics to the south, to whom we have been preaching the necessity of joint defense against outside aggression, would have felt discouraged and disillusioned.

By maintaining and reinforcing our young Army, we prove to the world that in the vital matter of safeguarding our liberty we are in deadly earnest.

The Churchill-Roosevelt Statement

REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 14, 1941

Mr. MUNDT. Mr. Speaker, we Republicans and others who are opposing the entrance of this country into war have frequently been attacked by the most active and acrimonious interventionists in America—of whom I am glad to say we have very few if any in this House—for our stand, and we have been charged with being defeatists and obstructionists who offer nothing but a negative policy to America.

The war crowd supports the bizarre theory that it is necessary to engage in destructive warfare as a prelude to constructive world planning, and they have held that to plan for peace while war is on is to give aid and comfort to the enemy.

On Sunday night, June 8, Congressman VORYS of Ohio and I debated two eminent Democratic Members of this House on the American Forum of the Air on the subject Should the United States, While Continuing Its Preparedness Program, Take the Leadership in an Effort To Bring About Peace? Mr. VORYS and I said "Yes." We believed then and do now a peace offensive aimed at driving a wedge between the Axis Governments and the Axis people is an effective device for both shortening and winning the war. On May 21, I made a similar proposal in an address over the Columbia Broadcasting System.

Consequently, I want to say I am encouraged by the joint statement issued by Winston Churchill and President Roosevelt today. While it is too early to make a considered statement about the full impact of their joint suggestions, I do want to say that the general objectives of victory without vengeance and peace without passion are highly commendable and constructive. The manner in which the goals set forth in this statement are pursued will determine in large part whether it serves to enhance or impair our national interests. If it is used as a means for ending this war on an equitable basis without involving this country in the fighting, it will go down in history as an epochal event; if it is used as a lever to pry this country into the war, it will rise up to plague its authors. I think we should all unite in making the former alternative the goal of America.

I do not want this country to enter the war to project its peace aims on the world, but I do want this country to encourage by other means the acceptance of a peace treaty which will be just enough to be workable and strong enough to be permanent. As a partner in a peace offensive, this country can better serve the world than as a partner in a war offensive on any foreign battle front.

Shall We Have Another A. E. F.?

EXTENSION OF REMARKS

OF

HON. ROBERT A. GRANT

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

RADIO ADDRESS OF HON. ROBERT A. GRANT, OF INDIANA

Mr. GRANT of Indiana. Mr. Speaker, under leave to extend my remarks, I include herewith a radio address which I delivered over the Columbia Broadcasting System on Sunday evening, August 10, 1941:

My fellow Americans, the proposal before the House of Representatives to extend the compulsory service of the Army selectees presents a great issue of American life for prompt decision: Is there to be another American expeditionary force?

As a Member of the Congress, charged with the responsibility for this historic decision, I want to discuss with you the elements of the problem before us. Every American home is involved, for the fundamental question at issue is this: What is the obligation of representative government in regard to a promise made to the people? Is the pledge to be honored when due, or may other considerations absolve the Government of full responsibility for its public promises and commitments?

We are indebted to the Columbia Broadcasting System for this opportunity to survey the issue in the American way.

I speak to you, not as an old man, nor even a veteran of former wars, but as a young man just past 36, who registered under the Selective Service Act on the 16th day of last October.

A leading Washington newspaper yesterday carried a story from London saying:

"Whatever is happening in Anglo-American relations, the conviction appears to be growing here that the United States is now nearer to becoming directly involved in the conflict than at any time since the war broke out."

It was only a few days ago that Prime Minister Winston Churchill told the House of Commons that the United States "Is advancing in rising wrath and conviction to the very verge of war."

On the 8th of last April Vice President HENRY A. WALLACE said in a public address in New York City: "The United States now has her second opportunity to make the world safe for democracy."

And 3 months later, on July 4, we had the declaration of General Wavell, the retiring British commander in chief in the Middle East, who, commenting upon America's part in the war, said: "We shall have to have airplanes, tanks, munitions, transport, and finally men."

And a few days after that came the statement of General Auchinlech, the new British Middle East commander, to the effect that American manpower eventually would become just as necessary in this war as it had been in the first World War.

A year ago the people of this country were debating the original selective-service law. The congressional debates and the news reports of the time referred repeatedly to the fact that the system contemplated a period of 1 year's training. The bill did provide that selectees could be kept for an additional period if Congress should find that the national interest was imperiled, but this part of the bill was not stressed in the public debate of the time.

The American people, especially the young men and their families, understood the training period would be 1 year, unless, of course, the United States should become involved in war in the meantime. Five different polls by the American Institute of Public Opinion mentioned 1 year of service.

We are now faced with the President's proposal to extend the period of service of the selectees. The Senate version of the bill would hold them for an additional 18 months. The House bill proposes that they be held for an indefinite period. Of what value is the 18-month limitation? For, if the proposal to train them for 1 year can be violated, then why may not the 2½-year period be violated? In fact, may it not be 5 years or even more? Senator PEPPER, of Florida, one of the recognized spokesmen of the administration, said only a few days ago in the Senate:

"Talking about these boys going home? They will be in the Army for at least 5 years, and maybe 10, and this war will last at least 5 years and maybe 10, and maybe a generation."

If there be facts that greatly increase our danger today, the American people, whose job it would be to do the fighting, are entitled to have them. They are not yet in the record.

I know of not one responsible military authority who says that the United States is in danger of invasion.

The House bill also provides that we should remove the present limitation which says that no more than 900,000 selectees may be in training at any one time. Just what does this proposal mean?

General Marshall, our Chief of Staff, whose integrity is beyond question, testified during the hearings on the pending bill that an Army of 1,700,000 men, when properly equipped, would be adequate to defend the Western Hemisphere.

We have at the present time, roughly, a military force of a million and a half, including more than 600,000 selectees. Thus the limitations in the present law would permit the calling of almost 300,000 additional men if we but had shelter for them and the equipment with which to train them. This would give us a force of 1,800,000 men, considerably more than the number needed for the defense of this hemisphere. What, then, are we to think of the proposals to lift this lid, to permit mustering of a much larger Army?

My able colleague, the Honorable ROSS A. COLLINS, of Mississippi, chairman of the War Department Appropriations Subcommittee, told us in the June issue of the Readers Digest that we are failing to profit by the lessons of the present war, that we are building another old-style mass army. "We need," he writes, "a highly motorized and mech-

anized Army with more fire power, greater mobility, greater armor protection, and a more paralyzing punch."

He points out that in the spring of 1941 the Chief of Staff requested funds for the initial equipment of an eventual Army of 4,318,000 men. This is more than two and one-half times the number of men, according to General Marshall's judgment, that we need for the defense of the Western Hemisphere.

What, then, are we building toward? Why do we seek an army in such numbers, if it is not to make them a part of another A. E. F.?

The advocates of the pending resolution claim that unless the draft year is extended our Army will rapidly disintegrate. It is true that the rotation of trainees, such as the law contemplates, might work some inconvenience. It is also true that it would be a serious blow to our Army if all of these 600,000 selectees were to be released on the same day. But what are the facts? The demobilization of the selectees would be staggered over a period of time in the same numbers in which they entered the service. There would be no mass exodus. Testimony before the House Military Affairs Committee shows that the draftees entered the Army in the following groups:

November	13,806
December	5,521
January	73,633
February	90,238
March	153,437
April	124,982
May	62,456
June	79,523

You will note that the largest number of draftees who would leave the Army in any one month, would be about 153,000, or, roughly, 10 percent of our present Army. These are scheduled to go home next March, and between now and then we have more than 7 months to induct and give preliminary training to the necessary men to replace them. Only 19,327 selectees will have completed their year of training by the end of 1941.

One reason given for the enactment of this law a year ago was that the rotation of selectees through this period of service would provide a large reserve of trained men. With the limited amount of equipment that we now have available, we would have a static condition in our Army if we were to freeze the present draftees in the service. The release of these men, at the expiration of their year of training, and the substitution of new men, therefore, would actually strengthen rather than weaken our military position.

The vote in the House of Representatives tomorrow or Tuesday is expected to be very close. As one opposed to extension of the year's service, I shall work 'till the final roll call for the maintenance of that position by the entire House. Representative government requires that the people make their wishes known, and, if the opinion of the people on this question is made known to Congress, I can assure you the verdict will be in accord with the majority opinion.

Mr. Paul Patterson, the distinguished publisher of the Baltimore Sun, who is now in London, also brings us up-to-the-minute news on this topic. As an influential American publisher, it may be assumed that he has access to the highest official sources of information. In a signed dispatch published last Friday, Mr. Patterson relates that British policy now contemplates a vigorous offensive calculated to bring the war to a successful conclusion in 1942.

He goes on to say—and I now quote his exact words: "The active participation of America is now argued to be essential if this is to be accomplished."

Here we have the whole picture. America's active military involvement is not merely desirable. London says it is essential.

This supports the earlier statement of General Wavell, when he said that victory must be won, not on the high seas, but on the soil of the European continent. He went on to say: "And if this is the way it is to turn out, we certainly are going to need American manpower, just as we did in the last war."

Mr. Patterson's London report continues: "The deadweight opposition of public opinion in America to active warfare is fully measured," but that "An extraordinary program seems to be unfolding designed to stimulate a reversal of American opinion."

He adds that "Measures wholly contrary to conservative British methods are now receiving consideration. The full extent of these efforts is not announced, but there is no question that when they are made effective American interests will be stirred."

In other words, London has decided there is urgent need of another A. E. F. and has set about the task of converting American public opinion to war.

In the language of the street, America is going to "get the works."

The objective is a new A. E. F. to fight on Europe's blood-soaked soil.

Such is the demand made upon this country on the eve of our vote in the House to extend the period of draft service.

Those who support the extension of service remind us that the draft law forbids the use of these men beyond the Western Hemisphere. But it should be remembered that the original proposal for the extension of draft service was coupled with the demand that this prohibition against foreign expeditions be stricken from the law. That request has been silenced for the moment. Yet the fact remains that on July 10 there was introduced Senate Joint Resolution No. 91, which would give the President power to use any members of the armed forces outside the Western Hemisphere.

That resolution still is before the Senate Committee on Military Affairs.

In his fireside chat of December 2, 1940, outlining the lend-lease program, President Roosevelt uttered this solemn pledge:

"There is no demand for sending an American expeditionary force outside our own borders. There is no intention by any member of your Government to send such a force. You can, therefore, nail any talk about sending armies to Europe as a deliberate untruth."

The President could give renewed emphasis and vitality to this pledge today by publicly requesting his leaders in the Senate to bring Senate Resolution No. 91 to a roll call promptly and having it voted down with the thundering support of the administration forces. Why has this not been done?

Such action would clear the air before a final vote is taken in the House on the bill to extend the draft year. But so long as Resolution No. 91 is alive in the Senate there are substantial grounds for fears that a new A. E. F. is in the making.

I feel that no danger confronts the Nation that could justify the violation of the solemn pledge uttered by President Roosevelt in his campaign address at Philadelphia on October 23 1940, when he said in measured words:

"To every man, woman, and child in the Nation, I say this: Your President and your Secretary of State are following the road to peace. We are arming ourselves not for any foreign war; we are arming ourselves not for any purpose of conquest or intervention in foreign disputes." I repeat again that I stand on the platform of our party: "We will not participate in foreign wars, will not send our Army, naval or air forces in foreign lands outside the Americas, except in case of attack."

That promise is now presented for redemption.

I shall vote to redeem it in full.

America tonight awaits the answer to her anxious question: Are we to have another A. E. F.?

Rural Electrification and National Defense

EXTENSION OF REMARKS

OF

HON. HENRY O. TALLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 14, 1941

Mr. TALLE. Mr. Speaker, the serious shortage of essential materials, especially copper and zinc, threatens to impede the development of rural electrification at a time when the need for this development is most important. Accordingly, I addressed a letter to the Secretary of Agriculture on June 28, 1941, as follows:

WASHINGTON, D. C., *June 28, 1941.*

Hon. CLAUDE R. WICKARD,
Secretary, Department of Agriculture,
Washington, D. C.

MY DEAR MR. SECRETARY: It has come to my notice that there is a serious shortage of certain metals which are essential to construction of distribution lines in the rural electrification program. The latest figures which I have obtained from the Rural Electrification Administration indicate large shortages of both copper and zinc.

Quoting from a statement furnished at my request by the Rural Electrification Administration, which statement is based on the raw materials requirements for distribution-line construction under the proposed $100,000,000 loan program for the fiscal year 1942 plus the carry-over from the fiscal year 1941, the following are needed:

Steel	tons	85,000
Copper	do	75,554
Zinc	do	3,500
Porcelain	do	4,844
Poles		1,905,610
Cross arms		366,666
Aluminum	tons	160

It should be noted that these figures take no account of the quantities needed by municipally owned or privately owned utilities.

Two abnormal forces over which the farmer has no control are operating simultaneously to increase mechanization of agriculture:

(1) The Selective Service Act drafts labor off the farm.

(2) Employment in national-defense industries lures labor off the farm.

As a result, the farmer must get along with less labor; he must shift to greater use of machinery. This forced shift makes electric power immensely important, especially since the farmer has been asked to produce more of certain commodities which are essential to the defense program which the Federal Government has embarked upon.

Keeping in mind, then, the place which food holds in our national-defense program, I submit that it is the part of wisdom to consider well the need for metals in rural electrification in the event that the shortage which prevails at the present time makes it necessary to establish priorities in these metals.

I have discussed this serious matter with the Rural Electrification Administration and with the Priorities Division of the Office of Production Management. The former agency expressed grave concern over the shortage; the latter agency lent a sympathetic ear to my plea.

This message is addressed to you, Mr. Secretary, in the hope that you will impress upon

the Priorities Division of the Office of Production Management—in the event that priorities are declared—the urgent need for these metals in rural electrification. I urge that these requirements be placed as high on the schedule of priorities as other demands on these metals for national-defense purposes will permit.

Respectfully submitted.

HENRY O. TALLE,
Member of Congress.

Mr. Speaker, I am interested in constructive results. Government departments have mighty tasks to perform at the present time. I do not, therefore, criticize the Secretary for the fact that a month passed before I received a reply to my letter, nor the further fact that the reply was too general to be a satisfactory response to a specific request. I may state also that repeated oral assurances given me by O. P. M. and R. E. A. officials in the meantime were satisfactory. I trust that in keeping with these assurances rural electrification requirements may continue to occupy first place on the schedule of so-called nondefense uses for these materials.

I submit, Mr. Speaker, that the ordinary pursuits of the American people must not be discouraged or even allowed to languish because it is from these pursuits that most of the money must come to pay the stupendous cost of national defense. And to those pursuits it is hoped many of our men in military service may return when the insanity of war has passed.

Nearly every day there come to my desk copies of mimeographed statements issued by Government officials to the effect that business as usual must stop. On the other hand, the revenue bill passed by the House on August 4 and now pending in the Senate reaches out for taxes more than usual. If the goose that is expected to lay so many additional golden eggs is killed, from what source can the expected revenue come?

The Aluminum Shortage—Profits Versus Defense

EXTENSION OF REMARKS
OF
HON. WALTER M. PIERCE
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 14, 1941

Mr. PIERCE. Mr. Speaker, issues of great daily papers in New York and in Washington, D. C., have recently given space to news and editorials about the suspicion which clouds the defense activities in our National Capital. It has been frequently stated that commissions must be paid to inside "favorites" and "fixers" in order to secure defense contracts. I know defense officials have issued statements to the contrary, but ugly rumors are not contradicted by many facts and incidents, some of which have come to my attention in connection with the location of the great aluminum plants demanded by the defense program. Since these plants are dependent upon an abundant supply of cheap power, some of them have, very necessarily, been located in the Columbia Basin. I have been extremely impatient with the delays in the location and building of these plants because it means that production of an essential material has been long withheld.

It appears to me that delay of production is of no significance to certain groups when private profits are at stake. It seems ironical, even tragic, that we should have so hotly debated the question of extending the terms of service of selectees, Reservists, and National Guardsmen when the most essential necessities to supplement their personal sacrifices cannot be manufactured because of the greed of highly privileged and highly placed citizens who are presumably to be protected by these chosen young men.

Certainly the spectacle of piles of aluminum pots and pans collected from the housewives of the Nation is bitterly ludicrous when we think of the terrible waste of aluminum through neglect in putting plants into operation and in the construction of unnecessary power facilities. We have one group considering measures for the salvaging of small business and for the dividing of contracts, when we know that the profits from the contracts resulting from this unfortunate emergency have created an atmosphere laden with suspicion for small businessmen.

UNITY BASED ON CONFIDENCE

Leaders on both sides of this aisle have called for national unity, in these critical days, but I warn you that unless we secure early unity of action instead of the disgraceful spectacle of an internal struggle over profits, position, and personal power we shall march over roads of deep discouragement. This is the time and place to speak of these matters with the utmost candor. Unless we can put a stop to the evil practices, defense preparation will be paralyzed by greed, guilt, and suspicion. "No free republic can fight off tyranny unless its citizens love justice more than their cut," says a college president in his last report. In sober, rational moments all these men who are betraying our country must themselves know, and must know that others know, that they are not actuated by regard for the public welfare.

No one can look with complete indifference upon this shameful situation. Whether a believer in public power or in private monopoly of an admittedly essential public utility, all decent and safe citizens do believe that every public servant and every man who influences governmental action should be actually and honestly acting in the interests of the Government. We cannot tolerate, in peace or in war, a man of influence and power in public counsels who wears a uniform which he betrays by private or secret action. This is a time when men within and without the Government must be compelled to show their true colors.

The perpetuation of our form of Government depends upon public confidence. Everyone whose conduct in public office, or as a trusted public adviser, shows that he is not really motivated by the public welfare should be driven from position of public trust in days of peace, which become days of danger under threat of war, when such men are in high position.

We propose to keep nearly a million and a half men in service while our bureaucrats and dollar-a-year experts play the profit-and-privilege game with supply and production, failing to realize that service morale depends upon supply of proper equipment.

National safety demands that I relate my experience with some officeholders dominated by the profit motive, while holding responsible public position or influencing public action. I shall later set forth other facts from which accurate conclusions may be drawn.

THE LIGHT-METAL SITUATION

Since July 13, 1940, I have continually called attention of this House to the light-metal situation and have offered constructive suggestions. I now desire to bring the story to date.

About 90 days ago, responsible officials of O. P. M. acknowledged the true situation as to aluminum and promised that 400,000 kilowatts of Columbia River power would be immediately put to work in new plants for aluminum production. Work has not yet started on these proposed projects. I am informed that all the locations have not even been selected, and, due to differences of opinion, a new group of engineers is just now sent to the field to pass, once more, upon proposed sites. Bonneville engineers had already made this study and filed results, but, even though power facilities are the prime factor in such location, their advice has been rejected.

WASTE OF ALUMINUM

I have previously pointed out that one kilowatt of power working for a year will produce 1,000 pounds of basic aluminum. This 90 days' delay applied to the proposed 400,000 kilowatts is equivalent to 100,000,000 pounds of aluminum, or about one-quarter of our total 1940 production. These delays in one plant alone amount to 133 largest bombers and over 800 average fighting planes per month.

In addition to such costly delays, consideration must be given to the excess first cost of the transmission facilities necessitated by the juggling and favoritism program. This will amount to at least $1,500,000 on one aluminum plant. This excess cost must be assumed by all the rate payers on the Bonneville project. At least $5,000,000 will be the total unjustifiable excess cost for all the announced Columbia River aluminum plants. These mistakes will also add $500,000 a year to the power bill of the manufacturers of aluminum and will undoubtedly be added to defense costs.

CANADIAN LOSSES THROUGH SABOTAGE

This extravagance, however, is not the whole story. In a release, O. P. M. has told us that earmarking of Canadian aluminum would keep us out of our difficulties until these new Federal plants were started. Unfortunately, we now see, as the veil of censorship is lifted, that the large Arvida plant of the Canadian

Aluminum Co. on the Saguenay River has been put out of business by organized sabotage. This is verified by a declaration of the Canadian Minister of Munitions and Supply. From what has been published, it appears that, as the result of labor trouble, the switches were pulled and the furnaces or pots were allowed to solidify. It will take nearly a month to chip out the furnaces, and another two weeks to put them in operation. The loss of production is equivalent to about 2,000 American and British planes. This Canadian situation will necessarily cause us to increase our aluminum and critical metal commitments to England under the Lend Lease Act.

DEFENSE REORGANIZATION NEEDED

We now find ourselves faced with an accelerated aluminum shortage, and, in spite of this, we see our experts trying to locate these new plants at considerable distances from the generating stations. This is done at the expense of thousands of tons of critical metals used in the lines and facilities. It is time to call a halt to such tactics.

The men who are playing this game belong to the same group who overestimated our production capacity, and stores and supplies, and grossly underestimated our requirements. The crying need of the times is a complete defense reorganization whereby square plugs will be fitted into square holes and round pegs into round holes. There has been some reorganization, but only mere gestures, and there is complete lack of candor. Kellogg, for example, was moved out of O. P. M. as power adviser. Now, under the guise of liberal leadership, other private power agents have been moved in. It is natural for them to suggest remote plant locations, when the extra bill will have to be met by the smaller rate payer.

F. P. C. WANTS STEAM PLANTS

We find the same situation in electric-power planning. The struggle for authority has resulted in the recent ill-conceived, hastily drawn steam plant press release of the Federal Power Commission. This would upset the application of the holding-company legislation and, under the guise of defense, attempt to bail out manipulated private electric companies. That action of the F. P. C. was fraudulently publicized, and it was made to appear that the private-utility trick so sponsored also had the blessing and sponsorship of well-known public-power advocates.

The Federal Power Commission release was headed "Federal Power Commission gives President Roosevelt plan for adequate power supply for defense program in 1943, 1944, 1945, and 1946: Urges new R. F. C. subsidiary to place and finance orders for additional generating capacity upon recommendation of the Federal Power Commission." It thereupon sets forth a list of proposed steam plants, several of them located in the Pacific Northwest, which has the greatest available hydro power of any section in our part of the world.

We are a great distance from the coal which would be used for steam plants. We have only one transcontinental railway, already overtaxed, which could carry the coal to the steam plants, and we now have several steam plants idle in the Pacific Northwest because of lack of fuel and cheapness of water power. If coal and transportation are important to the defense program, the Government should not initiate a program of building steam plants for private utilities.

Immediately following that astonishing release was another of July 21, which stated that "the Commission (F. P. C.) and O. P. M. will be welded into a coordinated effort to place and execute all phases of the defense power program." Secretary Ickes soon told a press conference that the F. P. C. 5-year program "was ill-advised and carelessly prepared" and that he proposed to pay no attention to it. Those familiar with the Bonneville basic legislation felt that the project might be legally protected from the inroads of the private utilities via F. P. C. and O. P. M., but we are not now so fully assured in regard to our situation.

THE CURE FOR THESE EVILS

There is a cure for these cited errors, and that is for Congress to exercise a greater restraint through its power of the purse. I propose also that simple legislation be enacted prohibiting R. F. C. from advancing funds for steam plants to be located within economic transmission distances of low-cost Federal water-power plants without a full congressional hearing.

A simple amendment should be added to any of the proposed Columbia Valley Authority bills, requiring that the excess costs of emergency plant locations be removed from the Bonneville rate base. Hearings on such proposals will open up the mistakes that have been or are being made and will afford Congress an opportunity to exercise more stringently its power of the purse. We need to investigate immediately and stop such mistakes, made evidently by the abuse of authority.

PLANT LOCATIONS AND GRIDS

Four years ago, while the Bonneville bill was under consideration in the Rivers and Harbors Committee of the House, prompted by messages sent to me from the area, I pointed out the adverse effect on the public interest of certain transmission-line proposals. At that time it was suggested by certain private utility interests that two sets of intermediate voltage lines be constructed so as to have termini on the two sides of Portland, one adjacent to the focal point of Portland General Electric private utility and the other adjacent to the concentration point of the other local private company.

Such a proposal would have strategically placed Bonneville's output in the hands of the private companies to distribute. One other intermediate voltage line was also then proposed from Bonneville to Yakima, to tie into the private lines, with no thought of grid lines adaptable to the distances in order to connect Bonneville and Coulee.

It was fortunate for the defense program that such subversive proposals did not mature. The present suggested change of aluminum plant location from a point near the Bonneville generating station to a point near the 1937 proposed eastern focal point looks as if this is a revival of the old subterfuge, intended to concentrate power outlets at points which will place bulk energy in the hands of the private companies when this emergency is terminated. The whole procedure used by O. P. M. and R. F. C. suggests that either Alcoa or the private power companies or real-estate owners had some hand in this shift.

MONEY AND MATERIAL COSTS OF PLANT LOCATIONS FOR PRIVATE BENEFIT

I venture a prediction that this whole matter is going to be carefully searched before Congress votes any additional Bonneville deficiency funds to make these connections. At that time I intend to press for disclosures of factual information on the exact additional costs and excess critical materials used by locating these emergency plants remote from the generating stations.

I have made my own estimates based on distances, loads, and costs per mile, and feel that the proposed shift of the aluminum plant from the bus bar to the Portland focal point will cost $1,500,000 and that the Longview location of the Reynolds aluminum plant represents over $3,000,000 of excess vital materials and capacity, which will require further appropriations to replace.

This statement gives the background for a sharp remark I made on this floor on June 6 on Power and Aluminum Shortages in Relation to National Defense. That led certain Oregon papers to ask that the full story be told. Over two weeks ago I placed these details before O. P. M.

I asked why it was necessary to spend a million dollars of Government money to build a Bonneville transmission line in order to locate a pressingly needed aluminum plant with an eye to salvaging a real-estate investment rather than for the purpose of rescuing our air program, which is definitely in jeopardy.

OUR STAVISKYS

Between 1927 and 1933, the French plunger, Stavisky, defrauded investors of $10,000,000. When his crimes and the losses were made known, there were riots in the streets of Paris. People were slain and a judge was assassinated. When the long trial was brought to an end, the London Times said editorially:

> There is a warning for all countries in the Stavisky affair. Sentences on culprits can do little or nothing to remedy the national harm done when the wicked are allowed to prey on the unwary.

Senator LA FOLLETTE, writing in the Progressive May 31, this year, said:

> More recently, the so-called Truman committee of the Senate, investigating defense expenditures, disclosed to the public through its hearings, the shocking story of how the monopolists have hindered the defense program, and the even more serious disclosure that the Office of Production Management condoned policies which would have the effect of fostering a bigger and better monopoly in the production of aluminum.
>
> The story of the international monopoly in aluminum is replete with all the elements of international intrigue, profit greediness, lack of social consciousness and public welfare, and plain, downright skullduggery in business operation. As pointed out by the T. N. E. C., it is by no means a unique situation, but typical of a large number of other industries.

"CASHING IN" VERSUS BOMBERS

The Office of Production Management, in a release of July 21 sent to Members of Congress, reviewed the pressing need for aluminum, magnesium, and other defense materials for huge quantities of continuous power. One paragraph ended on a noble strain.

No sacrifice can be too great to assure this goal.

Just as these releases were being issued, a Washington paper carried a New York dispatch stating that—

The Committee of Utility Executives, organized in 1935 to combat New Deal public-power policies, has quietly disbanded. No explanation of its disbandment has been made public, but persons close to it indicated last night that the utilities executives had decided that the current situation left the organization little to do.

I can vouch for the truth of that statement.

NEW ORGANIZATION NEEDED

If the O. P. M., F. P. C., R. F. C., and other alphabetical agencies were actually interested in aluminum production and the resulting airplane manufacture, they would have located the aluminum plants promptly and most advantageously close to the bus bars. They would not have insisted upon the building of long, expensive lines, which use great quantities of aluminum. They would have saved time and costs and materials incidental to the building of every transmission line.

Exactly the opposite course has been taken in the Pacific Northwest. Months will be consumed in building lines unnecessarily at huge costs. It appears that some of these lines have been located with an eye to present and future profits of our Staviskys. I fear that some of those who have been allowed to make these decisions have been more interested in profits than in production. They have succeeded in diverting the public by the quick and slick stunt of collecting pots and pans.

As I reread the brief paragraphs quoted above, I reflect with anxiety upon the fact that some who are unfit, by training, experience, and character, hold high and responsible positions in this defense program. If our production lags, or is further halted under such circumstances as I have suggested, I believe there should be a commission set up by Congress to bring order and proper administration out of the maze of confusion and poor organization which has resulted so scandalously.

DANSE MACABRE

The picture in my mind as I think of the whole situation in regard to power, aluminum, and magnesium, so important in our defense program, is the classic Dance of Death. I fear it is literally a dance of death for public confidence and for our defense program. The agents of the special interests and big businesses weave in and out of this dance. One day they are liberals formulating Government policies. The next day they are attorneys serving private utilities or handing out Government contracts, and their places in the official ranks have been taken by similar groups. If we can help to correct the abuses which always creep into emergency affairs we shall be doing a real service for the morale of the country.

What Next in the Pacific?

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, August 14, 1941

EDITORIAL FROM THE WASHINGTON TIMES-HERALD

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix a very interesting, enlightening, and informing editorial from the pen of Capt. Joe Patterson, the editor of the New York Daily News, which was reprinted in the editorial column of the Washington Times-Herald.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Times-Herald]

WHAT NEXT IN THE PACIFIC?

On July 25, President Roosevelt by Executive order froze Japanese assets in the United States—about $130,000,000 all told.

"MUSTN'T TOUCH"

This was in retaliation for Japan's announcement that France's Vichy government had invited the Japanese to move in and police French Indo-China, which the Japs said they were only too glad to do.

Of course it was a territorial grab by Japan, at a time when France couldn't prevent it and Hitler was insisting that his Vichy stooges be nice to Japan. This grab, as we understand the proceedings, our administration hoped to prevent by its economic crack-down on Japanese assets in this country, plus the threat of a 100-percent embargo on commerce between Japan and the United States.

WHAT'S OUR NEXT MOVE?

The crack-down did not stop the Japanese.

Japanese fighting ships were hovering off Indo-China's chief port, Saigon, when the Vichy invitation was announced. On July 31 the Associated Press reported from Saigon that a "fully equipped Japanese army of crack troops, obviously ready for action and taking nothing for granted," had formally occupied Saigon that day. Camranh Bay, big French naval base farther north in Indochina, is also reported in Japanese hands, just as if our Government had never thundered against it.

On August 1, it was reported from London that the Japanese had capped their Indo-China coup by demanding military bases in Thailand—formerly Siam, and what inspired idiot changed the name we don't know.

Well, what do we do now?

ONE WORD FROM US

One word from us, and the Japs have done as they pleased about Indo-China. They have also placed themselves within 750 miles of Singapore, 700 miles of North Borneo, and 850 miles of the Philippine Islands.

Are we supposed to fight, to keep Singapore safe for the British, or the Dutch East Indies safe for the resident Dutch, or the Philippines safe for the Filipinos—all of whom love us only when they are as scared as they are at present?

JAPAN NO PUSH-OVER

If we do fight Japan, it promises to be a long and tragic fight, and we are by no means sure of winning it.

At best, our fighting ships would have to travel some 6,500 miles west of our big naval base at Hawaii to come to grips with a Japanese Navy waiting near its own bases. With sufficient ship strength we might overcome that handicap; but how strong is our Pacific Fleet?

We don't know. Fleet movements nowadays are screened by censorship. But it is known that our Atlantic Fleet has been considerably strengthened of late—meaning our Pacific Fleet has been considerably weakened.

Japan is no push-over; and, by venturing into the far Pacific for a fight, we would be letting Japan choose the battleground.

WHY SHOULD WE FIGHT?

All this seems unnecessary to us. We are convinced of two things: That Japan is sick of its war in China and that Japan would be willing to settle its Pacific differences with us peaceably.

Japan and the United States ought to divide Pacific hegemony between them, the dividing line corresponding roughly with the international date line. The Philippines, under such an agreement, would fall in the Japanese sphere, true; but we think that would be fine, and that we ought to seize with glad cries this chance to cut them adrift before 1948.

We can see no use, and we can see a likelihood of national grief and humiliation, in a United States-Japanese war at this time.

Why not at least sound out the Japanese on the chances of a settlement which would save their face in China while getting them out of most of China, and permitting them a reasonable degree of expansion from their cramped, overpopulated islands?

Our present Far East policy is heading us into war with Japan—and for what? And, by the way, has it ever occurred to the assembled brethren that nothing could please Hitler more?

Rivers and Harbors Bill

REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 14, 1941

Mr. PITTENGER. Mr. Speaker, I have listened with a great deal of interest to the preceding speaker, the able and distinguished gentleman from Kansas [Mr. REES]. I want to assure him that he is just as mistaken about this proposed bill being a "pork-barrel bill" as anybody can be. This rivers and harbors bill which I hope will be presented to this Congress is the regular type of river and harbor bill, where the projects are endorsed by the War Department engineers.

Mr. VOORHIS of California. Will the gentleman yield?

Mr. PITTENGER. I yield.

Mr. VOORHIS of California. And does not the gentleman want to point out to the gentleman from Kansas also what he already knows—that every Member of the House has the right to vote on every single paragraph in that bill?

Mr. PITTENGER. That is true.

Mr. REES of Kansas. Will the gentleman yield to me?

Mr. PITTENGER. Yes; I yield to the gentleman.

Mr. REES of Kansas. Can the gentleman explain to the House how it occurs that this Congress cannot find $300,000,000 to build highways in this country, but can find over a billion dollars in a bankrupt Treasury to attempt to build projects that will not be completed for at least 4 more years? How in the world do you relate those things?

Mr. PITTENGER. Now, please do not make a speech in my time. The gentleman from Kansas is wrong about that. The St. Lawrence is a $285,000,000 project and not a $1,000,000,000 project, as some of the railroads and utility interests would have you people believe.

Mr. Speaker, let me say to the gentleman from Kansas that I was in favor of the bill to which he refers which had for its purpose the building of highways in this country and I voted to override the Presidential veto on that measure. In my opinion, that measure was meritorious. We need internal improvements, or if you want to call them that, we need domestic projects which ought to be planned for and many of them started even during this national emergency. So I have supported and shall support, projects which will build up America and develop its highways and transportation systems.

That is one reason why I am vigorously supporting the St. Lawrence seaway project, and the other projects in the rivers and harbors omnibus bill. This includes, so there may be no mistake, an authorization for the Florida ship canal. Let us keep the records straight and note that an omnibus rivers and harbors bill is nothing new in the Congress of the United States. It is the regular procedure for the Committee on Rivers and Harbors to have hearings on all requests and on all rivers and harbors projects and the War Department engineers appear and testify in connection with these projects. It is the rule for the committee to act favorably only on such projects as are recommended by the War Department engineers. We have no more efficient or able group of men than those same engineers. They do not recommend projects unless they can justify the same.

This ought to be sufficient comment to silence the cries of the enemies of the St. Lawrence seaway project to the effect that its friends are indulging in what is commonly known as pork-barrel legislation.

So that the gentleman and others interested may be properly informed, I will say that the St. Lawrence seaway project was before the Rivers and Harbors Committee for 8 weeks and witnesses from all over the world appeared before the committee. War Department engineers estimated our share of the cost at $285,000,000 and it was voted by 17 to 8 to include it in the rivers and harbors bill.

I have heard testimony since becoming a member of the Rivers and Harbors Committee, in connection with the so-called Florida ship-canal project. Everyone who adopts a national viewpoint and who believes what will help one section of America will help the people in the country as a whole, need have no hesitation in support of that project.

I expect at some other time to discuss it at length. Let me say, however, that from the standpoint of a national-defense project, it is sound and desirable. From the standpoint of commerce and other advantages, facts will justify its support.

It is about time, while we are spending billions of dollars for national defense and for aid to Britain, that we prepare to utilize the great river and harbor and transportation facilities of the United States. Such a program is far behind in the United States and the sums of money which Congress will be asked to appropriate for these purposes are very small in comparison with the billions that are now being spent and when the national and international emergency is over, will leave no tangible results. In our national economy, the rivers and harbors bill to be reported out of the committee by distinguished members of the Rivers and Harbors Committee to this Congress is one of the most valuable types of legislation which it will be the privilege of this Congress to enact when the committee brings the measure on for a vote.

The Democratic Party Is Not a War Party

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 14, 1941

Mr. RANKIN of Mississippi. Mr. Speaker, several days ago our Republican friends held a conference in this hall in which they adopted a resolution charging the Democratic Party with being a war party. I deny that statement. If a declaration of war were brought before this House today I do not believe there would be 10 Democrats vote for it on a roll call in the absence of some overt act against us. I make that statement advisedly, after discussing the matter with Members on the Democratic side.

The Republicans also attacked President Roosevelt. The President has never said that he was going to plunge this country into the European war. He did say he would not send American boys to fight on foreign soil. That promise has been kept.

I know there are a few agitators on the outside who want us to send an army to Europe. But where would we land an army? Suppose we attempted it. There is not a place in Europe we could land an army even if we wanted to. Do you not suppose the authorities of this Government know that?

I agree with the gentlemen who have spoken here today on this subject. I hope this movement on the part of the President will result in bringing this futile, senseless, destructive war to a close, and that peace will soon be reestablished among the nations of the earth.

Hon. George W. Norris

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1941

Mr. RANKIN of Mississippi. Mr. Speaker, on last Friday the House was not in session or I would have taken occasion at that time to felicitate one of the greatest authorities the common people ever had on passing his eightieth milestone. I refer to Senator GEORGE W. NORRIS, of Nebraska.

For more than 10 years—yes, for more than 15 years—I have fought with him on the greatest economic issue confronting the American people. That is the power question. I am prepared to say now that in his devotion to the masses of the American people, to the cause of the common man, he has been as "consistent as the northern star of whose true fixed and resting quality there is no fellow in the firmament." His name will go down through the centuries for the service he has rendered to the power consumers of America.

America's Obligations and Opportunities

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 14, 1941

ADDRESS BY WALLACE McCLURE

Mr. ROBERTSON of Virginia. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Wallace McClure, Assistant Chief, Treaty Division, Department of State, on the occasion of "I Am An American Day" before the Massanetta Springs Summer Bible Conference Encampment, Synod of Virginia, Massanetta Springs, Harrisonburg, Va., Wednesday evening, August 13, 1941:

Speaking at Denver in 1911 at the tercentenary celebration of the King James translation of the Bible into English, the former president of Princeton, then Governor of New Jersey, pointedly asserted that "not a little of the history of liberty lies in the circumstance that the moving sentences of

this book were made familiar to the ears and the understandings of those peoples who have led mankind in exhibiting the forms of government and the impulses of reform which have made for freedom and for self-government among mankind."

If Woodrow Wilson was right in so asserting, it surely follows that this English-speaking nation of ours, and particularly you and other groups like yours who, as special students of the Bible, must be considered leaders in your corporate capacity and as individuals in your separate communities, have opportunities for service to mankind and obligations to live up to them which are not universally possessed and the possession of which must be accounted a privilege and a responsibility of the first order in human affairs.

It is of importance that you should be keenly alive to this responsibility as you turn aside momentarily from your general purpose of Bible study to celebrate I Am An American Day, and to invoke the patriotic impulse which it implies. It is uniquely fortunate for us that the scene of our assembly, acutely conscious as we are of the lengthening shadow of the current world cataclysm, should be in what we may not inaccurately think of as the locality of Woodrow Wilson's birth, the place of the nativity of the Commander in Chief of the American Army and Navy in the most recent of his country's ordeals at arms. For, as you are poignantly aware, it is hardly half an hour's drive from this spot where we hold our evening's discourse that, 85 years ago, this great American President and great world statesman of the first World War was born. He was born, moreover, into the household of a man of the church, a man who knew and who taught the Bible and who was prepared to educate his son in public service according to Christian precept.

Some of you, doubtless, were present in May of this year when he who is President of the United States in these multiplying months of the second World War, the Commander in Chief's trusted lieutenant in the first, dedicated the old manse at Staunton as a permanent memorial, saying of Woodrow Wilson, "We applaud his judgment and his faith."

That judgment and that faith touching the needs of humanity in days which many of us yet vividly remember can hardly be a false guide to us today who, here in the Valley of Virginia, are seeking to understand a book that teaches us to serve our fellow men, teaches us that the pursuit of happiness is most successful when we follow the precept, "Even as ye would that men should do to you, do ye even so to them."

Patriotism claims service as its essence, service flowing from love of country, service that genuinely contributes to the public welfare. He is the greatest patriot who is the stanchest practioner of the Golden Rule. He is the greatest statesman who so leads his people that in the great world neighborhood they love their neighbors as themselves. Wilson was such a statesman. As was said of him at the time by a distinguished Japanese minister of the gospel, he seemed to rise above the imbecilities of war and to know no hatreds.

I

The thoughts of the Chief of the American State were centered upon the construction of peace; and, indeed, as the Acting Secretary of State said a few weeks ago, he "gave his life in the struggle to further the realization of the splendid vision which he had held up to the eyes of suffering humanity—the vision of an ordered world governed by law."

"The League of Nations, as he conceived it," Mr. Welles continued, "failed in part because of the blind selfishness of men here in the United States." To patriots gathered in any community of our country to ponder upon the implications of the phrase, "I am an American," this truth is of supreme concern. Blind selfishness is the nemesis of patriotism. We can no more serve country at the same time giving ear to greed than we can serve both God and Mammon. But to build for our country and our people an ordered and law-governed world in which to be and live is to rise to patriotic heights unparalleled save by those who, in its early beginnings, gave this country being and created for it national life. They did their part; it is for us of this day and time, if we would worthily carry on their work, to lend our influence to the end that the whole human neighborhood shall be for all of us a place in which our children can abide in peace and happiness.

To this end let those who now aimlessly cry "Peace, peace," when there is no peace, rather give the full tide of their energy to preparing for a just peace when the time for peace arrives. Their noncooperation now serves only to build up an antipathy for them that will render them impotent when the time of their matchless opportunity comes—their opportunity to thwart the greed and reactionism that will as surely endeavor to assert itself on the morrow of the second as it did in the wake of the first World War. The supreme test of patriotism now is and will be the exhibition of unshakable determination that the old myopia, the old stubborn self-seeking that has made of the world a battlefield, will not succeed in making the kind of a peace that can only lead to broken peace again, and, in endless vicious spirals, to fast-moving preparation for a third world war.

The League of Nations failed for other reasons in addition to the selfishness of some of our fellow citizens here in the United States, chief among them that "it was forced to operate, by those who dominated its councils, as a means of maintaining the status quo." It was never enabled to operate, Mr. Welles continued, in the way that Wilson had intended, "as an elastic and impartial instrument in bringing about peaceful and equitable adjustments between nations as time and circumstance proved necessary."

The patriot who is also a student of affairs well knows that no human institution stands and moves not. All things human change, and where there is no progress there is sure to be backsliding. The patriotism of the future will therefore be prepared at whatever sacrifice to see that the world's peace machinery is kept diligently in steady motion forward, "stretching itself to the measure of the times," as Wilson said was essential in the Federal Constitution, and vigorously eliminating all disruptive influences, whether springing from stupidity or greed, before they develop into the malignancy of war. The patriotism of the future cannot confine itself to national frontiers—for the peoples' pursuit of happiness cannot be carried on altogether within the physical confines of their respective territorial boundaries.

Yet it remains true, of course, that within those frontiers the need for completely self-forgetful service is as great as ever, for there are those who continually seek to blind us with false contentions that the supposed demands of their tiny group, or money-making endeavor, or restricted community are the needs of the Nation, and that failure to support special legislation for the fulfillment of those demands is unpatriotic and un-American. Precisely the reverse is more often true. Patriotism has no connection with all of us doing without in order that a few of us may have a disproportionate share of a diminishing national income.

Every man who would in good conscience take part in the celebration of future I Am An American Days must always take his stand unalterably against all forms of special privilege and must seek the maximum of production of the good things of life to be distributed as widely as possible toward meeting every individual's legitimate needs and reasonable wishes. That this shall be true is the most obvious prerequisite of economic security, and economic security is a fundamental condition of contentment, respect for law, local, national, and world order, and the maintenance of peace.

II

It is therefore a matter of prime importance as we prepare for the reconstruction of our affairs as human beings after the present World War that we think in terms of reducing and eliminating barriers to trade, well knowing that such barriers are likewise barriers to the creation and enjoyment of material goods, and well knowing that to neglect this basic phase of our national life is to neglect alike our opportunities and our obligations.

Inaugurating the Foreign Trade Week in May of the present year, Secretary Hull, in a radio address beamed to reach well-nigh all the world, remarked that:

"It is none too early to lay down at least some of the principles by which policies must be guided at the conclusion of the war, to press for a broad program of world economic reconstruction, and to consider tentative plans for the application of those policies.

"The main principles, as proven by experience, are few and simple:

"1. Extreme nationalism must not again be permitted to express itself in excessive trade restrictions.

"2. Nondiscrimination in international commercial relations must be the rule, so that international trade may grow and prosper.

"3. Raw-material supplies must be available to all nations without discrimination.

"4. International agreements regulating the supply of commodities must be so handled as to protect fully the interests of the consuming countries and their people.

"5. The institutions and arrangements of international finance must be so set up that they lend aid to the essential enterprises and the continuous development of all countries and permit the payment through processes of trade consonant with the welfare of all countries."

This is a program of enlightenment. It lays the foundation for plenty. "Too many human relationships, within and among nations," Mr. Hull had said on a former occasion, "rest upon the shifting sands of selfish search for immediate advantage."

Now, immediate or special advantage for some is all but invariably at the expense of the more important long-term welfare not only of the public generally, but even of the supposed beneficiaries. For the curtailment of production and distribution, reducing as it does the common wealth, must shortly threaten the very privileges that are carved out of it and bring down together, whether in war or economic depression, both the favored few and the underprivileged many. "Barbarism rather than civilized existence becomes the scheme of life" when such counsels are in the ascendancy.

The desire for wealth, if it is wisely directed is a desire for a world community in which all are prosperous, not one in which the wealthy must constantly be on guard against the machinations, sometimes real, sometimes imaginary, of those who have been deprived of opportunity to be wealthy, also. It seems incontestable that protection against the pauper labor of the rest of the world has cost American labor far more than would ever have been given up through reasonable collaboration with their fellow workers elsewhere, evidenced by more encouragement of the exchange of the respective national products than has heretofore been vouchsafed. We who are Americans, celebrating today that fact, can hardly be proud of our lack of judgment to say nothing of our selfishness. After all, liberality and equality are matters of common sense even more than of right and wrong Self-interest that is not enlightened defeats its own purpose. With enlightenment, under the scarcely to be challenged

rule that in the little world that ours has become what is best for all is best for each, it ceases to be selfish.

A liberal economic basis for a world organized for peace is the objective of every patriot who has learned the lesson that the years have taught, who has seen how economic strife leads to poverty, poverty to anger, anger to war.

III

It is war we have—shooting war all around the world. We in the United States have not ceased to strive to put out the fire that has crept steadily nearer with the months of our current years We may do well to pause for a few moments in order to remind ourselves of the cumulative events of the decade now coming to an end.

In his testimony before the Committee on Foreign Affairs in January of this year when the bill that has become an act further to promote the defense of the United States was under consideration Secretary Hull outlined the steps by which international relations had deteriorated since the present reign of lawlessness began

The first of the steps in this fatal direction occurred in 1931 with the forceful occupation of Manchuria in contravention of the provisions of the Nine Power Treaty and of the Kellogg-Briand Pact, upsetting the order created by the Washington Conference of 1921–22, and the setting up of a part of China of the Manchukuo regime under Japanese control established and maintained by force of arms. In July 1937, Japan embarked upon the present phase of its large-scale military operations against China, employing invading forces of more than a million men and setting up new puppet regimes where deemed expedient. Japanese spokesmen have left no doubt of an intention to obtain forceful mastery of an area containing almost one-half of the entire population of the earth, with consequent arbitrary control of the sea and trade routes in that region—a matter of immense significance, importance, and concern to every other nation wherever located. "Previous experience and current developments," Secretary Hull reminded his former colleagues in the House of Representatives, "indicated that the proposed new order in the Pacific area means, politically, domination by one country. It means, economically, employment of the resources of the area concerned for the benefit of that country and to the ultimate impoverishment of other parts of the area and exclusion of the interests of other countries. It means, socially, the destruction of personal liberties and the reduction of the conquered peoples to the role of inferiors."

Italy made the first overt breach of world order to be charged to a European country. This occurred with the conquest of Ethiopia in 1935, "in direct contravention of the solemnly accepted obligations under the Covenant of the League of Nations and the Briand-Kellogg Pact." This was followed in 1939 by the seizure of Albania, "in violation of unequivocal treaty obligations," and in 1940 by the Italian entry into the war being waged by Germany for a "new order" based upon "unlimited and unrestricted use of armed force," and by the attack upon Greece.

From the time Hitler and his associates came into power in 1933, Germany began the feverish construction of vast armaments—accompanied by an accumulating array of broken promises. Continuing his testimony, Mr. Hull said: "After employing for several months in the Disarmament Conference in Geneva tactics which have since become a distinct pattern of German policy—further demands as previous demands are met—Germany, in October 1933, rendered impossible any effective international agreement for limitation of armaments by withdrawing from the Disarmament Conference. There then followed nearly 6 years during which Germany, having determined upon a policy of unlimited conquest, moved inevitably toward the catastrophe of war." The entire German economy became harnessed to belligerent preparation. More than half of the national income was expended for military purposes.

Contemporaneously occurred a series of movements for strengthening the German strategic position, the occupation and fortification of the Rhineland in direct violation of the Locarno Treaty; the absorption of Austria, in direct violation of pledges given by Hitler to respect its sovereignty and independence; the dismemberment and eventual seizure of Czechoslovakia, in direct contravention of the most solemn assurances; the annexation of Memel. Then came, in quick succession, beginning 2 years ago, the brutal devastation of Poland, and, despite neutrality on their part scrupulously observed, the invasion and occupation of Denmark, Norway, Holland, Belgium, and Luxembourg; the defeat of France, with augmenting pressure to violate the armistice agreed upon with that country; and subsequently the seizure of Rumania, the disruption of Yugoslavia, and the overthrow of Greece. And now, in climax, a treaty notoriously entered into as a part of this wild plunge into destiny is itself accorded the fruits of the same contemptuous attitude and Russia becomes the scene of what has been described as the greatest battle in human history.

In the face of such a record, dare anyone say that there exists no danger to the American republics? Replying to allegations that, since Germany has not been able to cross the English Channel, its armed forces cannot cross the Atlantic, Secretary Hull said:

"German forces could cross the channel in an hour's time were it not for the fact that Britain, now thoroughly prepared and well armed, is fighting every hour of the day to prevent that crossing, and is fortified with every known device to repel a landing. The 20 miles of water between continental Europe and Britain are under British, not German, control. Were Britain defeated, and were she to lose command of the seas, Germany could easily cross the Atlantic—especially the South Atlantic—unless we were ready and able to do what Britain is doing now. Were the Atlantic to fall into German control, the Atlantic would offer little or no assurance of security.

"Under these conditions our national security would require the continuous devotion of a very great part of all our work and wealth for defense production, prolonged universal military service, extremely burdensome taxation, unending vigilance against enemies within our borders, and complete involvement in power diplomacy. These would be the necessities of a condition as exposed as ours would be."

That is why, throughout this lengthening crisis, your Government by both word and deed has constantly endeavored to stay the hand of the aggressor and to encourage the utilization of procedure within the bounds of law and order. It continues to do so.

In the conduct of your international relations it has directed its efforts to the following objectives:

"* * * (1) Peace and security for the United States with advocacy of peace and limitation and reduction of armament as universal international objectives; (2) support of law, order, justice, and morality and the principle of nonintervention; (3) restoration and cultivation of sound economic methods and relations based on equality of treatment; (4) development in the promotion of these objectives of the fullest practicable measure of international cooperation; (5) promotion of the security, solidarity, and general welfare of the Western Hemisphere."

In proceeding by whatever legitimate means have been available toward the attainment of these objectives, the United States has not turned its back upon pre-war peace machinery. Only this morning the old system of treaties for the advancement of peace, inaugurated by Secretary of State William Jennings Bryan prior to the first World War was confirmed by the exchange of ratifications of treaties between this country and three members of the British Commonwealth of Nations, Australia, Canada, and New Zealand.

We cannot tell what expenditure of our strength and our substance will be required of us that the task of consolidating our safety through the restoration and preservation of order may be completed, but after the force of the aggressor has been met by superior force in defense, after the method of unification by the sword has been outlawed and rendered ridiculous by an accomplished unification through intelligence we shall come to realize that more basic than the power of armed might is the power of persuaded and convinced collaboration. We shall then realize the essential truth of Secretary Hull's words with which he addressed on Christmas Eve 1938, the Eighth International Conference of American States at Lima:

"There are those who think the world is based on force. Here, within this continent we can confidently deny this And the course of history shows that noble ideas and spiritual forces in the end have a greater triumph. Tonight, especially, we can say this, for on this night nearly 2,000 years ago there was born a Son of God who declined force and kingdoms and proclaimed the great lesson of universal love. Without force His kingdom lives today after a lapse of 19 centuries. It is the principality of peace—the peace which we here hope in humble measure to help to give by His grace to the continents of America."

The peace that we hope may be given to the continents of America we likewise hope may be given to the world. "We of America," as Woodrow Wilson once said "long since learned that intellectual development and moral fitness are the most powerful elements of national advancements" Just after Christmas, 1918, standing in his grandfather's church at Carlisle, close by the Scotch border, and in the midst of a country from which so much of religious inspiration has been brought into the valley of Virginia, Wilson uttered his belief that while the first World War, concluded by the armistice of a few weeks previous, had "brought the nations temporarily together in a combination of physical force, we shall now be drawn together in a combination of moral force that will be irresistible.

"It is moral force that is irresistible. It is moral force as much as physical that has defeated the effort to subdue the world. Words have cut as deep as the sword. The knowledge that wrong was being attempted has aroused the nations. They have gone out like men upon a crusade. No other cause could have drawn so many nations together. They knew that an outlaw was abroad who proposed unspeakable things. It is quiet places like this all over the world that the forces accumulate which presently will overbear any attempt to accomplish evil on a large scale. Like the rivulets gathering into the river and the river into the seas there come from communities like this streams that fertilize the consciences of men, and it is the conscience of the world that we are trying to place upon the throne which others would usurp."

May it not be that from quiet places such as Massanetta Springs, where patriots are assembled to celebrate "I am an American Day," patriots who have learned the "stern lessons of duty" which Wilson learned from his Carlisle grandfather, there is growing irresistibly in these days the universal pledge that this war against force as the primary method of conducting human affairs shall be won and that there shall be established and faithfully maintained an order of human affairs that is hospitable to the enjoyment of life by human begins whose personal worth, individual dignity, and pursuit of happiness is the foundation of government.

For the Nation's Safety

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 14, 1941

EDITORIAL FROM THE PHILADELPHIA EVENING BULLETIN

Mr. MYERS of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Philadelphia Evening Bulletin of August 13, 1941:

[From the Philadelphia Evening Bulletin of August 13, 1941]

FOR THE NATION'S SAFETY

By the narrow margin of one vote the House of Representatives has accepted the 18-month extension of service of the men drafted or otherwise at present in the armed forces of the United States.

While the closeness of the vote gives cause for anxiety in its evidence that the gravity of the national emergency is not appreciated—or, what is worse, in many cases ignored for reasons of supposed political advantage—the essential thing is that weakening of the armed forces of the Nation, against which General Marshall warned, has been averted.

The attitude of those who resisted extension is irreconcilable with the action of Congress itself in voting conscription and passing the lend-lease bill. It cannot logically be squared with the manifest intention of Congress to tax the American people as they have never been taxed before, and to ask the country to submit to economic controls which can be justified only by the existence of a national emergency of the gravest sort.

If the country is in such grave peril that such measures are necessary, weakening of the defensive power of the Nation's armed forces through the disruption of Army units which the withdrawal of so many men this fall would bring about cannot be justified. The safety of the men themselves demands that they be more adequately trained for the task which they may face.

The country's gratitude is due to those in Congress who by their votes have placed the Nation's safety before all other considerations.

The Crime Against China

EXTENSION OF REMARKS

OF

HON. U. S. GUYER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 14, 1941

NEWS LETTER OF THE INTERNATIONAL REFORM FEDERATION, CAPITOL HILL, WASHINGTON, D. C.

Mr. GUYER of Kansas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a news letter of the International Reform Federation, of Washington, D. C.

The letter referred to is as follows:

[News letter of the International Reform Federation, Capitol Hill, Washington, D. C. Advance release from Progress Magazine for September 1941 by the editor, Clinton N. Howard]

Despite the heart-rending appeals for mercy from the long suffering people of China, and the protests of religious and civic bodies at home, the slaughter of millions in China, and the bombing of undefended cities, has continued for 4 years with the aid and cooperation of the Roosevelt administration until the hands of Uncle Sam are red with the blood of its victims.

But for American supplies of scrap iron, steel, copper, gasoline, petroleum, bombing-plane accessories, and machinery, the war in China would have ended in victory for the invaded country at least 2 years ago. At least Japan could not have continued the slaughter without our help.

UNRESTRICTED DESOLATION

Madame Chiang Kai-Shek declared at that time, "We can win the war against Japan, but we cannot win a war against Japan and America at the same time." In a scathing article in Liberty Magazine, December 21, 1940, she pointed out that her unarmed and defenseless people "were mowed down in their millions by the most ferocious and inhumane type of warfare that had even been let loose upon human beings in unrestricted desolation."

AMERICAN "GUARANTIES"

Speaking of international covenants, guaranties of territorial integrity and the open-door policy to which the United States is a signatory she continues "Treaties, agreements, and understandings have gone with the wind of self-interest, and so far as we of China are concerned, we have been virtually abandoned, and even victimized, by those whom we had been taught we could regard with unshaken confidence as our friends. * * * To our people it is unutterably sad that for three weary, heartbroken years of heroic resistance we have been left without help to combat a savage aggressor in a war which is not ours alone, but which is that of all democracies."

THE GOOD SAMARITAN

Not only did China receive no help "but the American Governm nt threatened its technical instructors working with the Chinese Air Force with loss of citizenship. * * * The American Government ordered airplanes bought by China before the opening of hostilities, to be removed from an American steamer then at a port on the west coast of the United States. * * * America amassed profits by selling to Japan the necessities of warfare. Eighty percent of Japan's war supplies and 95 percent of the aviation gasoline which was used by Japan in her ruthless bombing came from America. * * * China will remember never to believe in any international promises, no matter how many imposing seals adorn the documents. * * *. China was strangled to death by an economic noose fashioned out of British appeasement, American profiteering, and French fear. * * * The democracies have sown the wind and are now reaping the remorseless whirlwind."

DEAF, DUMB, AND BLIND

This was written 8 months ago, but to all of these appeals, at home and from China, the President turned a deaf ear. He has not deigned to offer any palliation or explanation to the appeals of church bodies, Federation of Churches, patriotic organizations, and organizations like the International Reform Federation, which has maintained a mission in opposition to the cultivation and sale of opium in China for 12 years, with a resident foreign secretary who was decorated by Sun Yat Sen, the first President of the Republic, for the success of our campaign in China.

One protest was recognized by our very able Secretary of State, Mr. Cordell Hull, which stated that any embargo imposed against Japan would have to operate likewise against China, at a time when Japan had closed every port of entry into China, and the paltry $25,000,000 American credit voted China provided that no part of it was to be used for military defense against Japan. It was an extension of credit for domestic purchases in the United States, while we were selling Japan military supplies to be used against China without condition or limitation.

EMBARGO AGAINST CHINA

One other protest addressed to the President brought an acknowledgment sidestepping the issue by stating that no action could be taken in imposing an embargo against such shipments to Japan without congressional legislation. Why then an embargo against the purchase of defensive weapons with the credit advanced to China? Why then this sudden embargo now placed against shipments of oil to Japan? Similar action could have been taken at any time since this undeclared war began, without waiting to lock the stable after the horse was stolen.

The President has allowed Japan to strip this country of scrap iron, steel, and oil for her undeclared war to bring China to her knees, or bomb her out of existence, until we find ourselves in the pot-and-pan stage of mendicant nations, with black-outs from 7 p. m. to 7 a. m., gasless Sundays, rationed gasoline, and an announced shortage of scrap iron and steel that will send junkman Harold Ickes into the garret and cellar of every home and the dump of every town and city. If this is our tragic situation while we are still at peace, what will it be if we become actively involved in a world war?

ARMING OUR ENEMIES

Why should this country, at peace for a quarter of a century, be short on raw material to prepare her for a defensive war? Because the administration has certified it for shipment to foreign countries, principally Japan, for use in her war against China. In the 5 years 1935–40 there was shipped from the United States 16,473,000 tons of scrap iron and steel of which 8,387,700 tons, 51 percent, went to Japan, against 16 percent to the United Kingdom, every ton of which is now sorely needed for the defense of the United States, possibly in a war with Japan, threatened for the last 2 years.

UNITED STATES NOW IMPORTING SCRAP

The shortage is so great that the Bethlehem Steel Corporation, which requires 300,000 tons of scrap per month to fill the Government defense orders is now obliged to import scrap from Mexico, Cuba, and South America at a price above that paid by Japan, according to the statement of Eugene G. Grace, president of the Bethlehem Steel Corporation, who further states, "It will require from 1 to 2 years to overcome the scrap shortage due to the heavy rate of exports over the last 5 years." A Nation-wide drive for the collection of iron and steel scrap, similar to the recent drive for scrap aluminum, is expected to begin in August, with another to follow for copper as the result of Japan obtaining 90 percent of her total importations from the United States.

SUBVERSIVE ACTION

These acts of sedition on the part of the administration "come very near the line of subversive action, if not treason," as Secretary Stimson charged against Senator WHEELER when three of his post cards against war inadvertently reached selectees by forward to the camps.

The President now gives as his excuse for this indefinite delay in placing an embargo upon oil shipments to Japan his desire to keep Japan out of French Indo-China and the

oil and rubber resources of the Dutch East Indies. Well, despite his appeasement policy, Japan is there without asking his leave—there with a full military, naval, and air equipment, with 40,000 armed men, within striking distance of the Netherlands Indies, Singapore, and the Philippines, with Hawaii and the Panama Canal in the offing, in the prospective battle of the Pacific.

After 4 years of sparring with the Yellow Peril, the President makes a feeble confession and goes down for the count. The President has been wasting American substance in riotous living and finds himself in the far country eating husks out of the yellow man's hand.

After 4 years' dependence on its American arsenal, on July 30 Japan sends another bombing fleet of 130 planes, probably made from American scrap and propelled by American gasoline, to blast what remains of Chungking, and takes a pot shot at the American gunboat *Tutuila*, at anchor on the opposite side of the Yangtze River, as a warning to America to keep her hands off of French Indo-China and the oil, rubber, and tin resources of the Dutch East Indies.

"A CLOSED INCIDENT"—LIKE "PANAY"

True to form, the yellow man apologizes and explains it was a foul hit. And foul it was. The whole seamy story is the foulest chapter that has been written since the outbreak of the war. Not against Japan, an acknowledged enemy, but against China, a country to whom we have constantly proclaimed ourselves to be a protector and friend. As foul as anything done by Hitler in Poland, Holland, and France, or Mussolini in Greece or Ethiopia, because they proclaimed themselves enemies while we have constantly proclaimed our good-neighbor policy toward China. We talked about "the more abundant life" and supplied the weapons for Japan to impose upon them the most abundant death suffered by any nation in history.

TESTIMONY OF AMERICANS

Julian Arnold, for many years a commercial attaché in the Far East, quoted on the floor of the United States Senate, said: "If one were to follow the Japanese armies in China and witnessed all the American mechanized equipment, he might think, except for the personnel, that he was following the American armies." Dr. Walter A. Judd, the American medical missionery, says that half the graves in China could be labeled "Made in America." Thus this administration has continued its heartless, soulless, brainless, criminal policy since the war against China began until this day.

Well might our Lord ask, "Which now thinkest thou was neighbor to him that fell among the thieves?" Our good-neighbor proclamations are "as sounding brass and a tinkling cymbal."

ADDING INSULT TO INJURY

The excuse of the President only adds insult to injury. Employing the same kind of logic, he should have been supplying Hitler with gasoline on the ground that if he did not do so it would drive Hitler through the Balkans to appropriate the oil fields of Rumania and Iraq. The two are analogous. And while the President has been sacrificing our oil supplies to keep Japan out of the Dutch East Indies, as he says, the Dutch East Indies, belonging to the Netherlands, whose government is now headquartered in London, made a 1940 treaty with Japan to supply her with 1,800,000 tons of oil per year, triple the shipment going to Japan previous to 1940—enough to fuel Japan's entire fleet, and much of its army, supplied by England's ally to Japan.

And to protect this oil supply, and keep it out of the hands of Japan, the President has continued to deplete the American oil reserves by keeping up our shipments to Japan. With the result, as stated by Secretary of the Navy Knox, "Japan has built up a war reserve of oil sufficient for 1 to 2 years of naval and military requirements."

If we go to war with Japan, now only "a spark away," as stated by Premier Konoye, she will fight us with American scrap and oil.

Contrast the basis for the charge of subversive action if not treason, made against a Senator with this diversion of the military resources of the country by the administration on the threshhold of war.

"LET'S LOOK AT THE RECORD"

The facts justify the implication a thousandfold more than the castigation of Senator WHEELER for his post-card campaign for peace. The administration has previously led the country to believe that an embargo had been placed against shipments of American gasoline to Japan.

On September 26, the fatal day when the alliance of Germany, Italy, and Japan, aimed at the United States, was officially proclaimed, our procrastinating President employed a power which his department chiefs denied he possessed, and put a ban upon gasoline to Japan. Later it was discovered that these shipments were not only continued, but increased and officially certified by our Department of State. Not a single order is known to have been rejected under this moral embargo plan.

The exports for March 1941 included 306,206 barrels of motor fuel, 103,372 barrels of aviation gas, 244,633 barrels of gas, oil, and distillates, 82,325 barrels of residual fuel, 84,207 barrels of lubricating oil. So it has been going month after month since the moral embargo of September 1940 was announced.

ALWAYS AN EXCEPTION

Since that time another embargo was declared against all shipments of oil to Japan, "except from Gulf and Pacific coast points." This was when we began to feel the shortage of gasoline on the Atlantic coast. Instead of shipping the surplus supply from the Gulf ports in the 50,000 oil cars said to be available for use to relieve the shortage on the Atlantic coast, shipments to Japan have continued up to this present date.

A MORAL BLACK-OUT

Secretary Ickes, "petrol peddler for defense," now estimates "Japan is importing 60,000 to 70,000 barrels of oil daily from the west coast of the United States." The last embargo applies only to such shipments of oil as are not sanctioned or licensed by the Government. But this did not operate as a restriction but resulted in an increase for 1940 as compared with 1939. For the first 6 months of 1941 the oil shipments with "official sanction," have averaged $4,000,000 per month, all of which has been used or will continue to be used to bomb the civilian population, massacre old men, kill women and children, and burn alive the babies of China, or fight the United States.

This policy of appeasement has proven a failure for the last 4 years and will for the next 4 years, should the war continue that long. It has not and will not restrain Japan from carrying out her plans to establish her greater Asia empire. Japan's occupation of French Indo-China in heralded by the official Japanese press as "the greatest victory and most splendid achievement of our history. * * * We are prepared to defend our lifeline to the last, as America and Britain are supposed to be prepared to defend theirs to the last." This is the challenge of Japan to the United States and Great Britain.

JAPAN'S OBJECTIVE

No military-minded man on three continents was surprised at this move by Japan except the Commander in Chief of the American Army and Navy, the President of the United States. The late Senator Sheppard, chairman of the Senate Military Affairs Committee, saw it coming, and confidentially predicted it a year ago. It is no betrayal of confidence now that Japan is on the march, and the President has acknowledged it.

It was the undeclared objective of Japan in every movement she has made since the annexation of Manchuria, indicated by the invasion of China proper, followed by the seizure of the coastal islands, ports of entry, Formosa and Hainan, and climaxed by the occupation of Saigon, the coastal base of French Indochina, with her covetous eyes on the Dutch East Indies, as her next objective, which any military-minded man could have foreseen 2 years ago, and prevented entirely if American military supplies had been cut off.

It is to be hoped that the American people will escape the merited punishment of this short-sighted policy of the administration and the Chinese massacre by the bloody hands of Uncle Sam.

We have found no pleasure in telling the story again, but since every other public man is to be held up to public scorn and charged with "subversive activity against the United States, if not treason," for exercising the right of petition and free speech, then the administration must be held to a strict accountability for surrendering the military resources of the country to its potential enemies.

BEAM AND MOTE

One million post cards mailed to American citizens, with no attempt at concealment, and open to the knowledge of every postmaster and mail carrier in the country, is a million times less subversive and treasonable, than 10,000,000 tons of scrap iron, and $400,000,000 worth of American gasoline, petroleum, and military supplies, sold under cover of Government license to our potential enemy, to be used to complete the destruction of China or begin the destruction of the United States.

EXTRA! EXTRA! EXTRA!

Since the above article was written the President has taken summary action against Japan, with the approval and acclaim of the entire Nation. In retaliation for the entry of Japan into French Indochina the President has issued an order, exercising the power under the Constitution which he has always possessed, of freezing all Japanese assets in the United States and placing (another) embargo upon all petroleum products from the United States. It also puts an end to the $100,000,000 silk purchases from Japan by the United States, which is about 80 percent of her entire silk industry. As stated previously, her trade in this country in gold credits during the last 3 years amounted to over $450,000,000.

If Great Britain and the Dutch Indies join the United States in this new embargo, as is now indicated, it is difficult to see how Japan can recover from the blow, unless it comes too late to stop her military progress beyond Indochina, and there are no leaks provided in the order of the President for shipment by special licenses, as heretofore.

The long hoped for action has at last been taken, which we pray will bring new hope to shattered China and promote the peace of the world. The President is to be thanked, despite the delay, and all America will close ranks to stand by the action in defense of justice for China and the security of the United States of America.

Let Us Keep Faith With Young America

EXTENSION OF REMARKS

OF

HON. HENRY O. TALLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

Mr. TALLE. Mr. Speaker, yesterday was a solemn occasion in this Chamber.

A departed Member was beautifully and appropriately eulogized. His virtues were those of a true American. I join with his friends in saying: "Well done, thou good and faithful servant."

This is another solemn hour. We have met to consider a proposal which affects the lives of our young people. We have met to decide whether faith shall be kept with young America. The proposal has its roots in the frailty of human nature and can be defended only on the ground that "All the ways of a man are clean in his own eyes."

In the old copybooks used in the little country schoolhouse away back in the horse-and-buggy days, some gems of truth were set for boys and girls to copy as they learned the now almost forgotten art of good penmanship. Here are some of them from the pen of Benjamin Franklin:

Haste makes waste.
A penny saved is a penny earned.
He who goes a-borrowing goes a-sorrowing.
Honesty is the best policy.

The shades of these friends of my childhood days are still with me, and that is why I have so often been amazed and astounded at the proposals which have come before the Congress during the past 8 years. More is the pity that so many of them have been enacted into law.

Mr. Speaker, there is something vital and fundamental at stake in this issue. It touches the moral fiber, the very character of the American people. It is an issue which involves the good name of the United States. That is why I voice my gratitude to our able and esteemed Speaker for his frank and clear-cut statement quoted in the Washington Post under date of July 10, 1941:

We have made a contract with selectees that they stay in the service for only 1 year * * * I am definitely not in favor of amending the law to require their retention on active duty after their 1-year term has been served.

When our Nation was born and the Thirteen Colonies were united under the Constitution, faith was kept with the creditors who had claims against the several parts then welded into the Union. That was honesty; that was wise finance; that was statesmanship. The American people have never had occasion to regret it. The Nation's credit sprang into life. Confidence was established. Faith had been kept.

Shall we today, a century and a half later, be less faithful in a matter which touches the lives of our young people? I pray you, let not the good name of the United States be tarnished.

Mr. Speaker, I am among those old-fashioned people who believe that a government, like an individual, will be better off by keeping its word than by breaking it. For 8 years promises have been broken. The breaking of promises has cost our people much money; it has upset our economy; it has well-nigh destroyed our Republic. There is but one hope left now—good faith among men.

Over the portals to his Inferno Dante inscribed the words, "Leave hope behind, all ye who enter here." Let us not promise our young men that they shall get their jobs back after 1 year of military training, and then proceed to destroy our economy so that there will be no jobs for them when they return. Let us not promise them a definite term of service and then proceed to make that term indefinite. Good faith, my countrymen, is the foundation stone of civilized society.

What is the purpose of it all? Are we preparing for another A. E. F.? Are we embarking upon a crusade to press down upon the brow of all the peoples of the earth the so-called "four freedoms," whether they want them or not? Is there to be another unknown soldier so soon?

Mr. Speaker, I beg leave to quote from memory a few lines from the poem, The Unknown Soldier, by Carl Sandburg:

And so today we lay him away,
The boy nobody knows the name of,
The buck private, the Unknown Soldier,
The doughboy who dug under and died,
Because they told him to—that's him!

Is that the purpose? Shall the doughboy be told to dig under and die as a victim of another crusade into far countries?

Mr. Speaker, Singapore is not a suburb of San Diego and it is still a long way to Tipperary. Our young people are not craven or cowardly. They are as patriotic, as courageous, and as ready to defend their country as were the farmers who fought by the rude bridge that arched the flood in colonial Massachusetts. But like those embattled farmers, their hearts are not in foreign lands. They are right here, right here in the United States. And that is as it should be.

America's Protection First

EXTENSION OF REMARKS

OF

HON. E. HAROLD CLUETT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

Mr. CLUETT. Mr. Speaker, it is to be regretted that this House is divided on the principles involved in House Joint Resolution 222. Although the measure as amended has passed, an impression must be left with the American people that the vote was not decisive and that unity, which the country is so earnestly demanding, has not been found in the Halls of Congress. It is not now too late to have that unity and a tolerance for the opinions of those opposed to our views, which will bring us closer together in an effort for our common purpose. In the heat of debate so many statements are made which I wish might be struck from the RECORD. Our differences are not, and must not be, insurmountable. The fact of such a sharp division between the Republican and Democratic Representatives must call for a sharp protest and inquiry into the fact that, in spite of protestations from each side of the aisle, that this was not a partisan matter, we find only 20 Republicans voting for the bill. I still claim that this bill and all its wide implications are not partisan matters and that the vote recorded will not bring cheer to our men in uniform nor to our people generally because of its indecisiveness and partisan aspects.

One does not need to be an economist or expert on army or naval affairs, or a diplomat, to form some judgment on the course of our national and international path; and as a Member of this Congress I feel, as every Member must feel, an obligation and solemn duty to express himself on these problems. The times are too serious to quibble over the dots and dashes of parliamentary debate. Literally hours are wasted in unfair attack and meaningless argument. Today every hour and every minute of the day may mean the loss of a precious advantage in our defense effort. I have weighed in my own mind, as all of you have, the evidence of the press, the radio, the spoken word, to determine at this very dark hour what is best for America.

We can be certain that we are not spending billions and arming and training a million and a half men just for fun. I am in favor thus far of the President's foreign policy, as I have been unalterably opposed to most of the New Deal. We can continue our opposition to these policies, but let us not tie those problems to the far more dangerous ones of foreign policy and our efforts for national defense. Such an attitude is useless and unpatriotic. It is without doubt true that 80 percent of our people wish to keep out of war. We can all say "Amen" to that, but to withdraw our aid and shut our eyes to the possibilities of a complete German victory over the entire Continent of Europe is cowardly and unthinkable. We must take the risk of involvement. We do not want and there is no present need of another A. E. F. The possibility of some land and naval forces at some strategic points may be a necessity. Let us stop the cry of whether Iceland is on the twentieth degree or the twenty-first and a half degree of longitude. It is a tremendously important port if we are to help win the battle of the Atlantic and get supplies to Britain. Who can decide best the location of these critical bases but our Army and Navy experts.

This war will not be won if this Nation is unwilling to assume risks. We have done so for a year. How loud a cry was raised when destroyers were ordered overseas. How big a rumpus was raised at our allowing the repair of friendly vessels in our harbors. How loud was and is the protest against fleets of bombers rushing each day across the Atlantic, some reported carrying explosives. How disturbing to the isolationists the fleets of patrol vessels engaged in a most dangerous mission in guarding our sea lanes. Let us argue and delay all aspects of international law and the rights of Congress, and then send Hitler a blueprint of our intended operations. If we are to have this much-wanted unity, let us stop this criticism of the President, of every step he takes. I cannot and will not believe he nor any true American would deliberately take us into war unless every other means of protecting America were exhausted. I am unwilling now and have been unwilling to

follow the advice of ex-air colonels, rabid and politically minded Senators, of groups of Republican have-beens in determining my opinions of domestic and foreign policy. I have voted for the lend-lease bill and all appropriations in aid of national defense because I wanted this Nation and those fighting for us to be so strong that no nation or group of nations could overcome us. That record is clear, and the district I have the honor to represent has with remarkably few exceptions approved of my position.

Does it not suggest itself that the people of my district, one-quarter of a million strong, a thrifty, intelligent, patriotic community of men and women, are not unaware of the critical times we are passing through, but that they have confidence in those who are directing them from the high offices to which they have been chosen, and have not shown by word or letter that they disapprove the policies of this administration in its conduct of foreign affairs, and I shall proceed to act with that assumption.

I believe a majority of our people would today approve the steps taken, and be willing to take extreme risks in our operations on land and sea if they realized our peril. Our opponents will ask, "What peril? Who is planning to attack us, and where and when?" Can anyone who has read Mein Kampf, John Gunther on South America, Van Paason, or Douglass Miller, fail to understand the distinct and unanswerable conclusion there drawn of America's danger, economic as well as military?

Proofs of this kind fall on deaf ears as meaningless, visionary, war hysteria, and propaganda. More interest in the sales of their books than in facts. No danger from Alaska. No danger from Mexico or South America. No danger in the fall of Britain, in the capture and destruction of their fleet. All is well with the world. Let us go about our business as usual. Ah, yes; another cry. Let us look after our troubles at home. We have enough to worry about here without bothering about Russia, or China, or the Dutch East Indies. Indeed we have these troubles, and here I part with the New Deal and their coddling of labor, the National Labor Relations Act, and the protection afforded these many years to Communists.

What a national disgrace, these strikes against vital defense industries. Strikes and disorders of a contemptible character by racketeers and agitators and Communists against the free will of honest, intelligent American labor. Strikes so violent and so criminally organized that the orders of the United States Government are flaunted and ridiculed. Any discussion we may have regarding the length of service of our citizen army must be coupled with the continuing strikes against defense industries. The old maxim, "You can't strike against the Government," seems meaningless, and while the Congress wrangles about holding intact our present force, we appear helpless in the face of these difficulties. The War Department states that between January 1 and May 15 of this year strikes in Army projects and armament orders alone caused the loss of 1,675,773 man-days of production. Unless this situation is corrected, and quickly, we will have the men without the guns. Nothing more unfair and serious can well be imagined. Yes; we are fighting on two fronts, and we intend to win on both of them, because that is the will of honest, free-thinking, loyal Americans.

Perhaps some of the above reasons can be cited for the retention of our selectees, National Guard men and reservists. For years we have neglected to train even a respectable peacetime army, and now is the time, if ever, to let this Nation and every nation know that we intend to make America strong for any eventuality. Do not let us gamble longer with security. Let us tell our selectees plainly that their Commander in Chief believes their continued service necessary in the interest of their country's protection. What do these men think of the utterances on the floor of the House; that they are being held by subterfuge, unfair dealing, broken pledges, warmongering? Talk about weakening the morale of these men. What could dishearten and disrupt them more than to proclaim publicly that their Commander in Chief and Chief of Staff are playing politics with their difficult and dangerous duties? Our wish is to send them home at the earliest moment, to restore them to industry and peaceful pursuits, but the demands of these critical times urge us to pause and consider well all the serious results involved in such a wish. An officer commands, a soldier obeys, and I cannot believe—and I have noted no evidence in support of any gossip—that the men in our camps, or wherever they are serving, will not accept as good soldiers any order retaining them in the service of their country. Just recently the following remarks were made by the national commander of the Disabled Veterans of the World War. I quote:

> We who served in the World War know of the unfortunate consequences of the inadequate training of many of the men who were under fire then. It is the opinion of this organization (the D. A. V.) that, while the service extension may be a temporary hardship in some cases, it would be an unfortunate thing to send men again to conflict without adequate training.

I regret that a letter which I presume all Members of this House received, arrived too late for incorporation in the debate. Signed by the director of the national legislative committee of the American Legion, I assume it has the support of that body. I quote:

> For 20 years the American Legion has advocated and presented to the Congress a program for universal military training in order that the young manhood of our country would be prepared to serve efficiently in the event of an emergency.
>
> On September 16, 1940, the Congress enacted the Selective Training and Service Act of 1940. Congress did this because of the emergency threatening the country. Certainly, the crisis confronting us is more serious today than it was at that time.
>
> The national commander, Milo J. Warner, has repeatedly stated to the country that the American Legion feels the situation demands the enactment of necessary legislation to insure keeping intact, during the emergency, troop units already trained, and retention of selectees in service.
>
> The American Legion supports unqualifiedly legislation extending the training period for an additional 18 months, and we request your support of this legislation.

Many people criticize the polls gathered by the American Institute of Public Opinion under the directorship of Dr. George Gallup, an honest, able investigator, rendering a most useful service to the American people. In a letter addressed to me under date of August 7, 1941, he states:

> "Which of these two things do you think is more important for the United States to try to do—to keep out of war ourselves or to help England win even at the risk of getting into war?" Before the fall of France we found voters 2 to 1 in saying it was more important to keep out of war ourselves. But by the late summer of 1940 this picture had almost exactly reversed itself; the institute found voters 2 to 1 for helping England even at the risk of getting into war.
>
> From this fundamental revaluation of the European conflict has sprung a whole series of specific new attitudes. Since that time we have found the following:
>
> A majority for the lend-lease bill.
>
> A majority for vast defense appropriations.
>
> A majority approving the occupation of Iceland.
>
> A rather slim majority in favor of convoys.
>
> A very large majority willing to fight if any part of the Western Hemisphere is attacked.
>
> And we found 68 percent saying they would rather have America go into the war than see Britain forced to surrender.

These statements are most interesting, and indicate that a majority of the American people are fully conscious of their danger, and thus far are not opposed to the existing policies of our Government. Conscious of these facts, our Nation will not now turn aside, but face the future with its untold sacrifices bravely and resolutely until our safety is secure.

The American People do not Want Another A. E. F.

EXTENSION OF REMARKS

OF

HON. ROSS RIZLEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 14, 1941

RADIO ADDRESS BY HON. ROSS RIZLEY, OF OKLAHOMA

Mr. RIZLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I made last Sunday night over the radio:

> The question foremost in the minds of the vast majority of the American people is, "Are we to have another A. E. F.?" As the war progresses in Europe, Asia, and Africa, when considered in connection with our own foreign policy, the American people are constantly asking this question, "What is our objective?" Or perhaps better said, "What is the ultimate intention of those in charge of the administration of our foreign affairs? Just how far do we intend to go? Do we intend to send an army to Europe, Asia, or Africa to assist Britain and Russia if that is necessary in order to defeat the Axis Powers?"

I am thoroughly convinced that the opposition to the present program, if it may be termed such, and certainly much of the opposition to the extension of the time of the selectees from those who are not isolationists in any sense of the word, but who are unalterably opposed to an American expeditionary force, comes from the fact that they have no assurance whatever of the ultimate intention of our Government in this respect. From the outset much of our dealing with the European nations has pointed in one direction. It is not a question of whether we agree or do not agree with the foreign policy of the administration, if we merely intend to lend our aid short of war to the democracies—that is one thing. If, however, we intend to go all of the way and again send our soldiers to fight and die in Europe, Asia, and Africa, that is another thing.

It is interesting to review from our own standpoint the events of the past 3 years, which are now history, and from this chapter of events try to ascertain just what is the ultimate aim and intention of our Government, and I am indebted in part to a recent feature story appearing in one of the papers for a portion of this review.

Prior to the actual outbreak of hostilities in Europe, among the very first things that happened so far as we are concerned was our summarily recalling of Mr. Hugh R. Wilson, our Ambassador to Germany. That was in the fall of 1938. It was a barbed gesture on our part, and Berlin clearly demonstrated its irritation by shortly thereafter recalling its ambassador from Washington.

Through the "era of the Munich delusion," as someone has put it, we played our cards pretty close to our bosom, sharing the hopes of most of the world that lasting peace might grow from this fantastic planting of shark's teeth. It did not, and when in 1939 the war came and German armies had swarmed into Poland, less than 18 hours thereafter the President again sounded the keynote for the continuing attitude of our Government by taking the radio and saying, "I cannot ask that every American remain neutral in thought. Even a neutral cannot be asked or expected to close his mind or his conscience." This certainly was notice to Germany of the direction that American thinking was going to be guided.

Continuing at least the mental pressure on Germany, the administration continued its goading of the Nazis by pushing through the Congress an amendment of the neutrality law permitting the purchasing and importing of munitions and war supplies—a step of great benefit to Britain, but of no help to Germany. Also, the so-called neutrality patrol in our Atlantic waters, apparently under orders from the beginning to give out information pertaining to any Nazi shipping or raiders in this half of the world. A system which had for its purpose protection for Britain's carriers and guaranteed danger to German vessels. Then in the spring of 1940 came the big blitzkrieg. One by one the hordes of the German Army occupied Denmark, Belgium, Holland, and Norway. Then came the crack-up of France, and it was then that the Italian dictator, thinking he could see the end in sight, got busy, and we verbally slapped him down by referring to the fact that he had stabbed in the back a swooning France. And that went down in the books against us in both Berlin and Rome.

While we have been sticking our necks out and courting trouble, we had not up to that date done very much of anything toward preparing as a nation to back up our position, and it was then that undoubtedly someone must have said, "Mr. President, I don't think that we can keep up this name calling and this taking sides and this policy of aid to one group as against the other without getting in trouble ourselves, and we are not too well prepared."

And so on May 16, 1940, the President asked Congress for $1,182,000,000 for defense authorizations and appropriations. Two weeks later, on May 31, he further called for $1,270,740,000 more. On July 10, for an additional $4,848,000,000, and obviously the Congress realized that what had been going on was likely to result in more than just a word battle and in response to the President's request for these huge appropriations, the Congress said, "Yes, Mr. President, we realize we are either going to have to put up or shut up." It takes money and lots of it to build planes, tanks, guns, bombers, and battleships, and the appropriations were made, and that Congress and the present Congress have continued to make these appropriations until we have now authorized and appropriated for what we term national defense, including aid to England, more than $52,000,000,000. This is more money than we expended fighting World War No. 1. These huge appropriations for armament were implemented by the Congress when it passed the Selective Service Act assembling and calling into service the largest peacetime army of all time in the history of this country. And we might go on.

Of course, a lot of things have transpired that are pretty hard for the common, ordinary folks to exactly understand. Notwithstanding all of this belligerency by us in favor of one side as against the other and notwithstanding all of the huge preparations that were in the making to build up a large fighting force, when the national election came along both of the great political parties met in convention and solemnly promised the American people that we were not going to war. It is a fact, however, that before the ink was hardly dry on these solemn pledges, we gave the Nazis another uppercut by the so-called trade to Britain of 50 American destroyers for the right to occupy 8 Atlantic naval bases. It was an aggressive step on our part and showed the Nazi Government that we were a potential foe who did not choose to sit and wait for each unfolding of Hitler's strategy.

Following the destroyer incident, plus all that had preceded, notwithstanding the solemn pledges of party platforms that we would stay out of war, many of the American people, in view of all that we were doing, which looked warlike to them, were still skeptical and uncertain as to the genuine intention of our Government. Many of the things that we were saying and doing didn't appeal to their common sense as the best method to be used if we were sincere in our statements that we intended to stay out of a shooting war. Even our candidate for the Presidency on the Republican ticket became quite voluble in his denunciation of the administration and went so far as to say on many occasions that the policy we were pursuing would certainly lead us into a shooting war, and that the reelection of President Roosevelt would mean our active participation in the war. It was after this challenge that Mr. Roosevelt gave his positive assurance to the fathers and mothers of this country that their sons would never be called upon to fight upon a foreign battlefield, and in no event would we actively participate in the war except in the case of actual attack. This further solemn promise of the President came as a reassurance to those who do not want to go to war. And for the time, at least, their apprehensions were somewhat allayed.

In November came the election, the battle of ballots was over, and the President came before the American Congress and indicated in no uncertain terms what he was thinking about so far as our future policy is concerned. He said, and I quote: "I ask this Congress for authority and for funds sufficient to manufacture additional munitions and war supplies of many kinds to be turned over to those nations which are now in actual war with aggressor nations. Our most useful and immediate role is to act as an arsenal for them as well as for ourselves. They need billions of dollars' worth of weapons of defense * * * Let us say to the democracies, 'We Americans are vitally concerned in your defense of freedom. We are putting forth our energies, our resources, and our organizing powers to give you the strength to regain and maintain a free world. We shall send you in ever-increasing numbers, ships, planes, tanks, and guns. This is our purpose and our pledge.'"

And in that memorable address he finally concluded by saying, "In the future days which we seek to make secure, we look forward to a world founded upon four essential human freedoms. The first is freedom of speech and expression everywhere in the world. The second is freedom of every person to worship God in his own way—everywhere in the world. The third is freedom from want—which, translated into world terms, means economic understandings which will secure to every nation a healthy peacetime life for its inhabitants—everywhere in the world. The fourth is freedom from fear—which translated into world terms means a world-wide reduction of armaments to such a point and in such a thorough fashion that no nation will be in a position to commit an act of physical aggression against any neighbor—anywhere in the world."

With these noble sentiments and concepts, of course, no one can find fault, but the question which was uppermost in the mind of everyone at that time who heard or read those utterances, and is still uppermost in the minds of the American people is just how far and to what extent will this country go to establish these four freedoms everywhere in the world. Subsequent utterances of our President on many occasions since that time again present to our people the burning question of ultimate intention "How far will we go?" Will it be aid short of war in order to accomplish these objectives, or will we go the whole way if that is what it takes? Did we mean it when we promised that our aid should be short of war, or do we intend with the full strength of our military might to plant our flag everywhere in the world to carry out these objectives? This is the thing that has brought confusion to the vast majority of the American people and the tragedy of the whole thing seem to me to be this—that those who attempt to direct the thinking of this country and more particularly the press and a vast majority of the commentators, leave no room for a middle ground. They make their own division of the country and classify the people as either isolationists or interventionists. I believe that there is a middle ground that can rightfully be occupied and I firmly believe that the vast majority of the people in this country belong to that middle-ground class. They are neither interventionists or isolationists. They want to build and make our own defenses so impregnable on the ground, at sea, and in the air that no aggressor nation or group of aggressor nations will ever dare attack us. They sympathize with every nation in Europe that has been crushed by the aggressor and are willing to lend or give, if necessary, all aid short of war to those who are fighting to regain their freedom.

Yes, my fellow Americans, they are willing to go in for an all-out sacrifice if needs be to make our country safe and strong. They may wonder just a little bit sometimes, just how much some of those who are talking the loudest about all these sacrifices we are to make, intend to make themselves.

On the other hand they do not want to send our sons to Europe, Asia, or Africa to engage in foreign wars for the purpose of attempting to try to solve and settle the problems of the warring nations. They do not want and will not have another A. E. F. This I am sure is the way that 80 percent or more of the American people feel about

this war picture and the sooner the President of the United States can give some positive assurance to the American people that we will not have another A. E. F. the sooner we can expect to have unity in this country.

As I have suggested both of the great political parties promised the American people that such was and would be the case and nothing has transpired or can transpire to warrant a violation of that solemn promise. I realize that human affairs, national and international, viewed from the standpoint of a nation, are complex and dominate factors that often are neither ascertainable nor predictable. I come from the great Middle West and I realize that our people in Oklahoma are not as directly affected by the European war and the Asiatic war, either economically or emotionally as the people who live in some other parts of the country. Very few of us have near kinfolk in foreign countries, investments abroad, or interests in international organizations. Probably we feel safer because of our inland situation. It seems to me that in this great Middle West area that the people are inclined to a relatively dispassionate view of the international situation. Possibly chiefly because of the reasons that I have heretofore mentioned. Be that as it may, I sincerely believe that more than 80 percent of the people throughout the entire Middle West, sizing up the whole picture, are pretty much in accord with the following policies:

First. They believe the United States should continue with our preparedness program continuing to increase our naval, land, and air forces to such a degree of efficiency that we can successfully defend the whole of the Western Hemisphere, if needs be, against any aggressor or combination of aggressor nations.

Second. That aid to the democracies should be continued in order to enable them to obtain their needed supplies from us, but that we should not enter into methods of warfare in order to deliver goods to them, and that we should not underwrite their success in their present struggle.

Third. That our frontiers are not on the English Channel, the Rhine, the Mediterranean, the Yangtze, or the East Indies, unless we enter the war and make such a choice of frontiers. That the choice of these frontiers when we are at peace implies an intention to dominate the world through our naval, air, and military might.

Fourth. That entry into this war by us will result in impoverishment of the American people, and when complete victory is gained, the economic power flowing from the victory will not be sufficient to pay us for the costs of the war in dollars and cents, to say nothing of the suffering, sorrow, and tears that war would bring.

Fifth. That after having entered the war and after having won the war, we would have to assume the role of an international policeman for an indefinite time and would have to support this position by maintaining indefinitely great naval, air, and military forces throughout the world. That we would have to remain so prepared so as to maintain in all of the countries of the world such a huge army so as to be in a position at all times to support our judgment against the judgment of the people whose order we had undertaken to preserve and whose territorial integrity we had agreed to maintain.

Sixth. That if we do not enter the war, we will, after the war is ended, be able to meet our economic competitors in the international field successfully.

This I believe fairly sums up the thoughts, the wishes, and the hopes of the great majority of our people. They hate Hitlerism and everything it advocates. They hate communism with all of its undermining influences and characteristics. Both are contrary to every conception of American ideals and our free institutions. They resent being called Nazi sympathizers simply because they oppose sending our sons to again fight and die and rot on European and Asiatic battlefields. They know that war is wholesale violence. It is not glorious. It is not magnificent. It is cruel. It is sordid. It is the destroyer of life and of property. It unleashes the most violent passions in the breasts of men. It empties homes of loved ones. Most of the war pictures in historical textbooks and on the walls of museums are a fraud and a deceit. They show a few men flushed with victory marching into a conquered town. They do not show the dead and rotting bodies upon the battlefields. They do not show the bitter tears of womanhood and the tons of youthful blood that incarnadine the ground. They do not show the pestilence of disease ravishing a conquered territory.

War is not blown bugles. War means blackouts and the silent thrust of frenzied bayonets and the shrieking of shells and the speeding of vulture bombing planes across the sky and the blood foaming from the mouths of the wounded and the unheeded rattle of the dying. There is only one real museum of war—the hospitals where armless, legless, and blinded, butchered men wait the reveille of eternity.

There is only one true monument to war—the white crosses on unnamed graves in national cemeteries. Yes, our people hate war. They will give their all in the defense of this country, but they do not want and they will not have another American Expeditionary Force.

State Socialism

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 14, 1941

LETTER FROM A. S. ANDERSON, PHILIP, S. DAK.

Mr. CASE of South Dakota. Mr. Speaker, under permission previously granted, I offer for the RECORD a terse letter which I have received from Mr. A. S. Anderson of Philip, S. Dak.:

PHILIP, S. DAK., *July 25, 1941.*

HON. FRANCIS CASE,
Washington, D. C.

DEAR SIR: A farmer brings a load of wheat to the grain elevator but before he can market it he must produce his wheat-marketing card. If he belongs to the A. A. A., well and good, if not, he pays a penalty of 49 cents per bushel for noncompliance.

A workingman applies to a defense plant for a job. Before he can get on the pay roll he has to get a union card.

I ask you if this is free enterprise? I should call it regimentation, state socialism, planned economy. It is the philosophy of the dictators.

There is no escape even in death. Our social security number is placed on our death certificate.

Yours truly,

A. S. ANDERSON.

Priorities In Spending

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, August 15 (legislative day of Thursday, August 14), 1941

ADDRESS BY HENRY M. WRISTON

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able speech made by Dr. Henry M. Wriston, president of Brown University, and chairman of the Citizens' Emergency Committee on Nondefense Expenditures. This speech merits the attention of all citizens of our country.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WE MUST HAVE PRIORITIES IN SPENDING

American public opinion must by this time be fully alert to the fact that great sacrifices are to be demanded for the citizens of the United States. When, on July 10, the President asked for $4,770,000,000 more in appropriations for the War Department, he gave notice that he was going to ask for further billions for the Navy and lease-lend program—doubtless well over seven billions. Upon hearing that news, even the Secretary of the Treasury remarked that it would require a restudy of the whole fiscal position of the United States, and intimated broadly that additional new taxes would be demanded. "We have got to take a new look at the picture. * * * The new figures give us an entirely new situation." Congress is now considering a bill designed to raise $3,500,000,000 more than the tax bills of previous years.

On July 14, Leon Henderson, Price Control Administrator, said: "Every person will be touched, and many will be touched harshly, by the defense program. The first year of this program to protect democracy here and abroad brought little change in our ways of life. * * * It becomes my disagreeable duty to tell you that the party is over. Not that you didn't sense it before, but it needs to be brought home to housewives and businessmen so that, in true American fashion, we can stir our stumps and get busy handling the situation."

To put it, perhaps, in the shortest possible terms, in the present fiscal year the United States is intending to spend through the Federal Government alone, omitting completely from consideration State and county, municipal, and other local expenditures, about one-fourth of the total national income. Such figures ought to challenge the attention of every American citizen.

PRIORITIES IN SPENDING

There is a second fact which is of like fundamental importance. We are hearing a great deal, and necessarily so, of priorities. That is to say, certain kinds of things are held to be more essential than other things which are desirable but not indispensable. Those items which are given priority must be produced and distributed whether other goods, which are equally desirable or even more useful in normal times, are available or not. For example, we are all aware of the

drive to collect aluminum and of the severe restrictions upon the use of aluminum in manufacture, except for defense purposes. That is only the most widely advertised instance, but it is typical of many, many others not so well publicized. Everyone recognizes that a system of priorities is essential, that it is inescapable, and that it would be a great mistake to try to get along without it.

Now, the striking thing is that these two ideas, the idea of enormous and sacrificial expenditure for defense and the idea of priorities, have not been effectively brought into contact in the mind of Congress. We can see this when we look at recent appropriations. The Citizens Emergency Committee is designed specifically to demand of Congress that it establish priorities in the field of expenditure precisely as the Office of Production Management is establishing priorities in the fields of production and consumption.

In making appropriations, Congress has been going on the principle of "business as usual." If, in past years, there have been Federal appropriations for an agency or any other purpose, they are continued as usual and often even expanded. That body has passed defense appropriations promptly, but has given defense no priority at the public till over other expenditures. Defense and nondefense items, essentials and nonessentials, have been treated substantially upon the same basis by the Government of the United States; and all the new demands upon the Public Treasury occasioned by the international crisis have been pyramided on top of an already staggering load.

LABOR SHORTAGES

Everyone knows that many of the huge appropriations in recent years have been designed, in the President's words, to "prime the pump," to bring relief to the unemployed, to take care of young people who were neither in school nor at work—in short, they have been antidepression measures. Yet here we are in the midst of what may fairly be described as a war boom. In many fields there is no longer any unemployment; there is a scarcity of labor. Over the radio on July 12, I heard reports from State after State as to the shortage of farm labor, for example. Yet the appropriations of an emergency kind for antidepression purposes are continued, though the occasion for them has disappeared in the intense military, industrial, commercial, and agricultural activity we have today. The shrinkage in the need for appropriations has not been reflected in corresponding reductions in Federal expenditures. That is just one instance of the failure upon the part of the Government of the United States to establish priorities in expenditures. It is a threat to the success of the defense effort itself.

The people of the United States have given more hostages to fortune, have committed themselves more heavily upon the presumption of a stable future than any other people at any time in the history of the world. To begin with, our agricultural investment is the heaviest investment of money and labor ever made by any people anywhere in the world. Our industrial investment and our communications investment, measured by bonds and stocks and other securities, or by fixed assets, are the heaviest investments in those forms of activity ever undertaken by any people anywhere in the history of the world.

INVESTMENT IN STABILITY

Our investments in life insurance, and more recently in social security and unemployment insurance, dwarf into pygmy size any other like commitments made by any other nation in the history of the world. The savings of the people of the United States in banks of one kind or another are larger than the entire savings of any other people anywhere in the world. The endowments of our hospitals and orphanages and homes for the aged, of our universities and colleges, of our schools, public and private, run so far beyond the philanthropic endowments of other nations that they are not comparable to them. I suppose the endowments of institutions in the United States alone are larger than those of all the rest of the world put together.

All those commitments of every kind are based upon the assumption that we will remain solvent, that those hostages to fortune are safe. And yet, as Mr. Henderson said "before long now there will be more purchasing power running around hunting something to buy than there are goods available. If that occurs to a substantial degree, no power on earth can prevent inflation." Inflation would wipe out the endowments of hospitals and homes, universities and colleges, would make insurance payments and savings accounts lose their purchasing power and carry only the form of money, having lost its substance. We would be in the tragic situation described in one of Rudyard Kipling's poems—

"Though there was plenty of money
There was nothing the money would buy."

Whatever the present World War may mean elsewhere, its meaning for America is perfectly clear. It is a test whether "this Nation, or any nation so conceived and so dedicated can long endure." With the international phase of that challenge this committee is not directly concerned. We operate upon the presumption, which is shared, I believe, by an almost unanimout Nation, that the defense of the United States in a military sense must be made secure at whatever cost. There should be no extravagance, there should be no reckless waste, even in national defense. But with the specific problem of national defense this committee is not concerned. We are assuming that appropriations will be staggering great and we are assuming that Congress under the pressure of public opinion, will be more and more careful in making those appropriations.

DOMESTIC SAFETY

But equally important with, and perhaps more important than, the international challenge to the American way of life is the domestic problem. Democracy can be destroyed at home by recklessness, by bankruptcy; even the defense effort would be hamstrung by inflation. But democracy can be destroyed in another way, by the failure of public opinion to control the Government. For the essence of democracy is simply this, that the Government is a reflection of public opinion, and when the Government escapes from the control of public opinion, whether by force or by the decay of alert citizenship, democracy has gone.

When you struggle to save something, you want some assurance that it is going to remain when the struggle is over. The domestic security of the things we treasure must be guarded all the time the foreign effort is being made. It will be no use saving America from external threats if it becomes insolvent and at the mercy of some other evil. We must not only put down the present evil but remain strong to face new ones.

No one has expressed the paramount need for thrift and solvency more pointedly or more pungently than President Roosevelt, who said: "Taxes are paid in the sweat of every man who labors, because they are a burden on production and are paid through production. * * * Our workers may never see a tax bill, but they pay. * * * What I am talking about are the taxes which go to the ordinary costs of conducting government year in and year out. That is where the question of extravagance comes in. * * * Upon the financial stability of the United States Government depends the stability of trade and employment and of the entire banking, savings, and insurance system of the Nation."

THE CITIZENS EMERGENCY COMMITTEE

The Citizens Emergency Committee is organized to make that statement of the President of the United States effective, to call insistently to the attention of the public and the Congress the need for establishing priorities in national expenditures. Defense comes first, the essential services come second, and other things should come a poor third or be dropped entirely. In short, there must be a system of priorities in Federal expenditure. To that end, this committee will shortly begin to make specific suggestions. In carrying forward this work, we appeal to all the citizens of the United States for their help. We serve no interest but that of the public.

The Independence of Cuba

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Friday, August 15 (legislative day of Thursday, August 14), 1941

ADDRESS BY CUBAN AMBASSADOR

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by the Cuban Ambassador to the United States, speaking of the independence of Cuba and what a great privilege it is for a small nation to live in such proximity to the United States of America, that, regardless of its size and strength in comparison to those of its neighbors, it can enjoy unquestioned freedom and liberty.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE INDEPENDENCE OF CUBA—SYMPTOM OF A CULTURE

Today, the 20th of May, the people of Cuba celebrate a glorious anniversary which has a profound philosophical and historical significance for all the nations of our continents and of the Caribbean, for on such a day they inaugurated their democratic and independent republic, after well-nigh a century of war against the discovering metropolis.

Thirty-nine years have gone by since the 20th of May 1902, when the United States of America, in fulfilling the international obligation born of the joint resolution of the Congress and sealed in the Treaty of Paris after the common sacrifice of Cubans and Americans put an end to Spanish domination, delivered to the Cubans the responsibility of self-government, for which entire generations of illustrious patriots had fought in wars without precedent in the history of the efforts for independence of our sister republics of the Americas. And in the years that have elapsed the progress, the political education, the culture, and civilization of our people have made evident before America and the world the right which our liberators had to aspire to an ideal of redemption for which our country was already prepared in full development and maturity.

The fact of Cuba's independence constitutes unquestionably a symbol and a symptom which characterizes our American culture.

At no time as today has the celebration of this anniversary attained a deeper meaning. If on other occasions the countries of this hemisphere have celebrated the date of their glorious independences, today, when international law, which had succeeded in obtaining by steady progress an extraordinary development, seems to be disappearing, the celebration of the anniversary for the independence of an American nation needs must constitute for the others a motive for special rejoicing and to draw from the historical fact the inevitable philosophical consequences that will determine the sole international conduct possible to them in these anxious hours through which humanity is passing.

Our human society of today is met in a terrible and transcendental struggle. It can be asserted without fear of contradiction that if at other times the great wars fought by nations were motivated by insane desires for territorial expansion or economic domination, the great battle which the world is fighting today has a deeper character and wider and greater consequences, since it is not fought to impose a religious creed or to win supremacy in this or that market in the economic field, but it is a struggle between the two strongest tendencies that influence the human spirit in their antithetical conceptions of the world and life; on the one hand the tendency that represents the progressive moral improvement of humanity, in ascending spiral, a tendency that wishes to win days of happiness, of justice, and of freedom for man, and on the other hand, that which aspires to subdue humanity by violence and terror, to reestablish the slavery of man to man, and of one people to another.

And it is in this tragic hour which is being lived by humanity and in which the world is thus divided, that the celebration of the independence of a nation acquires extraordinary importance, for although our country may be small in size and limited in population, it has been, and continues to be great before the eyes of that part of the world which professes the cult of democracy and respect for the self-determination of nations, the fundamental basis on which up to now international law has been built, in contrast with the beliefs of those that pretend to destroy the sacred right of the smaller countries by proclaiming the brutal reign of force over and above the civilizing postulates of order, law, and justice.

The international crisis suffered by Europe and Asia has made of America the only safe haven, not only for liberty, justice, and law, but for that which is more consubstantial among ourselves—the right to independence of the several peoples, large or small, but whose nationalities, respected and deserving of respect, represent cultural, geographic and historical attainments, integrating the continent which, under the generic name of America, represents today, in indestructable ties of continental solidarity, the sole unconquerable fortress for liberty and the dignity of man. A continent which is prepared to fight with faith and with energy to keep this patrimony of western civilization and culture from perishing in the infernal conflagration which, destroying all the conquests of progress in the field of morality, would carry humanity back to an epoch already surpassed by effective advancement.

The independence of the Republic of Cuba is a living example of a constructive and fertile Americanism and is in agreement with the conception of our far-sighted compatriot, Don Manuel Sanguily, who, back in 1890 thus defined it in clear and definite words: "Americanism is not an effort toward racial approximation such as Germanism and Slavism; it is a system of ideas as was, for example, Hellenism; it is a social tendency; an ideal of life and of government, whose end is federation, whose basis is autonomy, whose form is the Republic, and whose essence is democracy."

It is not then an exaggeration to assert that all of America can justly be proud to have always tendered homage to the ideas of democracy and freedom. Examine, if you will, the peculiar nature of its international law, and you shall verify that this has been built with comprehension, tolerance, respect for the weak, and with the application of the most equitable manner of creating the rules of law—the democratic way.

Democracy, which is the most progressive and broadest political formula to which the highest degree of moral perfection of man has reached—democracy, which is the political system that makes possible the consecration of those human rights which because they belong to the very nature of man must be considered inalienable and permanent in any political system that deems itself cultured and civilized as well as essential for the orderly and peaceful life in the community of nations. Human rights, which in 1916 the American Institute of International Law, in moments also decisive for the ascending march of humanity, recognized as fundamental and necessary for the stability of international comity, consecrating them in the famous declaration which has embraced the essential thought of the Americas in this matter—namely, the right of every nation to its own existence and the condemnation of any act of aggression; the right of every nation to its independence and to its free determination; the right of equality among all nations and that of assuming, according to the Declaration of Independence of the United States, among all the powers of the earth, the separate and equal position to which it is entitled according to the laws of God and of nature; the right to a territory within definite boundaries and the obligation which all nations have to protect the rights of others and to fulfill the duties which international law establishes.

What a magnificent sight, gentlemen, this which in a constant and renewed manner is offered by America to the world, with celebrations such as ours for the independence of one of the republics of the glorious constellation of Washington, Bolivar, and Marti. Confronted with the grave disequilibrium of other continents because of the reign of ideologies which deny the right to independence of the small or weak nations, and which are proof of the decadence of cultures that were at one time examples of human greatness and progress, the Western Hemisphere shows a profound unity which is eloquent proof of social cooperation, of collective fraternity, or mutual and reciprocal friendship and collaboration to achieve together the progress of civilization.

May the Almighty continue to bestow upon our peoples the creative and fruitful ideas of fraternity and equality so that even through the most difficult, darkest, and dangerous moments of the history of today, America shall continue to be the forum of right and unconquerable rampart of liberty.

The Gasoline Tax

EXTENSION OF REMARKS

OF

HON. ELLISON D. SMITH

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, August 15 (legislative day of Thursday, August 14), 1941

STATEMENT BY H. V DANIEL

Mr. SMITH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by H. V. Daniel on the gasoline tax.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE GASOLINE TAX THE MOST BURDENSOME BORNE BY ANY NECESSITY

(Statement by H. V. Daniel)

The tax burden of the American people is becoming increasingly more imposing. Accordingly it becomes more and more imperative that specific tax measures be sound and equitable. The desire for sound tax policy, for example, should overrule any tendency to increase the rates of certain existing taxes simply because they have proven to be good revenue producers.

Last year, during 1940, the taxes levied on the sale of gasoline produced 1 out of every 11 tax dollars collected by all the taxing jurisdictions in this country. The aggregate tax revenue collected by all these governmental units amounted to $12,756,000,000—exclusive of pay-roll payments for social security. Of that amount, $1,155,000,000 represented Federal, State, and local taxes on gasoline sales.

It must be remembered that more than 180,000 governmental units in this country exercise the sovereign right to tax the citizen, his properties, and his income. It must be remembered, too, that these taxing jurisdictions impose a great variety of taxes of every nature. Then it is significant that the single tax on gasoline produced nearly 10 percent of all governmental tax revenue in 1940.

Because the gasoline tax has proved to be such a dependable producer of revenue, public administrators repeatedly have tapped this tax source as a matter of expedience with very little consideration for tax justice. The result is that today the Federal Government collects a gasoline tax at the rate of 1½ cents a gallon, all the States tax gasoline at rates ranging to 7 cents a gallon, and the counties and municipalities of certain States also levy their own gasoline taxes at rates as high as 3 cents a gallon. In some localities in Mississippi and Alabama the combined taxes on gasoline total 10½ cents a gallon.

With the 50-percent increase in rate enacted by the Revenue Act of 1940, the Federal gasoline tax now costs consumers of gasoline approximately $343,000,000 annually. In view of the fact that greater amounts of Federal revenue are derived from tobacco and liquor taxes, it may appear that the Federal gasoline tax could be increased without imposing an unreasonable burden on gasoline consumers. Such a viewpoint, however, overlooks the degree to which gasoline is taxed by State and local governments.

Before the loan of petroleum tankers to nations overseas made necessary a campaign to curtail the consumption of gasoline in the more populous Eastern States, tax authorities predicted that State gasoline tax revenues for the year 1941 would cost consumers more than $900,000,000. Consequently, when proposals are made to increase further the Federal gasoline tax rate, it must be remembered that the State gasoline tax burden alone normally approaches $1,000,000,000. The Federal and State gasoline taxes together already represent a most burdensome penalty on gasoline consumers.

That the taxation of gasoline is primarily a State tax field also should be remembered. The gasoline tax was originated by the States, and each of the States now has come to rely heavily on this impost. Some States depend on it for half their revenue. It is well known that the gasoline tax most properly should be used as a "benefit tax" for financing highway construction and maintenance. Since the provision of highways still is primarily a State function, the continued and successful use of the gasoline tax by the States should not be jeopardized by an excessive duplicating Federal gasoline tax rate.

Recognition must also be given to the fact that gasoline, tobacco, and alcoholic beverages differ basically as consumer goods. The consumption of tobacco and alcoholic beverages represents nonessential consumption; many would call it socially undesirable consumption. The consumption of gasoline, however, represents the consumption of a necessity fundamental to our national economy. Of this adequate evidence was presented to the House Ways and Means Committee. No grounds exist, therefore, for a comparison of the relative excise tax burden on the consumers of gasoline and the consumers of alcoholic beverages and tobacco.

The consumption of gasoline nevertheless is taxed more heavily than the consumption of any other necessity. At the present time Federal, State, and local gasoline taxes—averaged for 50 representative cities throughout the Nation—represent a special sales tax of 47 percent on the price of the commodity. A comparably severe rate on any other necessity cannot be found.

Evidence of the severity of gasoline tax rates is the fact that the Federal gasoline tax alone provides the Federal Treasury with 14 percent of all Federal excise tax collections. Of the $2,491,530,000 collected from all Federal excise taxes during the fiscal year 1941, $343,000,000 represent collections from the Federal tax on gasoline. Certainly the consumers of this single necessity—gasoline—already are more than paying their share.

With the increasing necessity for imposing sound and equitable taxes, serious consideration should be given to the special burden of taxation which the consumers of gasoline now bear. Possibly too much emphasis is being placed on all excise taxes in the rapidly changing Federal fiscal structure. Although an increase in the rate of any excise tax may not appear unreasonable in itself, the accumulation of the small and seemingly reasonable increases eventually results in a top-heavy and disproportionately burdensome tax system.

Draft Vote Political Gamble

EXTENSION OF REMARKS

OF

HON. JAMES M. TUNNELL

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Friday, August 15 (legislative day of Thursday, August 14), 1941

ARTICLE BY DAVID LAWRENCE

Mr. TUNNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by David Lawrence which appeared in the Washington Evening Star of August 14, 1941, entitled "Draft Vote Political Gamble."

There being no objection the article was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of August 14, 1941]

DRAFT VOTE POLITICAL GAMBLE

(By David Lawrence)

1942 ELECTIONS MAY TELL HOW CITIZENS REGARD HOUSE ACTION

The biggest political gamble of a decade was taken by Members of the House of Representatives in their vote on the extension of the term of military service for the drafted troops.

The Democratic Party, by a vote of 182 to 65, voted to extend the term of service by 18 months, while the Republican Party voted, 133 to 21, against the measure. Which will prove to have been the better vote when the November 1942 congressional elections are held?

While politics was rarely mentioned in the debate, it was in the background of the House voting. For obvious threats from constituents that they would take reprisals at the polls were clearly present, either by letters from back home or through the pressure of the organizations which lobbied for or against the proposal.

Broadly speaking, the Republican vote may prove to have been the more dangerous, especially if the Nation is at war or if the present emergency continues beyond November 1942. Clearly, the Democratic Party will seek the support of independents in the electorate on the ground that the Republican Party is an obstructionist party and cannot be counted on to defend the Nation, even when the leading military experts of the Government call for action to preserve the safety of the Republic.

But if the war emergency has passed, the Republican stump speakers will expect the reaction of the country to be one of indifference to the congressional voting on such questions as draft extension. Other issues relating to reconstruction or the return of power to the people may be more influential in the voters' minds.

ALMOST SOLID OPPOSITION

So if one believes that the war will be over by November 1942, the Republicans will have taken little risk. If it isn't over, the Republican Party may face an annihilating defeat at the polls. There will be sections of the country, such as the Middle West, where isolationist sentiment is strong and some Republicans will benefit by that attitude, but in the main, with the Nation all out for the defense program and possibly for war, in November 1942, the Democrats will naturally seek to make a clean sweep for their party on the ground that divided counsels and obstruction are dangerous to the successful prosecution of the then existing program.

The Republican Party has consistently voted against the President's foreign policy ever since the outbreak of the war in September 1939. At a time when partisanship is supposed to be eliminated, the Republicans voted almost as solidly on foreign policy as on domestic questions. Though claiming to be in favor of national defense to the uttermost, the Republicans have failed to uphold the War Department in its vehement plea for draft extension and have endeavored to override the wishes of the military authorities.

There were some Democrats, too, who voted against the administration, but they represent a minority of the party, whereas the Republican Party threw the bulk of its strength—more than 80 percent—against the War Department's recommendations.

It will be contended, and plausibly, too, that without the 21 Republican votes cast in favor of draft extension the measure would have been lost, so that a certain amount of credit is due the 21 Republicans. But when it comes to an appraisal of what the party as a whole did, the 133 votes against the measure out of a total of 154 Republicans voting will be used impressively against the Republicans on the stump to bolster the charge that the Republican Party could not be trusted with full power in both Houses and that a vote for the Republican Party in the congressional elections may be a vote for chaos and division at a time of international crisis.

GAMBLING ASPECTS OF VOTE

The Republicans would try through their spokesmen and leaders to claim they would support the Government in its national defense, but the Democrats will point to the record, not only on the draft extension but on arms-embargo repeal and on the lend-and-lease bill in the House, as proof of the fact that the Republicans have lined up partisanly rather than on broad grounds of national policy.

One of the gambling aspects of the vote was related to the expectation of a House defeat of the 18-month extension and a subsequent rewriting of the measure in conference between the two Houses. Had the House voted down the 18-month proposal and had it adopted a 6-month or a 12-month extension, or some other amendment, many opponents of draft extension would have had an opportunity to record themselves in favor of the milder measure. Then, if the conference report had accepted the Senate version, namely, the 18 months' extension, the rewritten measure would have been adopted in the House either by a voice vote or by a record vote. This would have been defended on the customary grounds that it was all or none and that those who favored some extension had no opportunity to vote on any change in the conference report. This sort of thing had been talked about in the Capitol corridors and may account for the large record vote cast against the 18 months' proposal, which many Members really thought would be defeated and then restored in the conference committee. The administration, however, took no chances and rallied its forces to win. Had greater pressure been exerted by the administration the majority for the bill would have been larger. But since the administration leaders saw the political aspects and desired to avoid embarrassments to Members hailing from isolationist sections of the country, the final vote was closer than it otherwise would have been. The close vote does not by any means reflect the sentiment of the House on any concrete issue relating to the emergency, but merely reflects the domestic politics of the draft and a bet that in November 1942 the war will be over or that the issue will have been superseded by other issues far more controlling in the voters' minds.

The Agricultural Situation

EXTENSION OF REMARKS

OF

HON. STEPHEN PACE

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 15, 1941

Mr. PACE. Mr. Speaker, before the House adjourns today we will have completed consideration of all defense, emergency, and other necessary legislation pending before the Congress. As I understand, it is your intention to order a recess for 2 or 3 weeks, in order that you and the other Members of the House may get away for a few days and have a much-needed rest. The past 8 months have been a very trying period for every Member of Congress physically, mentally, and spiritually, and I am sure that this short vacation will prove helpful to everyone.

We will all go home with much concern over the international situation and the future security and welfare of our own Nation. No doubt it will prove helpful to all of us to get away from this scene of tense action, make a quiet study and summary of the conditions today and the problems which may soon face us.

On the other hand, there has never been a time when I could return to my district with as much satisfaction from the standpoint of our agricultural problems. While the reports come to me that crops are not so good, for which certainly no one can hold Congress responsible, yet the returns from the sale of farm commodities are certainly much improved since this Congress convened on January third. No fair mind can doubt, Mr. Speaker, that the actions taken by the present Congress have contributed in large measure to the improvement in price of farm commodities.

Let us take for example the four great crops in which my State is particularly interested, cotton, wheat, peanuts, and tobacco.

On August 1, the beginning of the current season, we had on hand 10,600,000 bales of American cotton. We are now gathering another crop which is estimated to total 10,800,000 bales, giving us a total present supply of about 21,500,000 bales of cotton. With our exports down to around only 1,000,000 bales per year, this means that we have in the warehouses and in the fields more than twice as much cotton as can possibly be sold or disposed of during the year. Ordinarily this would mean that cotton would bring only between 8 and 10 cents per pound, due to the enormous surplus on hand and yet today cotton is selling around the parity price of 16.49 cents per pound. At the same time, Indian cotton at Bombay is selling at 8½ cents and Brizilian cotton at Sao Paulo is selling for 8 cents. This shows conclusively, Mr. Speaker, that with a world price around 8 cents per pound, with more than a 2-year supply on hand, the only thing that is holding American cotton around parity is the cotton program enacted by Congress.

The same can be said of wheat. At the beginning of the season we had on hand a surplus of about 400,000,000 bushels of wheat. This year we are making an enormous crop, now estimated at 950,000,000 bushels of wheat. The most wheat we can possibly consume is about 750,000,000 bushels, which, like cotton, gives us about a 2-year supply or an enormous surplus. About the same condition exists in Canada, where they have an enormous surplus. While Canadian wheat and Australian wheat and wheat produced in Argentina is bringing from 40 to 52 cents per bushel, our own wheat is selling between 90 cents and $1 per bushel.

What about tobacco? All the reports show a good crop this year. The Commodity Credit Corporation now holds about 360,000,000 pounds of flue-cured tobacco from the 1939 and 1940 crops. Yet reports come to me indicating that the Georgia crop of tobacco, which is now going to market, is bringing an average price of around 25 cents per pound and the best grades are being sold at from 35 to 50 cents per pound. The present parity price on flue-cured tobacco is 22 cents per pound, and I am delighted with the price being received by the Georgia producers, notwithstanding the size of the crop and the large surplus which the Government has in storage. I just wonder, Mr. Speaker, what the situation would be without the legislation enacted by Congress.

Now, as to peanuts, present indications are that we will have a yield for the edible trade—that is, peanuts grown on the allotted acreage—of around 650,000 tons, with prospects of consumption by the edible trade of between 400,000 and 500,000 tons. In spite of this surplus and after weeks of effort, we have gotten the Secretary of Agriculture to peg the price of peanuts at $90 per ton. While I urged and insisted that the price should be pegged at at least $100, it is very gratifying to me to know that the peanut producers of my State are assured a reasonable price on the peanuts grown on their allotted acreage. For the peanuts grown for oil, in excess of the allotment, present indications are that we should be able to maintain an oil price of at least between 10 and 12 cents per pound, giving oil peanuts a market at between $70 and $80 per ton.

It was only a few weeks ago that my committee had before it a bill to make some minor changes in the law for wheat and corn. It was this bill which we amended, as to loans on farm commodities, that brought about the present law making mandatory a loan of 85 percent on the five basic commodities. It is this law more than anything else that is bringing to the American farmer today a better price for his crops, far above the world price. We now intend to ask the Congress to continue this 85-percent loan provision for several more years and I hope that it can be made permanent. In addition this Congress has appropriated $500,000,000 for soil benefit payments and an additional $200,000,000 for parity payments. This loan provision and these appropriations absolutely insure at least parity prices for the five basic commodities.

So, Mr. Speaker, I will start home tomorrow feeling much better over the situation with regard to those who toil from daylight to dark to produce the food and fiber to feed and clothe this Nation. We must continue our efforts until the farmer realizes, not only parity prices, but parity income and a fair share of the national income of the Nation.

Ceremonies Incident to Conferring Degree on Col. Raymond Robins by University of Florida

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Friday, August 15 (legislative day of Thursday, August 14), 1941

ARTICLE FROM THE BROOKSVILLE (FLA.) JOURNAL

Mr. PEPPER. Mr. President, I ask unanimous consent to have incorporated in the Appendix of the RECORD a description of ceremonies in which the honorary degree of doctor of laws was conferred on Col. Raymond Robins, a distinguished American, at Chinsegut Hill, Fla., on June 6.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

[From the Brooksville (Fla.) Journal of June 12, 1941]

UNIVERSITY OF FLORIDA BESTOWS DEGREE ON COLONEL ROBINS—HONOR CONFERRED BY PRESIDENT JOHN J. TIGERT AT CHINSEGUT HILL

The University of Florida conferred upon Col. Raymond Robins the honorary degree of doctor of laws, June 6; and in so doing, also honored itself, according to expressed views of spokesmen for the university and a host of friends and admirers of Colonel Robins all over the country.

The impressive ceremony, the first ever given in absentia by the university, was conducted on the lawn of Colonel and Mrs. Robins' home, Chinsegut Hill, under the spreading limbs of the Altar Oak, a huge old live oak tree. Dr. John J. Tigert, president, in the regalia of a Rhodes scholar, and Dr. Wilmon Newell, provost of agriculture, also in cap and gown, officiated, in the presence of six members of the university faculty all in caps and gowns and colorful stoles. The audience of about 80 persons included political and educational leaders of Hernando County and a number of intimate friends from far and near in the State.

In his citation, Dr. Tigert called Colonel Robins among other things a leading protagonist of peace among the nations and an earnest evangel of the Christian way of life, especially among college men and women. He said, "One of the first conspicuous figures in political liberalism of our day, you have championed many worthy causes, not the least of which has been your effort to promote the economic and agricultural development of your adopted State. You have explored well-nigh every path of service." At the end, "For these distinguished achievements, we salute you and recognize you as one of the leading citizens of our country today."

Dr. Newell, in presenting the recipient to Dr. Tigert for the honorary degree, said he

felt he was honoring the University of Florida, and then gave a brief biography of the candidate.

At high points in the ceremony the audience applauded with enthusiasm. It was a far cry from the days when the Seminole Indians used the old hilltop to signal messages to each other in the language of smoke. A place of ordered but natural beauty, it looked out on far blue space where vistas had been cut among the trees with spectacular effect. Chinsegut Hill Sanctuary had become reality from a boyhood dream of the Colonel's—dedicated to the threefold purposes of a forest reserve, a wildlife refuge, and an experiment station to work out in all future years the conservation of natural resources, and the development of better breeds and seeds and methods of culture for the farmer and stockman, all under ownership and direction of the Federal Government and the agricultural college of the University of Florida, cooperating in the great venture. Mr. W. F. Ward, superintendent of Chinsegut Hill Sanctuary, appeared in cap and gown as a member of the agricultural college faculty. (As is well known, Colonel and Mrs. Robins in 1932 donated their 2,082-acre estate to the Government for exploitation in behalf of this county, the State, and the Nation.)

When he had donned his stole, Colonel Robins, an able interpreter of world affairs, made his response. He said he would rather have an honorary degree from the University of Florida than from any other institution of learning. And he challenged the university, along with other universities in the country, to lead the coming new birth of freedom by establishing groups on the following subjects: Reconstruction After the War; Freedom of Religion; Social Control of Government by Self-Government—That Is, Democracy; Freedom in Scientific Research and Demonstration; Industrial Freedom, Wherein We Throw Off the "Isms," Ideologies, and Revolutionary Dogmas of the Old World and Embrace the American Way of Life; and Outlawry of War, to Abolish the War System of the Ages. Educational leaders should let us know why we, the upholders of democracy, believe in what we are doing.

First, though, Colonel Robins said we must win this war—and we will win it. Then we must make war illegal, a crime, and must seek to unite all nonaggressor nations in support of any nation that is attacked. For war has grown more destructive and more costly, and has become national and international suicide, a threat to civilization itself. He said he would like to see all State universities form the above-mentioned groups, with Florida leading, particularly because such educational institutions are made possible and maintained by taxpayers of the country and are thereby obligated as well as privileged to seek to work out answers to problems in these chaotic times.

From his wheelchair Colonel Robins said fervently, "I would rather be alive in this great hour than at any time in the last 1,000 years." For he thinks these are great, if disturbing times. He discussed at some length the address of Robert H. Jackson, Attorney General of the United States, at the first conference of the Inter-American Bar Association, in Habana, Cuba, in March of this year.

One of the strong statements of the address was: "We are haunted by the greatest unfinished task of civilization, which is to create a just and peaceful international order." Legal process is the only practical alternative to force. Another telling declaration was: "The Kellogg-Briand Treaty for renunciation of war as an instrument of policy, and the Argentine Antiwar Treaty, swept away the nineteenth-century basis for contending that all wars are alike, and all warriors entitled to like treatment, and this adoption in our time of a discriminating attitude toward warring states is really a return to earlier and more healthy precepts."

(Attorney General Jackson, addressing representatives of all 22 South American republics, made the Kellogg-Briand tract the basis of reconstruction after the war, when new freedoms will be added to old freedoms we must preserve.)

Colonel Robins concluded his talk with a tribute to Christianity, the vitalizing force of the world, without which the human spirit has no dignity and the word "democracy" has no meaning.

Colonel Robins, one of the State's most distinguishd residents, received the degree of Bachelor of Laws from Columbia University in 1896. In 1923, the honorary degree of Doctor of Laws was conferred upon him by Hillsdale College. On the advent of his recent recognition by the University of Florida, he received letters and telegrams from many distinguished friends, including Cabinet members and under secretaries in Washington, D. C.

Among many prominent Floridians attending the ceremony were Dr. Roy B. Guild, executive secretary of the Men and Religion Forward Movement, for which Colonel Robins was once world lecturer, and Mrs. Guild, now of Winter Park; Dr. W. M. Rowlett, Dr. F. L. Adams, and Mrs. R. A. Ellis, Tampa; Judge F. R. Hocker, of this judicial district; and Ex-Mayor Jake Gerig, of Ocala; and many others. Miss Mary E. Dreier, of New York, sister of Mrs. Robins, came down from Maine for the event.

Colonel and Mrs. Robins were hosts to the assembled guests at a beautifully appointed luncheon following the activities of the morning. Tables were arranged in living room, dining room, and solarium, and flowers were used from the Chinsegut gardens, now in their full glory of summer blooms. The affair will be a lasting memory to those privileged to be present.

Criticism of Votes Against Draft Extension

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, August 15 (legislative day of Thursday, August 14), 1941

ARTICLE BY GOULD LINCOLN

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the RECORD an article appearing in the Washington Evening Star of yesterday, written by the well-known, able, and fair-minded political writer, Mr. Gould Lincoln. The article, appearing in the column The Political Mill, is entitled "Republicans Criticized for Playing Politics in Voting Against Draft Extension."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From The Washington Evening Star of August 14, 1941]

THE POLITICAL MILL—REPUBLICANS CRITICIZED FOR PLAYING POLITICS IN VOTING AGAINST DRAFT EXTENSION

(By Gould Lincoln)

G. O. P. in this year 1941 stands for grand old politics. The Republican party in Congress is making a sorry record as the Nation faces grave dangers. One hundred and thirty-three Republican Members of the House voted on Tuesday against the Army service extension bill. Twenty-one Republicans had the vision and the patriotism to support the measure. Had there been two less votes for the bill it would been defeated. It is a safe bet that had that happened, the Republicans who thought they were playing smart politics would have been very, very ill. It is an old axiom in politics—legislative politics—that it is safe to vote against a measure which is unpopular in some quarters, but which is sure to carry, despite the negative votes. It is quite another thing, however, to vote against a measure tied up so intimately with national welfare as the service extension bill and defeat it.

Had the measure been defeated, the blame would have gone to the Republican party. And those Republicans in the House who opposed it would have been holding the bag. They would have been on a hot spot. They would have succeeded in turning back a measure which the President and the Army's highest officers have repeatedly said is essential for the safety of the country. They would have succeeded in making this country look like 30 cents in the eyes of its potential enemies—the Axis Powers. What the Latin American peoples would have thought would have been that the United States, preaching so greatly about the defense of the Western Hemisphere, had no serious intention of going through with hemisphere defense.

Here was no question of entrance of the United States into the wars in Europe and in Asia. Here was only a question of adequate national defense, and the great majority of the Republicans in the House, under Republican leadership, turned their backs squarely on the measure. Gen. George C. Marshall had testified that unless the draftees and National Guard men and Reservists were retained in the service two-thirds of the American Army would have been demobilized. This is no joking matter, with the country threatened from both the East and the West. The Republicans knew, or should have known, that Japan is so moving in the Far East as to become more and more of a menace to this country and its interest. They should have known that Nazi Germany is driving ever westward, and has forced the present French Government into a new declaration of "collaboration," which means, in all probability, that the Nazis will get naval and air bases in Dakar—that part of Africa nearest the Western Hemisphere. Yet they stuck to their opposition to retaining the Army intact—an army that is still only partially trained. Either they were dumb or worse.

TIME FOR UNITY

If ever there was a period in the history of the United States when politics in international affairs should be absent, this is the period. If ever there was a period when every step looking to adequate national defense should be taken, this is it. For any political party, under such circumstances, to deliberately cast its votes in opposition to a national-defense measure is inexcusable. It may think that it is laying up treasures in heaven, for the future—such as public resentment against heavy taxes and against retention of men in military life. It may even realize on these issues at some later election. But it certainly was not thinking of the safety of this country, nor of its real interest at this time.

Specious arguments were advanced by opponents of the bill, arguments that to keep the draftees beyond a year would be in violation of a pledge contained in the original Draft Act. The act contains no such pledge. The most cursory reading of the law shows that Congress clearly said that if the national interest was imperiled, Congress, by so saying, could authorize the President to keep the draftees in service indefinitely. The argument was made, too, that if the Army was

kept intact, it would be a clear indication that this country was preparing to enter the European war. Nothing of the kind. For nearly 2 years these Republican leaders have been insisting that the present administration was doing its best to drag the country into war. The proof of any pudding is in the eating. The country is not at war, but it certainly is better prepared than it was to face any attack that is made against it.

Sixty-five Democrats joined the Republicans in voting against the service extension bill. They, too, must bear the blame of the big vote which was cast in opposition. But the Democratic Party generally and its leadership staunchly supported the measure. When the vote was announced it showed that 182 Democrats voted for the bill

BLACK SPOT ON ESCUTCHEON

The Republicans not only voted against any extension of the period of military service. They also voted against removing the limitation of 900,000 placed on the number of draftees who may be taken into the service at any one time. The Army at present has something less than 1,500,000 men. If the full number of draftees under the 900,000 limitation were taken into the service, it would have less than 1,800,000. Considering the size of the armies which are mobilized in the Axis nations, this is a ridiculously small number if this country is to be called upon to defend not only the American people but also the Western Hemisphere. The Republican leadership has not yet declared itself opposed to the defense of the Western Hemisphere—to an abrogation of the Monroe Doctrine. It might as well have done so, however, as to join in the attack against a larger Army

True, this country is not yet at war nor has the Western Hemisphere yet been attacked. The Republicans doubtless will say that if war comes they will quickly support measures to enlarge the military forces. Soldiers are not made in a day, or a month, or even a year. Not in these days of warfare, with modern weapons. Preparations that are made too late are as bad or worse than making no preparations at all.

Maybe the Republican Party will garner votes in the congressional elections next year because of its stand in Congress on this defense measure, although that is still doubtful. But whether they do or not, its representatives have left a black spot on the party's escutcheon.

Mississippi

EXTENSION OF REMARKS

OF

HON. JAMES O. EASTLAND

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Friday, August 15 (legislative day of Thursday, August 14), 1941

POEM BY HERBERT B. ALLEN

Mr. EASTLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a poem entitled "Mississippi" by Herbert B. Allen, editor of the Grenada County (Miss.) Weekly.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

MISSISSIPPI

(By Herbert B. Allen, Grenada County, Miss., Weekly)

Down by the Yalobusha,
Where magnolias shade the lawn;
The bobwhites call each evening,
And the mockingbirds at dawn.

There flowers bright and fragrant,
All the gardens glorify;
And gorgeous sunsets introduce
The night's majestic sky.

The folks all speak in accents soft
And pleasing to the ear;
They grip my hand in friendship,
And revere traditions dear.

Grand melodies in choral tones,
Sung by familiar faces,
Accompany sermons by my friends,
Exhorting Christian graces.

The fragrance of young chicken,
Fried with artistry and skill,
Combines with good, hot cornbread
In a rhapsody to thrill.

The spirit of the old deep South
Lends dignity to life;
A haven from confusion
In a world so torn by strife.

So now to pack my other shirt
And don my gayest tie;
Treat my good Chrysler to some gas—
Then to the North, "Good-bye"!

The Roosevelt-Churchill Joint Declaration

EXTENSION OF REMARKS

OF

HON. HENRIK SHIPSTEAD

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, August 15 (legislative day of Thursday, August 14), 1941

ARTICLE BY LUDWELL DENNY

Mr. SHIPSTEAD. Mr. President, I ask unanimous consent to have printed in the RECORD an excellent statement and analysis of the Roosevelt-Churchill joint declaration, written by Mr. Ludwell Denny and published in the Washington Daily News of today. The statement sets forth the implications and the possible consequences of the meeting of the two distinguished gentlemen and of their statement.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of August 15, 1941]

F. D. LACKS POWER TO EFFECT SECURITY AIMS

(By Ludwell Denny)

An Anglo-American alliance to defeat Hitler, followed by an Anglo-American armed peace for world freedom and economic security, is the essence of the Roosevelt-Churchill joint declaration.

The announced aim to defeat Hitler, and the secret agreements on how to do that necessary job, are much more important than the generalized peace program. Like political platforms, official peace programs never have been faithfully observed by the victors.

Neither Mr. Roosevelt nor Mr. Churchill, with all their great powers, has authority to commit the United States or the British Empire to the basic political and economic changes involved in their joint pledges. Such authority exists only in Congress, as restricted by the Constitution, and in Parliament—not to mention the Dominion parliaments.

CONGRESS LIKELY TO BALK

On the basis of past performance, there is no reason to believe that Congress will consent to the kind of American participation in world responsibilities contained in the Roosevelt declaration, or that Congress will reverse the tariff, monetary, and other economic policies which have helped to prevent the proposed equality in trade and raw materials.

Nor is there any evidence that the British Parliament and British capital would be quicker than the American Congress and capital to relinquish their present Anglo-American monopoly or semimonopoly on most of the world's strategic raw materials, trade routes, markets, credit, and gold.

The Roosevelt-Churchill desire for international economic equality is no more definite than the forgotten No. 3 of Wilson's 14 points for "the removal, so far as possible, of all economic barriers and the establishment of an equality of trade conditions." Such Anglo-American barriers are much higher under Roosevelt and Churchill than those which the Wilson peace failed to destroy.

STRONG POINTS LACKING

The territorial and colonial pledges which made the Wilson Points the most powerful propaganda of the last war are lacking in the Roosevelt-Churchill statement. It is limited to the generalization that they seek no territorial aggrandizement, and "desire to see no territorial changes that do not accord with the freely expressed wishes of the peoples concerned."

It could not be specific on territory, as Wilson was, because Britain may need to make secret territorial deals to pry away some of Germany's allies or to hold her own. Hence only Nazi tyranny is named. For the same reason Mr. Churchill could not agree to "the open covenants, openly arrived at," which made No. 1 of Wilson's 14 points so popular with the people.

Nor could Mr. Churchill be expected to mention, much less have authority to pledge, freedom for colonial peoples.

REPEATS MAJOR BLUNDER

But, since the exiled governments of Poland, Czechoslovakia, Yugoslavia, and others are part of the present British alliance, it was necessary for yesterday's declaration to include a "wish to see sovereign right and self-government restored to those who have been forcibly deprived of them."

Although this seems natural enough, it underwrites the major blunder of the Wilsonian program as demonstrated by experience—the division of Europe into many small sovereign states, which multiplied political conflicts, trade barriers, economic chaos, and minority problems. Mr. Wilson hoped to control these obvious evils, which cause wars, by the unity and regulatory powers of a League of Nations.

Therein is the vast difference between the entire Wilson plan and the entire Roosevelt-Churchill plan. The essence of any peace plan is this: Who is going to enforce it—who will be judge and police? The two general alternatives are some kind of superstate, or the victors. The Versailles Peace provided the League, in name, but a victor's control in fact, because the victors ran the League and had the guns.

BETTER THAN VERSAILLES

The Roosevelt-Churchill declaration is more honest than the Versailles Treaty, which disarmed the vanquished in order to disarm the victors—but never did the latter. The present plan is to disarm "nations which threaten or may threaten, aggression"—with America and Britain the judges, apparently, since nobody else is mentioned—pending some indefinite and unspecified "permanent

system of general security." As for "peace-loving people," Britain and America will aid any "practicable measures" to "lighten" armaments.

Perhaps Mr. Roosevelt and Mr. Churchill would prefer an international organization as guardian of world peace, protector of freedom, and provider of prosperity, rather than assuming that Anglo-American victors and their associates would be equal to such responsibilities or capable of achieving such a millenium. A pax Anglo-Americana would be heaven compared to Nazi slavery. But they know that many neutral nations, no less than enemy nations and colonial peoples, distrust Anglo-American power.

But Mr. Roosevelt and Mr. Churchill cannot be blamed for failing to pledge the alternative of an international organization, when a majority of the American Congress and public apparently are opposed. Thus many of the inconsistencies, evasions, and inadequacies of the Roosevelt-Churchill declaration are more inherent in existing international chaos and domestic prejudices than representative of the statesmanship of its authors.

Morals Versus Health of the Men in the Camps

EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Friday, August 15 (legislative day of Thursday, August 14), 1941

ARTICLE BY PAUL L. BLAKELY, S. J.

Mr. WALSH. Mr. President the influential Catholic weekly America has given study and publicity to conditions in the Army camps, particularly the importance of maintaining moral standards. Rev. Francis X. Talbot, S. J., editor of America, writes me suggesting that an article by Rev. Paul L. Blakely, S. J., entitled "Morals Versus Health of the Men in the Camps" be inserted in the CONGRESSIONAL RECORD. In his letter he states:

> These statements treat of a very delicate topic but one that is tremendously important for the protection of the young men in the camps. I decided to open the topic only after consultation with the responsible authorities. It is hoped that the matter may be taken up in the Senate and the House and that some action may be secured from the authorities.

I ask unanimous consent that the article be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From America of August 1941]

MORALS VERSUS HEALTH OF THE MEN IN THE CAMPS

(By Paul L. Blakely, S. J.)

In an editorial published last week under the heading "Protected camp immorality," this review directed attention to an Army practice which is causing much uneasiness to thousands of American fathers and mothers. The editorial was written under a grave sense of duty. No decent man cares to mention this immoral Army practice, still less to discuss it. But in this case silence is not a virtue but vicious cowardice.

Not parents alone but all of us want our young men to come back to us improved—physically, mentally, and morally. We are eager to support any movement which can help these young men to make their months of service a period in which they will not sink in the moral scale but rise. For this very reason we feel obliged to protest any military regulation which can lead the young soldier to conclude that sexual immorality does not matter much provided that mechanical and chemical means are taken to avoid the diseases which commonly follow promiscuity. And it seems to me that some at least among the young recruits will reach exactly that conclusion, if the Army continues to hand out to them "practical mechanical protection against venereal infection" and to erect prophylactic stations open to them at all hours of the day and night.

Most of us know by heart the reasons which have been alleged for the course made mandatory by the Army regulations. Despite all that can be said by the officers, including the chaplain, some of the men, it is argued, are going to expose themselves to infection. This is regrettable, of course, but they say they can keep a bad matter from getting worse by providing, first, a mechanical protective device; and next, a place in which the man who has run the risk of disease can be aided. With this man's morals, they claim they have no direct concern, but what can be done to keep down the incidence of infection, will be done.

It is quite obvious that these Army regulations do not take morals into account. If they did, they would not prescribe methods which, to not a few of the young men, far removed from the moral and social restraints of home, are a direct incitement to vicious courses.

Let us turn to the Basic Field Manual: Military Sanitation and First Aid, published last year by order of the Secretary of War. There, under the head of control measures, we read that all "post exchanges are required to stock condoms of approved quality," and that "some one of these (prophylactic tubes) will be stocked by the post exchange." This gives us no exalted idea of moral standards in our new Army. But that is not all. In addition, "the medical department is responsible for operating sufficient prophylatic stations to serve adequately each command," and at these stations "any soldier may apply for treatment regardless of the hour." Evidently, the Government is not quite sure of the efficacy of its mechanical and prophylactic devices.

The psychological effect on the young soldier of this elaborate set-up cannot but be bad. It conveys, almost irresistibly, the impression that the Government expects him to indulge in riotous courses from time to time, and has no objection, provided that precautions are taken against disease.

It is no justification to say that these "precautions" are taken in all armies. At least, the contention is no stronger than the rejoinder that they should be taken in none. But our position is that we are unable to approve the theory that it is lawful to do evil that some good may result. This position was so well explained by the Most Reverend J. B. Simonds, D. D., archbishop of Hobart, Australia, in a public address on November 28, 1940, that I am presuming his excellency's permission to quote liberally.

"I have the unpleasant duty of speaking plainly in criticism of the action of our public authorities in sanctioning a regulation which cannot fail to have a subversive effect on the moral tone of the community. It has come as an unpleasant shock to many people to learn that contraceptive devices are regularly issued to the soldiers of the A. I. F. and militia camps of Australia. In Tasmania, public tenders were recently called for the wholesale supply of rubber contraceptives to the military authorities, and they are now regularly handed out in great numbers to all the men who request them. This sordid matter has been made the subject of complaint to me by parents of young soldiers, who are distressed to find that their sons have been corrupted by the easy road to vice which officialdom has opened to them.

"The demoralizing effect which this action of the Government will have on the youth of Australia is incalculable, and the regulation which empowered it is a disgraceful one with which no decent Government should be associated. The distribution of these things to men in camp is stated to have been undertaken in order to protect them from the danger of infection from venereal disease.

"Does the Federal Government, then, accept as a principle the vicious theory that the end justifies the means, no matter how immoral these means may be?

"Under the pretext of protecting the physical health of a relatively small and undisciplined minority, our leaders have chosen the depraved course of handing out to the young men of Australia hundreds of thousands of instruments of immorality. Surely it is not too much to expect that, as they are rightly solicitous for the physical health of the troops, they would be equally solicitous for the moral health of the youth of the country, and would refrain from spending the people's money to provide them with incentives to sin.

"We cheerfully resign ourselves to the oppressive burden of taxation which is imposed to carry the present war to a victorious issue. But it is a most depressing thing to learn that any of the money wrung from the people or begged from the poor in war-savings, is allocated for purposes of immorality.

"The religious leaders in the various States are doing their best to maintain the spiritual and moral standards of the men in uniform. Their people have made splendid sacrifices to build, equip, and maintain many church huts where the spiritual needs of the men can be met, and their recreation taken in a clean and healthy atmosphere. The Federal Government has no money with which to assist this fine uplifting work, but it does not scruple to spend the public money to break down the moral standards of the youths whom it invites or conscripts to defend the ideals of the Nation. It is little wonder that cynicism so often greets the assertion that we are fighting to uphold the Christian standards of life.

"We Catholics have a clearly defined principle to guide us in judging this action of the Government. It is a principle given to us by the Holy Spirit through the pen of St. Paul, who strongly reprobated the theory that we may do evil that some good may result (Romans iii: 8). On this principle we must take our stand, even though it should prove to be as unpalatable to modern paganism as St. Paul's insistence on justice and chastity was to the Roman Governor, Felix."

I do not see how anyone who respects the principles of Christian morality can dissent from the views so frankly and bravely stated by Archbishop Simonds. It is certainly the duty of the Government to take every possible precaution to guard the health of these young men, but, unless we go all-out totalitarian and assert that the Government is not bound by any law, it is also obliged to do what lies within its province to safeguard their morals. When it fails in this important duty, then, as the archbishop says, its assertion that it is fighting to uphold the Christian standards of life is apt to fall on cynical ears.

It is clear from the Government manual from which I have quoted, that the military authorities realize the difficulty inherent in the age-old problem of keeping an army free from venereal disease. Yet it is impossible to escape the conclusion, after studying the manual, that in the military scheme too much reliance is placed on prophylaxis and upon mechanical devices, and too little on the influence of factors which are of another nature. A military observer has recently said

that probably seven-eighths of the drafted men in a given camp are amenable at all times to military discipline. The remainder constitute the dregs of the camp. In spite of the wisest administration of discipline, they will break through, and can be controlled only when sent to prison. Archbishop Simonds probably had some such conclusion in mind when he said that the Government had provided an immoral and disgraceful plan "of protecting the health of a relatively small and undisciplined minority." The American military regulations apparently assume that this plan must be applied to all the men.

The sixth chapter of the Basic Field Manual ends by prescribing methods which can be used whenever an excessively high venereal rate is found in a command. Were these precautions taken from the beginning, the alleged need of mechanical devices in this fight against disease would probably disappear. "Stringent control measures may be necessary. These may include all or any part of the following: (1) Placing red-light districts and all places selling liquor out of bounds. (2) Patrolling of restricted districts by military police. (3) Limiting passes to 4 hours; granting no passes after 9 p. m. (4) Classifying passes. (5) Routine bed checking." These regulations, but especially the first two, ought to be applied from the outset, and enforced consistently, instead of being held back until the camp is rotten with disease. Military police, properly trained, can search out places of evil resort as often as they are reopened in another district, and again put them out of bounds. That degree of supervision, surely, should be found possible.

Only a tyro in the knowledge of human nature will think that the solution of this problem can be easily reached. But it must be held for certain that no solution can be found in a method which is itself a violation of the moral law. When a government distributes contraceptives in its military camps, it acts on the immoral principle that evil may be done for a good end, helps to break down the soldier's moral sense, and, as Archbishop Simonds has said, engages in a disgraceful business with which no decent government should be associated.

Every approach to a solution must be controlled by moral and religious principles. If these principles are held to be of secondary importance to the mechanical devices recommended in the Army regulations, a decrease in the incidence of venereal disease may be secured, but at the cost of undermining moral standards. The Army practice may produce healthy animals, but the ideal which we are entitled to demand of the Government is the soldier who is a Christian gentleman, faithful to his country, because he is faithful to his God.

No Declaration of War and No American Expeditionary Force

EXTENSION OF REMARKS

OF

HON. GEORGE HOLDEN TINKHAM

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 15, 1941

ARTICLE AND TABLE FROM THE NEW YORK SUN

Mr. TINKHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article and table from the New York Sun:

[From the New York Sun of August 14, 1941]

VOTE ON LONG ARMY SERVICE IS ANALYZED—SLIM ROOSEVELT VICTORY MAY ACT AS BRAKE ON FOREIGN POLICY—IS SEEN AS SIGNIFICANT—SECOND REBUFF BY HOUSE IN 2 DAYS FOLLOWS ACTION ON DRAFT PROPERTY BILL

WASHINGTON, August 14.—The skin-of-the-teeth victory by which the President won an 18-month extension in the term of service of National Guard men and selectees from a reluctant House of Representatives on Tuesday, promised today to act as a brake upon the rapidly accelerating interventionist trend of administration foreign policy.

Twice in the last 2 days the House has flashed the red light of warning squarely in the face of the administration leadership as it passed upon measures vital to the defense program and intimately linked with international policy.

Yesterday it defeated by a majority of 5 to 1 the President's "draft property" bill because a number of restrictions upon the Government, designed to safeguard the rights of individual citizens, were deleted by a conference committee of the two Houses of Congress after the House of Representatives had inserted them in the legislation.

SIGNIFICANT BALLOT

Twenty-four hours earlier an even more ominous warning was flashed when the House passed by the margin of a single vote the bill extending the service of draftees. Widely regarded here as the most significant ballot which has been taken in either branch of Congress this year, the vote on that question has been carefully tabulated and analyzed by administration leaders who find it in grave cause for concern.

No issue which has been presented to the Congress since the outbreak of the European war, probably, has effected a more clear-cut test of isolationist and interventionist sentiment. The administration's entire foreign policy is based on the belief that the United States stands in great peril and must defend itself now by forestalling future attack.

Isolationists on the contrary have contended that the danger envisioned by the President is largely imaginary.

In the test which took place in the House the advantage lay definitely with the interventionist elements. General Marshall, Chief of Staff, had testified that failure to pass the bill would decimate the United States Army and destroy its effectiveness for defense; and there was no one in or out of Congress who successfully disputed that statement.

Every ounce of pressure that could be exerted upon the top-heavy Democratic majority in Congress was applied by the administration, and in spite of all this, disaster was averted by one vote out of a total of 419 which were cast or announced as pairs on the issue.

WAR DECLARATION IMPOSSIBLE

That vote, analyzed by States and major geographical sections, indicates that the Nation today is divided sharply against itself on the major questions of American foreign policy. It indicated conclusively that any attempt by the President to win authority to use American military forces outside the Western Hemisphere would be brusquely rejected in Congress by the representatives of the American people.

Likewise, it revealed that any declaration of war under existing circumstances would be impossible.

As reflected by the congressional vote, the sentiment in 20 of the 48 States today is predominantly isolationist, while 24 States lean toward intervention. Four States divided their vote on the issue equally.

In the isolationist group four States voted solidly against the draft extension. These were Iowa, North Dakota, South Dakota, and Idaho. In the interventionist group seven voted solidly in favor of the measure: Virginia, North Carolina, Georgia, Alabama, Louisiana, Mississippi, and Texas.

INTERVENTIONIST STRENGTH

For his victory President Roosevelt must thank the solid South and the Southwest for their all but unanimous support. The South is overwhelmingly interventionist, as is the Southwest. The border States, and, on the Atlantic coast, Maryland and Delaware feel the same way about it.

To the north, where New England touches upon the Canadian border, and where Canadian influence and sympathy is strong, interventionist sentiment likewise predominates, as it does in Japan-conscious California, and in the Pacific Slope States of Nevada and Utah.

Seldom has either branch of Congress shown such disregard of party lines as was shown in the vote on the draft-extension bill. While a substantial majority of Democrats voted for the measure and an even more imposing majority of Republicans voted against it, the evidence indicates conclusively that the membership was motivated rather by sectional than by political interest in recording its decision.

DIVISION IN NEW ENGLAND

Striking example of this is New England, where seven Democrats and seven Republicans favored the bill, while seven Democrats and seven Republicans opposed it.

In New York, which also swung into the isolationist column, Mrs. CAROLINE O'DAY, personal friend of Mrs. Roosevelt and unfailing supporter of the President's policies, was paired against the bill, while such old-line administration supporters as CULLEN, of Brooklyn, likewise deserted the President on the issue. Only three members of Tammany—BLOOM, DICKSTEIN, and KLEIN—voted for the measure.

Most surprising thing about the entire vote, probably, is the fact that north of the Mason and Dixon's line a majority of the members of the President's own party voted against him on the issue.

Most important evidence to be gleaned from the vote, however, is that labor and agriculture are wholeheartedly antagonistic to the administration's foreign policy, as indicated by the fact that in every State where labor is strongly concentrated the congressional membership opposed the draft extension. Every State in the North Central group went against the bill, and in the entire Ohio delegation, for example, only two votes for the measure could be found. In the Western group, primarily agricultural in character, no State went in favor of the bill, and in the North Atlantic section only Maryland and Delaware dissented from the isolationist trend.

REGIONAL SENTIMENT REFLECTED IN HOUSE VOTE ON ARMY SERVICE

WASHINGTON, August 14.—Of the 433 Members now sitting in the House of Representatives, 419 either voted or were paired for or against the bill which extends the military service of selectees for another 18 months.

Cutting across party lines so widely as virtually to erase them, the issue presented is construed in Washington as the most conclusive test of isolationist-versus-interventionist sentiment yet taken in Congress, and the following tabular analysis shows how the members of each party for the seven major geographical sections of the country divided on that issue.

I Am Going To Keep Faith With the Draftees

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

STATEMENT OF HON. LOUIS LUDLOW, OF INDIANA

Mr. LUDLOW. Mr. Speaker, by unanimous consent of the House I submit for printing in the CONGRESSIONAL RECORD a statement I gave to the press on July 20, 1941, in regard to the draft extension bill which proposes to hold our draftees in service beyond the agreed 12 months' limit. The statement is as follows:

It pays to be honest. I hope that Congress will remember that honesty is the best policy when it decides whether or not our draftees shall be pressed into service beyond the period of 1 year.

Every man who entered the military service under the Conscription Act did so with the understanding and belief that he would be released at the end of a year unless the United States meanwhile should enter the war. That was the promise generally made to our young men at every drafting and recruiting center in the country, and on that promise they have relied. The compact was that they were to give 1 year of their lives to the service of their country, after which they were to be free to plan their own future. I believe that in good faith and conscience that contract should be recognized and lived up to by our Government. To force them now to remain in the service indefinitely will cut a canyon clear across their lives and will disrupt and becloud their entire future by making it impossible for them to plan for school work, for business and professional connections, for marriage, or for any of the other objectives that normally engage the attention of intelligent and healthy young Americans.

Canada has never required any such sacrifice of its young men. Canada has not even passed a conscription law. The Government and the people of Canada will not stand for conscription, although Canada is deeper in the war than we are and is a member of the British Empire.

Undoubtedly important readjustments will have to be made in our Military Establishment unless the draft is extended, but the entire problem could be solved, I think, by calling for voluntary enlistments. Some of the young men like the Army, and they have no commitments or prospects in private life that would prevent them from continuing in service on a voluntary basis, and I believe there would be more than enough volunteers to take the places of those who would drop out. Our militarists do not want volunteers. They want a conscripted army, but Congress, representing the people, has not only the right but the duty to make this decision.

The Government made a moral, if not a legal, contract with the boys under the terms of which they would be in the Army only for a year. From the standpoint of the Government itself this contract should be sacredly kept, for a boy who has a feeling that his Government has lied to him will never be as good a soldier as if he had confidence in his Government's good faith.

The whole issue, it seems to me, resolves itself into a question of honesty, just plain, common honesty. Brushing aside all of the cobwebs the fact remains that the boys were told that they would be in the Army only for a year, and they implicitly believed that promise would be kept. As far as I am concerned, speaking as one Member of Congress, I am going to be honest with them. I am going to keep faith with them.

Labor Opposes St. Lawrence Waterway and Power Project

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 15, 1941

Mr. VAN ZANDT. Mr. Speaker, the unqualified opposition to the ratification of the agreement between the United States and Canada for the construction of the St. Lawrence waterway and power project by the many thousands of organized workers, whose interests will be adversely affected should the project be completed, was forcibly set forth in the testimony of labor spokesmen during the hearings before the Committee on Rivers and Harbors. So that there may be no doubt in the minds of the Members of the House as to the unequivocal position taken by these labor leaders, I call attention to the following excerpts from the testimony:

Mr. John L. Lewis, president of the United Mine Workers of America, representing 600,000 workers in the anthracite and bituminous coal fields, said in part:

Properly and thoroughly unmasked, the St. Lawrence project will not stand the light of a penetrating examination. * * * The stupidity of Government agency propaganda in support of the project and the method of presentment is almost unbelievable. * * * The new dress of defense necessity is calculated to lift the proposal from the mire of the monstrous and uneconomic and make those who know better, accept it as an essential arm of national defense.

The United Mine Workers do not propose to be taken in by political pitchmen operating under the cloak of defense needs. We do not believe that the coal industry should be singled out and penalized by foolhardy and unnecessary economic competition fostered by either the Federal or State governments and financed without warrant from the scant ready money held by the taxpayers of the Nation. * * *

Deepening of the St. Lawrence channel cannot possibly help American coal in lowered transportation costs. It will help foreign coal delivered to additional Canadian ports and save connecting rail hauls. * * * The St. Lawrence waterway will be an invitation and new peril in the barter game of other countries to unload whatever they have for whatever price or trade arrangement that can be negotiated in order to maintain exchange money and rates. Let us not mistake this certainty. * * * This waterway will touch the principal coal markets of the United States where the bulk of our coal production lies and has its outlet. * * * We have no import duties on coal in the United States. About 95,000,000 tons of American coal

touches those waters, the St. Lawrence area, and that is a market of tremendous value to any foreign country or countries that want to come into it, and the seaway would make it possible for the entire market to be taken away for the dumping of foreign coal. * * * So here is the mining industry of the United States being stripped naked in the economic coal market of the world by this proposal because a tramp steamer can come into Buffalo, Cleveland, Chicago, and dump coal at any price under the Government's subsidized barter system.

Mr. Thomas Kennedy, international secretary-treasurer of the United Mine Workers of America, stressing the disastrously distressing effect that the project would have on the miners engaged in the production of anthracite coal, stated:

Reduced to figures which the average layman may grasp, it, the St. Lawrence project, will mean the loss of something approximating 3,000,000 man-days of production in the anthracite industry. It is a loss which the people, the industry, and business interests in this section of our country cannot afford to lose. * * *

Development of the St. Lawrence seaway is only going to mean the end of our Canadian business. * * * If the St. Lawrence is made navigable to ocean liners, it just means we will lose this business completely, because foreign coals will come right into our back yard and undersell our American products. * * *

These foreign coals coming into the head of the Great Lakes through the St. Lawrence would not only ruin our Canadian business but would be a distinct menace to our American markets along the southern border of the St. Lawrence River.

Mr. J. G. Luhrsen, executive secretary of the Railway Labor Executives Association, speaking on behalf of the members of the 20 standard railway labor organizations, said:

We know that this waterway project will divert business from the rails in very substantial tonnage, so that railroad employees will be deprived of thousands of positions and without a livelihood to follow in any substitute vocation. * * *

We, of course, are certain that all such exports and imports as go through the ports of New York or Philadelphia get a substantial rail haul. If you construct this St Lawrence waterway, the vast majority of the rail haul will be lost to this new waterway. * * * There can be but one wholesome national answer to the St. Lawrence waterway project and that is that it should and ought to be voted down. It has every element of preponderance of evil rather than good for the American people as a whole. It will concentrate and centralize and defeat the avenue of decentralization when the emergency is over. * * * It will harm one of the most important arms of inland national defense we have today * * * the railroads. It will curtail, rather than increase, employment. * * * It will give every advantage to foreign vessels. * * * It adds to the danger of attack. * * * It does everyeverything that can possibly be imagined to make more vulnerable all of our national defense.

The following excerpts are also taken from the hearings:

W. D. Johnson, vice president and national legislative representative, Order of Railway Conductors:

Railway employees have pledged to the President their unqualified support in carrying forward our national-defense program. Railway employees can be depended upon to make their pledge good in every respect. Our opposition to the St. Lawrence seaway and power project supports that pledge, because it is our honest judgment that the manpower that will be required and the several hundred million dollars necessary to carry on the improvement work can be and should be converted to a more profitable program of production of national-defense material that could be made available for effective service before the work on the St. Lawrence project could be started.

John T. Corbett, national legislative representative and assistant grand chief engineer of the Brotherhood of Locomotive Engineers:

This brotherhood has contracts with all railroads of the United States and Canada. * * * Railroad labor has been reduced nearly half during the last 20 years. Construction of this proposed waterway must result in diversion of transportation now handled by the railroads and additional loss of jobs to additional railroad employees. The attention of the committee is called to the fact that the estimate of costs of the project fails to express any definite estimates of the loss of positions that citizens of the United States must suffer. These surely are costs that railroad employees must pay for through unemployment and less desirable working conditions. * * * It is the position of the Brotherhood of Locomotive Engineers that there is no present necessity for this project, and remarks made by officers of the Government indicated their hesitancy in expressing the statement that the project was either a necessity or vital for national-defense purposes.

S. C. Lush, deputy president, Brotherhood of Railroad Trainmen:

This organization has a membership of 157,000 in the United States and Canada, of workers engaged in train, yard, and dining-car service upon the railroads of the two countries. If the deepening of this channel is not necessary for defense, and we do not believe it is, American labor, particularly labor engaged in railroad transportation, is a victim of attack in this bill authorizing construction of the St. Lawrence waterway project. * * * It is a subsidy to water transportation which will bring about reduction in hours of railroad workers and workers in allied industries. * * * The discriminatory character of the project will require labor in all sections of the country to contribute to the tax levy constituting the subsidy. The extent to which railroad labor is required to finance this tax burden will in effect cause it to contribute to the reduction of man-hours of employment and reduction of wages in the railroad industry. * * * Our Government has thus far subsidized inland waterways amounting to approximately $2,176,000,000. * * * If we add an additional half billion dollars or more to such subsidies to the St. Lawrence project, it will be done at the expense of labor and taxation, loss of employment, and reduced earning capacity.

J. A. Nesbitt, secretary, International Railway Association, an organization composed of employees who have retired under the provisions of the Railroad Retirement Act:

Today we are faced with another threatening arm of heavily subsidized waterway improvement, reaching out to divert even to a greater and more alarming degree, what is left of value to the railroad mode of transportation through the proposed improvement of the St. Lawrence basin. * * * Railroad employees are much disturbed over the diversion of the enormous tonnage of traffic from land transportation through the seaway, thereby reducing employment pay rolls, purchasing power, and revenues of the railroads and endangering the future status of the vast army of retired railroad employees.

Mr. John R. Owens, secretary-treasurer of the International Longshoremen's Association, an affiliate of the American Federation of Labor, representing organized workers on the water fronts of our ocean, gulf, and lake ports, appeared in opposition to the bill accompanied by four union officials representing longshoremen of the New York Harbor district. These men pointed out in clear and forcible statements the immeasurable harm that the completion of the waterway would do to maritime labor in our Atlantic and Gulf ports; stressing the baneful effect that the diversion of traffic from existing ports to the waterway would have upon the maritime industry and its employees.

During the course of the hearings representatives of union longshoremen, employed in the Great Lakes district, representatives of the organized grain shovelers union and of the tugboat employees, appeared in opposition to the measure.

One of these witnesses, Mr. August A. Wolf, president of the Tug Firemen and Linemen, said:

We are opposing the St. Lawrence seaway, and so went on record during our convention at Detroit, starting March 11 of this year. On the various trips I have made from one port to another, I found opposition to this seaway construction quite definite among those engaged in marine work. Not only will it harm the tugmen, but all Great Lakes sailors who now make their livelihood sailing on the Great Lakes who will be replaced by foreign sailors. This should have a direct effect on the tugmen who, after following this line of business for years, will find their activities cut in half. * * * As a representative of labor, I voice my objections to this plan, not only because it is detrimental to the men in my particular union, but because on my trips through the Great Lakes area, covering almost every port, I found no general sentiment in favor of this project.

So far as labor's attitude concerning the St. Lawrence project is concerned and as reflected by what transpired during the course of the hearings on the bill, it may be properly and truthfully stated that organized labor is overwhelmingly against the St. Lawrence project.

Extension of Military Training

EXTENSION OF REMARKS

OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 15, 1941

EDITORIAL FROM THE BALTIMORE SUN

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Baltimore Sun of Monday, August 11:

[From the Baltimore Sun of August 11, 1941]

COMPLETE THE TRAINING

Among the Members of the House who oppose the bill to extend the period of military

service are some who would count the noses of pressure groups in any emergency and would vote with an eye single to political safety. Some others are so ruled by political passion as to be blind to reason. But others opposed to the bill, or hesitant over it, are decent men disturbed by the sacrifice required of the soldiers who will be kept in the service for a longer period.

These decent men among Members who oppose or who hesitate ought to put to themselves one solemn question: Can any sacrifice required of the young men of America be more serious, more terrible, than to send them into modern war untrained to protect themselves, or only half-trained? It would be superfluous to restate the nature of mechanized war. Everyone knows. It would be superfluous to restate the art and science now employed in war, or the striking power and the killing power of new weapons. Everyone knows. It must be obvious to the dullest mind that untrained or half-trained men will be slaughtered in battle. Can the Congress exact any sacrifice of American youth equal to that?

There is no doubt that to extend the service of young men now in uniform or to be put into uniform will, in many cases, involve hardship upon them and upon their parents. The original induction in many cases involved hardship. But Hitler has made hardship the lot of all men. We do not have choice between ease and hardship. We have choice between different kinds of hardship. In this case the choice is simply stated. Do the people, do the Members of Congress, prefer that our sons shall have the hardship of an extension of service which will permit them to be thoroughly trained Or do the people, the Members of Congress prefer to risk the ultimate, terrible hardship of unnecessary slaughter of our sons?

Gen. George C. Marshall, Chief of Staff, has clearly illuminated the whole question in his testimony before the House Committee on Military Affairs. At one place in that testimony he said:

"We have had some tragic examples in our history of good men, sound men, being involved in humiliating reactions on the battlefield and the very same men performing magnificently at a later date, when they had been thoroughly organized and trained. We had such situations in the Civil War. In fact, most of the Union Army ran into the arms of Congress, I think, after the first battle of Bull Run. And yet later on those same men did some of the heaviest fighting and took the heaviest punishment in the history of the world. But it took years to develop that state of discipline."

Into that professional military testimony must be read the human elements with which decent Members of the House are concerned. Those armies of the past not only failed when fighting as untrained men and succeeded after being trained. They also left in their graves great numbers of men whose lives might have been spared had the training been given before, and not after, initial battles. If that was so in the relatively simple military operations of the past, no great imagination, only simple common sense, is necessary to foreshadow the horrors which will follow the use of untrained or half-trained men against trained armies of today possessed of modern weapons of death and destruction.

Responsible men cannot take refuge in the assertion that there is no real danger that our Army will be engaged in battle. There is danger. An overwhelming preponderance of opinion in the country has declared that there is danger. What else is the meaning of the whole vast armament program which is quickly revolutionizing the social and economic life of the Nation? What else is the meaning of the great lease-lend program? What else is the meaning of the unprecedented enactment of compulsory service in peacetime—an enactment which no one seriously proposes to repeal?

There is danger that the men in our Army will be engaged in battle. While that danger stands before our eyes, it will be a sin against American youth to fail in any steps which will assure their thorough training to engage in battle on even terms. It will be a sin against American youth to ease the hardship of extended training and expose them to the vastly worse hardship—the horror—of battle without adequate training. It will be a sin against the youth who are now directly affected by the proposed legislation, for in emergency they may have to return to the ranks only half trained. It will be a sin against their present comrades in arms, for they will be left to face the future with depleted and enfeebled units. It will be a sin against the youth who are yet to be called, for they will begin their service, in this time of danger, in a weakened and unprepared Army.

To the decent men in the House who oppose this bill of extension, or who hesitate, we say: Think solemnly of your responsibility. For every boy whom you relieve of the hardship of extended service, you may consign another boy to unnecessary slaughter on some field of battle where he will face a trained foe.

Denver's Public Library

EXTENSION OF REMARKS

OF

HON. LAWRENCE LEWIS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1941

Mr. LEWIS. Mr. Speaker, citizens of Denver take great satisfaction and considerable modest pride in our public library, which for 17 years has been under the able direction of its librarian, Dr. Malcolm G. Wyer. With its 13 branches in all parts of the city, the library has greatly extended its usefulness by making easily accessible to citizens in all parts of Denver and to visiting students its rich and extensive collection of books, periodicals, and documents.

In addition to the general collection such as is found in every first-class library of the larger American cities, the Denver Public Library has large and constantly growing collections on specialized subjects, notably on western history, especially the history of Colorado, and on many technical subjects. As our people, old and young, are distinctly air-minded, and as we have in Denver, Lowry Field, one of the United States Army's large Air Corps technical schools, there has arisen of late years an ever-increasing demand by citizens, and especially by students at Lowry Field for popular and technical works on aeronautics. This demand has been met by a noteworthy collection on aeronautical subjects.

The following article, printed in a recent edition of Denver, the publication of the Denver Chamber of Commerce, is pertinent:

DENVER HAS FAMED TECHNICAL LIBRARY

Within the Denver Public Library functions the unique science and engineering department known as the engineers' library which is the largest technical library between Chicago and the Pacific coast. It is famed throughout the United States and has been described by the Massachusetts Institute of Technology as the best practical technical library in the country.

The technical library is of such excellence that at least one engineer is known to have made his residence in Denver in order to have access to it. Another engineer came from New York City to devote 10 days in research on metals and metallurgy.

The engineers' library is made possible through the cooperation of the State board of engineers and land surveyors, Colorado Scientific Society, and the Denver Public Library. It had its inception when the Colorado Engineering Council, composed of delegates from 14 engineering and scientific societies, sponsored legislation authorizing the State board to appropriate library funds from fees. The engineers' library is in charge of Miss Margery Bedinger, chief, science and engineering department, Denver Public Library.

National recognition has been extended to this library unit as an aid in defense work. Its coverage of aeronautical subjects is especially complete. An outstanding aeronautical collection from England was recently acquired. It consists of 1,400 items in 7 languages and dates from the year 1600. Modern books on aeronautical subjects are being continuously added. These are used extensively by soldiers from Lowry Field, and through cooperation with the Civil Aeronautics Board a deposit station has been established at the municipal airport.

Technical subjects also include photography, which is covered by the best books and magazines on the subject.

The library works closely with the Bureau of Reclamation, which maintains field headquarters in Denver, and with other Government technical units. Lists of new books are sent every 3 months to members of the Colorado Scientific Society, Colorado Engineering Council, and the Colorado section of the American Institute of Architects. The library serves the entire State of Colorado in the technical field.

Sudden impetus in use of the engineers' library sometimes gives an inkling that something is about to happen. Such was the case in 1939, when many strangers to Denver used the library for reference on mining and metals. Within 1 or 2 months World War No. 2 started.

Extension of Military Training—Money Spent in Defense Effort

EXTENSION OF REMARKS

OF

HON. ROBERT A. GRANT

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 15, 1941

Mr. GRANT of Indiana. Mr. Speaker—

In the close vote on the draft bill—

According to Representative Cox, Democrat, of Georgia—

is to be found that deep truth which most refuse to write, that there is a lack of confidence in too many of those who have been appointed to conduct public affairs. The people of this country are beginning to resent what they believe to be the fact that their Government has, in large part, been taken away from them and delivered into the keeping of an alien and alien-minded group, wholly unfit for the work they have been assigned to

do and for the office to which they have been appointed.

The draft-extension bill as passed by the House extends the period of service of all Army men by 18 months. It provides an increase in the basic pay of all men in the Army, except commissioned officers, by $10 for each month they serve beyond 1 year. The bill further provides that the 18 months' additional service shall be credited against the 10 years draftees are required to serve as members of the Reserve forces. The House version of the bill also requires the Secretary of War to discharge those men whose continued service would result in hardship to them or their families, but the discretion as to whether or not individuals come within this hardship rule is left to the Department.

The bill passed the House by a slim majority of one vote. Press reports of the fight on the floor of the House cannot possibly give a true picture of all of the pressure that was exerted behind the scenes. The changes made in the bill were accepted by the Senate, thus it was possible to avoid another vote in the House such as would have followed had the different versions of the House and the Senate bills gone to a joint conference.

Some of the most belligerent ones have referred to the opposition to the draft-extension bill as political. On that point, the three best-informed men in America today on conditions in Europe are united in their opinion that this country should not become an active participant in the European war. They are Joseph P. Kennedy, former Ambassador to Great Britain; John Cudahy, former Ambassador to Belgium; and even William C. Bullitt, former Ambassador to France.

These three great Americans are outstanding members of the Democratic Party. They were personally selected by President Roosevelt to represent our Government in these respective countries and to keep us informed of happenings there. Certainly no one in our country today is better informed nor has a wider experience from which to speak on this question of our entrance into the war.

Their experiences do not depend upon hearsay. They have watched the changing scene with their own eyes. They did not visit Europe with a passport in one hand and a lunch basket in the other and then hurry back home to pose as experts on international affairs.

Do we understand the implications of the tremendous sums of money being poured into the defense effort? All of us favor a strong national defense, second to none; but, at the same time, we must realize that there will be a day of reckoning. Expenditures of nondefense items should be pared to the bone and waste and extravagance in the defense program itself should not be countenanced.

The public debt passed the $50,000,000,000 mark this week and the pending tax bill is still expected to leave us with a deficit of some ten billion dollars for the current fiscal year. I am enclosing herewith a most interesting compilation of figures touching upon the subject of national expenditures and national debt. I hope you will find time to give them careful consideration and seriously consider the implications of this present-day program.

The following table shows total Federal appropriations and authorizations for the 2 fiscal years, 1941 and 1942—a total of $67,559,885,510. The compilation includes all Presidential recommendations before Congress as of August 1, 1941. Complete details on these appropriations and authorizations may be found in the CONGRESSIONAL RECORD for July 24, 1941, page 6298 et seq.:

Department	Fiscal year— Ended June 30, 1941	Ending June 30, 1942
Army	$13,283,577,072	$11,987,179,831
Navy	4,466,286,457	[1] 12,391,918,072
Other national defense	1,336,671,908	2,460,970,250
Total defense	19,086,535,437	26,840,068,153
Lend-lease fund		7,000,000,000
Civil functions	7,487,971,964	7,145,309,956
Total, all Federal	26,574,507,401	40,985,378,109
Grand total for 2 years	$67,559,885,510	

RECAPITULATION

Cash expenditures for—	
Fiscal year 1941	$12,710,000,000
Fiscal year 1942 to date	1,000,000,000
Civil functions, balance, fiscal year 1942	6,500,000,000
Defense contract commitments unpaid	23,684,585,982
Defense authorizations still to be contracted	[1] 23,065,299,528
Total	67,559,885,510
Average annual Federal expenditures, 7 years (1927–33)	4,057,000,000
Average annual deficit, 7 years (1927–33)	657,000,000
Average annual Federal expenditures, 7 years (1934–40)	7,843,000,000
Average annual deficit, 7 years (1934–40)	3,457,000,000
Annual deficit for fiscal year ended June 30, 1941	5,103,000,000
National debt, July 1, 1941 ($371.21 per capita)	48,961,487,962
Budgeted deficit, fiscal year 1942	10,900,000,000
Estimated debt, as of July 1, 1942 ($454.25 per capita)	59,861,487,962
National debt, June 30, 1933 ($179.21 per capita)	22,538,672,164

[1] These items include, between them, $8,095,173,256 in appropriations and authorizations for the fiscal year 1942 still in various phases of the legislative process; plus $7,297,000,000 needed after 1942 to complete the 2-ocean Navy and other long-term defense projects as now authorized.

[2] Does not include annual average of $670,000,000 postal expenditures paid directly from postal receipts.

The House Votes

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 14, 1941

EDITORIAL FROM THE NEW YORK HERALD TRIBUNE

Mr. SABATH. Mr. Speaker, I have just been informed that the Senate has acted upon the House amendments to the service-extension bill, same having been agreed to by a vote of 35 to 19. By this action it will not be necessary for the bill to go to conference and will be transmitted directly to the President for signature. In that connection I desire to have inserted in the RECORD an editorial appearing in today's issue of the New York Herald Tribune, a Republican newspaper, and which I have only hurriedly glanced over, which expresses the opinion that in times like these the press of the country cannot help but approve the action of Congress in taking steps to strengthen our defense. The editorial reads:

[From the New York Herald Tribune of August 14, 1941]

THE HOUSE VOTES

The House, like the Senate, has recognized the gravity of the international situation. It has performed its plain, if arduous and unpleasant, duty of voting to extend the inadequate 1-year service term; and the country will not have to face the disbandment of its new Army—still only half-trained, and on which colossal amounts of energy, time, and money are being invested—just as the desperate issues which led to its creation are reaching their most critical months. The main point has been happily carried. But it would be quite useless to deny that the extreme narrowness of the vote has seriously diminished the value of the action. All around the world it can only be read as a sign of disunity, political factionalism, frivolous inability in the United States to face and understand the hard conditions of contemporary international life.

This vote was certainly rendering no service to the young men whose term of duty is to be extended. At a time when it has been demonstrated over and over again that the best security is in strength, this is creating an appearance of weakness, the only effect of which will be to invite the very dangers that may summon these young men to battle. The appearance is doubtless deceptive. The much larger majorities obtained by the proponents of the bill on the earlier test votes, which were not a matter of record, strongly suggest that many Members, on the final vote, were not recording their convictions but, assuming that the bill would pass anyway, were trying to play politics.

Unfortunately one cannot rely on the general staffs in Berlin and Tokyo, the hard-pressed people in Britain, or the Latin Americans who are seeking to gage our strength, to grasp such nuances of the American political scene. And one can only ask again, quite soberly, whether there is a sufficient realization in Washington and elsewhere of just how grave the international situation really is or of what bad politics it may prove to be to attempt to play politics with it—or in any other way to take a passive, narrow and short-range view of problems that are quite certain, however they may be answered, to be decisive for the history of the United States, as of the rest of the world, over a very long time to come. Many people in the United States in recent times have been obsessed with the dangers of action, of a positive stand, of doing anything that may lead to war. How many of them have considered the dangers of inaction, of a negative stand, of doing nothing, even if the inaction leads not only to war but to defeat? How many of them, in reading Marshal Petain's abject and extraordinary confession of utter helplessness and defeat, have realized that here is nothing else than the end product of partisan politics, of inaction, of obstruction, of doing nothing that may lead to war or anything else?

This newspaper does not believe that any such document will ever come from a head of the American State. It does not believe

that the United States has frittered its strength away in fear and partisan narrowness and division; it does not believe that this country will ever do so. It is concerned for those, of whatever group or whatever the party they profess to represent, who risk by shortsightedness the terrible retribution which the people of this country would bring down on anyone who sought to lead them with obstruction, inertia, and timidity into such an irremediable disaster as has overtaken France and the other subject peoples of Europe.

Hon. Elmer L. Irey and Intelligence Division Praised by Secretary Morgenthau

EXTENSION OF REMARKS
OF
HON. JOHN J. COCHRAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1941

PRESS RELEASE OF THE TREASURY DEPARTMENT

Mr. COCHRAN. Mr. Speaker, on numerous occasions I have called attention to the House and to the people of the country of the work performed by the Division of Intelligence of the Bureau of Internal Revenue. This outstanding Government agency brings into the Treasury of the United States, on an average, 30 times as much additional revenue annually as it costs to operate the Division. Every day its personnel is active, either in the field or in prosecuting income-tax evaders in the Federal courts. So outstanding was a recent case that the Secretary of the Treasury took it upon himself to write a personal letter to Hon. Elmer L. Irey, Chief of this Division.

It seems to me, Mr. Speaker, especially during this period when so many critical statements are made in reference to the administration and to those who are in charge of our various Government agencies, that the release from the Treasury Department together with a report of the Treasury letter should be printed in the RECORD, and under the permission granted me I include them as part of my remarks. They follow:

Commending the Intelligence Unit of the Bureau of Internal Revenue on the successful conclusion of its case against Enoch L. "Nucky" Johnson, Atlantic City political leader, Secretary Morgenthau today directed letters of appreciation to Elmer L. Irey, Chief of the Unit and coordinator of the law enforcement agencies of the Treasury, to Guy T. Helvering, Commissioner of Internal Revenue, and to Francis Biddle, Acting Attorney General.

Johnson last Friday was sentenced to a 10-year prison term and fined $20,000 after a Camden, N. J., Federal jury found him guilty of evading income-tax payments for 1936 and 1937.

"Culmination of the Johnson case," Secretary Morgenthau wrote Chief Irey, "in a period of heavy armament expenditures will, it seems to me, cause the public generally to regard even more seriously than they have heretofore the offense of the individual who attempts to evade payment of his full share of the cost of Government. It is for that reason that I believe the successful prosecution of the charges in this indictment is an important contribution to national unity and good government. We have no time today for shirkers, and good citizens are likely to have little patience with those who want to share the privilege of citizenship without meeting the responsibilities that go with that privilege."

The Atlantic City boss was found guilty of cheating the Government in 1936 and 1937 of $38,707.40 in income taxes. In addition to the prison term and the fine, he faces a fraud penalty of 50 percent of the taxes he was found guilty of evading. For 20 years Johnson held sway over politics and rackets in his domain, much the same as Thomas Pendergast had done at Kansas City, Mo., before his income-tax evasions came to light.

"In addition to a number of rackets, including gambling, vice, and horse-race betting, corruption in city and county contracting also contributed to the income on which the defendant failed to pay a Federal tax," Mr. Morgenthau's letter concluded. "In the series of cases stemming from this investigation 37 other persons already have been convicted on various charges. As a byproduct of your 4-year effort to carry out your own responsibility, therefore, you should be pleased that you have benefited local government in another community of the United States."

Promotions to Special Agent William E. Frank, of New York City, who supervised the investigation; and to Special Agents Paul F. Snyder, Boston; Edward A. Hill, Philadelphia; and John C. Cheasty, New York City, who participated, have been ordered.

The text of the Secretary's letter to Chief Irey follows:

AUGUST 5, 1941.

DEAR ELMER: The successful termination of the difficult investigation into violations of the income-tax laws by Enoch L. Johnson, of Atlantic City, prompts me to tell you again of my gratification and pride in the perseverance and painstaking efforts in this case of the intelligence unit and of coworkers in the income-tax unit of the Bureau of Internal Revenue.

I want you especially to know that, in these days when all of us must give our first thoughts to the requirements of the national defense, we are not overlooking the day-to-day fulfillment of assignments which might seem more noteworthy in calmer times. Culmination of the Johnson case in a period of heavy armament expenditures will, it seems to me, cause the public generally to regard even more seriously than they have heretofore the offense of the individual who attempts to evade payment of his full share of the cost of Government. It is for that reason that I believe the successful prosecution of the charges in this indictment is an important contribution to national unity and good government. We have no time today for shirkers, and good citizens are likely to have little patience with those who want to share the privilege of citizenship without meeting the responsibilities that go with that privilege.

I shall appreciate it if you will express my congratulations and thanks to Special Agent William E. Frank, of New York, who had immediate supervision of the investigation, and to Special Agents Paul F. Snyder, of Boston, Edward A. Hill, of Philadelphia, and John C. Cheasty, of New York, the latter two of whom have been called to active duty in the military service.

I should also like to congratulate and commend the two revenue agents of the income tax unit, Walter Boxon, Jr., and John F. Williams, of Newark, and the several agents of the alcohol tax unit of the Bureau of Internal Revenue who aided you in this investigation. Such teamwork is an additional excellent example of the value derived from coordination of the Treasury's enforcement activities, which we began together more than 7 years ago.

The ability of your men to cooperate effectively with other departments of the Government is reflected in their relations during the investigation and trial with Attorney Joseph W. Burns, of the Tax Division of the Department of Justice, who served as a special assistant to the Attorney General and as chief Government counsel. All of us are indebted to him for his share in the effort that came to a conclusion with the imposition of sentence on August 1.

In addition to a number of rackets, including gambling, vice, and horse-race betting, corruption in city and county contracting also contributed to the income on which the defendant failed to pay a Federal tax. In the series of cases stemming from this investigation, 37 other persons already have been convicted on various charges. As a by-product of your 4-year effort to carry out your own responsibility, therefore, you should be pleased that you have benefited local government in another community of the United States.

Sincerely,

HENRY MORGENTHAU, JR.,
Secretary of the Treasury.

Open Letter to the President on Entrance of the United States in European War

EXTENSION OF REMARKS
OF
HON. ROBERT A. GRANT
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Friday, August 15, 1941

LETTER TO THE PRESIDENT BY ALFRED J. LINK, LAPORTE, IND.

Mr. GRANT of Indiana. Mr. Speaker, under leave to extend my remarks, I include herewith an open letter from a constituent, a distinguished lawyer and jurist, Alfred J. Link, of LaPorte, Ind., to the Chief Executive:

JUNE 4, 1941.

To the PRESIDENT OF THE UNITED STATES.

SIR: This is an open letter from a citizen of the United States of America to his President.

On October 23, 1940, I heard you over the radio. This is what you said:

"We are arming ourselves not for any purpose of conflict or intervention in foreign disputes. I repeat again that I stand on the platform of our party; we will not participate in foreign wars and will not send our Army, naval, or air forces to fight in foreign lands outside of the Americas except in case of attack.

"It is for peace that I have labored, and it is for peace that I shall labor all the days of my life."

On October 30, 1940, I again heard you over the radio. This is what you said then:

"The first purpose of our foreign policy is to keep our country out of war.

"And while I am talking to you, fathers and mothers, I give you one more assurance. I have said this before, but I shall say it again, and again, and again, your boys are not going to be sent into any foreign wars.

"They are going into training to form a force so strong that by its very existence it will keep the threat of war far away from our

shores. Yes, the purpose of our defense is defense."

On November 1, 1940, I heard you again over the radio. This is what you said:

"I am fighting to keep this Nation prosperous and at peace. I am fighting to keep our people out of foreign wars and to keep foreign conceptions of government out of our own United States."

Mr. President, you made those promises to me, to my wife, to my daughter, and to my three sons.

You made those promises to millions of other American fathers, mothers, sons, and daughters. They believed your promises, as you asked them to do. They voted for you, as you wanted them to do. They re-elected you, because you promised them defense and peace.

Mr. President, we have not been attacked. If you will honestly and realistically devote yourself to our own defense, no enemy will attack us; no enemy would dare to attack us; and no combination of enemies could defeat us.

If you send our planes, or ships, or men, into foreign danger zones to commit unneutral acts, you will invite, yes, you will provoke, attack. You will be leading and taking us into the very war which you promised to keep from us. You will not be keeping your word; you will be breaking your promises.

Mr. President, you made your promises freely and clearly, without conditions or reservations. Millions of American citizens heard what you said. They understood what you said. The vast majority of them believed what you said.

Mr. President, there were and there are American citizens who heard and understood your promises, but did not believe them. They said that you did not intend to keep your promises when you made them, and that you made them with intent to deceive your fellow countrymen; that previously you had made secret commitments to foreign nations and that these secret commitments conflicted with your public promises to the citizens of your own country. These same people say now that your conduct of this Nation's affairs justifies their lack of faith in your promises.

Your conduct and decisions within the very near future will determine whether the faith and confidence of the majority, or the mistrust and disbelief of the minority, were justified.

I cannot reconcile the promises you made to me and to my family in the fall of 1940 with the policies outlined in your radio address of May 28, 1941.

Will you keep the faith with those millions who heard and understood you in October and November of 1940, who believed what you said then, and who relied and acted upon your promises?

They expect you to keep your word.

Respectfully yours,

ALFRED J. LINK.

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. FRANK C. OSMERS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, August 15, 1941

EDITORIAL FROM THE NEW YORK SUN

Mr. OSMERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Sun of August 12, 1941:

[From the New York Sun of August 12, 1941]

THE GAZETTE WAS RIGHT

It is painful to have to record that our esteemed neighbor, the Montreal Gazette, was justified in some of the doubt it expressed on July 18 about that little junket of the Rivers and Harbors Committee of our House of Representatives. Members of this committee went to Canada to look over some of the territory affected by the proposed St. Lawrence seaway scheme. Although it felt that "presumably" the visitors had come with more or less open mind, the Gazette went on to say:

"It is unlikely that the committee will find itself in a better position to judge between the arguments of promoters of the waterway and those of the opponents merely by looking at the flowing water, but the splendid spectacle which the St. Lawrence affords should give them a more accurate idea of the magnitude and the ultimate cost of the project than they have been able to obtain in Washington. This should be some help in determining whether the work ought to be undertaken in time of war or deferred until a period when it will not interfere with the winning of the war."

Fancy beholds an editorial finger hovering over that word "should," in uncertainty whether to italicize it or not. The visit should have afforded the help mentioned, but apparently it did not. Politeness stayed the editorial hand, but politeness did not keep it from writing a suggestion that the committee would be much better off if it were not certain to be "shepherded" in such manner that its members would fail to come into contact "with those leading Canadian engineers, transportation experts, economists, and businessmen who are convinced that the seaway cannot be made to serve its intended purpose, who regard the navigation facilities and power development as unnecessary and, therefore, unnecessarily costly, and who see in the project a very serious diversion of men and materials from this country's war effort and from the United States defense program." What the committee ultimately decided is now history. It is to plump this project and the Florida ship canal project into a general pork-barrel rivers and harbors authorization bill.

Government Control of Monetary System

EXTENSION OF REMARKS

OF

HON. J. HARDIN PETERSON

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 15, 1941

LETTER FROM THE PRESIDENT OF THE CONSTITUTIONAL MONEY LEAGUE OF AMERICA

Mr. PETERSON of Florida. Mr. Speaker, pursuant to request granted, I wish to insert in the RECORD as part of my remarks the following letter from the Constitutional Money League of America, written by the president of the St. Petersburg chapter:

CONSTITUTIONAL MONEY
LEAGUE OF AMERICA,
St. Petersburg, Fla., December 28, 1940.

Hon. J. HARDIN PETERSON,
Washington, D. C.

DEAR MR. PETERSON: The country faces a situation today similar to that which existed in the early days of the Civil War. Except for the fact that we are not as yet actually at war, we have the same war expenditures to meet proportionately. To meet these expenditures Congress has the same constitutional resources as President Lincoln had—to issue Treasury notes.

The time is ripe for a change in our monetary system from private to Government control. Conditions within the country are favorable to create an informed public mind, such as Lincoln did not have and could not get.

We realize that the National Bank Act of 1863 and later, the Federal Reserve Act of 1913, legalized the use of national credit by a favored few and this has created complications in our national economy. To quote the elder Morgan: "You can't unscramble eggs"—but the Congress can prevent more eggs from being scrambled.

On March 4, 1933, the President uttered inspiring words: "The money changers have fled from their high seats in the temple of our civilization. We may now restore the temple to the ancient truths." Since then he has proved the sincerity of his purpose. All of the New Deal measures in the public interest prove it. His recall of the delegates from the London Monetary Conference and his historic message of July 4, 1933, serving notice on the gold bloc of Europe of the independence of the United States and of our intention to establish an honest dollar, ranks with the other Fourth of July declaration. That date was well chosen and full of meaning. Hence the Roosevelt hate. That hate, based as it is on public ignorance of the monetary situation, has been carefully fostered. Such words as inflation, fiat money, reckless spending, and vast public debt have been given a wrong meaning in the public mind. It is opportune now to enlighten the public. The people should right now be told the truth about money. This the President can do as no one else can. The people trust him.

When he does this the public will be enlightened overnight. Such pressure will then be brought to bear that Congress will have to pass such legislation as may be proposed. This can well be: Issue United States money debt-free at the source, sufficient to cover Government spending in excess of revenue. Government control is the only safe control.

The deliberate measures of the Federal Reserve System in 1920, followed by their measures in 1929–33, inflicted greater suffering, misery, and loss upon the people than resulted in our participation in World War No. 1. Recovery, so well on its way in 1936, was deliberately sabotaged by the Board in the fall of 1936 and 1937.

Give the facts to the country.

The great among our Presidents have all advocated Government control—Jefferson, Jackson, Lincoln, Wilson. We believe that the President has been steadfastly working toward this end. We believe the time is now to "restore the temple to the ancient truth" by giving back to the people control of credit and currency free from usury.

In the language of Senator Owen, "Permanent prosperity depends upon an adequate supply of money issued under the authority of Congress and regulated by legislative mandate." When our Government has done this it will have lighted the torch of liberty for all the nations. Prosperity and usury can never go hand in hand.

In conclusion, we desire to thank you for your interest and to assure you we shall appreciate in full measure your further

cooperation. This is a copy of the letter we sent to the President on December 2, 1940.

Cordially,

M. YOWELL,
President, Constitutional Money League of Florida.

Extension of Military Service

EXTENSION OF REMARKS
OF
HON. FREDERICK C. SMITH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

Mr. SMITH of Ohio. Mr. Speaker, I believe the Congress will do something gravely wrong if it passes this bill to hold the selectees and the National Guard in training more than a year, as was provided for in the Selective Service Act of September 1940.

This, in my opinion, will be breaking one of the most sacred pledges any government can enter into. A contract by a government with the people and the soldiers which involves the forthright and unequivocable agreement to draft into the army men for training only, and for a specified time, should be kept inviolate.

Our Government made a promise to our soldiers a year ago that they were being sent into military camps for 1 year. I will never vote to break this promise, particularly when we are no nearer a conflict in our hemisphere than we were when the promise was made.

Preparation for Peace Now

EXTENSION OF REMARKS
OF
HON. J. PERCY PRIEST
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Friday, August 15, 1941

EDITORIAL FROM THE UNITED STATES BAPTIST

Mr. PRIEST. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I am including an editorial from the United States Baptist:

[From the United States Baptist]

Action by our recent conventions in adopting resolutions looking to a study of peace plans which will result in a just and righteous and lasting peace after the conclusion of the present war, was of more than passing significance. It was recognized that such a peace must be based on Christian principles and ideals.

The southern Baptist convention in its session at Birmingham appointed the officers of the convention as a special committee to "lend itself to the advancement of such Christian ideals as would lead to the establishment and maintenance of a just and righteous peace"; while the northern convention, meeting at Wichita, expressing its disapproval of totalitarianism declared that "the principles and spirit of Jesus form the foundation on which any just and lasting peace must rest," and recommended cooperation with other religious bodies in studying various proposals for a just and enduring peace.

There must be preparation for peace, just as there has been preparation for war. Not only must there be deep and thoughtful study of the measures which should be adopted in the international agreements to be reached on the conclusion of the war. There must also be the creation of a widespread public sentiment in favor of just and lasting measures, and this public sentiment must be impressed upon the minds of those who will be responsible for drafting the peace treaties. If these terms are not based in their fundamental concepts on the eternally grounded principles of truth and justice and fair dealing as taught by Christ, there will be no lasting peace.

It is essential, therefore, that Christian bodies begin to make their voices heard now. It is vitally important to the future welfare of the world that Christian forces make known their belief that any peace which is to be enduring must be based on Christian ideals. They must study the problems involved in the numerous and complicated issues which will be discussed at the council table on the conclusion of the war; and they must make their views known. Christian forces must have a part in this settlement.

Here is presented a great challenge and a great opportunity. It is a challenge to our courage and our faith: an opportunity to perform one of the greatest services for the cause of Christianity and the future good of man that has ever been presented to us.

If the Christians of this Nation, uniting with Christians of other lands, succeed in making their voices and their influence felt to the extent of bringing into being peace terms that will be "just and righteous," peace terms that will be based not merely on selfish and mundane national considerations but on the unselfish and charitable principles of Christianity as revealed in the teachings of Christ, they will have accomplished something for which all "future generations will rise and call them blessed."

It may be said that it is too early as yet to consider what peace terms may be adopted after the war, and that it is impossible now to foresee what conditions may prevail when the time comes for final discussion of these terms. It is true that these future events are not entirely clear. Nevertheless it is our duty as Christians to make a thorough study and analysis of the many problems with their ramifications and connotations which will be presented to the statesmen and the leaders of the nations when they sit down at the conference table at the close of the war, prepared to draft terms by which the future destinies of nations and of peoples will be guided. In this conference the Christian forces of the world can make themselves felt, if they will begin now to study and to think seriously and constructively about the problems and the issues which will come before that conference.

It will not do to wait until the peace conference is ready to meet or is already in session. There must be advance preparation, with certain broad principles outlined so that they can be presented at the proper time to the authorities and to the governments responsible for drafting the peace treaties. These principles must be presented in such a manner that they can be applied in a constructive and practical way to the various issues—political, economic, and social—which will have to be considered by the makers of the peace terms.

This is a task worthy of the Christians everywhere. Our denomination, through its conventions, has taken a stand in favor of such study. The work should be started now, in order that all light possible may be thrown upon the subject. It is no easy task; but it is one that should challenge our utmost Christian endeavors.

Nondefense Expenditures

EXTENSION OF REMARKS
OF
HON. ROBERT A. GRANT
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Friday, August 15, 1941

Mr. GRANT of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a statement which my distinguished colleague the gentleman from New Jersey, ALBERT L. VREELAND, desired to have inserted in the CONGRESSIONAL RECORD.

At the present time the gentleman from New Jersey [Mr. VREELAND] is serving with the United States Army in New York State under leave of absence previously granted to him by unanimous consent of the House of Representatives. He requested the inclusion of the following resolution adopted by the board of directors of the Chamber of Commerce and Civics of the Oranges and Maplewood on August 7, 1941, mentioning at the same time his approval of the purpose expressed in the said resolution. The resolution is as follows:

The board of directors of the Chamber of Commerce and Civics of the Oranges and Maplewood unanimously urges that, in view of the magnitude of the appropriations necessary for national defense, and with the utmost being demanded of our economic and financial resources, Congress and the administration pursue the most rigid economy in nonmandatory expenditures.

The Nation has readily undertaken the greatest tax burden in its history, placing the national defense before all else, and properly all costs other than defense costs now should be kept closely in hand. With steadily rising employment, the decreasing need for public assistance should be taken into account, and certainly subsidy programs should be greatly curtailed. Public-works and work-relief projects should be examined in the light of nonmandatory expenditures, especially in those many cases where the projects are in direct competition as regards construction labor and materials with vital defense production.

The Unjust 49-Cent Wheat Penalty

REMARKS
OF
HON. EARL C. MICHENER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, August 15, 1941

Mr. MICHENER. Mr. Speaker, at page A3654 of the Appendix of the CONGRESSIONAL RECORD will be found remarks which I made on the floor of the House

on July 29, pertinent to the 49-cent wheat-quota penalty

In those remarks I quoted an Associated Press dispatch appearing in the Detroit Free Press and many other papers, purporting to quote a radio speech made by Mr. Harry N. Schooler, North Central Regional Director of the A. A. A.

I sent a copy of my remarks to the Secretary of Agriculture on July 31, protesting against the alleged speech made by Mr. Schooler. On August 8, I received a reply from Mr. Paul H. Appleby, Under Secretary of Agriculture.

On August 11, I addressed a letter to the Detroit Free Press and on August 13 I received a reply.

The Associated Press dispatch referred to, indirectly if not directly, imputed to thousands of farmers of the country, including many in my own congressional district, unpatriotic motives because of their German ancestry. Therefore, this whole matter is of vital importance.

The Department of Agriculture states that Mr. Schooler did not make the remarks credited to him in the radio address referred to in the dispatch, and asks me to give publicity to the reply of the Department of Agriculture.

The Detroit Free Press admits that this reference made by Mr. Schooler to farmers of German ancestry was not included in his broadcast speech but was included in an interview given by Mr. Schooler.

Mr. Speaker, in fairness to all, and in order to keep the record straight, I ask unanimous consent to include as a part of these remarks this correspondence.

The SPEAKER. Is there objection?

There was no objection.

Mr. MICHENER. The correspondence is as follows:

JULY 31, 1941.

Hon. CLAUDE R. WICKARD,
Secretary of Agriculture,
Department of Agriculture,
Washington, D. C.

DEAR MR SECRETARY: Enclosed please find some remarks I made in reference to the 49 cent wheat-quota penalty.

Particular reference is made to the marked portions on pages A3655 and A3656. Possibly you have already taken notice of this statement made by Mr Schooler This Schooler broadcast was given extensive coverage under an Associated Press head in Michigan and is at least most unfortunate.

Sincerely yours,

EARL C. MICHENER,
Member of Congress.

DEPARTMENT OF AGRICULTURE,
Washington, August 8, 1941.

Hon. EARL C. MICHENER,
House of Representatives.

DEAR MR. MICHENER: This is in reply to your letter of July 31 enclosing copy of your speech of Tuesday, July 29, printed in the CONGRESSIONAL RECORD of July 30, in which you refer to an Associated Press Dispatch from Detroit attributing to Mr. Harry N. Schooler, Director, North Central Division, A. A. A., the charge in a radio broadcast that protests on wheat-marketing quotas were originating "wherever there is a concentration of farmers of German ancestry." You are, of course, correct in supposing that notice of this statement has already been taken.

This is to inform you that Mr. Schooler made no such statement in his broadcast at Detroit and that he authorized no such statement. This fact has been called to the attention of the Detroit radio station over which the talk was broadcast, as well as to that of several newspapers which carried similar misinformation.

Mr. Schooler appeared on the Detroit station by request. He has received the following statement from Mr. Duncan Moore of station WJR in Detroit regarding this broadcast:

"I deeply regret the embarrassment you, apparently, have been caused by the story carried in the Detroit Free Press following your appearance on WJR.

"The Free Press story was in error, of course, because you made no mention whatsoever, on your broadcast about the motives behind the 'farmer revolt' against wheat control."

It may interest you to know that, although Mr. Schooler spoke extemporaneously, a recording was made of the broadcast in which he spoke. In this recording there are no statements regarding farmers of German ancestry, as you may see from the enclosed transcription made from the recording of the broadcast.

In your article in the CONGRESSIONAL RECORD you state that you "cannot find language too strong to condemn such unjustified course on the part of any official or representative of our Government," and you call upon the Department of Agriculture "to take proper action in the Schooler case."

I appreciate your interest in calling this matter to my personal attention. In view of the fact that the whole attack on Mr. Schooler is based upon an untrue statement, may I suggest that, in all fairness, you make public the truth regarding his radio appearance in your State.

Sincerely yours,

PAUL H. APPLEBY,
Under Secretary.

AUGUST 11, 1941.

DETROIT FREE PRESS,
Detroit, Mich.

GENTLEMEN: Enclosed you will find copy of speech made by me in Congress on July 29 Your attention is called to an Associated Press dispatch which was carried in your paper, and which is quoted in my speech.

I submitted this quotation to the Department of Agriculture and asked that disciplinary action be taken against Mr. Schooler who purportedly made the statement carried in the Associated Press dispatch.

I am in receipt of a reply from the Department of Agriculture, copy of which I enclose for your information.

It is difficult for me to believe that this dispatch was the figment of the imagination of an Associated Press reporter.

Inasmuch as the dispatch was carried in your paper, may I ask if you can give me any information as to its authenticity?

Thanking you, I am

Sincerely yours,

EARL C. MICHENER,
Member of Congress.

AUGUST 11, 1941.

Hon. PAUL H. APPLEBY,
Under Secretary, Department of Agriculture, Washington, D. C.

DEAR MR. APPLEBY: Receipt is acknowledged of your letter of August 8 in reply to mine of July 31 wherein I protested against the alleged statement made by Harry N. Schooler, director, North Central Division, A. A. A., which was given extensive coverage through the medium of an Associated Press dispatch.

I note your statement that the Associated Press dispatch was incorrect, and your suggestion that I give publicity to your letter.

I have this day sent a copy of your letter to the Detroit Free Press, one of the papers carrying the dispatch, and have asked them to advise me of its origin.

Just as soon as a reply is received from the Detroit Free Press, I shall insert your letter in the CONGRESSIONAL RECORD.

If Mr. Schooler did not make the alleged statement, he should be vindicated. On the other hand, if he made the statement, he is unfit for the office which he now holds. I think you will agree with me.

Sincerely yours,

EARL C. MICHENER,
Member of Congress.

THE DETROIT FREE PRESS,
Detroit, August 13, 1941.

Hon. EARL C. MICHENER,
Congress of the United States,
House of Representatives,
Washington, D. C.

MY DEAR SIR: Your letter of August 11 concerning the story carried by this paper on Mr. Harry Schooler, of the Department of Agriculture, has been brought to my attention.

Our investigation of this matter discloses that Mr. Schooler did not make the statement attributed by us to him in his broadcast over radio station WJR. Our investigation further discloses, however, that this statement was made to WJR representatives at a breakfast meeting following the broadcast.

The release prepared by the publicity department of radio station WJR contained both the broadcast remarks and those statements made by Mr. Schooler at the breakfast table. We were not informed that the remarks were not contained in the broadcast, nor were we informed that they were made off the record. Hence, our story which was based on the WJR release, credited Mr. Schooler with making the statements in his broadcast.

Should you desire further information, I suggest you contact Mr. Duncan Moore, of radio station WJR, or Mr. Mark Haas, also of radio station WJR. These gentlemen were present at the breakfast meeting with Mr. Schooler, and are in a position to elaborate on this matter.

Assuring you of our desire to be of service at any time, I am

Sincerely yours,

EDGAR A. GUEST, JR.,
Assistant City Editor.

The Congressional Front

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 15, 1941

BREACH OF FAITH

Mr. DIRKSEN. Mr. Speaker, suppose that in those warm days of early September 1940, when the original draft bill was being debated in the House of Representatives, the people of the Nation and the young men particularly, had known that there was a likelihood that they would be retained in service after the first 12 months, would the measure have been enacted? It is reasonably certain that it would not. Those who urge and favor an extension, however, insist that the country was fully aware of the provision that they might be retained in service if Congress declared it in the interest of national defense. That in turn raises the question of how and from what source the public formed its impressions of the original Selective Service Act.

First, let us mention the debates. Instances can be multiplied from the

debates of last year to show that emphasis was placed on the 1-year provision and little said about the proviso under which the men might be retained for longer service.

Secondly, there are the newspaper reports. Evidence was offered that Associated Press and Time magazine in a summary of the bill, fully acquainted the country with the proviso under which service might be longer than 12 months. An examination of dates, however, discloses that these summaries did not reach the public until after the measure had been approved. Most persuasive of all, perhaps, is the Gallup poll. It is widely read, is concise, and definitely serves to create impressions in the public mind. An examination discloses that in December of 1938, October 1939, June 2, 1940, June 23, 1940, July 9, 1940, July 28, 1940, and August 11, 1940, the Gallup poll question was, Do you think every able-bodied young man 20 years old should be made to serve in the Army or Navy for 1 year? Note that it mentioned 1 year, and that last poll was taken about 3 weeks before Congress voted on conscription. On August 11, 1940, another Gallup poll question was, Do you favor increasing the size of our Army and Navy by drafting men between the ages of 18 and 32 to serve in the armed forces for 1 year? Once more note that this poll says 1 year. On August 29, 1940, just a week before Congress voted, the poll question was, If the draft law is passed, will you personally have any objection to spending a year in some branch of military service? Once more note that it said 1 year. What impression did this convey?

HAND OVER TO UNCLE SAM

Luminous mountains of aluminum from the kitchens and pantries of the United States stand in mute but eloquent testimony to the willing and cooperative spirit of American citizens when Government calls on them to yield materials in the interest of national defense. There is every reason to believe that American business and industry, made up of the same people who surrendered their aluminum, will surrender their machines and materials if the need is shown, but Government does not think so. Thus, a bill was introduced in Congress to authorize the Government to requisition property. War Department officials who came before congressional committees to urge this legislation pointed out that machines, materials, patents, and airplanes might have to be requisitioned. The only weakness in their case was that all private airplanes with any military usefulness have virtually all been taken over; that patents and patent rights in the hands of unfriendly foreigners can already be taken under a law enacted in 1910; and that raw materials of value are already on the priority list. The only thing left in their case was machines, and with respect to them, they had no inventory to indicate what these machines were or where they were. On this thin basis Congress passed a broad requisitioning statute which delegates enormous powers to the Chief Executive.

DISTURBING SITUATION

There are 210,000 industrial plants in the United States; of this total, 145,000 are classified in the category of "small business." They employ 16,250,000 persons. The continued operation of these small businesses are vital not only to the employees employed therein but to lawyers, doctors, engineers, advertising men, consultants, and a host of other professions whose livelihood depends upon such business. Now comes Government to impose priorities on steel, iron, aluminum, rubber, tin, copper, brass, and a host of other materials which are regarded as indispensable to national defense. What shall these small businesses do for materials if they are now manufacturing goods and commodities that are not used in defense such as electrical equipment, washing machines, and similar items. A recent survey of small business indicates that 64 percent of those polled have indicated that they must go out of business unless they can procure defense contracts. Members of Congress and officials of the executive agencies are now meeting with delegations of small businessmen in the hope of meeting this very disturbing problem.

UNCLE SAM, MOVIE MAGNATE

Government deals in but one commodity. That is service to the people. Sometimes, as it undertakes a new service, Government deems it necessary to sell the idea to the people. In other years this was done by the written word in the form of press releases, and pamphlets, and by the spoken word over the radio. Little by little, Government has ventured into another medium of information. It is the movie. It has eye appeal and conveys a message. In the fiscal years 1940 and 1941, the executive agencies will spend $3,895,000 for movies. This will provide, when all expended, for 1,464 reels and 23,877 copies. Some are silent and some equipped with sound. A large number of agencies now use movies to sell their service and their ideas to the public. The Army and Navy are using movie shorts for instruction purposes. Titles are almost as intriguing as the thrillers which issue out of Hollywood. Some of them are Plows, Planes and Peace, Democracy in Action, Green Acres, Dangerous Dusts, Trumpeter Swan, Day at the Zoo, Trees to Tame the Wind, Germ Quiz, and a host of others. Thus Uncle Sam gradually becomes a movie magnate.

Shades of Gen. Billy Mitchell's Separate Unified Air Force

EXTENSION OF REMARKS

OF

HON. JOSHUA L. JOHNS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 15, 1941

STATEMENT OF COL. J. E. MYERS, UNITED STATES ARMY, RETIRED, PRESIDENT OF THE AVIATION DEFENSE ASSOCIATION OF WASHINGTON, D. C.

Mr. JOHNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Col. J. E. Myers, United States Army, Retired:

The Aviation Defense Association was formed in 1938 for the purpose of securing a state of air mindedness and air appreciation throughout the nations in the Western Hemisphere and we find that it will be necessary to establish a unified independent pan-American air command before there can be any real effort to sustain a great bureau of propaganda for air preparedness.

It is evident that German propaganda leading to their air superiority was largely obtained through hundreds of thousands of young glider pilots, trained from 12 years of age up, who were to become the backbone of the German air force. These young men insured the supremacy of the air which allowed some 200,000 German fighting troops to overthrow 4,000,000 Frenchmen.

Russia in 1926 had a semiofficial glider club named Aviakin with 4,000,000 members, each paying $9 annual dues. (See House Naval Affairs subcommittee report, May 27, 1941.) Their power machines tow 10 to 12 gliders, each one of which is capable of transporting from 15 to 20 fully equipped parachutists, but still they started their aviation activities too late.

Extensive gliding operations have not been encouraged by the Army or Navy. We possibly have in this country about 400 or 500 qualified glider operators, and I quote from the above Naval Affairs Subcommittee report the following extract of a letter it received from the Navy Department: "It was definitely concluded that the training of glider students was not worth while."

We know or should know by this time that air superiority means victory on land or sea and that no boat can long float against any such superior air attack. Therefore the first attempt to correct this 20-year delayed action must be to create an intense desire for aviation among the people of the Nation through such propaganda as the celebration of our national and pan-American aviation days.

In 1938 our association made an attempt to advance enthusiasm for youth education in aviation by sponsoring the annual celebration of National Aviation Day on Dr. Orville Wright's birthday. To this end we prepared a bill, which was placed by Senator PEPPER, Representative J. H. PETERSON, and others, and in due course of time was passed in the Congress and proclaimed by the President as National Aviation Day in spite of the opposition of Secretary of War Woodring and the officers of the National Aeronautical Association.

Few persons in the Americas realize that 2 days for the celebration of aeronautical achievements have been set aside by Congress and proclaimed by the President to honor the Wright brothers. They are August 19 and December 17 of each year. August 19, Wright's birthday; and December 17, the date of the first flight by the Wright brothers' machine. Neither of these dates has ever been properly observed by the Army and Navy.

On the first annual celebration of Dr. Wright's birthdate on August 19, 1939, the Navy sent a few planes to St. Petersburg, Fla., at the request of Senator ANDREWS, but the War Department wired to ground all the Army planes at the airport on that day. They were accordingly assembled and cowled on the edge of the field during the exercises and speech made by Representative PETERSON in honor of our pioneer aviator, Dr. Orville Wright.

This insult, you can call dumbness if you wish, but I call it a direct insult to the President of the United States and the people of America, meant the loss in propaganda and youth enthusiasm for aviation beyond any calculation. To me it is perfectly evident that there has been an organized effort for

repression of aviation celebrations in the past, to the great detriment of our national air preparedness.

Of the many bills introduced in Congress to further aviation, practically all are tabled or allowed to drop and we should all fervently hope that the bill to establish a separate unified air force under a single Department of National Defense will not meet with the same cold reception. Representative BEITER's separate air-force bill (H. R. 4790) does not change the permanent set-up of our present units of air force in the Army and Navy but the Secretary of the Air would make these assignments as well as the control of the huge long-distance land-based air operations, which would permit the switching of tremendous air power to any threatened point in the world, whether on land or sea.

It is high time to check up on our present organization concerning modern warfare. Old tradition must be scrapped as old junk. It is certain that our main air force must be divorced from land and sea units. It can no longer serve as a vassal and slave to the War and Navy Departments. Initiativeness and fearlessness in the Army and Navy can no longer be repressed. Youngsters should be encouraged to stick their necks out and express their views without the cruel necessity of chopping them off on every occasion.

Had a secretary of the air been appointed in Gen. "Billy" Mitchell's time we would have had men who were experts in aviation in charge of affairs. The chances are that there would have been no shortage of aluminum or other essential materials, and the chances are that we would have had the largest aviation force in our history, built "up to snuff" right now, and a civilian air reserve trained by expert Army aviators as an auxiliary air force of several hundred thousand men, paid for part-time voluntary war practice on light armored planes.

A secretary of the air might have envisioned many other requisites such as the construction of great superdefense highways connecting the Americas and between all strategical bases, the construction of thousands of airfields and underground air bases, the training of millions of young glider pilots and lightplane operators in a civilian air reserve as provided for by a congressional bill introduced at our request. Such a reserve would give expert aviation training to hundreds of thousands of glider operators, private flyers, mechanics, and others. It would provide for the construction of thousands of light plane ships and the installation of the necessary war equipment on them. It would establish a huge pool of mechanically inclined persons capable of resisting any invasion.

The shortage of pilots in Europe is appalling; the reserve could help remove the bottleneck which is sure to come to America. Many of the reserves might be well qualified to fly our regular superpowered airplanes. They would constitute our infantry of the air. They could repel invaders with light bombs and machine-gun fire. They could act as messengers, or for the transportation of glider parachutists, as they could be launched from fields or roadsides immediately in rear of our armies.

But, I am informed, our regular service does not want to train these civilian air reserves. Already the program provided for by our bill or some form of it is being taken over by Mayor LaGuardia's Civilian Defense, which, of course, defeats the entire program outlined for the reserve and would render it an entirely ineffective air-combat force.

It is ever the same old army-game policy played by the same clique which sent our boys to Cuba with inferior rifles and black powder in 1898. The same crowd which refused to see the Wright airplane, the Lewis machine gun, Christie tank, the horizontal smoke-screen bomb, and the lethal steel-wire (barrage) projectile which I devised and offered to the service over 2 years ago, and which was promptly rejected without test, although its adoption might be the solution of raids over London.

It is the same old navy that advocated the return to sailing vessels after the advent of steam—the same navy that is still building battleship death traps and had to be forced to build torpedo speedboats. The same old navy that does not want to train glider troops, even in the face of German and Russian successes and the Battle of Crete.

Shades of Billy Mitchell—look, listen, and be impressed. Had his ideas been accepted we would be the most powerful aviation nation in the entire world. We have the mechanically inclined population, the initiativeness, and inventive ability to keep abreast of and ahead of all other nations, provided we use these qualifications. We need officers who have vision, who can produce, and who can appreciate the fact that General Mitchell sank a battleship over 20 years ago, apparently with three 2,000-pound bombs, in 10 minutes. (See House Naval Affairs Committee report on H. R. 9218, 75th Cong.)

There is an unwritten law in the Army which refuses to retract even when it is proved to be wrong. It is the operation of this law that refuses to recognize Billy Mitchell and other progressive officers, which is now in full operation to defeat congressional legislation which must pass if we are to win the war. It is this policy which stands in the way of progress in the Army and which must be entirely eliminated before it is too late to save our Nation from disaster.

Let us act to divorce our air force from the Army and Navy. We can no longer hide our heads in the sands of tradition. We must talk bravely without fear of having our heads chopped off, and listen to the advice of the men in civil and military aviation who know what they are talking about. General Arnold has said we should have this separation, as well as such men as Col. Harold Hartney, Col. Roscoe Turner, Capt. Casey Jones, C. T. Malone, and other members of our Board of Aeronautical Advisers. Ordinary common sense will tell anyone that anything traveling in the air 350 miles per hour carrying bombs, machine guns, and cannon, will defeat anything going 50 or 60 miles per hour on land or sea.

We must stop the idea to let well enough alone, or that is too late to change horses in the middle of the stream. The fact of the matter is that it is not too late to shout the "cry of freedom" of the air from abject slavery.

Act now—save our Nation. Delay now is ruination.

Nondefense Territories May Come in for Rough Sledding

EXTENSION OF REMARKS

OF

HON. EUGENE WORLEY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 15, 1941

EDITORIAL WRITTEN BY W. R. RUTHERFORD, EDITOR OF THE MOORE COUNTY (TEX.) NEWS

Mr. WORLEY. Mr. Speaker, I am happy to call to the attention of the membership of the House an editorial written by Mr. W. R. Rutherford, editor of the Moore County News, Dumas, Tex., which I consider very timely:

[From the Moore County (Tex.) News]

NONDEFENSE TERRITORIES MAY COME IN FOR ROUGH SLEDDING

Evidence that Americans have not yet fully grasped the import of the foreign situation may be found in the fact that they are searching the vistas of their economic future more avidly than they are war news.

A true economic chart and compass is almost as difficult to obtain as is the truth about Russo-German war. This is due in large measure to weird discrepancies in the administration's attitude toward prices and profits.

Various Government agencies are constantly making headlines by their purported efforts to avoid inflation, and even now legislation is being drafted to give the President power to regulate prices.

The trouble, however, is that any Presidential regulation is always colored with those peculiar political hues that shade the President's attitude toward various groups.

No ceiling on inflation can come without a ceiling on both wages and taxes. Wages are constantly advancing, and no one in the Government today will even attempt to place a ceiling on taxes.

Moreover, President Roosevelt has shown no tendency to curtail the millions being spent on nondefense subsidies. We still have hordes of Farm Security Administration and Soil Conservation pie-county customers and few of the soft Federal job agencies have been abolished.

Inflation became a certainty along with legislation for parity payments to farmers, renewal of all types of agricultural loans, and all of that sort of thing.

Admitting, then, that the inflation era has set in, we are still at loss to determine exactly how it will affect us. Ordinarily it carries with it mass production of all kinds of goods, high prices, a mad orgy of spending, and then a God-awful headache.

So far as defense activities, mechanical wages, machine shops, boiler works, the steel industry, and all that sort of thing is concerned, inflation will probably again take its normal course.

In other words the communities and cities situated in the midst of heavy defense production, will get about the usual reaction, for more men will work, wages will be higher, and prices will advance.

In the Southwest where we buy more than we sell, we may take more of the rap and see less of the profits. With automobiles, refrigeration, heating, and house-appliance production already cut and more to come, workers in the heavy industrial section will make and spend just as much money, working on something else.

But in the Southwest automobile agencies, salesmen, dealers, and all those people may have rough sledding. It is a known fact that Government ownership stagnates community business, except for the amount of wages that goes into the nearby community.

It now looks as though farm prices will be steady to higher, wages higher, property and real estate seem to be due to have some advance, and the general mercantile dealer may have a whole lot less to sell, and white-collar workers that cannot be employed in the defense industries, very probably will get the short end of the deal.

Aluminum ware, automobiles, silk hose, radios, luxurious household and kitchen gadgets, toys, and even gasoline and tires may fast get to be things, which we shall learn to do without, or at least do with a very little.

Registration of Firearms

EXTENSION OF REMARKS

OF

HON. PAUL J. KILDAY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 15, 1941

LETTER FROM C. B. LISTER, PRESIDENT, NATIONAL RIFLE ASSOCIATION OF AMERICA

Mr. KILDAY. Mr. Speaker, under leave to extend my remarks, I include a letter addressed to me by Mr. C. B. Lister, secretary-treasurer of the National Rifle Association of America. This letter expresses in very forceful manner the objections of sportsmen in the United States to any law which would require the registration of firearms or permit the requisition of the firearms of any individual. A careful study of this letter will impress many of the Members with the importance of the amendment placed in the property-requisition bill to prohibit such an infringement of the right to keep and bear arms.

The letter follows:

NATIONAL RIFLE ASSOCIATION OF AMERICA,
Washington, D. C., August 13, 1941.

The Honorable PAUL J. KILDAY,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN KILDAY: On behalf of the sportsmen of Texas and the millions of others throughout the United States, I thank you for your consistent stand with regard to the registration of firearms under the so-called Draft Property Act.

As I have studied the discussions in committee and on the floor with regard to the amendment which you persuaded the Military Affairs Committee to attach to this bill, it seems to me that Judge Patterson and many Members of the House completely miss the basic danger involved in general firearms registration.

Sportsmen do not object to the registration of their firearms because of any fear of being shabbily treated by Colonel Stimson, Judge Patterson, or General Marshall. What the sportsman fears are the elements which now exist or which in the future may come into being in this country who would mark these three outstanding gentlemen as being among their first victims.

The sportsman's objection to registration of his arms is shared by many nonshooting citizens who have witnessed the operating methods of revolutionary elements abroad since the first World War. Communists, Fascists, Nazis, and "fifth columnists" have all taken advantage of convenient central registration lists of firearms owned by reputable citizens to seize such arms and to thereby break the power to resist on the part of the nonrevolutionary majority. When the Germans succeeded in placing Prince Paul on the throne of Yugoslavia, the Associated Press reported that one of their first acts was to send Gestapo agents with Yugoslavia police to collect all the arms owned by private citizens.

A part of the program of the Communist Party in this country, as reported by Senator LEE, of Oklahoma, in the CONGRESSIONAL RECORD of May 23, 1941, is to "break up groups of loyal fighting workmen; destroy, where unable to capture, all tanks, cannon, machine guns, and other weapons which loyal proletarians might use." In other words, the objections of American sportsmen to firearms registration are not based on any unwillingness to donate their guns whenever and wherever they may be needed for the national defense, but the objection is based on the lessons of contemporary history as to the dangers to national defense and to the American form of government which are inherent in a general registration of firearms possessed by loyal citizens.

The sportsmen of this country, through their various national organizations, have already offered their services, their arms, and their shooting ranges to the Governors of the several States in connection with the organization of State guard units and to the National Director of Civil Defense for such use as he might desire to make of them in connection with his national program. Mayor LaGuardia has advised this office that he has no plans for such utilization of civilian marksmen and that the matter is being left up to the State governments. In many of the States these sportsmen are now being utilized in the State Guard and in connection with the formation of auxiliary police units. Neither the registration of personally owned firearms nor the requisitioning of such arms is required in order to make them fully available for proper national-defense or civil-defense activities. In this connection it seems to me to be worthy of note that Judge Patterson, in his testimony before your committee, said "there is no possibility of a shortage of rifles. In fact, a shortage would be almost inconceivable." Accepting this as a true statement, it would appear to be equally inconceivable that there could be any objection to the inclusion in the bill of your amendment.

We cannot escape the belief that if the Members of the Senate and House, with particular reference at the moment, of course, to the conferees, understood these facts, they would promptly agree to the wisdom of incorporating your entire amendment in its original form into S. 1579.

Sincerely yours,

NATIONAL RIFLE ASSOCIATION,
C. B. LISTER,
Secretary-Treasurer.

We Should Preserve the Morale of Our Army and Sanctity of Contract

EXTENSION OF REMARKS

OF

HON. STEPHEN M. YOUNG

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

Mr. YOUNG. Mr. Speaker, a year ago Russia and Germany were in alliance. Now Josef Stalin, an international bandit, is fighting desperately to defend himself against the double-cross of Adolf Hitler, a stronger international cutthroat. I am a supporter of the foreign and domestic policies of the Roosevelt administration. It is my wish to support administration measures when in good conscience I can do so. It is my belief that this administration, by its strong attitude against Hitler and by our tremendous efforts to mechanize our Army, increase our military and naval aviation, and strengthen our already mighty Navy, has saved us from dictatorship aggression.

Our first line of defense is alert, ready, and able. Our Navy is the most powerful in the world; our naval aviation is superb. My view is that was is farther away from the Western Hemisphere now than it was before Hitler attacked Stalin. Believing as I do in a compact, mobile, and thoroughly mechanized Army, and fearing as I do an unnecessarily large standing Army in time of peace, I cannot support this measure. I hope and believe that the European war will end within a year and that representatives of this Nation will participate in the peace conference intent upon making sure that there will not be another peace crushing any nation, great or small, so that another world war will follow as a matter of course. In fact, President Roosevelt will at the proper time, I am sure, take the lead in a peace offensive. The common people of the world want peace, and our President will achieve world leadership for this Nation when he plays a major part in bringing an end to this senseless slaughter. President Roosevelt said:

> We will not accept a world like the postwar world of the 1920's, in which the seeds of Hitlerism can again be planted and allowed to grow.

In other words, in the day of reconstruction, peoples now oppressed and downtrodden and nations now nonexistent will be reestablished on national lines.

At this time we should profit by the misfortune that befell France and concentrate our efforts upon the building of a powerful military aviation and creating 20 panzer divisions of armored and mechanized soldiers. We should disregard the pleas of Army officers whose feet are nailed to the floor, who are looking toward the past, and who still go by the old manual of arms.

If an exceedingly large army is of such transcendent importance, why does not Great Britain at this time make some use of the two and a half million Englishmen in arms in England? It is not enough to say the reason Britain does not use part of this tremendous army as an expeditionary force to compel Hitler to fight on another front in Norway, Holland, or France, is that these two and one-half million soldiers are Englishmen and not Canadians, Australians, or New Zealanders. Doubtless, the compelling reason British leaders are not taking the offensive by landing troops on the Continent is that their Army lacks mechanized divisions, with tanks, field artillery, antiaircraft and antitank guns.

Selective-service soldiers have told me that in 6 or 8 months they have learned what should have been taught to them in 4 weeks. Fortunately, our Army now has the equipment and probably has the trained officers to do a much better job in creating trained divisions.

The men selected for service who have been taken from their homes and loved ones in response to a grave national duty should be permitted to go into the Reserves at the end of 1 year's training. Furthermore, Congress should not arbitrarily add 18 months to the enlistment period of those who volunteered. An

enlistment is a contract between a young man and his Government. In time of peace that contract should not be disregarded or changed. Let us preserve the morale of our Army and the sanctity of contract. After all, our Government is dependent upon the faith and confidence of its citizens. A great many of the 600,000 men now constituting our selective-service soldiers have spent years of training for the professions of peace. Others should be called to take their places. In doing this we create a greater trained Reserve. Even under the present law nearly 300,000 more young men can be inducted into the service. The fact that they have not been inducted is evidence that our General Staff officers know there is a lack of equipment for proper training and of housing facilities for proper maintenance.

I voted for the Healey amendment to add $10 per month to the soldiers' pay following 1 year in the service. In fact, I supported the Voorhis amendment to give $30 per month. Legislation is frequently a matter of compromise and the adoption of the Healey amendment is one good act of the House of Representatives this day. Study and examination of the testimony convinces me the claim is without foundation that our Army would be disintegrated were these selective-service soldiers to be returned to their homes after 1 year's training. If 50,000 men were returned to their homes each month how can it be claimed that the Army would be disintegrated when the places are at once filled by new selective-service soldiers?

If General Marshall and his officers cannot complete the training of selective-service soldiers in 1 year then a woeful error was made a year ago and these officers should admit their error and tell the youth of the Nation just how long it does take to train them. In the first place, they should not have taken the young men from their homes unless they were prepared to give them intensive training. Nearly every young man now in the service went into the Army from civil life with the very definite expectation of returning home in 1 year. In fact, they believed they had the word of their Government to that effect. They were not informed about the fine print nor the exceptions. Now, I fear the destruction of the faith that these young men have in their Government—that they had in the sanctity of a promise which they felt was solemnly made by men whom they could trust.

To this good hour the young men in our armed forces and their families are the only individuals who have made sacrifices in this national emergency. At the time these young men were ordered from their homes and peacetime pursuits there was an implied agreement, if not a direct contract, that they would be permitted to return at the end of a year's training unless this Nation was actually at war. This Nation is at peace. We are providing necessary defense measures for Western Hemisphere protection, and I voted for the lend-lease bill, and have consistently supported all measures for Western Hemisphere defense.

Our need is for a compact, mobile, thoroughly mechanized Army notwithstanding the plea of professional officers who apparently desire that our armed forces be expanded to about 3,000,000 men. Hitler conquered France with 12 panzer divisions of thoroughly mechanized soldiers; 120,000 men plus a couple thousand pilots. The bulk of his great army of 2,000,000 was useful only in occupying captured territory. Of course, American professional army officers will receive quick promotions in a rapidly expanding army.

Some advocates of this plan to keep selective-service men for a further period of training say the American soldier is the best paid in the world. They know not whereof they speak. Canada, though poor compared to the wealth of this Nation, pays its privates $1.30 per day. Canadian non-coms receive as much as $100 per month. In addition, the Canadian Government makes dependent allowance to families of men in the service. For example, a dependent wife of an army private or noncommissioned officer receives $35 per month and $12 additional each per month for 2 children. Thus, the Canadian Government pays the Canadian soldier and wife and two children $99.30 per month. Also in Canada skilled workers in the army receive extra pay. Certainly our soldiers should receive as much as unskilled labor in private industry.

America Must Unite

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 14, 1941

Mr. SABATH. Mr. Speaker, about 4 years ago the President, realizing the dangers of the Nazi aims, called attention to the then-prevailing world-wide conditions which, in his opinion, made it necessary to increase our Army and Navy for defense purposes. Upon informing the country of the dangerous situation, he was assailed as a warmonger who was bound to involve us in war. These war-making charges against our President were made, firstly, by Republicans and a few Democrats, due to personal animosity; and, secondly, by those carrying on Nazi-Fascist propaganda in this country.

These attacks continued unabated, despite the President's oft-repeated assurances and pledges to the country that the defense program he advocated was purely for defense purposes. Unfortunately, those factions and individuals behind these attacks continue to assail him, completely ignoring the self-evident fact that the war is being brought closer and closer to our country. The America-First Committee, Mr Lindbergh, and others of the Nazi-decorated coterie, together with others who are trying to bring about disunity and division in our Nation, are following in the footsteps of the Quislings who have admittedly furthered Nazi-Fascist activities in Austria, Czechoslovakia, Poland, Denmark, Norway, Holland, Belgium, and France, thereby causing them to become easy prey for the forces of Hitler.

Mr. Speaker, I have just been handed the latest issue of the Washington Evening Star, which carries the following front-page headline: "Petain pledges full Nazi cooperation." This action, together with the activities of Japan, must be conceded as bringing the danger of war very close to us.

The question before us is not a question of Roosevelt, the Democratic Party, Secretary of War Stimson, Secretary of the Navy Knox, Mr. Willkie, or Russia. This is a question of America—its political and economic freedom and its democratic form of government.

The fight against this service extension bill reminds me of the determined fight against the League of Nations which was both unjustified and ill-advised. The fight against the League of Nations was based on purely political grounds. Those who scuttled the League in later years deplored it. It is now believed that our entry into the League would have prevented this war and would have made unnecessary the expenditure of billions of dollars on our part.

For weeks Nazi propaganda leaders have been using the radio for the dissemination of false information not only in Germany, Italy, and Japan, but in all of the subjugated countries. Just last Sunday I heard one of these foreign broadcasts. To my amazement I heard several speakers assuring the people in those countries that they had succeeded in stopping the United States from giving aid to Great Britain, Russia, and China as contemplated by the passage of the lend-lease bill and quoted the speeches of the leading appeasers in proof. A refusal today to strengthen our military and naval position will be heralded by Hitler and the Japanese war lords as their victory. As Americans, are we not in honor bound and sworn to do our duty "to protect our country against foreign and domestic enemies" as we repeated so solemnly when we took the oath of office?

Mr. Speaker, during the debate last week many Members unjustifiably asserted that we are violating the agreement entered into with the draftees. These statements are erroneous as anyone reading the Selective Training Act must concede that they are, because the particular provision reads—

for 12 months, which may be extended if the national interests are imperiled.

I hold in my hand various letters from outstanding organizations and State bodies, endorsing this extension. From the American Legion comes this communication:

For 20 years the American Legion has advocated and presented to the Congress a program for universal military training in order that the young manhood of our country should be prepared to serve efficiently in the event of an emergency.

On September 16, 1940, the Congress enacted the Selective Training and Service Act of 1940. Congress did this because of the emergency threatening the country.

Certainly, the crisis confronting us is more serious today than it was at that time.

The national commander, Milo J. Warner, has repeatedly stated to the country that the American Legion feels the situation demands the enactment of necessary legislation to insure keeping intact, during the emergency, troop units already trained, and retention of selectees in service.

The American Legion supports unqualifiedly legislation extending the training period for an additional 18 months, and we request your support of this legislation.

From the resolution of the Massachusetts State Federation of Labor unanimously adopted in fifty-sixth annual convention in Boston on August 8, comes this forthright statement:

Whereas a victory of the Axis Powers in the present war would constitute a fatal blow to democracy all over the world; and

Whereas, from their internal actions, the German and Italian Governments have demonstrated they are savage enemies of organized labor; and

Whereas only with a defeat of the Axis can there be any hope that various social gains, painfully established since the last war, can be maintained: Therefore be it

Resolved, That this convention call on the National Government to take any steps thought wise by the administration, with the advice and consent of the Congress, acting on the advice of the United States Army Chief of Staff, the Secretary of the Navy, and other responsible agencies, to keep at its maximum efficiency the United States Army, Navy, and defense program; and be it further

Resolved, That this convention urge and will support whatever action is deemed necessary by the administration to make sure that American aid reaches its intended destination; and be it further

Resolved, That this convention pledge itself to the moral unity demanded by an unlimited national emergency; and be it further

Resolved, That copies of this resolution be sent to the American Federation of Labor, to the constituent members of the Massachusets State Federation of Labor and to the President and Members of the Congress of the United States.

The citizens of the groups mentioned are aware of the danger and Members of Congress here assembled would indeed be insensitive to the world about them if they could sit calm and secure in their seats, without a qualm of conscience to trouble them while they allowed themselves to be lulled to inactivity on this momentous measure by the deadly opiate of Nazi-Fascist emanating propaganda.

Can anyone justly deny that our interests are not imperiled when Japan, under Hitler pressure, is gradually coming closer and closer to the Western Hemisphere? When Hitler, who has conquered nearly all of Europe with the exception of Turkey, Spain, and Portugal, is now forcing France to cooperate and to give up Dakar, which is only 1,400 miles from Brazil. When Hitler is coveting other territories in Africa, and even Spain, using these possessions to force us into an exceedingly precarious position should Great Britain and Russia be defeated. With his present hammering of Russia, driving deep into the Ukraine, and gradually but firmly carrying out his plans not only for the control of Europe but also of Africa, how can anyone, in the face of his accomplishments to date under his planned program, declare that our national safety is not imperiled?

As we daily read in the press of the Nazi "fifth column" activities in South and Central America, and particularly in Brazil, Chile, Ecuador, Bolivia, and Mexico, it becomes self-evident that Hitler's ulterior object in fomenting unrest in these countries is but to intensify his propaganda in the United States to bring about discord and disunity. Every man or woman not blinded by prejudice or not controlled by Nazi influences must be impressed by the fact that our military position as well as our commercial interests are imperiled, because the war is, as I stated before, moving ever closer and closer to our country.

The close vote on this bill is being heralded by Hitler and Japan as a great victory, and to some extent will justify their statements that Hitler is growing strong enough in our country and in Latin America to tie the hands of the administration. I am satisfied that he is misled by the reports of his thousands of Gestapo agents, the Bund members, and the subversive organizations in our own country.

Mr. Speaker, the activities of the misguided Mr. Lindbergh and the speeches of some of the Members of this House, as broadcast by the Nazi radio commentators, merely bloat up the morale of the Germans, and act as the best propaganda agent in the world in the 14 countries which are Nazi controlled, thereby damaging severely the cause of Great Britain, Russia, and China.

Consequently, Mr. Speaker, I feel that the attacks on the President are strengthening the Axis Powers. For this reason I hope that every Member from now on will exercise more caution and consider the duty he owes to his country, to its free institutions, and to its democratic form of government. I feel that political self-interest should be and must be relegated in the interest of our permanent independence.

Mr. Speaker, I appreciate that a vast majority of our people are against war. So is the President, and so am I. Unfortunately, they do not realize the seriousness of the situation which confronts us today. I am satisfied that if they possessed the information which the President and all those who are in close touch with the plans of the Axis do possess, they would approve the action of the President who, notwithstanding the charges on the part of the Nazi-Fascist-minded leaders that he has been trying to involve us in war, has actually kept us out of war. Contrary to these charges, the President has done everything humanly possible by appealing to Hitler and Mussolini and by trying to appease Japan so that he could keep the promise which he has given to keep us out of war. Every fair-minded man must deplore the unfair accusations which are heaped upon him, but I appreciate that George Washington, Thomas Jefferson, and Abraham Lincoln were attacked and assailed, because, like Roosevelt, they tried to make secure our freedom and independence to insure a strong and united nation.

Mr. Speaker, Congress has been continuously in session for nearly 8 months and will take a recess extending up to September 15. It is my hope that the membership of this House during this interim will try to enlighten the people at home as to the danger confronting our country.

In conclusion, I will quote from an inspiring editorial which recently appeared in the Clovis (N. Mex.) Free Press:

Mr. Roosevelt is using all of his intelligence and effort in trying to lead this Nation along the course which he believes best. He is a real humanitarian, a real flesh and blood man, and he has had to meet more serious difficulties than any President in the history of the United States.

He took office during the depths of the darkest domestic period in our history in 1933 when banks closed, when industry was at a standstill, and when millions were tramping up and down the land, ragged and hungry.

Now he has the international crisis through which to guide this Nation. No American who is informed on the approaching crisis will doubt Mr. Roosevelt's ability and sincerity in leading this Nation along the wisest and safest course. We do not believe that there is another man in America who is better qualified than President Roosevelt to guide this Nation in the present emergency.

Survey of the Des Moines River

EXTENSION OF REMARKS

OF

HON. KARL M. LeCOMPTE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 15, 1941

RESOLUTIONS OF THE OTTUMWA TRADES AND LABOR ASSEMBLY

Mr. LECOMPTE. Mr. Speaker, under leave to extend my remarks in the RECORD I include a set of resolutions adopted by the Ottumwa, Iowa, Trades and Labor Assembly on the subject of the proposed comprehensive survey of the Des Moines River by the United States Army engineer:

Whereas the city of Ottumwa and vicinity have on frequent occasions experienced devastating floods resulting in the loss of life, a tremendous loss in property, large financial losses in the conduct of business, and unemployment during flood periods; and

Whereas the reoccurrence of similar floods is a constant threat to the city of Ottumwa; and

Whereas the city of Ottumwa has been able to provide only a limited amount of protection by the construction of river walls, levees, straightening of channel; and

Whereas the city of Ottumwa is financially unable to provide adequate protection to our city in the control of floods; and

Whereas a shortage in the water supply for the city of Ottumwa is a constant threat; and

Whereas a constant supply of good water can be maintained only through the construction of adequate reservoirs above our city on the Des Moines River; and

Whereas the underground water table is constantly receding with the resultant drying up of wells, thus proving injurious to farmers and their livestock; and

Whereas Ottumwa, because of an inadequate water supply, is unable to attract certain industries and factories; and

Whereas unemployment in the city of Ottumwa is resulting in distress to the taxpayers, business and labor interests; and

Whereas the citizens of Ottumwa are deprived of many of the healthful, invigorating out-of-door sports, such as boating, fishing, hunting, and other summer lake sports, also winter sports, which can be provided only by the construction of a big dam with multiple-purpose reservoir; and

Whereas Ottumwa, although known as a splendid trading center with some fine factories, actually loses many lines of trade because of the lack of proper lake facilities; and

Whereas the construction of a large dam on the Des Moines River at Red Rock, also another dam at Saylorville, by the United States Army engineers will assure the control of floods, with the resultant protection of life and property; will guarantee an inexhaustible supply of water at all times; will result in the raising of the underground water table; will provide employment; and will bring great economic benefits to Ottumwa and central Iowa; and

Whereas Mr. A. A. Couch, president of the Iowa State Federation of Labor, is a member of the Des Moines Defense Industrial Committee and a director of the Des Moines River Valley project, which places him in close touch with the comprehensive survey of the Des Moines River economic and labor conditions; and

Whereas the undersigned labor organization has the greatest respect and admiration for the judgment of Mr. A. A. Couch, our State president; we do hereby empower him to support for us the Red Rock Dam and the Saylorville Dam for first and second choice as our endorsement: Now, therefore, be it

Resolved, That we, the Ottumwa Trades and Labor Assembly, in regular session, do hereby heartily endorse the $100,000 comprehensive survey now in its final stages by the United States Army engineers, brought about through the efforts of the Des Moines River Valley project, interested citizens, and public officials, and do hereby urge upon the United States Army engineers, State and Federal Governments, that they further expedite the legal and engineering processes to enable the people of this area, and particularly Ottumwa, to enjoy the protection, economic and recreational benefits that will accrue to our citizens by the construction of the great dams in the Des Moines River Valley at Red Rock and Saylorville.

The Service Extension Act of 1941

EXTENSION OF REMARKS

OF

HON. CLARENCE E. HANCOCK

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

Mr. HANCOCK. Mr. Speaker, according to the latest figures published by the War Department, the Army today consists of 1,545,400 officers and enlisted men. Of this total 517,000 are Regular Army troops, 281,900 are in the National Guard, 681,500 are inducted men, and 65,000 are Reserve officers called to active duty.

If the National Guard men, the selectees, and the Reserve officers should all be relieved from active service upon completion of 12 months' duty and training, as contemplated by the Selective Service Act of 1940, the Army we have been building up since last fall and which in these perilous days we must have, could in the space of a few months be thoroughly disrupted and disorganized, and the national-defense program for our land forces completely wrecked.

We now have 14 Regular Army and 18 National Guard divisions in the field. The Reserve officers and the selectees are divided among these 32 divisions, so that each unit has a nucleus of experienced officers and men. It is a far better plan than was followed in the World War when whole divisions were made up of raw recruits, and the training of new men will be better and speedier even though it is more difficult and more technical. The program has scarcely begun. Many units have not yet received their equipment, and if the entire Military Establishment except the Regulars is shortly to be demobilized the frame-work of the Army will be destroyed and we will have a Reserve of untrained or partially trained men. This would be tragic folly not only from the standpoint of the Army but for the men themselves. Many thousands of lives were lost in the last war because neither the officers nor the men knew how to handle themselves and their weapons.

It is argued by the opponents of this measure that under the present law each selectee shall be transferred to a reserve component upon completion of his training period of 12 months, that the President has the power to call the reserve back into active service, and that therefore the pending bill is not necessary to hold the selectees in active service. That is true, but if such a course were followed it would be regarded as sharp practice by the men affected, it would be deeply resented and would cause confusion, disorganization, and unnecessary expense. I think the Congress should have the fortitude to face the issue of extending the period of service and do it now. It would be cowardly to place the entire responsibility on the President.

A great many misleading statements have been made regarding this bill and there is widespread misunderstanding as to its effect. It does not create another A. E. F. or authorize our entrance into the wars of Europe, Asia, and Africa. I would not vote for such a bill. The limitation of the Selective Service Act restricting the use of selectees to the Western Hemisphere remains in the law. It does not contain a declaration that a national emergency exists or make the unqualified declaration that the national interest is imperiled. It merely uses such language as will enable the President to extend the period of training and service beyond 12 months in conformity with the Selective Service Act of 1940. It does not violate any pledge that the service of the inducted men would terminate in 1 year. That was the hope and expectation of everyone but the possibility of longer service was known and discussed when the original bill was passed. This is a bill for adequate national defense and nothing else.

I would like the bill better if the authorized training period were extended for 6 months or a year rather than 18 months, because I believe the shorter period would stimulate the Army's effort to work out a schedule whereby a definite number of men would be inducted each month and a like number of trained men discharged. I do not see how a reserve force of any value can be created in any other way. This will undoubtedly be accomplished in the months to come, and in the meantime the men in service and their families should disabuse their minds of the fear that the period of service is extended from 12 months to 30 months by this bill. Men over 28 years of age will be released, as will those whose retention in service involves hardship at home, and the others as rapidly as possible after 12 months' training.

We are fortunate to have a Chief of Staff of the character and ability of General Marshall. He is not a warmonger or an interventionist and he is not "pro" any country except our own. He fully understands the necessity for high morale in the Army and is striving to promote it. Nothing is worse for the morale of a man than a feeling that he is the victim of injustice. The arguments of many of the opponents of this bill have fostered that feeling among the selectees. Now that the bill is passed, the debate should cease, and General Marshall should have the support and the cooperation of the 203 who voted for it and the 202 who voted against it in his gigantic task of building an efficient army for our common defense.

The citizens of this country differ as to the details, but they are almost unanimously in agreement on the general program of developing invincible forces for defense on land and sea. The movements of the Japs in the Far East, the advance of the Nazis in Russia, the capitulation of the Vichy Government to the demands of Hitler cannot be ignored or regarded with complacency. The menace to this country and this hemisphere grows more ominous day by day, and we know that with ruthless aggressors on the march our safety is measured by our military strength. There is very little opposition in or out of Congress to the huge appropriations we are making for ships, airplanes, and guns, and yet there is strong opposition to a bill providing for the training of men to use those ships, airplanes, and guns. Obviously the people of this country recognize the national danger. Many are unwilling to accept the unpleasant truth that service and sacrifice are essential.

The fact that the Service Extension Act was passed by the House on August 12 by the narrowest possible margin gives each one of us who voted for it a keen sense of responsibility for its passage. If any one of us had voted in the negative, it would have been defeated.

I did not relish the duty of casting a vote which would be disappointing to many of our young soldiers and their families, but I am convinced that my vote was in the interest of the peace and security of America. No other consideration matters.

Maritime Training Station, St. Petersburg, Fla.

EXTENSION OF REMARKS

OF

HON. J. HARDIN PETERSON

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 13, 1941

ADDRESSES BY CAPT. EDWARD MACAULEY, UNITED STATES NAVY, RETIRED, AND HON. TELFAIR KNIGHT

Mr. PETERSON of Florida. Mr. Speaker, on July 21, 1941, at St. Petersburg, Fla., in my district, the new maritime training station was dedicated.

The main address of the occasion was the address of Capt. Edward Macauley, United States Navy, retired, now a member of the United States Maritime Commission.

Captain Macauley's address was preceded by an address by Hon. Telfair Knight, Director of the Training Division of the United States Maritime Commission, who also introduced Captain Macauley.

It is my pleasure, pursuant to permission granted, to include the following fine addresses made by Director Knight and Commissioner Macauley:

ADDRESS OF TELFAIR KNIGHT, DIRECTOR OF THE DIVISION OF TRAINING OF THE UNITED STATES MARITIME COMMISSION

Mr. Chairman, ladies and gentlemen, this is a particularly happy occasion for me. I have been closely associated with the Maritime Commission's program for training personnel for our merchant marine ever since its inauguration. I wish here and now to pay tribute to that grand gentleman and real sailor, Admiral H. A. Wiley, who made this program possible. He it was who saw the need for training, and it was his indomitable courage that saw it through. Admiral Wiley retired from the Commission at the end of his term of office on September 25, 1940, but his influence remains and those of us to whom he has left the task of carrying on the work so brilliantly inaugurated by him are inspired by the memory of his outstanding leadership and accomplishments.

Our first training station was established at Hoffman Island in New York Harbor on September 1, 1938. About that time we conducted a survey to find a suitable site for a station on the Gulf of Mexico. When we approached the city officials of St. Petersburg, through your most efficient liaison officer, Lt. Comdr. F. R. Francke, on the subject of a site, we were met with cordial cooperation from the start. The city has presented this splendid location to the Maritime Commission and at its own cost has filled in the lowland and built the excellent bulkhead which we now see here giving us ample docking facilities for our three training ships attached to this station, the *American Seaman*, the *Joseph Conrad*, and the *Tusitala*. I wish to take this opportunity to express my appreciation to the city officials who have made this station possible.

The Maritime Service, which will operate this station, is an agency of the Maritime Commission, administered for it by the United States Coast Guard, which is doing a first-rate job, as all can see. Our hats are off to Admiral R. R. Waesche, the Commandant of the Coast Guard, and to his aides who are conducting the Maritime Service for us.

It is not necessary to say much about the station itself. It speaks for itself. The enrollment of trainees will begin immediately, and in a short time there will be approximately 500 young men in training here housed in this splendid building and on the training ship *Tusitala*. To this number will be added 300 trainees on the *American Seaman*, frequently in port. Thus, with the administrative staff, there will be approximately 1,000 men added to the population of your fair city.

May I also thank your citizens for the warm-hearted way in which they have taken our young men into their homes and made them a part of their civic life. This is a valuable contribution to the success of the training program.

The Maritime Commission regards its training program as of so much importance that it has placed one of the members of the Commission in charge of it to carry on the work so well begun by Admiral Wiley. This is Commissioner Edward Macauley, who is here today and who will address you. Captain Macauley is a seafaring man from seafaring forebears. His entire life has been devoted to the sea. As a naval officer he was in command of the U. S. S *George Washington*, which carried President Wilson to the peace conference after World War I. I take pleasure in introducing my boss, Captain Macauley.

AN ADDRESS BY CAPT. EDWARD MACAULEY, UNITED STATES NAVY, RETIRED, MEMBER OF THE UNITED STATES MARITIME COMMISSION

On the part of the members of the United States Maritime Commission I wish to convey to his honor, Mayor McCutcheon, the city officials, and the citizens of the city of St. Petersburg our deep gratitude for the inspiring generosity which has made possible the establishment of the maritime service training station here at St. Petersburg.

The Maritime Commission wishes also and particularly to express its recognition of and commendation for the important services and invaluable assistance rendered by Lieutenant Commander Francke.

The maritime service is to be congratulated on obtaining such an ideal location for a training station. This is my initial visit to this beautiful place, and from what I have seen of it, I am hoping that my duties may require frequent trips of inspection here. In case you should be inclined to regard those words as the natural courtesy of a visitor and a guest, let me say also that I am a Californian, and that when a Californian says anything like that about Florida, or even the most beautiful spot in Florida, as I am sure this must be, he is saying a mouthful. I cannot but face the facts and ungrudgingly state that it is impossible to imagine, even in California, a better site, a lovelier setting, or a more perfect climate. I will even go so far as to say that I have tasted your grapefruit and found them quite good.

But perhaps most of all I should congratulate and envy you who are to have the privilege of working and training in these surroundings. With the last word in plant and equipment at your disposal, you are about to play a major part in the development of the United States merchant marine and through the merchant marine, in securing the defense and well-being of your native land. This station and you men represent a vital addition to our national assets at a time when all our resources are needed as never before. But doubly important as this occasion is today, it is not so only because of the emergency. You happen to be in a service that is of unique importance both in war and in peace. In time of peace the Army and the Navy are inactive; it is their unused strength and efficiency that is important. But in the merchant marine, both in peace and in war, the daily active use of your skill and ability is vital to the welfare of our country. In peace your work is constructive and civilizing as perhaps no other active occupation is. In war you take your place as worthy partners of the Army and the Navy in the first line of defense.

It is a service with a proud heritage and a magnificent tradition, from the early days of the American Colonies, up through the years when the American clipper ships led the world in speed and beauty and in the skill and daring of their crews, to the last war when the crews of our merchant ships made for themselves a record as glorious as either of the armed services. It was our greatest naval leader of the World War, Admiral Sims, who in speaking of the officers and crews of the American merchant ships who transported supplies across the Atlantic for the American Expeditionary Force said:

"The skill and seamanship of these sailors was something that amazed naval officers, and they proved themselves to be seamen in a sense that naval officers never have the opportunity to become. The courage, initiative, and sense of responsibility, skill in handling ships of all types, and noteworthy seamanship characterized the merchantmen. * * * Without the merchantmen's skill, courage, and loyalty the war could not have been won."

And this brings me to the point I want most to impress on you. Magnificent as all this plant and equipment are, none of it is worth more than you make it. The best ship is just a tub in the hands of an ill-trained, slack crew, but in the hands of a smart, keen crew, many an old tub has done honor to the men who sailed her.

For seamanship is an art. It is the art by which vessels are handled under varying conditions of weather, circumstances, and geographical surroundings. The principles of seamanship may be printed in books or stated orally, but its mastery depends wholly on experience on board ship and at sea. It is an art whose rudiments are written in wind and water and only through contact with those elements can it be learned.

There have been great changes in the tools with which this art is carried on, changes from wood to steel, from hemp to wire, from sails to engines and motors, from crude implements to the fine precision instruments of today. In no profession are the responsibilities greater than in handling ships. Values involved are great—the material values of a vessel and of her cargo and the greater value of the human lives on board. Carelessness, ignorance, or inexperience can never be condoned. Whether in engine room or on deck, the real seaman still is the handy man. He rises to the emergency, on sea or on shore; be it storm, shipwreck, damage to machinery or the necessity of saving life.

It is said the beauty of ships and the romance of the sea and seamen are fast fading into the past never to return. A full-rigged ship, with all her white sails set and drawing is undoubtedly a more beautiful sight than a blunt-nosed freighter ploughing her way through the dark sea, belching black smoke from her funnels.

But there is beauty of another kind; the beauty of strength and power, of science; the accomplishments of man's brain and hand. There is the romance of machinery and invention, of successful work and progress against obstacles and odds, and final victory achieved. And always there is the vision, the striving for and approach to perfection.

In this day of mechanized ships, conquest of the sea is no less adventurous because the weapons have changed; the profit and pleasure to be gained in our commerce with foreign lands no less exciting. Civilization is based on the sea, for what is it but the interchange of ideas and culture between nations? History shows that the inception of such interchanges is trade, and trade between nations and continents must follow the waterways of the world.

With the passage of the Merchant Marine Act of 1936, and with the establishment in 1938 of the United States Maritime Service, a new era began. A long-range program of building 500 fast, modern vessels over a period of 10 years was commenced. Then with the coming of the world crisis an emergency program involving the construction of 422 additional vessels was adopted and within the last few days you have read of the President's request for almost $1,700 000,000 to add 566 more vessels to those already provided for. Five years ago the original long-range program which involved $125,000,000 was thought by many to be too big. Today, many times that sum is being spent and the only doubt is whether it is big enough.

In spite of the losses that may occur there can be no doubt that when the war ends, the United States will be the dominant maritime Nation of the world. And it is proper that we should be. During the many years from before the Civil War up until very recently most of the energies of the country were expended in developing the frontier, so to speak; in filling up our own great spaces, and there was comparatively little left over for the sea. Only in the last few years have our thoughts turned to the sea again, and it is clear that the whole trend of events is making sea-borne commerce more and more important in the life of the country. In making the sea your career you are carrying on the tradition that has made America great; you are the frontiersmen of the future.

In this career of national usefulness and commendable adventure on which you are about to embark I wish for the Maritime Service training station at St. Petersburg and for you all, many important, happy, and successful voyages.

Poll on Entrance of United States Into European War

EXTENSION OF REMARKS

OF

HON. BERNARD J. GEHRMANN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 15, 1941

RADIO ADDRESS BY HON. HARRY SAUTHOFF, OF WISCONSIN

Mr. GEHRMANN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address of my colleague the gentleman from Wisconsin [Mr. SAUTHOFF]:

My fellow Americans, I have been conducting a poll in my district by mail to ascertain the views of my people in regard to our entrance into the present World War. The results have been astounding. To date we have received 67,633 ballots of which 3,911 were in favor of our entrance into the present World War, while 63,722 were opposed. In terms of percentages 94.2 percent were against while 5.8 percent were for.

Some of the interventionist newspapers have objected to the poll and sought to discredit it by ridicule. The amazing response of the people is the best answer to their criticism.

These newspapers have also protested my use of the franking privilege to conduct this poll. May I remind my listeners that in the campaign last fall, under the franking privilege, the Democratic National Committee sent out 13,500,000 pieces of literature, while the Republican National Committee sent out fully an equal amount, one Congressman alone franking out 7,000,000 pieces of literature in behalf of Mr. Willkie for President. While these newspapers find fault with my sending out 157,000 pieces of literature to get an expression of the people on the most important matter touching their lives, they at the same time, swallowed hook, line, and sinker the franking of 27,000,000 pieces of literature in behalf of the Democratic and Republican candidates for President. How can they justify their stand denying to the people the right to be heard?

Surely the referendum has been recognized in nearly every city, county, and State in the Union as the right of the people to express their sentiments regarding matters affecting their lives. The present administration has recognized that right in the case of the farmers under the A. A. A. and in the case of the farmers under crop control. Surely if the farmers of the Nation had the right to vote on whether or not they would plow under little pigs, the fathers and mothers of our boys have the right to vote on whether they want their sons plowed under in Europe, Asia, and Africa.

When the mother gave birth to that son and the father toiled from morning to night to give him an education; when both parents made sacrifices in every way possible to insure him a place of honor in the future, no one should have the right to deny them a chance to express their wishes to their representatives in Congress. For Congress, under the Constitution, has the sole right to declare war. To rob an entire generation of its hopes and aspirations, to sacrifice it to greed for money and lust for power in the game of world politics is not the divine right of any one man. It must be the considered judgment of those whom the people have entrusted with that right, namely, the Congress of the United States. God has anointed no single individual with the divine right of underwriting the British Empire with the life of your son.

I agree with the statement of the Republican leaders who recently said:

1. That American lives should be sacrificed only for American defense;

2. That warlike steps taken thus far have undermined the constitutional powers of Congress and the fundamental principles of democratic government;

3. That Congress has not only the sole power to declare war but the responsibility to keep the country out of war;

4. That freedom in America does not depend on the outcome of struggles for material power upon other nations.

The myth that Hitler can invade America and conquer us has been utterly exploded. There are not enough ships in the world to transport 1,000,000 men and all the armaments and equipment necessary to properly safeguard them and undertake our invasion. It has been estimated that it takes 23½ tons of supplies and equipment for each soldier for a period of 30 days. Where could the ships ever be secured to transport that many men and that much equipment and supplies to our coast against our Navy, our air force, and our Infantry? And, even if it were possible to land them, how could they be maintained over here?

This Hitler fear has been cleverly built up to create a war psychology. Sword rattling has been done repeatedly by three outstanding members of the Cabinet—Secretaries Stimson, Knox, and Ickes. In addition to the speeches of these men we have had a drive by agents of the Department of Agriculture to incite war hysteria among the farmers by scaring them with an invasion of the Western Hemisphere and also by holding out the lure of a market for agricultural products.

In addition to the efforts of these Cabinet members to create a war psychology, we have had repeated acts of war committed by this country, as Joseph Alsop says, with a private hope that the Atlantic patrol will produce an incident that will give cause for the United States' declaring war. I have not time nor space to go into all the details, but may I remind you of the fact that we scrapped the Neutrality Act, which was passed when we were in our sober senses; we gave away part of our Navy; we opened our ports to the repair of vessels of one of the belligerents; we boasted of the fact that we sent observers to locate the submarines of one belligerent and we advised another belligerent of that information; we voted $7,000,000,000 as a gift to one of the belligerents; we encourage enlistments of our citizens in the armed forces of one of the belligerents, removing the loss of citizenship which in the past has always been a restriction against such enlistments; we have, in violation of our word and our good faith, enlarged the term of the draft under the Selective Service Act, although Canada has a draft of only 4 months' duration, with a positive prohibition against service overseas, and Canada is in the war and we are not.

And last, but not least, we have relieved one of the belligerents in the safeguarding of an air and naval base in Iceland, which is 2,650 nautical miles from New York City but only 600 miles from the British Isles. The danger in our taking over was the fact, as Senator BONE pointed out, that not only had these places been bombed, but as long as British troops were mingled with American troops at that point, Germany would be justified to fire upon that base.

In a story this week, Paul Patterson, publisher of the Baltimore Sun, stated that Britain was now ready to take the initiative in this war, and that she was satisfied that she could win by 1943, but if the United States would become an active participant, the war could be ended by 1942. In order to make America an active participant, a new, dynamic program has been set up to change public opinion in this country. So, now, the drive is on for American manpower. It worked in 1917, perhaps it will work again in 1941.

But the most serious story that has come out recently in regard to the occupation of distant points in foreign lands has been developed since the debate on the extension of the draft period of the selectees was begun in the Senate just recently. That story is to the effect that we are going to build up an Army of about 3,000,000 men, and that the first place that we shall ship our men will be to Freetown, a splendid port located in Sierra Leone, a British possession on the West Coast of Africa, 500 miles south of Dakar. Of course, all these moves mean an undeclared war, and we shall be in this war without Congress having had one single, solitary thing to say about it.

What is Hitler's position today? The best battleship that Hitler had has been sunk, and the rest of them are being blasted almost daily in their hiding places in German harbors by the R. A. F. His air force, which created havoc at the outset of his invasion of peaceful and unprepared nations, is now inferior to that of Great Britain, and in addition to the R. A. F. he has taken on the powerful air force of Russia. His army, which is still of great power, has not been able to blast through Russia in the 3 or 4 weeks as was expected and asserted by most of the experts. If Hitler cannot finish the job by the time the rains come in September, his mechanized ground forces will be useless in the mud, and when the September rains are followed by the snows, his real problem will begin. It is not the first time that the snows and the cold of Russia have decimated armies more than shot and shell nor is it the first time that a madman with delusions of grandeur has found his hopes and his ambitions buried in the vast steppes of Russia.

Great Britain and the United States are infinitely more powerful than they were a year ago while Hitler has been considerably weakened and his problems are increasing with the passing of time.

I now come to what I consider the real problem of the United States and by far the most serious one. When Hitler and his band of outlaws are wiped out and when Germany collapses, will communism take over? If communism wins in Germany, it will win in central Europe generally, in the Balkans, in Austria and Hungary, perhaps in Italy and undoubtedly in France. What then will become of the British Empire and particularly its ruling classes? They, of course, must fight communism or they will perish together with all their possessions. Will the United States, in case it has entered this World War before that time by being either dragged in through the front door or shoved in through the back door, turn its resources, its money, and its manpower to the defeat of communism and the preservation of the British Empire? We cannot lightly disregard any such contingency for anything can happen in this crazy world. Allies today are enemies tomorrow and enemies today may be allies tomorrow. Who can tell? To me by far the safer course is for us to so strengthen our defenses that no matter that the final eventuality in Europe may be, the United States of America will be safe, the youth of the country will be thoroughly trained, our Army, our Navy, and our air force will be ready and we shall be in a position so strong and so powerful that no nation or combination of nations will dare to attack us.

Of course, I appreciate that efforts may be made to reach us through other lands. If Canada should be invaded, which I don't think possible, or if Mexico should have a ruler over it friendly to a foreign enemy and should permit an invasion through its lands, then, of course, it would become necessary for us to take up arms as we could not tolerate an enemy in our backyard, but when it is said that we must take and occupy Dakar, land troops at Singapore and Hong Kong, concentrate our forces in the eastern Mediterranean for the defense of the Suez Canal, then I am opposed. I know of no reason why any American boy should be dedicated to the proposition of policing the world for the benefit of someone else.

Many people believe that with Hitler defeated, the world's troubles will come to an end. That is not the fact. This is a world-wide economic revolution and it will not subside until the underprivileged are given their just share in the wealth which they produce. The United States can perform a great service to the nations of the world by preserving a representative form of government here, by preserving our fundamental guaranties here, by showing the people everywhere that democracy can and does work here, and when the end of the war finally comes, by aiding the broken, disillusioned, and hopeless people everywhere with food, supplies, money, and credit to take up the task of healing war's wounds and reestablishing themselves in their restored home lands.

This Deluded Land

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 15, 1941

EDITORIAL FROM CHICAGO TRIBUNE

Mr. SHAFER of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Tribune:

[From the Chicago Tribune]

THIS DELUDED LAND

Presently Mr. Marriner Eccles, of the Federal Reserve Board, will be telling the householder how much he will have to pay down on any appliance he wants to buy and how quickly he will have to pay the balance. Mr. Roosevelt has made use of his own self-proclaimed unlimited national emergency and of the Trading With the Enemy Act, a war measure of 1917 never repealed, to put control of installment buying in the hands of Mr. Eccles and his Board. The commissar thus steps between the American citizen who has something to sell and the citizen who wants to buy it. Terms which might be satisfactory to them will not be sufficient in this new American way of life. They must be approved by the Federal Reserve Board.

Nothing in Mr Roosevelt's edict is to touch the installment paying for houses as arranged by the Federal Housing Authority. Although the new edict is to check buying, to accumulate a large, unsatisfied demand for consumer goods for later uses, and to lay a restraining hand on prices, there is to be no restriction on the easy borrowing for installment buying of homes financed by Government guaranty. There is to be no accumulation of a backlog in the building industry. And, although Mr. Eccles has these powers conferred on him by Mr. Roosevelt to prevent inflation, so it is said, Mr. Roosevelt will not surrender his power to devaluate the dollar or to print paper money, both inflationary possibilities.

Presently, if you want a used car, you will ask Leon Henderson, the Price Administrator and civilian supplier, how much you can pay for it. Mr. Henderson says this will be a large job and a tough one, but he thinks he can attend to it. He is saying how many new cars there are to be built and he is around putting price tags on one commodity after another. Mr. Roosevelt gave him the authority to do that having given himself, under his proclamation of unlimited national emergency, the authority to give it.

An edict stopped the processing of silk, and the women are wondering what their new stockings will be like. Mr Ickes' gasoline ukase in the East, limiting the hours of sale, was a flop, and he is expected to issue another rationing the automobile owner. He will tell you that you don't get 10 gallons, you get 5. The commissars also are approaching the use of electricity and of fuel. You are to set the thermostat at 65° and not exceed that heat. Mr. Wickard, of the Agricultural Department, has suggested that the American people quit eating cheese.

The priorities and the allocations of material have produced a confusion in American industry which leaves big and little businessmen staring at a future in which they can see only governmental control and in which many of them see ruin. These things have all been in the view of the perceptive eye for years. The approach to them began when the world was at peace for the most part and when there could be no pretenses of national emergency. The only excuse then was the depression, nourished as the best friend of the collectivists who were trying to gain control of American life. They could see that they would fail unless they got a great emergency.

The war abroad revived their hopes. If war conditions could be brought here, their position would be strengthened and their program could be presented as imperative. It was a favorite reflection of some of these people—and they gave it voice—that only in the requirements of a great war could the country be brought to sacrifice itself to the social and economic and political objectives of the program for a communistic state, and most of these people are now at work in the war program which has entered American life in the manner observable at every point.

Step by step we have gone farther than we dreamed possible toward government by edict, proclamation, Executive order, and administrative regulation. This autocratic state is already in full flesh and the citizens are obeying it. Initiative has been taken out of their hands and their enterprises are passing under the will of the Government official. Further evidences of this increase day by day. Liberties once thought safe are dissolving under attack.

The trouble with the American people has been that they were too little suspicious. They were incredulous. They had never before encountered in their government forces determined to delude them into surrendering their way of living. They couldn't believe their political system was in any danger. They couldn't imagine that anyone would take away from them things they thought were inviolably theirs.

They had always felt that their politicians could be made to obey when the occasion arose. They didn't think that their masters would arise and attain positions where they could not be touched. As it proves, the American people were ripe for just what has happened to them. They have lost control of their Government, and they can't do anything with it. They have lost control of Congress. They can't stop government by edict. They simply submit

When an order issues forth from Washington, however strange and extraordinary it may be, the people find themselves obeying it, regardless of the violence it does their system of government and regardless of the injury it does them. The imaginary war which assails them is thrown at them to smother their rebellious instincts, and they have become bewildered and pliable.

When they voted to destroy the limitation of tenure in the White House, they voted the probability of their own destruction. They didn't know the tenant in the White House when they gave him title to the premises and dominion over them.

This Week in Washington

EXTENSION OF REMARKS

OF

HON. ED GOSSETT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 15, 1941

RADIO ADDRESS OF HON. ED GOSSETT, OF TEXAS

Mr. GOSSETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I am delivering over the radio:

This week in Washington is one your speaker will never forget. Our Nation's Capital has rocked with important national and international action, action of which the full import will never be known, action the wisdom of which may long be debated, action for the consequences of which one can only guess and hope. Certainly this administration cannot be accused of inaction; sins of omission have been and will be few. The appropriation of additional billions for defense, the final approval of the largest tax bill in history, the extension of the draft, the President's historic pronouncement of the peace aims of the democracies, all form parts of an almost terrifying drama by which our Nation seeks through courageous action to avoid slavery, on the one hand, and war on

the other. Little wonder Members of Congress are now straggling out of Washington, weary and worn with the stress and strain of important decisions.

But let's get down to a brief discussion of a few of these events. All are familiar with the 1-vote margin by which the House of Representatives this week approved an extension of the draft. Never before in the history of our country has such drastic peacetime action been necessary. Never, we hope, will it again become necessary. If you could read your Congressman's mind and his mail on this important issue, you would understand why he is today a very tired individual. Many letters were touching, eloquent, heart-rending appeals by good fathers and mothers who want their sons back home. Some were bitter threats of reprisal if one should vote for an extension of the draft. One letter from an old friend says, "If you vote to extend the draft, you will never go back to Congress." Another from a boy in camp says, "Please send me the RECORD of the vote on this extension bill. A number of us fellows want it for future reference."

Your Congressman has no desire to conceal his action in this matter. He, with every Congressman from Texas, Oklahoma, and Louisiana, as well as the vast majority of other Southern Representatives, voted with a heavy heart for this extension of service because he felt it to be necessary. Certainly in such times as these, when our President, our Department of State, and the commanding officers of our Army and Navy say this thing must be done, a Congressman who is supporting a program of full and adequate national defense could not in good conscience say no. Most Congressmen well know that those who threaten political reprisal will keep their words. Those who study these situations know that political strength in a democracy lies more in an absence of enemies than it does in the presence of friends. Yet one who would put political considerations above his country's welfare in such hours of peril would be unworthy of even his own respect. Most Members of Congress have approached these problems prayerfully and have acted upon principle in the light of what they thought to be for the very best interest of America.

Since the beginning of this Republic, the Napoleonic wars are about the only major ones in which we have not participated. We have got into practically every war without anticipation and without preparation. Our situation now differs in both these particulars—there is both anticipation and preparation. Perhaps our different approach to this crisis forbodes a different result. Certainly the majority of thoughtful persons in this country feel that along the road of anticipation and preparation lies our best chance of escape. In the past our potential enemies have usually provoked or declared war upon us because of one of two errors: (1) thinking they could whip us, or (2) thinking they could bluff us. For the sake of all concerned, it is hoped that no such mistakes will be made in the future.

Of course, overshadowing all other events of the week, if not of the year, was the joint statement of Mr. Churchill and Mr. Roosevelt. For the last several days our papers and radios have been filled with volumes of news, views, and comment upon this momentous and historic meeting between the leaders of the democracies. Around the world, in all camps, comparisons are being made between the 8 points of Churchill and Roosevelt and the 14 points of Woodrow Wilson. On January 8 of this year, your Congressman, ED GOSSETT, placed in the Appendix of the RECORD, on page A50, the speech made by Woodrow Wilson to the Sixty-fifth Congress on January 8, 1918. In placing President Wilson's speech in the RECORD, the following statement was made by me:

"Mr. Speaker, on last Monday President Roosevelt spoke for the American people in a time of world crisis. Twenty-three years ago today Woodrow Wilson spoke for the American people in a time of world crisis. Both speeches were clear and honest statements of American ideals and objectives. Both speeches will go down in history as magnificent expressions of the high principles and purposes of a great democracy. Both spoke to the moral conscience of mankind, both committed America to responsible action in the pursuit and in the preservation of peace.

"Twenty-three years ago today Woodrow Wilson set forth in clear and unmistakable language the war aims of the American people. The 14 points enumerated in this address as a basis for peace are said to have contributed as much as did the force of American arms to the crushing of the supposedly impregnable Hindenburg line and to the end of the war.

"We were to witness shortly thereafter the tragic failure of his dreams. In ideals and objectives Woodrow Wilson was said to have lived 100 years ahead of his time. Let us hope it was only 23 years ahead of his time. His was a voice crying in the wilderness of international hate and confusion. His solicitude for the rights and liberties of small nations, his abhorrence of aggression, his hope for peace based upon international justice, quickened the heartbeats of despairing people everywhere.

"The problems of 1941 are the same as were the problems of 1918. Mr. Roosevelt speaks now as Mr. Wilson spoke then for the great masses of humanity who want to live together in peace. Had Woodrow Wilson received the support of the American people following the armistice of 1918, the present world crisis would not have occurred. The appeasers of Munich were no more responsible for the present World War than were those first isolationists who stymied and destroyed Woodrow Wilson in 1918–19. We could not escape then, we cannot escape now, as the richest and most powerful nation in the world, our responsibility for world leadership, for world peace.

"Let us resolve our honest differences of opinion into harmonious action. Let us not permit selfish, sordid, partisan politics to again destroy America's leadership in a time of peril. If we do civilization is doomed.

"Lest we forget, and in hopes that history will not repeat itself in the tragic errors of 1918, I want to place in the RECORD that memorable speech delivered 23 years ago today by President Wilson."

Nazi statesmen have sneered and accused Messrs Roosevelt and Churchill of plagiarizing Woodrow Wilson. Principles of truth and justice cannot be plagiarized. The parallels between the stated objectives in the 14 points and in the 8 points are striking. Let me remind you of at least one difference, however. The peace aims of America declared by Mr. Roosevelt are made during peace. Mr. Wilson's declaration was made in the midst of war. Mr. Roosevelt's aims are joined in and adopted by the British Empire. Mr. Wilson's statement fell upon the deaf ears of the British, was over their heads and wholly misunderstood by them. This very important distinction in the time and acceptance of this declaration of peace aims seems to me of historic and hopeful significance.

Wars will not be lessened among the nations until the causes for wars are lessened. The striking similarities between the 8 points and the 14 points in their efforts to remove causes for war have been declared generally as follows:

First. Both documents state that economic barriers shall be removed insofar as possible, and that all nations shall have access to the markets of the world.

Second. Both documents proclaim the right of small nations and oppressed national minorities to choose their rulers and the form of their governments.

Third. Both documents seek a scaling down of armaments.

Fourth. Both documents condemn secret compacts and balance-of-power alliances as a means of preserving peace.

Fifth. Finally, and most important, both documents proclaim the necessity for an association of nations to promote mutual good will, and to afford mutual guaranties of political and territorial integrity. Woodrow Wilson's dream of a League of Nations begins to reappear.

Already, however, the so-called isolationists have begun to attack this concept. Men will always have honest differences of opinion, but those who play politics with international affairs, those whose actions may be governed in this crisis by their hate of or love for any individual, are almost guilty of treason.

Just as America has participated in most all the wars since the foundation of this Republic, she has also participated in, in fact has been the leader of, most peace efforts. It is well known that Americans were active in the formation of the first Hague Convention in 1899. But here is a fact known to but few Americans, and forgotten by most statesmen. In 1910 the following Public Resolution No. 47 was passed by the American Congress without a dissenting vote and signed by President Taft. Now listen closely to its reading:

"Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That a commission of five members be appointed by the President of the United States to consider the expediency of utilizing existing international agencies for the purpose of limiting the armaments of the nations of the world by international agreement, and of constituting the combined navies of the world an international force for the preservation of universal peace, and to consider and report upon any other means to diminish the expenditures of government for military purposes and to lessen the probabilities of war."

In 1919 President Wilson created the League of Nations—a new dream of a New World to be ruled by justice and right. In a bitter attack upon President Wilson, America turned her back upon the League, and, in his own words, "broke the heart of the world." In 1922 America took the lead in the Washington Naval Limitations Agreement, under which world naval building was restricted for many years. In 1928 Secretary Kellogg negotiated the Briand-Kellogg Peace Pact outlawing war "as an instrument of national policy." This pact was eventually signed by 63 nations, and has subsequently been disregarded by most of them.

For the sake of peace and world order it is hoped that politicians will not again defeat American participation in some form of world peace organization. The League of Nations had faults. It should not have been a part of the Treaty of Versailles. Faulty and imperfect as it was, America should have joined the League, and should have occupied the chair left vacant at the head of the council table of the world.

Soon America will again be confronted with the proposition of joining a new and a better league. Nineteen years ago your Speaker participated in a debate with the University of Oklahoma on the subject *Resolved*, That America Should Join the League of Nations. In reference to the new association of nations, we borrow the concluding statement of the affirmative in that debate. The Speaker declared that "unless America joins the League of Nations, and participates in a world organization for peace, you might as well inscribe across the pages of this civilization that inscription which Dante wrote across the gates of hell, 'Abandon all hope, ye who enter here.'"

Amending the Selective Training and Service Act of 1940

EXTENSION OF REMARKS

OF

HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 15, 1941

RADIO BROADCAST OF HON. FRED BRADLEY, OF MICHIGAN

Mr. BRADLEY of Michigan. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following radio address to be delivered by me this week:

I wish all of my listeners could have been privileged to sit in the gallery of the House of Representatives last Tuesday evening during the final vote on the draft-extension bill. Here was being made possibly one of the most momentous decisions in our entire history as a nation. It was the most dramatic spectacle that I have ever witnessed and one which never will erase itself from my memory.

I do not pretend to be a dramatist or an artist with words, but may I attempt to give you some bit of a verbal picture of what transpired.

This was the setting: There were 405 Members on the floor. Our galleries normally hold 600 people, but on this occasion every aisle was full, people were standing in the rear, and certainly there must have been at least 800 people crowded into those galleries. The corridors outside were jammed. Many people had been sitting in the galleries—some had been standing in the halls—since early in the morning. Many boys in khaki were spotted around the gallery, all intently awaiting the final vote. We had gone into session at 10 o'clock in the morning in order to endeavor to arrive at a final vote the same day. Normally we meet at noon, occasionally at 11 o'clock, but never before in these eventful 3 years had we met at 10. Our general debate ended about noon and then for about 7 hours amendment after amendment was offered to the bill, and all were quickly defeated, with the exception of one which granted a $10-a-month increase in pay to the enlisted men who had served 1 year. But each amendment brought forth rapid fiery debate, pro and con, on the various parts of the bill. There had been a general agreement on the part of practically everybody that the Nat onal Guard, the Regular Army Reserves, and all officers should be retained in service, and hence the fight centered almost entirely on the question of whether or not the selectees should be retained beyond the 1 year as specified in the original act. And throughout this whole tense day Member after Member had been called off the floor time after time and pleaded with, cajoled, or frequently threatened to change his vote for or against.

Then sometime after 7:30 in the evening there came the dramatic anticlimax when Representative HARNESS, of Indiana, offered his motion to recommit the bill to the Committee on Military Affairs with instructions to report it back with certain changes. These embodied the suggestions advanced by all those, both Republicans and Democrats, who had been standing in opposition to the bill. His motion would have provided that all selectees who desired to do so at the end of their year's training could volunteer for further service. That was the principal point. The second point was that the number of selectees who might be called into service at any time would still remain at 900,000. Both of these provisions would, of course, be null and void if we later go to war or if the Congress declares that a national emergency exists.

A roll-call vote was taken on this motion to recommit and it was defeated by 190 to 215. A motion to recommit is generally offered on all important legislation, and the vote recorded on it is generally of such significance that frequently a final roll-call vote is not demanded, because of the general feeling that very few votes are changed on the question of final passage.

But in this instance, however, Chairman MAY, of the Military Affairs Committee, demanded a roll-call vote on final passage and then there began the enactment of a real drama. There is always some confusion at the start of any roll call, and very often considerable noise and scuffling in the Chamber. That was true in this instance. Also there was considerable restlessness in the gallery as the tally clerk started to call each Member's name in turn. In various spots over the floor, one could see little huddled groups of men, which meant that somebody in that group was carefully tallying the ayes and nays as they were being recorded. And whenever it was noted that a Member had switched his vote, the situation became more tense. Finally the Clerk ended his first roll call, which means that every Member's name had been called once; and then, as is our custom, the Speaker announced that the Clerk would again call the names of all those who failed to answer on the first roll call.

At the end of the first roll call, there had been a difference variously recorded by individual checkers of from one to five votes in favor of the extension; and so when the second roll call started, one could have heard a pin drop in that immense Chamber of the House of Representatives. The galleries were tense. Many Members stirred uneasily in their seats, a few of us were quietly pacing the floor in the rear of the Chamber. Finally, the second roll call was ended. Then one Member stepped down into the well of the House and asked that his vote recorded as "aye" be changed to "nay." Representative SHORT of Missouri asked that the vote be recapitulated to be certain that every Member was recorded correctly. This, by the rules of the House, the Speaker denied, before announcing the vote, and then came his dramatic words: "On this roll call 203 Members have voted aye, 202 Members have voted nay, and the bill is passed." Thus was history made in the House of Representatives. What the future holds for us and the Nation as the result of that decision, one hesitates to predict.

All our Michigan Members with the exception of two from the metropolitan Detroit area had voted in opposition to the extension.

I have often wondered just what must have been the individual reactions on board His Majesty's ship, *The Prince of Wales*, when the result of that vote came over the radio.

Over the week-end, we had suspected more and more that a momentous conference between Mr. Roosevelt and Mr. Churchill was unquestionably in progress on the high seas, and we knew pretty generally who must have been present at that conference by reason of their unannounced and mysterious absence from Washington. You will recall that our American newspaper correspondents had been denied all privilege whatsoever to accompany the President on this momentous fishing trip, in order, that he could have complete rest. Hence all we could do in official Washington was to conjecture on possibilities. We have since learned, however, that Winston Churchill did not ban the English news writers, because, as usual, whatever information we did get came from the London press, and since has been proven authentic even though at the time it was denied by the White House. We found in Washington last Friday that the pictures of the momentous conference released from the White House had been taken by English press photographers. Thus does Churchill keep his people informed while we remain in the dark; and so when this bill passed many of us then wondered just what effect that close vote must have had on the final decisions arrived at during the conference. Surely it must have given them plenty of food for thought, because certainly here was no mandate that the American people were ready for war. Surely, here was a mandate that the American people still insisted that there must not be another American expeditionary force; hence that vote may have had a distinctly sobering effect on whatever military plans may have been conceived in the conferences between our General Marshall and England's Sir John Dill. For after all, the people of this continent—both in our country and in Canada—are chiefly concerned about what decisions may have been arrived at in these military strategy conferences between our Army chieftains and our naval chieftains as well.

Toward the close of the debate on the draft extension, the majority leader of the House, Mr. MCCORMACK, had made this statement: "President Roosevelt has consistently said that he is taking steps for the defense of America and for the purpose of keeping us out of war, and he has kept up out of war to date, August 12, 1941." The thing that has kept America out of war to date—and the only thing—has been the voice of you, the people of America, and especially the voice of the mothers of America. What we are all concerned about is whether the statement issued on August 14, 1941, and signed by Mr. Roosevelt and Mr. Churchill may not have definitely marked the turning point in our future program. Apparently now our first aim will no longer be the defense of America but an offensive to bring about the final destruction of Nazi tyranny and to free the conquered peoples of Europe In the words of the present and recent past commander of the English forces in the Near East, this can never be brought about without the complete and active participation of American manpower.

The famous eight-point statement signed by President Roosevelt and Mr. Churchill is not entirely a statement of any new post-war policy; but what principally concerns us on this continent is not so much what we are going to do after the war is won, but just how far we may have to go in winning this war and in bringing about the final destruction of Nazi tyranny. Our friends up in Canada, who are active belligerents in this war, who have been making many sacrifices in the past, want to know—and justly so—why their Premier, Mr. Mackenzie King, was not invited to participate in that conference. They want to know why he was not invited, especially in view of the fact that it is noted in those dramatic English press pictures issued from the White House on last Friday that two of the President's sons—Capt. Elliott Roosevelt and Ensign Franklin D. Roosevelt, Jr.—were both present at that historic meeting.

And we in the United States want to know just what new and perhaps immediate commitments may have been made for our Navy or for our air force, or for the possibility of another American expeditionary force. Are we henceforth to forego "keeping the war away from our shores" by seeking war on foreign shores? We want to know just how much further we may be expected to go in providing the manpower to carry out those strategic military moves which were started in the occupation of Iceland, and more of which were predicted by the President in his speech of May 27, in order to encircle the Axis Powers through the future occupation of the so-called jumping-off bases—those in the Azores, in the Cape Verde Islands, in the Canary Islands, and

possibly also in the sending of an American expeditionary force to Freetown in South Africa to offset the threat to Nazi occupation of Dakar. The American people will wonder just how far we will have to go in the Pacific to bring about the encirclement of Japan and to remove her as a threat in the Pacific. These are the military moves which undoubtedly are in the offing and in which we want to know just how far we will have to participate with our own manpower. This may not be very far off, particularly when we realize that we have for some time been carrying out large-scale landing operations with a large fleet of transports supported by smaller craft off the coast of the Carolinas. We have been carrying out these training maneuvers recently on a large scale; not only with our marines but, I am told, also with some of our Regular Army and many selectees as well. Undoubtedly, some of our Coast Guard men from the Great Lakes are helping to man, and instruct in the manning, of the small boats being used for these landing operations and in training our men for possible similar landing operations on those islands far out in the Atlantic. Yes; we are more concerned about what we may be expected to do in the immediate future than we are in what is going to happen after the war is over, and which no one dare predict at this moment. Yet the eight-point statement definitely commits us to a role of policing the world, presumably with England furnishing the brains and we furnishing the money and brawn.

And now in conclusion, I have a brief announcement that I wish to make. As you have undoubtedly read in the papers, the Congress has decided to take a vacation until September 15, unless a crisis develops in the international situation by reason of which the Speaker can call us back into session immediately. I expect to return to the district and remain until about September 10. I have learned that it is unwise to rely too much on the press or radio for accurate information about just what is actually going on in Washington—and I say this, not in any spirit of criticism—but because of the fact that I have learned it is necessary for us to keep in touch with congressional committees in order to get the complete story on the various subjects which I have wished to discuss with you and which I think may be of interest to you. Consequently, in view of the fact that in these broadcasts I try to give you facts from Washington, I know that you will agree with me that it would be unwise for me to endeavor to continue these broadcasts during our recess period and, therefore, I ask you to give me a leave of absence from the air until September 17, at which time I expect to be back with you again.

New War Department Building in Virginia

EXTENSION OF REMARKS

OF

HON. MERLIN HULL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 15, 1941

ARTICLE FROM THE WASHINGTON EVENING STAR

Mr. HULL. Mr. Speaker, notwithstanding the opposition of President Roosevelt and that of the National Capital Park and Planning Commission, and the Fine Arts Commission, the hastily considered amendment tacked on to the $8,000,000,000 defense bill in this House, providing $35,000,000 for a new War Department building on the Virginia side of the Potomac River, seems about to become a law. The Senate, with a large number of its Members absent, refused by a vote of 27 to 30 to reduce the amount and the bill passed without a record vote.

The unusual procedure of making such an appropriation by this House without previous authorization was brought out in my protest against it when the measure came up on July 28. The Washington press has published many columns in opposition to the project of erecting "the largest office building in the world" at a time when our national defense is demanding billions for its program, and when the use of steel, copper, and many other commodities which will be required for such a structure are being otherwise restricted in order to protect the manufacture and construction of planes, ships, guns, ammunition, and so forth, so badly needed for national defense.

Without going further into a matter which now seems to have been determined upon by both House and Senate, I wish to insert in the CONGRESSIONAL RECORD an article from the Washington Evening Star which outlines the course of this War Department project. I would call particular attention to its ultimate cost when to the $35,000,000 there will be added the expense of new roads and streets, alterations of present driveways, and probably not less than two more bridges across the Potomac River.

The article from the Evening Star is as follows:

[From the Washington Evening Star]

WAR BUILDING "BLITZ" LEAVES CAPITAL STUNNED AND CONFUSED—PROPOSAL FOR WORLD'S BIGGEST OFFICE WOULD VITALLY AFFECT WASHINGTON

"Senator ADAMS. It will be perhaps the biggest building in the world?

"Mr. BERGSTROM (a consulting architect). The largest one I know of." (From the Senate hearings on the War Department Building.)

The Army's blitzkrieg attack on Congress and Washington, with the largest office building in the world as its immediate objective, has been so sudden and so overwhelming that effective resistance has been scattered and left in total confusion. Nothing quite like it has ever happened in Washington before.

Within a few days the House and the Senate Appropriations Committees have approved not merely a $35,000,000 building at the very gates of Arlington National Cemetery; they have approved a scheme so revolutionary in its ramifications and effect on Washington—as a city and as a Capital—that no one has had time even to attempt any careful appraisal of their full significance.

For the first time, however, there is about to be approved by Congress, through the questionable procedure of legislation in an appropriation bill, the transfer of a major Government department beyond the boundaries of the seat of Government.

The step is being taken in complete defiance of the Commission of Fine Arts and the National Capital Park and Planning Commission.

The Bureau of the Budget has been wholly ignored along with the Senate's own Building and Grounds Committee.

The President's hurriedly expressed admonition for caution, written just before he left Washington for a vacation, has been disregarded.

MANY TRANSFERS LIKELY LATER

And it is not only possible but probable that if the scheme is carried out the end of this war emergency—and all emergencies eventually end—will see the transfer out of Washington to Arlington County of offices for about 25 percent of all the executive employees in the Capital. Such transfer would be necessary to fill up the huge building planned for 40,000 War Department employees, more than half of whom doubtless would be dispensed with after the war.

The story of a decision reached in the course of a few days but vitally affecting the future of Washington—esthetically, economically, and perhaps politically—is almost incredibly full of surprising contradictions, confusion, and unsettled differences of opinion among the experts.

A subcommittee of the House Appropriations Committee, on July 17, was listening to W. E. Reynolds, Commissioner of Public Buildings, describe the lack of space for the Government agencies. His Commission had asked for $15,000,000 for temporary buildings and "fringe" buildings on the outskirts of Washington where some of the agencies could be located—moving to make room in Washington for others. The Budget Bureau had cut this item to about $6,000,000. Representative WOODRUM, Democrat, of Virginia, asked Mr. Reynolds if $6,000,000 was enough. Conversation turned to the land acquired by the War Department on the old Arlington experimental farm across the river as the site for relatively small, temporary buildings for the War Department.

GENERAL HAD PLANS READY

Mr. Reynolds suggested that Brig. Gen. Eugene Reybold, Office of Chief of Staff, might say something about War Department needs, and the general was asked to look into the availability of the old Hoover Airport as site for an office building. General Reybold returned a few days later, accompanied by Brig. Gen. Brehon B. Somervell, an engineer officer assigned to the Quartermaster General's Department.

General Somervell was ready, and must have been for some time. For he unrolled his maps and plans and displayed to the committee the site and architect's drawings of a building to be erected near the entrance to Arlington Memorial Cemetery.

It would cost $35,000,000. It would cover 34 acres. It would be three stories high. It would provide about 4,000,000 square feet of office space. It could take care of 40,000 people, "but at the present time we do not think we will use it for more than 30,000." There would be additional space for War Department records. It could be built in a year.

Would the $35,000,000 cover everything? Representative WOODRUM asked. "Will that complete the job, covering everything, including the utilities?"

Yes, sir," said General Somervell.

SPECIAL RULE OBTAINED

It is an unusual thing for Congress to approve a $35,000,000 item for an office building even after years of consideration and delay. But this plan went through like greased lightning. When it came up in the House a point of order was made against it, as legislation in an appropriation bill. The House was adjourned and a special rule hurriedly obtained from the Rules Committee waiving all rules and the bill was passed. It was impossible to get a separate vote on the War Department building, for the bill was appropriating some $6,000,000,000 for national defense, of which the War Department building was a small part.

News of the House approval of the plans stunned the Capital planning agencies. They had not been consulted. They knew nothing about it. Even high officials of the War Department, approached by reporters on the day the bill was reported out, said they had never heard of the project.

The Park and Planning Commission called a hurried meeting of traffic and highway authorities. The President dispatched a letter to Senator ADAMS, chairman of the Senate subcommittee which had the bill in charge. He said:

"MY DEAR SENATOR ADAMS: There is included in the first supplemental national-defense appropriation bill (H. R. 5412) 1942, now before your committee, an item of $35,000,000 for the construction of an office building across the Potomac on the site of the former Department of Agriculture Experimental Farm to house all of the activities of the War Department. When this project was first brought to my attention, I agreed that it should be explored. Since then I have had an oportunity to look into the matter personally and have some reservations which I would like to impart to your committee.

"It is gratifying to know that the Congress is willing to provide the necessary funds at this time to construct sufficient office space of a permanent character to meet the expanding needs of the Government and to permit a material reduction in the rental bill in the District of Columbia.

"While I am in full accord with this general objective of providing additional permanent space and have no objection to the use of the Arlington farm site for an office building for the War Department, I do question the advisability of constructing the entire 4,000,000 square feet on the proposed site without first being reasonably sure that the present and proposed traffic and transportation facilities can accommodate the 45,000 employees who will be employed in this immediate area and that the necessary adjustments in Arlington and the District of Columbia can be accomplished without undue burden upon either community. In this connection, I invite your attention to the report of the National Park and Planning Commission. * * *

OBJECTION TO PHASE OF PLAN

"My attention was also called to that part of the report of the Committee on Appropriations of the House on the bill wherein it was suggested that the proposed project would permit the War Department to vacate all space in the District of Columbia including the permanent building for that department on the site bounded by Twenty-first, Twenty-third, C and E streets NW., the first unit of which has been recently completed and occupied, and the reassignment of this building to the Navy Department. I trust this suggestion will receive further consideration. It has been my thought that after the present emergency the Congress would provide the necessary appropriations to complete the planned development of that section lying between Constitution Avenue, E Street, and west of Twenty-first Street, wherein it is proposed to locate the permanent home of the War and Navy Departments. Congress has authorized the acquisition of all land within this area and a large portion is now Government owned. To defer the completion of this plan indefinitely would constitute a severe setback to the development of this section and result in improved real-estate values which will materially increase the cost of acquisition of land.

"In view of the above, I believe it would be unwise to provide office space on the Arlington farm site for more than 20,000 War Department employees until some experience shall have been acquired as to the effect of concentrating so many employees in this location. It may be that upon completion of this smaller building all interested parties would recommend against further expansion. On the other hand, a more complete survey at that time might warrant the construction of additional units. In the circumstances, I believe it wise to proceed with a first unit, and upon its completion to resurvey the situation and carefully determine the extent to which further expansion at this location may be justified.

"I am presenting these comments to you in order that your committee may have the benefit of my review of the proposed project at Arlington farms as well as my hopes regarding the final development of the area west of Twenty-first Street between Constitution Avenue and E Street.

"Sincerely yours,

"FRANKLIN D. ROOSEVELT."

CONTRADICTIONS IN TESTIMONY

In reference to the President's proposal for a building to house 20,000 instead of 40,000 people, General Somervell told the committee that such a building would not "meet the needs for the War Department." In addition, he said that it would not save 50 percent of the cost of the building twice as large.

Some curious contradictions appear in the testimony. Chairman SNYDER, of the House Subcommittee on Army Appropriations, testifying before the Senate committee, said that he believed the building, if it costs $35,000,000, would probably pay for itself in 7 years by increased efficiency in the War Department and saving rent in the District of Columbia. But Chairman ADAMS, after hearing all the testimony, said that "I am not sold at all on this thing as a measure of economy. * * * I doubt very much that you can justify it on the ground of saving money. * * * I question very much the extent of saving in dollars, but I don't think that is the big item." The big item, he thought, was the increased efficiency resulting from having the employees all under one roof.

General Somervell did not believe that staggered hours for employees in the new building would be necessary. But the Park and Planning Commission, after consultation with traffic authorities, found that it would be necessary to stagger working hours over a 2-hour period in the morning and a like period in the afternoon.

STILL LARGER FUND NEEDED

General Somervell said that $35,000,000 would "cover everything." But that statement is contested by other estimates, still in the process of formulation and running as high as $10,000,000, to cover new roadways and approaches and facilities. The Park and Planning Commission estimated that roads and approaches would cost between seven and eight million dollars.

Part of this might come from highway funds—not yet available—which the War Department has said "informally" it would be willing to certify for defense highways. This money, it has been said, might have to be spent anyway, and the War Department Building would merely expedite the expenditures. If the War Department Building is approved, however, it would have to be spent immediately in order to make the building accessible to the employees when it is completed.

For the District of Columbia, the new approaches and highway projects—many of which have been planned for construction over a period of years—would have to be rushed to completion immediately. If these improvements are to be available in time to serve the new building within a year or so, no money is available now. That money will have to be provided either through increased local taxes or by Federal grants. The amount is in doubt. No estimates have been made. But many millions will be required. The so-called Whitehurst program, containing many items that would be necessary now if the building is constructed, was to be spread out over 8 to 16 years, depending on the money available.

AGENCIES ARE SPLIT

Opposition to the building developed a curious split between the agencies charged with the esthetic development and planning of the Capital. Chairman Clarke of the Commission of Fine Arts flatly opposed the site. It was reserved, he said, as far back as 1901, as open territory, to be used either as a park or as an extension of Arlington Cemetery. It was inconceivable to the Fine Arts Commission that the plans of 30 years would be upset by the War Department's sudden conclusion that the Arlington site is the only one available.

The Park and Planning Commission, and the President, found no objection to the site itself, but both questioned the wisdom of using it for so large a building.

The Senate committee sought to develop thought as to other available sites. But those testifying were stymied by not being able to point out any place in Washington immediately available for so large a building. No one previously has advocated the necessity for housing 30,000 or 40,000 employees under one roof and no one had ever mentioned the possibility of a $35,000,000 building. And the War Department's sudden decision that this was absolutely necessary caught the planners unprepared. It must be remembered that the Park and Planning Commission has been trying to purchase land, according to carefully laid plans, with a few million dollars spread over many years. The thought that Congress was actually trying to find a site for a 34-acre building, parking space for 10,000 automobiles, and 40,000 employees naturally took them off their feet and left them gasping.

SWITCH ON SITES CURIOUS

Both the spokesmen for the Fine Arts Commission and the Park and Planning Commission advocated, as did the President, the so-called Northwest Rectangle, in which there already has been completed the first unit of a new War Department Building. But the War Department, which previously had approved the Northwest Rectangle plans, suddenly switched against them. General Somervell's chief objection seemed to be that there was not enough land to provide parking space for the employees as well as an office building for 40,000 employees in that area.

Here, however, another curious angle developed. The recent highway and traffic survey of Washington, known as the Whitehurst report, reached the definite conclusion that it was economically impossible to provide off-street parking space for large buildings in Washington. The proposal was made that the search for such space be abandoned, and that "fringe parking lots" be established on the outskirts of the city, connected with the various office buildings by direct bus routes. The decision now to go out of Washington to build a large enough building to house 30,000 or 40,000 employees, with parking facilities for 10,000 automobiles, upsets the basic philosophy of the fringe-parking idea and creates new traffic problems not contemplated in the Whitehurst report. An idea of what this traffic problem will mean can be gained from a realization that from the Department of Commerce Building to the Apex Building the whole Avenue Triangle development houses a third less employees than would be housed on the other side of the river in the War Department Building. There was conflict in the testimony before the Senate committee as to the capacity of the bridges and the approaches. And this conflict, still undecided, leaves also undecided the question whether another bridge across the Potomac will be immediately necessary.

TRAFFIC DATA GIVEN

A traffic survey in the fall of 1939 showed that 75 percent of the War Department employees live in Washington, the remaining 25 percent being about evenly divided between Maryland and Virginia. It also showed that about 18 percent of the employees walked to work. With the sudden expansion of War Department personnel, the percentage of those living in Washington has in-

creased. A large proportion of them are housed in rooms, and such facilities are not available outside the city.

An important consideration, not touched on in the hearings, affects the future of Washington—after the war.

In April 1917 there were 2,816 War Department employees in Washington. The war brought on the sharp fluctuations shown in the following tabulation:

1918	37,406
1919	27,416
1920 (March)	18,985
1920 (June)	12,212
1921	6,429
1922	4,921

As shown, the number of employees after the war decreased in less than 4 years by 33,000.

On July 1, 1933, the number of employees had dropped still further to 3,744. In 1940 the number had risen to 6,694; in May 1941 it had jumped to 21,620. The number now is about 24,000. By the first of next year the anticipated employment is 30,000—still 7,000 less than the peak of employment during the first World War.

ONE-HUNDRED-YEAR NEED IS SURPRISE

One surprising angle of the War Department plan is the scheme to build a building that will last 100 years, the largest office building in the world, to accommodate what obviously is a temporary emergency force of employees. After the emergency has passed, the number of employees will rapidly decrease. Perhaps 4 years after the emergency has passed, the number of employees will drop from 40,000 to less than 20,000; perhaps to 10,000.

The huge building at Arlington will, of course, be in excess of the needs of the War Department then.

What will happen? Government agencies have some interesting statistical computations in the process of formulation. As the War Department and other agencies are cut down after the war and space in the War Department Building becomes available, other agencies in Washington, occupying rented or temporary quarters, will be shifted across the river. And space computations now indicate that as many as 29 percent of the entire executive department personnel might be so shifted.

If the shift did not take place, the excess space at the Arlington building, even counting 1,000,000 feet for storage of department records, would be wasted.

If the shift did take place, it would precipitate a serious economic problem in the sudden vacating of about 60 percent of Government-rented space in Washington office buildings. Incidentally, the R. F. C., through its subsidiary, the R. F. C. Mortgage Co., has invested almost $10,000,000 in Washington office building construction. About 25 percent of all office space in privately owned buildings in Washington is rented to the Government.

There is, of course, no question about the great demand for office space now—not only by the War Department, but by almost every other agency. By July of 1942, provided the present emergency continues, the Government will own about 19,500,000 square feet of office space; will be renting about 6,000,000, and still will be short 2,000,000 square feet for which provision must be made. This does not count the space contemplated in the new War Department Building. If that is built, 4,000,000 additional square feet will be available, which would mean a surplus, instead of a shortage, of about 2,000,000 feet.

The War Department, housed in about 17 different buildings in Washington, now needs about 734,000 square feet of office space. By constructing the new building, with 4,000,000 square feet available, the War Department would release about 2,140,000 square feet of space it is occupying. Principal beneficiary of this additional space would be the Navy, which would take over the Munitions Building, which it now shares with the War Department. This, apparently, would mean that a temporary building, now under construction in Arlington County, would not be needed for the Navy but would be utilized by some other Government agency.

As the War Department plan took nearly everybody in Washington by surprise, many of the points hurriedly raised in objection remain unsettled. General Somervell, who has a fine reputation as an officer, is dead sure he is right. Others are dead sure he is wrong.

Congress is expected to approve the building within a few days, and it is believed that new objections, not voiced as yet, will develop as fast as the promised construction. It is to be doubted if any single act of Congress ever changed, quite so radically, the future picture of Washington or caught so many people, supposedly concerned with planning for the city, completely off guard.

Appropriations and Obligations Incurred by Congress — Seventy-seventh Congress, First Session, to August 18, 1941

EXTENSION OF REMARKS

OF

HON. JOHN TABER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 15, 1941

Mr. TABER. Mr. Speaker, the following is a statement of the total amount which will come directly out of the Treasury in one way or another as a result of the bills that have been passed so far in the first session of the Seventy-seventh Congress. These figures include, in addition to direct appropriations, permanent appropriations, contract authorizations, R. F. C. war loans which will either not be paid back or will have to be paid through Government contracts, and reappropriation of funds which without this action would remain in the Treasury.

TABLE I

Direct appropriations	$39,897,767,138.63
Reappropriations	29,749,775.20
Permanent appropriations	5,009,674,586.00
Total cash appropriations	44,937,191,499.83
R. F. C. loans	2,760,000,000.00
Contract authorizations	3,698,481,291.00
Total available in all ways	51,395,672,790.83

This is the largest sum ever made available for the Federal Government.

The following table shows a breakdown of the amounts made available by bills for each Department in the last two sessions of Congress:

TABLE II.—*Appropriations*

Title	76th Cong., 3d sess.	77th Cong., 1st sess.
Agriculture	$1,189,960,963.00	$1,184,516,385.00
District of Columbia	53,256,901.00	60,778,564.44
Independent offices	1,409,409,314.00	1,986,577,372.76
Interior	$175,313,170.00	$222,675,113.00
Labor-Federal Security	1,188,920,569.00	1,203,941,940.00
Legislative	24,279,820.00	25,726,737.00
Military	1,522,571,757.00	10,567,986,098.00
Navy	1,493,342,750.00	3,449,878,416.00
State, Justice and Commerce	111,934,280.00	279,142,477.00
Treasury-Post Office	4,461,798,310.00	5,663,651,791.00
War Department civil functions	328,642,417.00	230,899,173.00
First deficiency	92,035,408.52	197,272,544.88
Second deficiency	139,466,777.23	1,041,444,529.75
Urgent deficiency	57,541,300.00	393,687,775.00
Additional urgent deficiency		174,409,630.00
Supplemental deficiency	254,790,776.00	
Relief, Work Projects Administration	1,282,711,357.00	910,905,000.00
First supplemental national defense, 1941	1,768,913,908.00	
Second supplemental national defense, 1941	4,045,102,532.00	
Third supplemental national defense, 1941	1,450,483,928.00	
Fourth supplemental national defense, 1941		1,533,567,102.00
Fifth supplemental national defense, 1941		4,383,221,174.00
First supplemental national defense, 1942		7,586,896,948.00
Lend-lease defense aid		7,000,000,000.00
First supplemental civil functions, 1941	287,990,014.35	
Housing	338,263,902.00	
Reconstruction Finance Corporation loans to South America	500,000,000.00	
Reconstruction Finance Corporation loans to industry	1,000,000,000.00	
Reconstruction Finance Corporation defense housing insurance		10,000,000.00
Reconstruction Finance Corporation purchase strategic materials		1,500,000,000.00
Reconstruction Finance Corporation, Commodity Credit Corporation		1,250,000,000.00
Army clothing		175,000,000.00
Merchant ships		313,500,000.00
Tennessee Valley Authority		40,000,000.00
Total	23,476,330,154.10	51,395,672,790.83

Of this grand total, not more than $2,500,000,000 was spent before July 1, 1941, and a very large percentage of it will be expended during the fiscal year ending June 30, 1942.

Expenditures for military purposes are now running at the rate of nearly one and a half billion a month; I expect that figure to reach two billion a month by January 1, two and one-half billion by April 1, and three billion by June 30, 1942.

Even allowing for the reduction which will be occasioned by the tax money which will come in, the expenditures for the fiscal year 1942 will, in my opinion, run between twenty-seven and thirty billion dollars, and the deficit will be from fifteen to seventeen billion dollars.

The national debt on June 30, 1941, was $48,961,443,535.71, in addition to approximately $6,500,000,000 of guaranteed Government obligations, or a total of approximately $55,461,443,535.71.

By June 30, 1942, it will be in the neighborhood of $65,000,000,000 direct and $8,000,000,000 indirect, without any further changes in legislation.

The following table shows a breakdown of the appropriations of this Congress into regular, permanent reappropriations, contract authorizations, and special funds for each Department of the Government:

TABLE III

Agriculture:	
Regular	$1,060,500,063.00
Permanent	112,697,638.00
Reappropriation	11,318,684.00
	1,184,516,385.00
District of Columbia:	
Regular	54,183,106.00
Permanent	3,818,685.00
Reappropriation	45,845.44
Contract authorization	2,730,948.00
	60,778,584.44
Independent offices:	
Regular	1,414,626,838.00
Permanent	356,276,039.00
Contract authorization	208,452,000.00
Reappropriation	7,222,495.76
	1,986,577,372.76
Interior:	
Regular	188,325,923.00
Permanent	14,591,440.00
Reappropriation	3,082,750.00
Contract authorization	16,675,000.00
	222,675,113.00
Labor-Federal Security:	
Regular	1,195,861,940.00
Reappropriation	8,080,000.00
	1,203,941,940.00
Legislative:	
Regular	25,002,256.00
Permanent	718,481.00
	25,720,737.00
Military:	
Regular	10,384,821,624.00
Permanent	18,779.00
Contract authorization	183,145,695.00
	10,567,986,098.00
Navy:	
Regular	3,415,521,750.00
Permanent	3,228,772.00
Contract authorization	31,127,894.00
	3,449,878,416.00
State, Justice, and Commerce: Regular	279,142,477.00
Treasury-Post Office:	
Regular	1,147,624,384.00
Permanent	4,516,027,407.00
	5,663,651,791.00
War (civil functions):	
Regular	228,601,828.00
Permanent	2,297,345.00
	230,899,173.00
Urgent deficiency: Regular	393,687,775.00
First deficiency:	
Regular	191,478,544.88
Contract authorization	5,794,000.00
	197,272,544.88

TABLE III—Continued

Second deficiency: Regular	$1,041,444,529.75
Fourth supplemental national defense, 1941:	
Regular	1,376,464,602.00
Contract authorization	157,102,500.00
	1,533,567,102.00
Fifth supplemental national defense, 1941:	
Regular	2,299,767,920.00
Contract authorization	2,093,453,254.00
	4,393,221,174.00
Lend-lease defense aid: Regular	7,000,000,000.00
Additional urgent deficiency: Regular	174,409,630.00
Relief, W. P. A.: Regular	910,905,000.00
Army clothing	175,000,000.00
Merchant ships	313,500,000.00
Tennessee Valley Authority	40,000,000.00
First supplemental national defense, 1942:	
Regular	6,586,896,948.00
Contract authorization	1,000,000,000.00
	7,586,896,948.00
Reconstruction Finance Corporation:	
Defense housing insurance	10,000,000.00
Purchase strategic materials	1,500,000,000.00
Commodity Credit Corporation	1,250,000,000.00
	2,760,000,000.00
Total	51,395,672,790.83

The following table gives the number of employees in the Federal Government beginning June 30, 1930. These figures indicate a steady increase, and it must stop. There has been an increase of 787,839 since the Roosevelt administration came in, an increase of over 100 percent.

TABLE IV

1930	560,456
1931	571,368
1932	570,000
1933	577,170
1934	580,181
1935	751,269
1936	810,418
1937	871,236
1938	855,210
1939	925,260
1940	1,011,066
1941	1,365,000

The Roosevelt administration has succeeded in putting out of business hundreds of manufacturers and businessmen, especially in the smaller organizations. It has thrown out of work millions of men. It has prevented the successful operations of farming, mining, and business. It has endeavored to make more acute and more direct the distress of the people of the United States by what it calls social legislation, but which in fact has lowered the standard of living of the American people, reduced employment, and thrown millions on relief.

The debt limit has been raised to $65,000,000,000, which will be reached by the end of the fiscal year.

I have no criticism of the appropriations which have been made this session for national-defense purposes, totaling aproximately $36,000,000,000. I only wish that we had a Secretary of War and a Secretary of the Navy in charge of their Departments and competent to see that the defense money was honestly and efficiently spent. The worst part of the story is that defense money is being spent for other purposes than defense, and our expenditures for relief are still going on in spite of the fact that unemployment is on the decrease because of war preparations.

Upward of $2,000,000,000 of the funds appropriated for nondefense items should have been saved. We have the spectacle of the W. P. A. the C. C. C., and the N. Y. A. out soliciting people to go on relief and be paid by their organizations. It is the most disgusting spectacle that any administration has ever put on. Even now the administration is trying to put through enormous projects costing billions of dollars that have nothing whatever to do with defense and are a menace to the people of this country. Our national defense is being jeopardized by the dissipation of our resources by unprincipled spenders, whose only object seems to be to wreck the financial and business structure of the United States.

Is it not about time for the American people to wake up and realize how the Roosevelt administration has been swindling them?

Is Decentralization of Industry a Myth?

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 18, 1941

Mr. PITTINGER. Mr. Speaker, several months ago those in charge of our national-defense program announced that industry would be decentralized and that the Midwest would share in contracts for war materials and other national-defense purposes. To an infinitesimal extent, this promise has been kept. It is being observed more in the breach than in the observance.

Instead of approaching this problem from the standpoint of those communities with large numbers of unemployed people, the Government has kept right on expanding industries on the Atlantic seaboard and more and more has centralized the production of national-defense articles in certain localities.

In the Eighth Congressional District of Minnesota, which I have the honor to represent, no national-defense industries of any kind have been located. The Army could well afford to train men in our northern climate and establish an Army base in our locality, but nothing of that kind has been done. When they

decided to train ski troops, they passed by our territory, which in the wintertime is ideally located for such purposes. Up the shores of Lake Superior at Port Arthur and Fort William, the Canadian Government is building airplanes and its shipyards are building boats. But in northern Minnesota no such constructive work is being done and there are still thousands of unemployed people.

I just received a letter this morning from a resident of Duluth, Minn., and this is what he says to me:

It seems proper to inform you that conditions here at home are still deplorable and thousands of people around here are unable to find work so they can earn a living in spite of all these defense contracts being let all over this country. In considering the billions of wealth which are dished out every month to foreign countries, we, at times, are wondering if our representatives in Washington are representing foreign lands and their interests or the American people who elected them to office.

This constituent expresses my views exactly on the present policy of Government departments in furnishing our people with employment in connection with our national-defense program and the spending of money to aid foreign governments.

Administration officials, in their desire to develop a strong foreign policy, should not overlook the needs of American citizens.

In an editorial in this morning's Washington Post the whole problem is admirably summed up, and I quote a portion of the editorial, which reads as follows:

No secret has been made of the fact that Army and Navy procurement officials prefer to deal with prime contractors, while the latter—often for good reason—are reluctant to farm out defense work to other concerns. As a result the subcontracting program so far has been a failure. Defense orders have been concentrated in a comparatively few hands, and a vast amount of equipment that could be employed on defense work remains idle, or is being used for less essential purposes. Now that many smaller concerns engaged on nondefense orders face shut-downs because of raw-material shortages, vigorous and prompt action is called for to spread defense orders over a larger area. So it is encouraging to hear that O. P. M.'s Defense Contract Service will shortly be empowered to make subcontracting mandatory and to adapt defense orders to the facilities of the smaller companies.

The Selective Training and Service Act

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941.

Mr. DINGELL. Mr. Speaker, because I feel I should not prolong the debate with regard to the extension of the service period of the selectees as provided for in House Joint Resolution 222, I shall avail myself of the customary privilege of extending my own remarks and the inclusion of an editorial printed in the Detroit News on Monday, August 4, which is a clear-cut and unchallengeable statement of fact, indicating that there was no 1-year agreement.

The editorial is as lucid as it is brief. On the points which it covers it is unanswerable and reflects my opinion on that score. Over and above that, Mr. Speaker, I want to say that I had no choice but to vote for the bill. I had not made up my mind definitely until virtually all of the debate was exhausted. Now I am convinced that a grave national emergency exists, that my country is in danger, and that I have no right to trifle or take chances with my country's safety. If I am to make an error, it must necessarily and preferably be on the side of safety and security. I could not in conscience do less and enjoy peace of mind.

What would my answer be to my people in the event that I voted wrong and my country and its people became subject to a foreign despotic and tyrannous master? No excuse, no subterfuge, no explanation could be given that would satisfy, that would begin to compensate for the everlasting enslavement and for the cost in blood and treasure. If the Congress, on the advice of experts, ordains and declares that a grave national emergency exists and that training and preparation must be made at maximum and at top speed and it should be found that the preparations were more abundant than necessary, then the people will understand that the action was typically American and that it was intended that we shall be safe rather than sorry. No amount of explanation or regret will ever satisfy a defeated and enslaved American people. I include the editorial so ably written and captioned "No Flat Agreement for One Year Only."

[From the Detroit News of August 4, 1941]

NO FLAT AGREEMENT FOR ONE YEAR ONLY

In letters to the editor, as well as in private discussion of the term of service for selectees, there occurs repeatedly the idea that 12 months was the service "agreed on" in the "bargain" with the Government.

In truth there was no bargain. A government that had to bargain with the country's young men for its defense would be no government at all. The obligation to render military service, as to pay taxes, is absolute and not to be qualified by the individual citizen.

But citizens do misunderstand laws or fail to read or remember, which evidently is the case with the selective-service law. Its language is plain enough on the question of the length of service. In subsection (b) of section 2 it says:

"Each man inducted under the provisions of subsection (a) shall serve for a training and service period of 12 consecutive months unless sooner discharged, except that whenever the Congress has declared that the national interest is imperiled, such 12-month period may be extended by the President to such time as may be necessary in the interest of national defense."

Some political opponents of extending the period of service now speak of the law's provision on that head as something hidden, like the fine print in a snide contract. But there was no fine print. Nor was there a need to hide anything, for the plainly stated purpose of this law was to create an Army "for the common defense."

It was plain the training provided for was not just for training's sake; that it was for service of the country in time of need. Surely no one expected a new army would be trained every 12 months, and that thereafter the last trainees would be free to let the country take care of itself.

Subsection (C) of section 2 says:

"Each such man, after the completion of his period of training and service under subsection (B) shall be transferred to a reserve component of the land or naval forces of the United States and until he attains the age of 45, or until the expiration of a period of 10 years after such transfer he shall be deemed a member of such reserve component and shall be subject to such additional training and service as may now or hereafter be prescribed by law."

There remains the question whether "the national interest is imperiled" now, as subsection (B) says, in a way to justify extending the service of present selectees. No "bargain" is involved there, yet every citizen does have the right to his own opinion of the emergency. As to that, however, if the country is not prepared to rely on the President as Commander in Chief to tell it what is needed for defense, we do not know whom it can rely on.

Amending the Selective Training and Service Act of 1940

EXTENSION OF REMARKS

OF

HON. JAMES A. WRIGHT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

Mr. WRIGHT. Mr. Speaker, after considerable hesitation I have decided to support this bill and because many people feel so strongly about it, both those in favor of its passage and those opposed to it, I think that it is only fair that I should discuss the reasons which have influenced me in arriving at my position.

I have a great amount of sympathy for the humane point of view which has inclined many people to vote against the bill. I feel that a mistake was made originally in the passage of the Selective Service Act. Too much emphasis was undoubtedly placed upon the provisions of this act which restricted the term of service to 1 year, and too little emphasis upon the provisions as to national emergency which would prolong the service for a greater period of time. Regardless of the wording of the act, which if read carefully indicated that a period of service beyond the year probably would be required, I know full well that the public generally and the selectees in particular contemplated a period of service of but 12 months. It was unfortunate that this impression should have been generally given, and I think that when the original act was passed, the public should have clearly understood the length of time that it would be necessary to keep our young men in camps. The mistake has been made. Now the question confronting the Congress is, keeping these facts in mind, Should they vote to release the men in camp and expose the country to peril?

This first mistake after all can be corrected. The men can be kept in camp. We must decide whether we will do so. If this bill passes and the course of world events later shows that we have been unduly alarmed about the possibility of war, the men can later be released. If we err in retaining the soldiers, we err on the side of safety. This again is a mistake which can be corrected.

On the other hand, if we are in imminent danger of war, as has been attested by the leaders of our Army and by our Department of State, then certainly it would be folly, perhaps even national suicide if we weakened our armed forces. Our self-preservation as a people may be at stake. Granted this, the personal disappointment or inconvenience or hardship of any portion of our population cannot influence our action. It would be unthinkable to disarm at the moment of danger. This would be a mistake unlike the two other possible mistakes that we have considered, in that it could never be corrected. It would be the most tragic mistake that we could make as a nation. We would place in jeopardy those liberties which are our proud inheritance and which are the very spiritual life of our Nation. We would admit our impotence to defend our national welfare. We should be convicted before all history as a generation of cowards who dare not preserve for ourselves and our descendants that way of life which our predecessors, even those within our own memories, have won with their sacrifice and blood.

I have always thought that in time of crisis our country had the right, in order to secure its national welfare, to call upon any of its citizens to bear arms in its defense. The period of service is properly measured not by any agreement or contract but by the duration of the national emergency. The duty of service and sacrifice is the primary thing. Any bill which might be passed by Congress is merely the formal enactment, the mechanics by which this duty of service is expressed. No law has permanent force. It may be repealed or a different law substituted the day after its passage. The Congress may, therefore, and must if the public safety demands it, call upon the citizens to rally to the colors. It may call back those men in service whose period has expired, may retain those who are already in service for a longer period of time than that contemplated, or call others who have not yet served. The test is the national interest, and it is the obligation of Congress as the elected representatives of the people to weigh all considerations carefully and to make its choice as to what course will best serve the national interest.

Now for a brief consideration of some of the other aspects of this bill. Are we in danger of war? I do not believe that any human knows what course the present struggle will take nor how far it will spread. We see Japan threatening to advance southward and to cut off supplies which are vital to us as a nation. We know that in the South American countries propaganda is rife, seeking to alienate those people from us and to incline them toward the Axis philosophy. We know that Britain has been fighting valiantly against the greatest armed forces of history, and that if her fight be unsuccessful we would be the last large democracy in the world. We know that everywhere that Hitler has conquered the most brutal and abject slavery has been imposed upon the people. We know that peaceful relations cannot be permanently maintained with such a government as that now dominating Europe; that former periods of peace have been used only as a period of respite and preparation for further conquest. We know that with cynical cunning they use our own disinclination to war and our own love for democracy as a weapon against us. They seek to corrupt and confuse us from within before they attack from without. No one knows when they might find it to their interest to move against the United States, either by economic pressure or military attack. I feel that we are in grave peril, and I do not propose to lend my efforts to weakening our Army.

Many arguments have been advanced to the effect that a substitution of one group of selectees for another will not weaken the Army. The testimony of our Chief of Staff, General Marshall, conversations which I have had with many students of military affairs, both in and out of the Army, as well as common sense would negative this argument. There are no distinct divisions, regiments, or even companies of men made up entirely of selectees. They are trained side by side with soldiers of our Regular Army and with members of our National Guard and with Reserve officers. More than ever today the unit is the division; the individual is unimportant. Present wars are fought not by guerrilla tactics or by citizenry armed with rifles and lying behind fences and stone walls. Wars are won today with highly organized and highly mobile mechanized units in which the individual must learn to subordinate himself and to do his duty with the utmost efficiency and dispatch. Units like these are not trained in a short time. It took only 150,000 mobile, highly organized German soldiers to conquer the Low Countries and France and disorganize and destroy millions of Allied soldiers. They had been trained for 8 years.

There is just one more thought. The entire world is looking toward the United States. We must not falter in the resolute position we have taken. Where would England be today without our aid? What course would South American politics have taken had we weakened in our stand and showed a willingness to appease? In what direction would Japan have moved had it not been faced by a certain conflict with our powerful Navy? It is our national duty to present to the world a united front. We cannot have a division between our executive and our legislative arms of the Government. We cannot show the world that we are divided as a nation. It is only by concentrated action that we can hope to avert this war from ourselves and at the same time to confound the enemies of our civilization.

The Selective Service Extension Act of 1941

EXTENSION OF REMARKS

OF

HON. JOHN A. MEYER

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 12, 1941

Mr. MEYER of Maryland. Mr. Speaker, following my vote against the bill extending the service of draftees, National Guards men, and Reservists from 1 year to 2½ years there have been some press statements and comments relative to my stand. Despite these, however, there are some essential considerations which dictated my action that have not appeared.

First, I should like to state that I voted against the service-extension bill simply because I believed, and still believe, that a better bill could have been and should have been enacted. I believe that such a long and indiscriminate extension period does not serve our best interest, all considered, at a time when this Nation is not at war.

The measure which would have received my support would have provided for a shorter extension period. It would have provided for some system of progressive discharge of the older draftees and others upon whom the present indiscriminate extension works particular hardship. Consider that there are in the Army thousands of men of relatively high age who were brought into service under the terms of the original Draft Act. Consider also that there are many patriotic young men in service who, thinking that 1 year's training only would be required of them unless the Nation should actually find itself at war, did not wait to be drafted but willingly applied for voluntary induction.

While the bill was under consideration there was offered an amendment providing for a 6 months' extension and progressive discharge of selectees based so far as possible in seniority. Together with the majority of the Maryland delegation, I voted for the amendment. I do not contend that it would have been a perfect measure, but it would have done something toward alleviating some of the hardships which the bill enacted makes certain.

I should like here to emphasize several points. The first is that this Nation is not now at war. It is true that a war of nearly world proportions is in progress and that we must be prepared for the most serious eventualities. I have supported and voted for every defense meas-

ure with a full understanding of such facts. But the facts of our situation at any given time determine what measures should be passed by the Congress and what action is proper for the Nation to take with reference to the conflict.

When the Service Extension Act was first put forward, I issued a statement which was reported in the press. In it I expressed the firm belief that citizens of this country, civilians, and service men alike, would approve any action, however drastic, once it was understood that such action was necessary. But I pointed out that such understanding would have to be based on information supplied by those highest in military and administrative positions. In view of this, I asked for a clearer statement of our situation and our military necessities than had up until that time been given the people. The result of the vote on the service-extension bill in the House of Representatives should demonstrate with utmost clarity that such a picture of our situation and our military necessities was not presented as would justify such a flat extension of service as two and one-half times the period originally specified. It was not shown, for instance, why a 6 months' extension would not serve our needs nor why it would not be possible and proper at the end of such period to take action calling for further extension if circumstances then made it advisable.

When the original draft act was made law it could, of course, not be told with any degree of certainty what the world situation would be at any time in the future and it cannot be told now. The point is that I believe the Congress and the citizens of this Nation stand ready at any time to take any action which existing circumstances demand where the interest or safety of the country is involved. Keep in mind that this Nation is not now at war and that it is important that we maintain the democratic way of doing things. A shorter extension period, progressive discharge of our present service men, and progressive induction of others eligible is the more democratic way as compared to the flat, indiscriminate and long-time extension which the bill I opposed provides. This particular point, and others related to it, could well be discussed with profit at much greater length than space here permits.

Another important consideration dictating my action on the measure is that of national unity. In these times I believe true national unity to be one of our greatest assets. The measure such as I would have favored I believe would have promoted national unity to a degree far outweighing any defects it might have been contended the measure possessed.

When I voted against the service-extension bill, that was enacted by so slender a margin, I was registering my opposition to its specific provisions. I believe that had it failed to pass that a better bill would have been enacted as a result. I believe that the resulting measure would have been one such as would have received far greater support from Members of Congress and much more general support from citizens throughout the country. And, furthermore, I believe that the real necessities of our national defense need not have been sacrificed thereby.

I think that it is foolish to contend that the measure as passed is the best possible one in the circumstances we find ourselves. But I freely admit that there can be honest differences of opinion on any subject. Were this not so there would be no court cases, nor would there be a division of opinion on this matter among Members of Congress and people throughout the country. It is my desire to cooperate to the fullest extent with the administration in all essential defense measures and to respect and to reflect the views of the citizens of this country. However, I feel that it is my sworn duty to study and weigh all defense measures and to determine them upon their merits, not to accept blindly every proposal put forth and labeled a defense measure. For instance, it has been urged by the administration, high military officials, and experts testifying before the House Committee on Rivers and Harbors that the authorization of the St. Lawrence seaway and power project is absolutely essential for our national defense. It so happens that I have examined this proposal over a long period and have reached the conclusion, together with many others, that the St. Lawrence survey fails to justify such expenditure as necessary to national defense, and, in my judgment, it is clear that the enormous sum of money required could be invested to much better advantage in other directions, for more pressing and immediate objectives, such as the necessary defense requirements of the great ports along the Atlantic seaboard. Can it be said that because its proponents urge this project upon us as a necessity to national defense that it should be accepted as such blindly, and that Members of Congress are impeding defense by opposing this project? I say, rather, that such opposition is in every sense in the interest of real national defense.

It is interesting to note that there are those who are heartily in accord with my exercise of independent judgment and criticism of this proposed seaway as a defense project, who, nevertheless, are critical of the use of the same independent judgment exercised in connection with the extension of the Selective Service Act. My estimate of what a proper bill would have been was based on evidence submitted to Congress during hearings held on the bill, coupled with my belief, as emphasized above, that the Congress and the people will at any time approve any action and make any sacrifice the country's welfare demands.

But now that the case is closed and the decision reached the controversy should end and those who cast their vote against this measure should stand foursquare behind General Marshall, giving him their full support and complete cooperation in the tremendous task of providing an adequate army for the common defense.

Defense by Aggression—The First American Expeditionary Force

EXTENSION OF REMARKS

OF

HON. GEORGE HOLDEN TINKHAM

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 18, 1941

EDITORIAL FROM THE SATURDAY EVENING POST

Mr. TINKHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Saturday Evening Post of August 16, 1941:

[From the Saturday Evening Post of August 16, 1941]

HISTORICAL FRAGMENT

Through all that devious pattern of getting into the war by staying out of it there were certain constant thoughts, like threads that appeared and vanished and came suddenly to view again, running always against the supposed design, no matter what the weavers said they were thinking or thought they were doing. Trace backward the one that was leading all the time to the first American expeditionary force—that is, to Iceland, where the armed forces of the United States now stand side by side with the British and where the United States Navy and His Majesty's Navy are acting together against the aggressor.

At any time last year, and especially during the campaign, anyone who asked who was going to reconquer Europe, or who suggested that Great Britain would be unable to put Hitler back without American manpower, was called a defeatist, a "fifth columnist," or a pro-Nazi. Did not Winston Churchill say Great Britain wanted from us only the tools to do the job, not our manpower? You might suppose he had political and strategic reasons for saying that. But if you had any doubt you could take the word of the President for it. During the campaign, October 23, 1940, the President said: "We are arming ourselves not for any purpose of conquest or intervention in foreign disputes * * *. We will not participate in foreign wars, and we will not send our Army, naval, or air forces to fight in foreign lands except in case of attack."

The thread is there. But you would have needed a cynical glass to see it. Almost no one did see it. The entire country understood the words "except in case of attack" to mean except in case of attack upon American territory, or, by the widest interpretation, upon this hemisphere. Congress so understood it, and with no word of dissent from the administration wrote it into the draft law, saying the Army it was about to raise was not to be sent out of this hemisphere.

The next appearance of the thread was on April 25 this year, when the Secretary of War, appearing before a special committee of the United States Senate, said: "Our forces must be prepared for the possibilities of war in many and varied terrains, it being quite uncertain in what part of North or South or Central America, or even possibly other regions, it may ultimately be necessary to use them." That was but a glimpse of it in two words—"other regions."

Meanwhile the Congress had passed the lend-lease law. Its anxieties and misgivings were quieted by the most solemn assurances that the administration's one idea was to push the war farther away. Those who said it was a law that released the President to conduct undeclared war against Hitler and would lead to an expeditionary force were confronted with the pledges that had been made to the contrary and then overwhelmed with a question. Did they doubt the word of their own Government?

On May 27 the President delivered the fireside chat in which he proclaimed an unlimited emergency. The constant thread now makes a startling reappearance, and you can see how it was there all the time. In this fireside chat the President said: "I have said on many occasions that the United States is mustering its men and its resources only for purposes of defense—only to repel attack. But we must be realistic when we use the word 'attack'; we have to relate it to the lightning speed of modern warfare. * * * We * * * will decide for ourselves whether and when and where our interests are attacked." * * * That was the speech in which he spoke of Greenland, Iceland, the Azores, the Cape Verde Islands, and the coast of west Africa as points that might have to be regarded as outposts of American defense.

From this point on there is a very shapely arrangement of events with dates.

June 10: The President makes his first 90-day report of the operations of the lend-lease law. This 39-page document is a formal statement of the American Government's participation in the war. The President says: "Allied ships are being repaired by us. Allied ships are being equipped by us * * * and are being armed by us. * * * Naval vessels of Great Britain are being repaired by us so that they can return quickly to their naval tasks. * * * We will help Britain to outstrip the Axis in munitions of war, and we will see to it that these munitions get to the places where they can be effectively used to weaken and defeat the aggressors."

June 11–28: Senator WHEELER, the America First Committee, and all last ditchers continue to support the fiction that the country is not in the war and cannot be until the Congress declares war. * * * Rumors of expeditionary forces preparing.

June 27: Senator GEORGE, chairman of the Senate Foreign Relations Committee, says: "The way to national unity is to give our people assurances that when we are called upon to move into the actual range of fire and send our men there, whether on board naval vessels or aircraft, the American people themselves will have some opportunity to pass upon the question, in other words, that they will have the ultimate decision." * * * By a secret understanding with the British Government the first American Expeditionary Force is then about to set forth.

June 30: The Secretary of the Navy, speaking in Boston, declares the time has come to send in the Navy and rid the Atlantic of Germans. * * * The first American Expeditionary Force is then on its way.

July 1: At his press conference the President declines to comment on the declaration made by his Secretary of the Navy. He tells the reporters he still hopes the country can avoid fighting, but he cannot be very confident about it. He derides private polls showing public opinion to be against war. Of course people are against war, but that, he says, is like being against sin.

July 3: The War Department makes public a report from the Chief of Staff, saying the military arm is hamstrung by the law which forbids sending the new draft Army off this hemisphere; he urgently recommends that it be repealed. * * * Senator WHEELER says he hears that an expeditionary force is going to Iceland.

July 4: In Cairo, Gen. Sir Archibald P. Wavell, retiring British commander in chief in the Middle East, gives an interview in which he says the outcome will have to be decided in Europe by manpower, and that the war cannot be won without American manpower.

July 7: The President notifies Congress that the first expeditionary force has arrived in Iceland to take over from the British; also that he has ordered the Navy to clear the Atlantic Ocean between the United States and Iceland. * * * In Cairo, Gen. Sir Claude Auchinleck, succeeding Wavell as British commander in chief in the Middle East, gives an interview saying the war will have to be won in Europe, and that it will take American manpower to do it.

July 8: At a White House press conference the President tells the reporters the lines of the Western Hemisphere are geographically dim. Anyhow, the Government will act beyond them when and if necessary. He declines to comment on the report of the Chief of Staff. * * * The military critic of the New York Times says the occupation of Iceland means that the Government intends to help Britain with military means and the beginning of our definite participation in a shooting war.

July 9: Winston Churchill says that instead of the American forces taking over in Iceland, as the President told Congress, the American and British forces and the two navies will act together there, "with the same object in view." * * * At his press conference the Secretary of the Navy is asked if the United States Navy will shoot if necessary to keep the North Atlantic clear, and he answers that the reporters ought to be able to answer that one for themselves.

July 10: Congress receives from the War Department the draft of two bills—one to extend all enlistments for the duration of the emergency, the other to authorize the President to send the Army anywhere, "within or beyond the limits of the Western Hemisphere, as he shall deem necessary in the interests of national defense." * * * The Senate Committee on Naval Affairs resolves to have the Secretary of the Navy before it and to ask him if the United States Navy has done any shooting.

We believe this marks the point in time when the weavers themselves had lost, or were about to lose, control of their own design. They had released the forces of defense by aggression in the new fashion of the world. You may say their thread was spun on the wheel of fate. That may be. Nevertheless, although it could tow a hemisphere, it could not tie us to the British Empire nor drag American manpower in until one end had been made fast in the European war zone. Fate itself could not have done that. It was an act of will.

A Plea for Tolerance

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 18, 1941

ADDRESS OF HON. LEWIS D. THILL, OF WISCONSIN

Mr. THILL. Mr. Speaker, under leave to extend my remarks I include the following address, which I delivered at the Washington Memorial Chapel, at Valley Forge, Pa., on Sunday, August 17, 1941. The seventeenth annual Wisconsin State Sunday service was held at Valley Forge, under the auspices of the Daughters of the American Revolution of Wisconsin.

Today most of the civilized world is engaged in bloody battle. The baser emotions of certain leaders in the world have created chaos, confusion, starvation, and destruction. We in America fortunately are still situated away from the actual conflict. We are still free to do our own thinking. Still free to do our daily pursuits. Still free to talk openly and express our convictions. Those fellow men caught within the boundaries of nations now at war must envy us, our liberty, and our system of government.

Americans sometimes fail to realize the blessings they enjoy—blessings which they have received without exerting any effort whatsoever. The freedom which we take for granted was not so easily won. I need not recount to you the trials and suffering endured by those who preceded us, especially those brave men under the command of General Washington and those political figures of his day who embellished the records of our great country.

The right of freedom of speech guaranteed to us under the Constitution carries with it the principle of tolerance. Certainly we may speak freely and argue as we see fit in private gatherings or in public forums but we should also exercise restraint in our utterances. As we listen to the radio we are subjected daily to conflicting views and opinions relative to the position of the United States in international affairs. The views of most Americans with regard to whether this country should enter the war or stay out of the war are taking definite shape. People are inclined to feel so strongly one way or another on this issue that they permit their emotions to run away with reason and they are all too likely to permit their tempers to flare up and their tongues to become unrestrained.

Perhaps we can find in the writings of George Washington some principles to direct us in the conduct of international affairs at the present time. About 150 years have passed since the time when Washington's guidance protected our new Nation. During that period our country has prospered and grown to a position where it is the greatest Nation on the face of the globe. Other countries, particularly in Europe, have undergone changes in government. Monarchies have been replaced by republics and dictatorships have in turn come into power. The pages of European history during a century and a half recount war after war. Some of us living today may consider the war in Europe as resulting from tyrannical passion; others as a creation of national hatreds running for generations; some believe the war was caused by diametrically opposed financial and economic systems; others declare the war arose from a desire on the part of one nation for world trade; some individuals interpret the writings and conquests of one of the dictators as a bid for world domination; others can see only destruction arising out of the aggression of a dictator whose legions and whose philosophies, they claim, will collapse because they are spread over such vast territory and encompass so many different nationalities.

Let me read the following excerpt from Washington's Farewell Address, which to some may sound as words of wisdom, while to others perhaps it might be thought of as the language of an appeaser:

"The nation which indulges toward another an habitual hatred, or an habitual fondness, is in some degree a slave. It is a slave to its animosity or to its affection, either of which is sufficient to lead it astray

from its duty and its interest. Antipathy in one nation against another disposes each more readily to offer insult and injury, to lay hold of slight causes of umbrage, and to be haughty and intractable when accidental or trifling occasions of dispute occur. Hence, frequent collisions, obstinate, envenomed, and bloody contests. The nation, prompted by ill will and resentment, sometimes impels to war the government, contrary to the best calculations of policy."

Can it be that today these words of Washington take on particular significance? Can it be that we are showing excessive partiality for one foreign nation and excessive dislike for another to such an extent that we are endangering our own freedom and peace? Can it be that real patriots who dare speak out against war are unfairly looked upon with suspicion and are the unfortunate victims of hatred? Can it be that there are certain individuals in this country who are now gaining the applause and confidence of the people but who are surrendering their interests?

Let me read further: "Europe has a set of primary interests which to us have none, or a very remote relation. Hence, she must be engaged in frequent controversies the causes of which are essentially foreign to our concerns. Hence, therefore, it must be unwise in us to implicate ourselves by artificial ties in the ordinary vicissitudes of her politics or the ordinary combinations and collisions of her friendships or enmities.

"Our detached and distant situation invites and enables us to pursue a different course. If we remain one people, under an efficient government, the period is not far off when we may defy material injury from external annoyance; when we may take such an attitude as will cause the neutrality we may at any time resolve upon to be scrupulously respected; when belligerent nations, under the impossibility of making acquisitions upon us, will not lightly hazard the giving us provocation; when we may choose peace or war as our interest, guided by justice, shall counsel.

"Why forego the advantages of so peculiar a situation? Why quit our own to stand upon foreign ground? Why, by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalship, interest, humor, or caprice?"

Is Washington telling us through the years that we should not engage in the present foreign war? Is he telling us that we have reached that stage in governmental efficiency where we may defy material injury from any outside source? Is he telling us that we may choose peace or war as our interest guided by justice shall tell us? Yes; the words of Washington carry added significance today when many think this country is on the verge of entering a foreign war. This Nation is now so powerful that it may choose peace or war. Justice and our interest should guide the action of this country in making this grave decision. Throughout the land arguments of those who favor war and of those who are opposed to war become sharper and more bitter. Tempers are flaring up and intolerance is being exhibited on every hand. Name calling, resentment, racial and religious prejudice should be suppressed. In these trying days for our Republic I make this plea: That we permit our judgment and reason to control our actions and speech rather than our emotions and our passions. If we are to guard our heritage of liberty it must be done by clear thinking and tolerance.

The Present Crisis

EXTENSION OF REMARKS

OF

HON. KNUTE HILL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, August 18, 1941

RADIO ADDRESS OF HON. KNUTE HILL OF WASHINGTON

Mr. HILL of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me yesterday afternoon:

Dear friends, I have time and again, both in private and in public, declared that the national emergency, the danger of invasion by a foreign foe, is not greater today than it was a year ago. I will go further than that—it is not as great as it was a year ago. Any activity without cessation or rest must necessarily result in fatigue and distress. This is especially true of destructive warfare. The war dogs, like hunting hounds, are fresh at the start but begin to falter at the close of the day. Hitler's troops have without pause traveled at a furious pace for several years. It is true that many of the smaller nations yielded without much of a struggle. It was comparatively easy for a mechanized army to overrun these weaker countries because only an imaginary line—somewhat like a State line in these United States—separated them from Germany. Nevertheless, these victories took their toll from Hitler in funds, in equipment, in soldiers. It is, of course, clear that the wealth of these nations both in money and natural resources have been an asset to Germany. This can hardly be said of the conquered armies. Unwilling soldiers are poor soldiers—and this is equally true of sailors.

In my opinion Hitler at the height of his power and victories could never have successfully invaded the Western Hemisphere. He has been unable to cross the 20-mile English Channel—how could he possibly transport troops across 3,000 miles of ocean? If we use the immense appropriations for the defense program for strictly defense of the Western Hemisphere, especially building up a powerful and separate air force, we could defy any navy carrying troops to come within 500 miles of our shores. (See Al Williams' article in the CONGRESSIONAL RECORD for July 29, 1941, p. A3858.) Then, too, the armies in conquered European countries would mutiny against Hitler and the people therein would rise in rebellion. Moreover, if we cultivated the South American republics as assiduously as have the Germans, Hitler could gain no foothold there. So, the threat from Hitler has at all times been negligible. And now that he has undertaken to subdue the Russian Bear he certainly is finding his match, and this distracts his attention from us even if he had such designs. He is and will be occupied for months to come.

As for Japan, there can be no threat to the United States from that source. All she wants is "Asia for the Asiatics." Is not that their version of the Monroe Doctrine when we insist on America for the Americans? For myself, I never condoned the acquisition of the Philippines, and the sooner we let them go, the better for us. The desire to hold them and the itch for the trade of the East Indies is the cause for our trouble with Japan.

The crisis today rises from several sources. First of all, we are joining hands with Stalin and communism to crush Hitler and nazi-ism. We are in league with one dictator to destroy another. Beware that Stalin does not make good his plan to internationalize the whole world. To appease him the Roosevelt-Churchill eight-point program completely omitted one of the four freedoms—freedom of religion. Another element of the present crisis is the lack of morale in our hastily formed Army. Taking young men from civilian life, forcing them to leave good positions to serve at $21 per month, while common laborers are getting increased wages and industrialists are profiteering; extending this enforced enlistment by 18 months, in violation of all fairness and clear understandings at the time of the conscription bill—all this has broken down the morale. It is reported that many of them are committing suicide since the extension was voted. Read Life for August 18 and also one article by Pearson and Allen in the Merry-go-Round to know how a very large majority of the selectees feel about the matter.

Still another element is the danger of secret diplomacy—secret commitments by our leadership with the leadership of the British Empire. The Congress as a coordinate branch of the Government is entitled to know all the facts and commitments and have a part in them when so grave an issue as participation in a war on foreign soil is concerned. We, as the chosen representatives of the people of these United States are entitled to know the truth and the whole truth so we can act accordingly. I, for my part, absolutely refuse to be kept in the dark and then merely concur in or approve the acts of this administration or any other administration.

Again an element in the present crisis is the encroachment on our civil liberties. If we were actually at war there might be occasion for some of the petty regulations and rules imposed upon a free people. But we are not at war—and until Congress so declares—we will not be. Therefore, I, as every other citizen has a right to do, resent the sending of officials of the Federal Government's agencies into our homes to spy on our activities or threaten us with dire results if we express our honest opinions and convictions. This is not democracy—it borders on dictatorship. Nor is it in conformance with our democratic institutions and a spirit of tolerance for those who differ with us as to the best methods of keeping out of war to call us names and charge us with being in league with Hitler. We despise and hate Hitlerism as much as the interventionists do, and I challenge any one of them to furnish one scintilla of evidence that we have any communication with or the least regard for Hitler or Hitlerism. I repeat what I have so often emphasized; we want none of Stalin with his communism, Mussolini with his fascism, nor Hitler with his nazi-ism. We must preserve and protect this country of ours for Americanism, which means equal opportunities for all, justice for all, the right to the four freedoms for all.

Lastly, the most serious, the most dangerous element in this crisis is the threat of fascism as the outcome of the present program. We have without stint voted billions upon billions for a defense program. Unusual and heavy taxes must necessarily be levied to

pay the "fiddler"—the war god. Do you remember the aftermath of the first World War? Well, that will be a Sunday-school picnic compared to what the aftermath of this World War will be if we enter into active participation. The people were long suffering in 1918 and 1919 and in 1933 they took new hope and courage.

But 1942 and 1943 will find a people ready for open rebellion because of broken promises and broken faith and broken homes. They will be ready for a real dictator. He will appear and have ready at hand an army and navy—always so subservient to the purposes of command and dictatorship.

To my mind there is only one way in which to prevent this catastrophe. Let us build up our stupendous defense program, but keep our Army and Navy subject to civilian authority at all times. Let this defense be for the Western Hemisphere alone, so that we may use our chief efforts to solve our own domestic problems and thereby have a contented people, an invincible protection against all aggressors, while at the same time setting a splendid example for the whole world to follow.

Lastly, let Congress respectfully but firmly insist on its prerogatives as well as duty to know all the facts and be an active partner in this world drama. Thus will democracy function and the dream of the founders of this Nation become a practical and blessed reality. We can and must continue to make this splendid country of ours the great experiment of democracy—of free government, of laws and not of men. Let us inscribe in letters of living light on our banner as we march along the fine words of Theodore Roosevelt, who said: "This country of ours will not be a good place for any one of us to live in unless and until it is a good place for all of us to live in." When we shall have accomplished this worth-while purpose, the world will listen to our reasoning and profit by our example along the pathways of peace. To this end, let us pledge and proclaim our own America first.

Dairy Farmers Up In Arms

EXTENSION OF REMARKS

OF

HON. BERNARD J. GEHRMANN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 18, 1941

Mr. GEHRMANN. Mr. Speaker, much is being said about unity these days, and I agree we need unity, but that unity cannot be forced upon people without applying the principle of the Golden Rule, which is, "Do unto others as you would have others do unto you." That is not practiced by some of our Government departments, and especially do our dairy farmers object to the unfair treatment they are being subjected to. They are compelled to pay present high prices for everything they buy and are told that prices will be frozen at not to exceed 10 percent above the 1909–14 period. How can we expect to create unity under those circumstances? That is not only my opinion, but it is the conviction of all the dairy farmers in every section of the country. The newspapers in my State carry headlines of protest meetings being held everywhere and the National Cooperative Milk Producers Federation called a meeting, which is held in Chicago today and tomorrow, August 18 and 19, to protest against what has been done and what is proposed to be done.

The first thing that caused our dairy farmers to protest was the unwarranted and unprecedented broadcast by a division of the Department of Agriculture advising people how to prepare butter substitutes so as to make them look like butter and, incidentally, avoid a violation of the law which compels a tax of 10 cents per pound on colored oleo. The dairy farmers are paying large sums of money to advertise their God-given natural product, while public money is being used to advertise an imitation, much of which is not even produced in this country. Three recent counts make it impossible to expect unity and cooperation from our dairy farmers.

First. The new proposed standard for oleo promulgated by Mr. McNutt, Federal Security Administration, which, beginning September 6, permits the oleo interest to color and flavor oleo like butter, permits addition of vitamin A equal to butter, and permits use of benzoate of soda as a preservative.

Second. The recent broadcast by the Consumer Division of the United States Department of Agriculture advising people to use oleo instead of butter.

Third. The statement of the Secretary of Agriculture suggesting that Americans decrease consumption of American or cheddar cheese for the duration of the emergency.

Then the next thing which will affect all the farmers is the proposed price fixing or freezing upon which hearings have started before the Banking and Currency Committee. It is proposed to freeze farm-commodity prices at not more than 10 percent above parity. Parity as figured by the Department as of July 15 is less than 34 cents; that would make the top at which it would be frozen a trifle over 37 cents. The 1909–14 period that is being used to figure parity shows that butter averaged 26 cents for those 5 years. In figuring price advances on the major items the farmer must buy, outside of labor costs, I find that they are 92 percent higher now than they were then. So in fairness, the farmers' prices should be 92 percent above that so-called parity period. If we add 92 percent to the price the farmer received for butter in that period, it will be found that 50 cents would be the real and honest parity price at present. I placed a very comprehensive table, prepared by Mr. Linder, Georgia State commissioner of agriculture, in the RECORD a few days ago that will give the same comparison on other major farm commodities. You will find it on page A3873 of the Appendix of the RECORD. Save it, because it will come in handy in the future when the farmers are ridiculed because they ask for the same treatment that any individual, firm, or corporation is entitled to—in fact, must have to stay in business—and that is at least parity, which is always less than cost of production.

Evidently it is assumed that the farmer who is largely an individual and does not seem to believe in organization, can be satisfied with anything. The Department of Agriculture about a month ago was all set to make a drive to organize the farmers in every agricultural county of the State, without using the existing organizations, the State departments, or the colleges of agriculture. Their intention at that time was to start in the dairy States, and Wisconsin was to be the first State on the list. There is no question but that a two-way pledge was to be prepared, and every farmer was to be asked to sign it. Because of the adverse publicity that this proposal received, at least the loyalty pledge evidently has been dropped. A representative of the Department in a press release stated that—

> There is no intention of asking the farmers to sign a loyalty pledge to the United States.

I quote further from that statement:

> However, the Department of Agriculture has worked out a tentative plan, the official declared, whereby individual farmers will be asked to sign a pledge agreeing to step up their productions

Second—

> There is no intent on the part of the Department to ask farmers to sign a pledge of loyalty to the United States, though this may have been discussed at one time.

I do know that a couple of months ago a letter did go out from the Department to their men in every county which had for its purpose the making of the farmers more inclined to go along with the foreign policy by telling them by word of mouth that the farmers would benefit greatly because of the demand for farm commodities across the ocean. Mr. Wickard admitted to the entire Wisconsin delegation that this letter had gone out. I mention these things simply to show how impossible it is to get the farmers into a frame of mind to cooperate with these actions by a department that should really be their friend, vividly before them. Maybe the farmers will realize what I have said for many years is true, namely, that the day when a farmer could class himself with the capitalists and continue as an individual is past. If you can expect to get your fair share of the Nation's income, you, as farmers, must be organized as every other group is organized. Not until you do will you get justice. The farmers' share of the national income has decreased each year until in 1939 it was just about 8 percent, including all the Government subsidies and grants. I believe it will be even less than that the next few years of so-called prosperity. Only the farmers themselves can change this.

Magnesium: Magic Metal of the Future

EXTENSION OF REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, August 18, 1941

ARTICLE BY RICHARD L. NEUBERGER

Mr. LEAVY. Mr. Speaker, on August 9, Hon. Richard L. Neuberger, of

Portland, Oreg., wrote an interesting and instructive article which appeared in the Progressive, a publication in Oregon, giving a brief history of the unusual progress that has been made at the State College of Washington School of Mines, cooperating with the United States Bureau of Mines, in connection with newly discovered processes for treating magnesite ore and reducing it to magnesium by electrothermic methods.

The article follows:

[From the Progressive of August 9, 1941]

MAGNESIUM: MAGIC METAL OF THE FUTURE

(By Richard L. Neuberger)

Probably you never have heard of magnesium. But you will in the near future. Light metal is in high demand today and magnesium is 30 percent lighter than aluminum. While the country holds parades and drives to collect old pots and kettles and other aluminum utensils, a little group of scientists is working in the Pacific Northwest to perfect a metal which may supplement and eventually be a substitute for aluminum.

It is a long story and an exciting one.

In 1937 A. E. Drucker, director of the Washington State College School of Mines, noticed that Germany was manufacturing 80,000,000 pounds of magnesium annually. This could mean only one thing—a vast military air force. In America little magnesium was produced. It was made from salt water and sea water and corroded speedily.

At Pullman, site of Washington State College, a remarkable experiment began The experiment was financed by the United States Bureau of Mines and by the State of Washington. In this little town in the Palouse wheat hills, technicians and scientists constructed a pilot plant for the manufacture of magnesium from a mineral found in huge quantities near Spokane. The name of this mineral is magnesite. One of the largest deposits on earth is in Stevens County of Washington, due north of Spokane.

SOLVING THE ALUMINUM RIDDLE

In the pilot plant at Pullman Dean Drucker and H. A. Deorner, of the Bureau of Mines, began experiments and tests with magnesite. Using electricity, the basic factor in all light metals, they worked ceaselessly. At last, only 2 weaks ago, they announced success. After a long test run the pilot plant produced magnesium of high quality, magnesium which does not corrode, and will stand the most severe conditions and strain.

This magnesium can be manufactured for 10 cents a pound. At present aluminum costs about 14 cents a pound, and the salt-brine inferior grade of magnesium approximately 18 cents.

This is all extremely significant, especially with the Nation collecting all spare aluminum for the air force. At present aluminum is manufactured mainly from bauxite ore. This is obtained largely from British and Dutch Guiana, and some from the East Indies. It must be brought to the United States in ships. With the present shortage of shipping, many of these vessels are desperately needed for the sea route to the British Isles.

"MAGIC METAL OF THE FUTURE"

The Pullman magnesium process is entirely within the borders of the United States. Material from beyond our borders is not necessary. In the Pullman process only two ingredients are essential—magnesite and electricity. Magnesite is found in huge quantities in Stevens County, and 88 miles away is the greatest single source of electricity in the world, Grand Coulee Dam.

In this power age Grand Coulee is a fabulous edifice. Each of its generators will be the largest electric machinery ever built, capable of producing 108,000 kilowatts apiece.

Today Germany holds first place among the nations in the production of magnesium. Scientists in this country believe that magnesium has been a factor of vital importance in the air armada with which Goering has demolished cities and terrified countries as old as civilization. Congressman CHARLES H. LEAVY, New Dealer from Spokane, calls magnesium "the magic metal of the future." He believes that some day it will be as important as aluminum.

AFTER THE WAR IS ENDED

Congressman LEAVY also points out that the Aluminum Co. of America, which held a monopoly of light metals for more than a generation, has tried to thwart the manufacture of magnesium and the development on a wide scale of new methods of producing aluminum. It is significant that if magnesium becomes an essential material in both civilian and military life, the Federal Government and the State of Washington will merit most of the credit.

Along with the magnesium experiments in Pullman, work has been advanced on the possibility of manufacturing aluminum from alunite. This is a clay-like substance found in considerable abundance in the Pacific Northwest. A process has been developed by which high-grade aluminum can be extracted from it, using electricity as the basic reducing factor.

The Kalunite Corporation has been working on this idea for a long time. If it ever is perfected, America can manufacture aluminum with materials entirely in its own borders. That alunite is deposited in the hills near Bonneville Dam and constitutes an added helpful circumstance.

One can only hope that after the war is ended, these new discoveries and advances will be put at work to raise living standards and increase the comfort of every man, woman, and child.

"We Are Satisfied"

EXTENSION OF REMARKS

OF

HON. J. PERCY PRIEST

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, August 18, 1941

EDITORIAL FROM FORTY ROUNDS, WRITTEN BY CORP. W. W. VAN PELT

Mr. PRIEST. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include an editorial written by Corp. W. W. Van Pelt, for a camp paper, Forty Rounds, published at Camp Jackson, S. C.:

[From Forty Rounds, Camp Jackson, S. C.]

OUT OF THE FRYING PAN

As far as we have been able to determine, our outfit has clean hands in respect to this "write a letter to your Congressman" activity about which so much is being said and done. However, while we so smoothly slide out from under this heavy hand, we confess that we do plenty of grumbling.

Learning to live under military rule and discipline without a civilian's full share of personal liberties and individual rights has not been easy. Collectively we growl about chow, drill, uniforms, fatigue details, and most everything that forms our life here. We, as the Southerners say it, "kick up a storm" about the labor strikes, the lawmakers, the Democrats (or Republicans), and the lack of some of our favorite funnies in the local papers. In short, we complain as much as would an armless man with a hide full of red bugs but we're not to be taken seriously.

For the most part, it is rather evident that it is fun being in the Army in some respects. Our comfort, entertainment, and living conditions have increased rapidly since our induction with an efficiency not often found in such large-scale operations. In general, we like our noncoms, respect our executive officers, and think most highly of our company commanders. As time goes on we find ourselves discovering that our regimental commander is more than just a name, and that we get quite a bang out of saluting him and receiving his salute in return.

We want to go home, nevertheless. We want to go back and work for those objectives, those plans for the future for which we have spent so much time to prepare ourselves. However, since our plans are based on the proposition that the American way of living will not change, we have a sober realization of the dead seriousness of our mission and of our own responsibility. We are in here to see it through.

Now legislation to keep us in the Army will undoubtedly disturb many of us. It will pack a punch of the kind we got with our first induction notice. There will be the usual barracks reverberation but it will soon pass. It boils down to the fact that we knew all the time we would be in the Army for the "duration" and that we will not be demobilized until all threats to the life we left, the life to which we will return, have been dissolved. Under these circumstances we are satisfied.

National Old-Age Pension Legislation Needed

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 18, 1941

Mr. PITTENGER. Mr. Speaker, of paramount importance to America is, of course, our national-defense program, because every American who has given thought and study to world developments knows that the Army and the Navy and the air forces of this country should be built up to meet any challenge which a foreign aggressor might make.

At the same time we should not and must not overlook our domestic problems, and there are many of them. The plight of our aged people should challenge consideration by Congress. Our present social-security legislation is wholly inadequate to meet the situation. There should be enacted a national old-age pension plan which will provide a pension for those men and women who have been pioneers in the work of building up our country and our institutions. From time to time I have called to the attention of Congress some of these cases, and in this morning's mail I received another letter which prompts me to again point out the need of congressional action.

I have a letter from one of my aged constituents who tells me that she is 78

years of age and that she is now sick and has no means with which to pay doctor bills. I quote from her letter:

I, for one, have done more for this country than many others have. I sent four boys to the Army 23 years ago. All served in the Marine Corps. Some of them married when they came back, and now have families to look after. * * * I have not received any support from the boys, and I can't take any more from them because they have sickness in their families, too. I don't call old-age assistance a pension. I think it is the Government's place to look after the aged. I think I am entitled to something for the little time I have to live, and I do not wish to die a pauper.

Mr. Speaker, this letter is one of many which I have received from various parts of the district, and it tells its own story. In my opinion, the proper committee of this House should heed the requests from the people of the United States, and hearings should be held and favorable action taken so that a person, such as I have described above, may be entitled to receive a pension payment from this Government.

Longevity Pay for Postal Employees

EXTENSION OF REMARKS

OF

HON. GEORGE D. O'BRIEN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 18, 1941

EDITORIAL FROM THE DETROIT FREE PRESS

Mr. O'BRIEN of Michigan. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Detroit Free Press of August 15, 1941, on the subject of longevity pay for post-office employees:

[From the Detroit Press of August 15, 1941]

AS WE SEE IT

THEY DESERVE IT

A bill has passed the House raising the maximum pay for carriers in first- and second-class post offices from $2,100 to $2,200 at the end of 10 years' service and $2,300 at the end of 15 years' service. The present pay schedule has been in effect since 1925. Compared with pay increases obtained in the last 16 years in private industry, these proposed increases for faithful and hard-working public servants are extremely modest.

Yet the Senate is understood to be considering trimming the proposed increases to $60 a year at the end of 10 and 15 years. That is cheap business for a body that added hundreds of millions of dollars to the administration's farm subsidies propcsal this year and has just voted to override Mr. Roosevelt's veto of a $125,000,000 pork-barrel bill for "defense highways."

The carriers deserve these raises. The total involved would be between $16,000,000 and $20,000,000 a year—not an awesome sum when you consider that the Government is spending at the rate of $277 a second for other purposes.

The Senate should adopt the House bill and put the pay of post-office employees more in line with the rising cost of living.

Definite Program Should Be Put Into Motion at Once To Correct Physical Defects of Draftees

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 18, 1941

Mr. RANDOLPH. Mr. Speaker, in the Appendix of the RECORD, under date of May 29, I discussed the need for corrective measures being put in force immediately to remedy physical disabilities discovered during examination of draftees in our selective-service system.

In a communication to Brig. Gen. Lewis B. Hershey, under date of May 19, I said:

It would seem to me that a definite program should and must be undertaken to correct these physical shortcomings just as soon as possible. It is not enough to find the trouble, but attempts should certainly be made to improve the physical condition of these refused men. That procedure would seem to me to be the part of a good national policy, vital to our continued preparedness program.

I received word from General Hershey in person and by letter from Captain Keesling, Jr., legislative officer of the Selective Service System, to the effect that they were greatly concerned about the situation and were giving careful consideration toward the end of developing a satisfactory and workable plan.

Mr. Speaker, I include at this point a splendid editorial from this morning's Washington Post entitled "Unfit For Service."

[From the Washington Post of August 18, 1941]

UNFIT FOR SERVICE

It is an interesting and disturbing commentary on the health of the Nation that nearly half the men examined under the Selective Service Act are being classified as unfit for military duty. Since the great majority of these men are in the early twenties, an age at which the human organism is normally most efficient, the figures suggest an even larger proportion of handicaps or chronic deficiencies among the population at large. Thus in describing the state of our national health as "alarming" the Baehr Commission on Physical Rehabilitation is not exaggerating.

Of course, physical requirements for active military service are still relatively high, but the Army shows no disposition to lower them. In the light of the Baehr commission's report to Federal Security Administrator McNutt, therefore, it will be necessary to make a radical revision of estimates of our reserves of manpower as regards both military and industrial service, unless some national program of physical rehabilitation is attempted.

The Baehr commission has recommended just such a program "in all the States and local areas" under the joint auspices of the Federal Security Administration and the Selective Service authorities. Local medical, dental, and hospital resources would be mobilized for the purpose. Dr. Baehr and his colleagues point out that such a program will be possible, however, only if financed and supported by congressional appropriations.

Whether Congress will be willing to make this rather considerable addition to the tax burden is difficult to say. Yet, as Mr. McNutt has pointed out, this is one form of defense spending that will bring great, if intangible, returns long after the war has ended. In any event, the report serves to point the tremendous problem of public health confronting this country and its inseparable relationship to the economic problem. For the most common physical causes for which draft registrants are rejected—excessive dental caries, orthopedic weakness, pulmonary and heart disorders—are traceable for the most part to such factors as early malnutrition or infections from controllable diseases.

Closer to War

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 18, 1941

Mr. SHAFER of Michigan. Mr. Speaker, the great majority of the American people are today hoping and praying that President Roosevelt was right when he told newspapermen on his return to Washington Sunday that the United States is no closer to actual participation in war as the result of the recent Anglo-American declaration.

A study of the declaration makes it difficult for many to understand how the President can justify such a statement. Certainly the defense phase of our armament and mobilization program was definitely terminated the moment the declaration was signed. The language of the declaration immediately changed this Nation's previous defensive relations into an all-out offensive alliance with Great Britain. The war aims of the United States and Great Britain were jointly defined in the declaration, including the restoration of territories taken by the aggressor nations, a more equitable distribution of essential raw materials, freedom of the seas, social security, and a stable peace economy throughout the world.

Then, most significant, is the declaration that Nazi tyranny must be destroyed. Pro-war spokesmen have often said this, but it is now said jointly and officially by the United States and Great Britain. The Anglo-American alliance, pronounced in the declaration, states that aggressor nations must be disarmed as a prerequisite to peace. The only way to disarm the aggressor nations is to do it with a superior force. President Roosevelt, in signing the Anglo-American agreement, pledged the cooperation of the United States in disarming the aggressor nations—and to do so immediately. The manner in which this is to be accomplished, the cost, and the military implications are obvious.

Replies to Questionnaire on Participation by United States in the European War

EXTENSION OF REMARKS
OF
HON. WESLEY E. DISNEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 18, 1941

LETTERS BY HON. FLETCHER RILEY AND HON. A. G. C. BIERER

Mr. DISNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters written by Hon. Fletcher Riley, judge of the Oklahoma Supreme Court, and Hon. A. G. C. Bierer, a former member of that court:

SUPREME COURT OF OKLAHOMA,
August 13, 1941.

Hon. STEPHEN A. DAY,
Congressman at Large,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: Your letter and enclosed ballot concerning the war situation reached me at the State capitol on yesterday, its having been mailed to my home at Lawton and delayed. I am this day marking, signing, and transmitting my ballot. I hope it will serve your purpose. The ballot as marked represents the consensus of opinion of those in and around my office. In considering this question, it is contemplated that the issue is whether the United States should immediately enter the war; and as you may observe, the vote is negative. All agree that preparedness is imperative. By it the ultimate arbiter in disputes between nations may be avoided.

On the last occasion when this issue arose, so to speak, we got the cart before the horse. In fact, we did not get much horse; for, if you will pardon the personal reference, I never saw a 75-millimeter field piece until 2 weeks before I went to the front. While there I never saw any aircraft of the United States Army, Navy, or Marine Corps.

While now France has fallen, it is thought France was of a mind to stop Hitler when he made his first move into the Ruhr. England, under Chamberlain's appeasement program, procrastinated. And while procrastination has been said to be the thief of time, it is not so in event time is well employed. It was critically said by the Germans that England would fight, but only to the last drop of the Frenchman's blood. This was not so. England fights manfully in extremis.

We all favor assistance to England under the Lend Lease Act. And if to preserve this democracy that issue must be won again on the field of battle, I for one favor it and am ready, able, and willing to serve in the armed forces, trusting and praying that fruits of victory shall not again be lost diplomatically or politically. If it be necessary to the issue not only to contribute material things but also our lives, this we are willing to do. To do this we pledge our sacred honor.

Withal, patience with determination applied may achieve the issue well stated by the immortal Woodrow Wilson, so that this time armed conflict on the part of the United States Government may be avoided. If in the unfoldment of the drama, war may not be avoided, it may as well be declared on the morrow.

Sincerely,

FLETCHER RILEY, *Justice.*

GUTHRIE, OKLA., *August 12, 1941.*

Hon. STEPHEN A. DAY,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR SIR: I am in receipt of your ballot card calling for a vote on whether the United States should enter the war or stay out of the war, with your circular letter in connection with the matter.

Neither I nor anybody can vote intelligently for either alternative put in that absurdly unfair manner. Of course, anybody in his right mind would rather stay out of the war than enter it, if that can be done consistently with national honor, integrity, and safety, but those who purport to believe in a program of peace at any price, and expect to meet the present situation by emulating the ostrich who sticketh his head in the sand, exposeth his rear and deemeth himself secure, are, in my opinion, very badly misguided. Assuming that the United States could, under any and all circumstances, stay out of the war, it would be very unwise to do so at the cost of living in a world dominated by Nazi tyranny and brutality, and filled with the brigandage and piracy of unrestrained brute force. That prospect is not attractive to many Americans. This Nation must and will proceed with all its capacity to place itself in a state of preparedness for the defense of its territory and its principles, and an absolutely essential part of that defense is to give, primarily to Great Britain and secondarily to the other nations resisting aggression, absolutely all of the help of which we are capable, at the same time bringing our own military force and domestic economy to war strength, ready for full, active participation in the war if that must be, and every thinking American knows that the course of events may compel our entrance into the war at any time.

Yours very truly,

A. G. C. BIERER, Jr.

Let Us Have Peace

EXTENSION OF REMARKS
OF
HON. KNUTE HILL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Monday, August 18, 1941

RADIO ADDRESS BY HON KNUTE HILL, OF WASHINGTON

Mr. HILL of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered over the radio last Saturday night:

Fellow Americans, I come to you tonight as an advocate of peace. I sincerely believe that I am practical as well as idealistic in this matter. I was charged the other day, after my speech on the floor of the House, with being a visionary, a dreamer, a man with too much faith in human nature. My good friends, the greatest visionary of all time, the Great Master, was the most practical of men. If His way of life was practiced throughout the world today there could be no war. His method of overcoming evil prevailed in His day. It will prevail today and through all tomorrows. It was not using force against force. It was using the simple formula of faith, hope, and love. In spite of all the wars of the past 19 centuries, only because of His method has the world made the progress that it has in civilization. And shall we abandon it now in the face of the worst crisis in the world's history and wholly adopt its antithesis—force and war? God forbid. We will not—we cannot, we simply cannot. The forces of evil may for decades to come continue at periodic intervals to pour their vials of wrath upon helpless men, women, and children, causing misery, poverty, and suffering where there should be gladness, plenty, and contentment. But, eventually the sunshine of peace will prevail and the fatherhood of God and the brotherhood of man will become a reality. It cannot be otherwise in a world created by a kind and wise and omnipotent Providence.

It is my honest conviction, and I firmly maintain that the constructive forces of the world are far superior to and will conquer the destructive forces. The ancient world had its Alexander the Great. The medieval world had its Caesar. The modern world had its Napoleon. But where are they? Where are they? Their memory lives only to be despised and shunned. Today we have Hitler. But he will soon—very soon—go the way of his predecessors. The pathways of peace are more pregnant with power, more vital with strength, more imbued with permanency than all the waging of war.

You are all familiar with the story of the contest between the wild wind and smiling sun in an attempt to compel the traveler to shed his cloak. The more furiously the wind lashed at him the closer the traveler wrapped his cloak about him, while the warm smile of the sun soon made the traveler take off his cloak and carry it on his arm. The wrath and fury of the storm brings only wreckage and destruction. It is only when the storm has abated that Mother Nature can again heal the gaping wounds that sear the beautiful landscape. When old Neptune opens up the sluices of the heavens to pour torrents into our Potomacs and our Mississippis, terrible destruction and devastation follow in their wake. Only when the fierce waters recede can Nature, with the help of her ally, man, repair the damage done and again start the march of progress toward the recovery and upbuilding of the wasted countryside. So with war; not until the hatred and fury and carnage of the battlefields are forever a thing of the past can we start our march of progress toward a better and fairer world in which to live. This is conceded even by those who now oppose present peace negotiations. The issue then is: When is the most acceptable time to press for peace? Let us be practical. Let us dispassionately and diligently study the pages of history. Did ever in all history a victorious army and nation show magnanimity or give concessions to the vanquished—or did it, rather, dictate terms of peace that were merely germs for a future war? No; with but one exception—when Grant told Lee to go in peace and gave the boys in gray their horses and guns. That resulted in a lasting peace and a united people.

But as to world wars let us only revert to World War No. 1. The completely victorious Allies imposed impossible peace terms on a conquered foe. Clemenceau and Lloyd George completely outwitted Wilson and scuttled his splendid 14 points, now advanced again in an 8-point program Thursday by Roosevelt and Churchill. Versailles was the basis for Hitlerism, and the duplicity of both France and England during the following decade was the beginning of World War No. 2. The war-torn and war-weary world was ready for a real peace then. Had we not participated in that first war, there would have been no victorious Allies to dictate impossible terms, grab unlimited territory, and repudiate both their debts and obligations of friendship for the United States. Neither would there have been a victorious Germany to dictate equally objectionable

terms of peace which inevitably lead to future wars. The leadership of the British Empire today is the same—uncompromising, relentless, and autocratic. I regret it, but I do not, I cannot, trust the British leadership today any more than I did in 1918. It is the same domineering leadership that now sends us an ultimatum to declare war and send our boys across or they will make a separate peace with Hitler. One can fully understand this of a British leadership which joins hands with one dictator, Stalin, and his despicable communism to fight another dictator, Hitler, and his equally despicable nazi-ism. Our purpose should be, our aim must be, to crush communism, fascism, and nazi-ism—to dethrone the three dictators who instigate and promote these "isms"—Stalin, Mussolini, and Hitler. We can best do this by staying out of the affray, build up our own national and hemispheric defense so that by our power and wealth and neutrality we can compel a just and lasting peace. Hitler and Stalin, like the Kilkenny cats, are destroying each other—and Lord God hasten their demise. The peoples of Europe—yes, the common people of Japan itself—are ready and anxious for peace. In my own pathetic little ancestral country, Norway, the people are revolting against Hitlerism. The madman of Europe is riding for a fall. He must know it, and should be ready to negotiate on terms acceptable to the British people. In any case, we will be far more effective in insisting on just and lasting peace terms if we keep ourselves out of active participation.

Let President Roosevelt dismiss his warlike advisers like Stimson and Knox and Marshall and join with Pope Pius in urging a cessation of hostilities, calling a peace parley which would have for its purpose justice to all the nations of the world. No, my good friends, I am not a Catholic. I am a Mason. But I am practical enough to realize that Pope Pius is sincere and will have a tremendous influence with the Catholic peoples throughout the world. As for President Roosevelt, he still has the golden opportunity of leaving a name and a heritage to posterity wherein his name will be inscribed in letters of living light on the scroll of history by using his exalted position and splendid talents in promoting a lasting peace which will make way for a real democracy throughout the world, not by force, but by example and persuasion. God grant him the vision, the wisdom, and the courage to do this one great act to crown his career. May a kind Providence so guide the American people that they may assist him in this worth-while task.

"AMERICA FIRST

"Not merely in matters material, but in things of the spirit.

"Not merely in science, inventions, motors, and skyscrapers, but also in ideals, principles, character.

"Not merely in the calm assertion of rights, but in the glad assumption of duties.

"Not flaunting her strength as a giant, but bending in helpfulness over a sick and wounded world like a good samaritan.

"Not in splendid isolation, but in courageous cooperation (for world peace).

"Not in pride, arrogance, and disdain of other races and peoples, but in sympathy, love, and understanding.

"Not in treading again the old, worn, bloody pathway which ends inevitably in chaos and disaster, but in blazing a new trail, along which, please God, other nations will follow, into the New Jerusalem where wars shall be no more.

"Some day some nation must take that path—unless we are to lapse once again into utter barbarism—and that honor I covet for my beloved America.

"And so, in that spirit and with these hopes, I say with all my heart and soul, 'America first.'"—Bishop G. Ashton Oldham.

American Way of Life Disappears—National Socialism and Communism Substituted

EXTENSION OF REMARKS

OF

HON. GEORGE HOLDEN TINKHAM

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 18, 1941

ARTICLE BY SAMUEL CROWTHER

Mr. TINKHAM. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following article by Samuel Crowther:

THE OUTLOOK—FREE ENTERPRISE IN UNITED STATES SEEN GIVING WAY TO SOCIAL REVOLUTION OF CONTROLLED ECONOMY

(By Samuel Crowther, economist and author)

Calvin Coolidge, discussing taxes, once remarked that a dollar primarily belonged to the man who earned it. Thus with exquisite simplicity he defined free enterprise. For, if a dollar does not primarily belong to the man who earns it, enterprise cannot be free. Today the Federal Government asserts a prior right to every earned dollar, and in addition the labor unions, to the extent to which they can establish the check-off, claim a right to share in every wage-earner's dollar.

And it has come about that, while we keep the nomenclature of the American way of life, actually that way of life has all but disappeared. In its place has been substituted a new kind of economy which no one fully understands but which would be a controlled economy of a type somewhere between national socialism and communism if anyone had the knowledge and the power to manage the controls.

We have had a social revolution which differs from the foreign revolutions only in that no one knows how it got here or what it is, but it is just as much a revolution as though it had been brought about by men wearing black shirts or brown shirts or wild whiskers. Our revolution arrived gradually, without flags or parade. It has been effected by men who would not or could not think through the measures which they advocated only to meet temporary situations.

The process continues. For instance, today certain businessmen in the O. P. M. are talking astronomical figures of all-out production without ever a thought that if armament production entirely displaces civilian production our whole economic structure will fall, unless at the same time a system of pure communism be introduced—and made to work. It may be noted that, whatever the virtues or the vices of pure communism, no one has ever found a way of making it work. The Russians, although they talked a great deal about communism, never got around to trying it.

Let us see where our country now stands. Let us call things by their right names:

(1) Money is on its way to being destroyed as a medium of exchange and has been practically destroyed as a storage of value. It is now merely a means by which the Government commandeers goods and services. The banking system, revolving about the Federal Reserve System, has become merely a bookkeeping utility for converting governmental promises to pay into bank deposit and hand money. Bank deposits have changed their character. They are no longer representing a section of the process of exchanging goods and services for other goods and services but are inert masses representing unpaid governmental obligations. The banking system is thus no longer a division of private enterprise but a governmental convenience operating inside the shell of private banking.

(2) The function of money has changed without changing the nomenclature, and hence the nature of institutions which depend on money as an expression of value has changed—but without a change in nomenclature. That is, the purchasing power of the assets of life-insurance companies, savings funds, building societies, and the like, depends not on private economic activity but upon the amount of money which the Government chooses to issue. Thus a factor of unknown power has been introduced into every investment—which means that ultimate, managerial discretion has been taken over by the Government and that private management in the investment field is limited to an area of glorified bookkeeping

(3) Since money is now a governmental commandeering utility—the Government just issues tickets for the goods and services it needs—it follows that private enterprise which depends for its existence on the production and exchange of goods and services has ceased to exist in other than form. For a producing mechanism which must earn money cannot survive as against a system which, for the time being, can issue money.

Some of these changes have been brought about to meet emergencies—war or otherwise—on the ground that the Government must take charge when big things need quickly to be done. This is another way of saying that politicians unskilled in management are inherently the best production managers. That may be true. But it has never been demonstrated.

Pork-Barrel Legislation Versus St. Lawrence Waterway Project

EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 18, 1941

Mr. MICHENER. Mr. Speaker, in the early twenties I made numerous speeches in the congressional district which I have the honor to represent in Congress favoring the development of the Great Lakes-St. Lawrence seaway. At that time this development had very nearly the unanimous support of the residents of that congressional district. Indeed, the Federal Government contributed to the making of a harbor at Monroe, Mich., largely in contemplation of this proposed deep-sea lane. The people of the city of Monroe formed a port district and, by their own vote, taxed themselves 50 percent of the cost of the harbor.

The project at that time was considered almost entirely on the basis of an outlet to the sea, with better and more reasonable transportation for that land-locked territory surrounding the Great Lakes. It was not then thought of as a national-defense adjunct.

This has not been a partisan proposal. It has had the endorsement of all Presi-

dents from Taft to Roosevelt and should not be placed in the political category.

During the present session of Congress the Rivers and Harbors Committee has held extensive hearings to determine the advisability of proceeding with the St. Lawrence development at this particular time. The national-defense aspect has been advanced by the administration, the O. P. M., and those primarily charged with the job of furnishing the materials for our national defense. A majority of the members of the Rivers and Harbors Committee favored the project, and, indeed, it seemed a certainty that consideration and a vote would be had by the House at this session of Congress.

Now the President has directed that this project be tied up with the Florida ship canal, the Tombigbee River proposition, as well as many other projects throughout the United States, many of which are of most doubtful validity. We should be thankful that Passamaquoddy Bay has not as yet been included. Let us hope that the President will not add that monstrosity to the bill.

In short, a genuine, old-fashioned political pork-barrel rivers and harbors bill has been prepared, and, in accordance with Presidential direction, an effort will be made to railroad it through Congress—the good projects carrying the unsound ones.

I have rebelled against pork-barrel legislation and have taken the position that at this particular time nonessential—even though desirable—expenditures by the Federal Government should be eliminated. We are all-out for national defense. We have a national debt of $50,000,000,000 now, in addition to several billions of contingent liability. If we continue the present rate of spending the national debt within the next year will be $100,000,000,000. The Congress has already appropriated $7,000,000,000 under the lease-lend law, and within the next 60 days the President will ask for an additional lend-lease appropriation of $10,000,000,000. We are told that much of this last appropriation will go to assist Russia and China. Just the other day the House passed a bill carrying $3,000,000,000 in new taxes. Note that is less than one-half the first $7,000,000,000 lend-lease appropriation. There must be a stop somewhere and the best place to begin is with useless pork-barrel legislation.

Mr. Speaker, pursuant to the permission given to me to extend my remarks in the RECORD, I include an editorial from the Adrian (Mich.) Telegram of August 16. This paper has been an ardent advocate of the St. Lawrence deep-water project, and the views expressed in the editorial are in the main my views regarding this project at this time. The editorial is as follows:

[From the Adrian (Mich.) Telegram of August 16, 1941]

MORE PORK

Congressmen who like pork—the kind presented by large expenditures of public funds in their districts—generally find a chance to get it in the rivers and harbors bill. The Rivers and Harbors Committee of the House is on the way this session to setting a new record. Hearings on this year's bill have not been finished yet and probably won't be for another month, but up to last Friday the committee had approved $281,000,000 worth of projects. Then it decided to include in the bill the St. Lawrence seaway, estimated to cost two hundred and eighty-five millions—and then the Florida ship canal at an estimated cost of one hundred and sixty millions. It is predicted that the bill's final total will be close to a billion dollars.

The committee's action in including the St. Lawrence seaway project in the omnibus rivers and harbors bill is regrettable. That it was voted in along with the controversial Florida ship canal is still more unfortunate. The seaway is encountering tough enough opposition as it is. But when it is put in company with such brain children of the blind spenders as the Florida ship canal—twice exposed and defeated in the Senate, thanks to Michigan's Senator VANDENBERG—it is too much. If the seaway cannot win approval on its own merits, but has to get through Congress by coming up for consideration with indefensible pork-barrel proposals and draw votes through logrolling, then it better be defeated.

Representative MANSFIELD, of Texas, chairman of the Rivers and Harbors Committee, said last Wednesday that President Roosevelt wanted the seaway included in the omnibus bill. He added that he had a letter to that effect from the President, but he did not disclose the text until the last of the week. In the letter President Roosevelt wrote of his anxiety to get the seaway started this year "in order to get power as soon as possible for the defense program," and said the best way to expedite it seemed to be to include it as one of the projects of the rivers and harbors bill.

But he also wrote to Representative MANSFIELD that river and harbor projects fell into two classifications: Those that will serve in the post-war reconstruction period, and others—"notably the St. Lawrence"—that are needed immediately. Then he added, "There is no reason why both groups should not be considered in the present bill with the understanding that when it comes to appropriations the defense needs shall be the controlling."

Clearly the President is not backing away from his designation of the seaway as a defense project, and just as clearly he does not consider it a pork-barrel undertaking. He wants to get it considered at once, and the quickest way to bring it before Congress is to have it included in a forthcoming bill. The thought is inescapable, too, that he thinks a little logrolling will not harm the seaway's chances and may help them. The President is a past master at practical politics.

But, nevertheless, the omnibus bill is loaded with pork. In addition to the Florida ship canal to cost one hundred and sixty millions, are a number of other projects, some of them indefensible from the standpoint of public need. For instance, there is the Tombigbee project for a waterway in Tennessee and Alabama. It was defeated a year ago after a slashing attack by Senator VANDENBERG. There are other projects; some of them may be desirable, but none of them are necessary. They may be desirable as post-war reconstruction jobs. If so, they should be considered when that time arrives. Right now the Nation is preparing for the war. The individual is asked to get along without some things he thinks desirable, so must the Nation.

Putting the St. Lawrence seaway project into the omnibus bill along with the Florida canal and other dubious proposals is bound to embarrass some of the seaway's advocates. They may be able to get amendments through in the House and Senate to eliminate the pork projects. More likely they will be subjected to demands for vote trading. The bill as a whole will, and should, draw the determined fire of that small group in Congress that is really striving to hold down nondefense spending. The trouble is that group is entirely too small.

Beneficial as the St. Lawrence seaway will be, it should go down to defeat if it can win only at the expense of having unneeded and unsound projects like the preposterous Florida ship canal forced onto the Nation along with it. The St. Lawrence seaway has faced a rocky road for years. It has overcome obstacles and is nearer to adoption than ever before. It needs no pork to aid it along now.

Draft Extension Vital to the Defense Plans of Our Nation

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 18, 1941

TELEGRAM TO HON. JENNINGS RANDOLPH, OF WEST VIRGINIA, AND REPLY THERETO

Mr. RANDOLPH. Mr. Speaker, during debate on the legislation to retain selectees in the service I did not take the floor to participate in debate. I voted for extension that we might better keep intact during the emergency the troops already intact and trained.

In this connection, I include copy of a telegram and my reply:

HUNTINGTON, W. VA., *August 12, 1941.*

Hon. JENNINGS RANDOLPH,
House Office Building,
Washington, D. C.:

The organization endorsed an indefinite period of service for selective-service trainees and respectfully request your support.

C. A. WILCUS, *Commander,*
Department of West Virginia,
Veterans of Foreign Wars.

AUGUST 12, 1941.

Mr. C. A. WILGUS,
Commander, Department of West Virginia,
Veterans of Foreign Wars,
Huntington, W. Va.

DEAR COMMANDER WILGUS: I have just received your telegram dated August 12 and note that your organization favors an indefinite period of service for selective-service trainees. As you know, the House is considering the bill today.

You may be assured of my whole-hearted support. I am in agreement with the President that it is dangerous to demobilize our armed forces in this increasingly critical period. Congress will, I believe, act courageously and formulate a fair basis for continuing our troops in service beyond the original intended enlistment. A plan should be evolved to take care of so-called hardship cases which naturally would occur in the ranks of the National Guard men and Reservists. It is my feeling that Senators and Representatives forming the isolationist bloc will be unable to defeat this further vital phase of our preparedenss effort.

As pointed out by military experts, to demobilize the drafted men who are at far corners of the United States and our possessions and to prepare for new untrained men just

at a time when there is a new crisis looming in the Pacific would be suicidal to American defense.

Let me again thank you for wiring and with kind regards, I am,

Sincerely yours,

JENNINGS RANDOLPH.

Mr. Speaker, these are difficult days and decisions are not easy to make. This is especially true when one considers the human element. I feel that the constituency I represent believes somewhat as did a father who wrote me on August 4 relative to the extended service bill. He said:

My only son, Charles, 19, is at Chanute Field. It is my wish that he remain on the job until all danger to our country is past. That is his attitude also. In fact, I would be embarrassed to death if he was not in the service. An education in a dictator-ruled country would not be of any value to the boy anyway. If he, or any of the rest of them, has the stuff in them they will quickly gain time spent in the service of their country.

Douglas Miller's Book, You Can't Do Business With Hitler

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 18, 1941

ANALYSIS BY SAMUEL CROWTHER

Mr. WOODRUFF of Michigan. Mr. Speaker, many students, writers, commentators, and others have been recently impressed by Douglas Miller's book You Can't Do Business With Hitler. Because of the supposed standing and experience of Mr. Miller, few people have had the temerity to challenge his conclusions. However, recently I read a review of this book by a man whose experience and ability properly equip him to pass judgment upon anything touching economic conditions of the past, present, or future, so far as this is possible.

I refer to Mr. Samuel Crowther, the famous writer and economist. Under unanimous consent to extend my remarks in the RECORD I include therein this analysis of You Can't Do Business With Hitler:

A NOTE BY SAMUEL CROWTHER ON YOU CAN'T DO BUSINESS WITH HITLER, BY DOUGLAS MILLER

This is an extraordinarily dishonest book, in that the author purports to write of Nazi business methods from first-hand experience as a commercial attaché at Berlin, 1925–39, but almost nothing in his book is drawn from experience except a few trivial and well-known incidents. Instead, most of the book has to do with events after 1939, and it is almost wholly a rewrite of the regular anti-Nazi propaganda. It is only slightly factual, and most of these "facts" are wrong. The book bears every evidence of having been written by a propagandist and planted on the supposed author, who is an assistant professor of economics in the University of Denver. It would be interesting to trace this book to its origins.

The theme is now standard. Hitler will encompass the earth, encircle the United States, and crush our foreign trade. That will crush us. Therefore we must, as a plain matter of self-preservation, go out and defeat Hitler and then reorganize the world with the money we are supposed to have and get the trade we so desperately need—even if we pay both ends of it—and keep the world prosperous and peaceful. In other words, the book attempts to appeal to business people whose concepts are too low to grasp the "four freedoms"—that defeating Hitler is just good business because Nazi ethics are bad for business.

The whole approach is juvenile. For instance, the author complains that Germany aims to be self-sufficient, which means a minimum of imports, while talking of Nazi plans to capture world trade, which, of course, means a maximum of imports and is wholly incompatible with self-sufficiency. He has a notion that a defeated Hitler will restore the British economy to the pre-1910 basis, with never a notion that the world has changed. He points to two-thirds of our trade being with the British Empire and seems to have the impression that this trade is with the British Isles, when, in fact, it is largely with Canada and Malaya. He also thinks that our foodstuffs and cotton exports can be revived by demolishing Hitler. Our foodstuffs went out of the market long ago, while the A. A. A. killed our cotton exports by holding our cotton above the world price. But the curious point is that he does not comprehend that what we buy from the world is more important to the world's economy than what we sell to the world is to our economy. So, if Hitler should control the world, we would not have to do business with him, but he would have to do business with us. The conclusions of the book are wholly maudlin.

A good deal of the book could be written about any country—if one chose to take the slant. For instance (p. 67), "Lawyers in Germany have very largely ceased to function as interpreters of the law, because, as I said earlier, courts are instructed to render decisions according 'to healthy public opinion.'" The African stuff is fantastic, the financial operations of post-war Germany are misstated—there is no mention that the President was an officer of a concern selling marks for speculation or that American bankers toured Germany to stir up borrowers. There is no mention of the events leading up to the moratorium or the standstill agreements, that the whole world put in exchange agreements after Britain went off gold in 1931, nor the action of France in precipitating the Credit Anstalt collapse or that our bankers have gotten most of their short-term money out of Germany.

There are some curious misconceptions. For instance, the author thinks our reciprocal trade agreements form a system and that the other party refrains from bilateral agreements. In fact nearly every country with which we made agreements also entered into bilateral agreements. And some, as Brazil, actually blocked our exchange and freed the British. The author is the first man who never understood that Hull, Sayre, and Grady played a great practical joke. Everything that could be done to us under the trade agreements has been done. Also he speaks of the vast store of gold owned by the Government. Nearly every dollar of that gold secures a gold certificate issued to the F. R. B., and taking that gold would be an utter breach of trust which would destroy what is left of our currency.

The book is not unlike several that were published during the last war "exposing" the Kaiser's world plans. This book differs from those in being more credulous and having a larger chamber of horrors. Considering the fact that most American corporations with property in Germany have long since charged it off, the terrible effects of confiscation are quite funny. It is also noteworthy that there is no mention of the fact that, although Russia in 1933 had at least the intentions of Germany today, our Government recognized her for trade purposes.

The big point in my mind is who planted this book on this fresh-water college imbecile. And how did he get into the service and why did he leave it?

Overcharges for Electricity in Mississippi

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 6, 1941

Mr. RANKIN of Mississippi. Mr. Speaker, the Jackson Daily News, a daily paper published in Jackson, Miss., which is constantly attacking me for some reason or other, contains an editorial entitled "JOHN RANKIN's Socialism," in which it says:

If Congressman JOHN RANKIN could have his way about it, he would establish complete Federal ownership of the power industry.

That is what Mr. Fred Sullins, the editor of this paper, calls socialism. He is constantly nagging me about the T. V. A. and about my efforts to electrify the farm homes of the State. He seems to be afraid I will spread T. V. A. rates over south Mississippi and relieve those people of the enormous overcharges they now have to pay for their electric lights and power.

Then, too, the farmers in south Mississippi are begging for cheap electricity and appealing to me to help them get it. But that would be socialism in the opinion of Fred Sullins and the Jackson Daily News.

The editor seems to fear that I will run for the Senate and get elected. He knows that if I should, I would make a drive not only to spread T. V. A. rates all over the State but to provide cheap electricity for every farmhouse in Mississippi.

Cheap electricity is the greatest economic blessing that could come to the people of the southern and western parts of the State, and especially to the farmers in those areas.

The people of Mississippi outside the T. V. A. area were overcharged $5,600,000 for their electricity last year. That was an average of more than $100,000 to the county, or the value of 2,000 bales of cotton to the county at 10 cents a pound, which is more than cotton brought last year. If the people in every single county in Mississippi outside of the T. V. A. area had been required to bring in 2,000 bales of cotton, or 400 bales for each supervisor's district, and pile it upon the courthouse yard, it would not have brought enough money to pay their overcharges for electricity for that one year.

The farmers in those counties pay more than twice the rates for their electricity that our farmers have to pay in the First Congressional District, which I have the honor to represent. Yes; I helped to get cheap T. V. A. power for the people I represent and for the farmers through-

out the district, and I expect to continue my efforts in that respect until we get these T. V. A. rates to the people all over the State and until we electrify every farm home in the State at those rates, whether it suits Fred Sullins and the Jackson Daily News or not.

That is not socialism, either. It is just plain, common honesty and justice for the people of the entire State of Mississippi.

Wages of Soldiers

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 19, 1941

EDITORIAL AND ARTICLES FROM PM

Mr. LANGER. Mr. President, when the Selective Service Extension Act was under consideration I moved that the pay of soldiers after they had served a year be increased to $100 a month. I ask unanimous consent to have printed in the CONGRESSIONAL RECORD an editorial and two brief articles published by PM in its issue of Monday, August 18, 1941.

There being no objection, the editorial and articles were ordered to be printed in the RECORD, as follows:

[From PM of August 18, 1941]

IS $30 OR $40 A MONTH DECENT PAY FOR OUR SOLDIERS?

When you stop to think about it, the strange thing about our Army is that it doesn't offer just about the best-paid jobs in the country. If our democracy is going to survive in a world stormed by armed fascism, it is going to be because our soldiers are better than the Germans, and because our Army is able to destroy their soldiers more effectively than they can destroy ours. But you'd never guess it from the pay.

Because we think it is important to the country and to the 1,443,500 men who make up the enlisted ranks, which include 681,000 draftees, we on PM have been looking into the subject recently. The first thing we found out is that if you're going to consider Army wages on a reasonable basis, you've got to get straight on a couple of angles that enter into Army service.

First is good, old-fashioned patriotism. It doesn't have a thing in the world to do with the question of how much a soldier should be paid, for the simple reason that you can't buy patriotism, and this country will inspire whatever patriotism it deserves whether or not it pays its soldiers well. But, because a man is patriotic, should he have to hitch-hike when he goes to town for an evening?

Second is the matter of sacrifice. Every man in the Army makes a real sacrifice to be there, and some will pay with their lives You can't pay for that. You can't measure it in money. But should a man who is willing to sacrifice in the larger sense be called on for smaller sacrifice as a special penalty? Isn't he still entitled to smoke tailor-made cigarettes the same as before he joined the Army?

In our check-up of the pay question we found it does have a very real bearing on the matter of morale, we'll discuss that at greater length later. We found it does bring up the same questions of decency and fair play and human dignity and security that come up in private enterprises when it comes to fixing a wage scale.

On the soldier's side, we found it centers around small but very real things, like the lack of the price of a bus ride to town, lack of money to take a girl out for an evening, lack of wherewithal to do the things that young people work for, to say nothing of the hopeless prospect of laying by enough to get married, or sending a few dollars home to the folks, or putting something away against the day the Germans are licked and the Army won't need men.

What is Army pay, that it won't do these things? Well, it is $21 a month for the first 4 months, $30 a month up to 1 year, and after that, due to a change just voted, it will be $40 a month. Which isn't a complete picture, because the enlisted man gets his food, clothes, and a place to sleep. The story on the next pages goes into that. It estimates that if you figure those in on a cash basis, the $30 soldier is getting about the equivalent of a man paid $90 a month or less in New York City.

And how does this theoretical $90 a month compare with pay in other Government jobs or for similar work? The postmen get $150 to $166 a month. Here in New York we pay our policemen and firemen $100 a month the first 6 months, then $166 a month, and by the third year they're getting over $200. Even the uniformed custodians you see around Government buildings get $112 to $116 a month.

Which is pretty good evidence that the soldier isn't in line, and brings us around to a very reasonable question:

Assume our soldiers are underpaid, can we afford to pay them more?

The obvious answer, of course, is another question:

Can we afford not to pay them what they're worth and what they should be getting?

But dismiss that and take a look at the story at the bottom of this page. It isn't easy reading, because it deals with big figures, but it does give you a basis to compare the cost of an Army pay increase with some other expenditures. That is probably the only way you can get at it, unless you can comprehend the boxcar figures of Government finances.

Maybe an item that runs into the hundreds of millions is hard to understand, but a $10 a month raise for soldiers that comes out to less than we spend for spare engines and spare parts for bombers can be understood. Evidence that raises—even substantial raises—would not disturb the defense program or Government finances is found in the fact that casually, during debate on the draft-extension bill, a $10 raise for 1-year men was put in without the question even being raised, so far as we could find out.

All this is just part of the story, but it does show that we could and should pay our soldiers more. How much is something else—certainly enough to give them something comparable to a decent living wage outside the Army.

On the next four pages we tell something of what we have been able to learn on the subject. On succeeding days we will complete the picture as we have been able to get it.—JOHN P. LEWIS.

WHAT IT WOULD COST TO UP PAY

Exclusive of officers, America's Army totaled 1,443,500 men on August 14. To increase the pay of every one of those soldiers $10 a month would cost the Nation only $14,435,000 a month, or $173,220,000 a year.

To the boys in uniform that's a lot of dough, but to the Nation as a whole it is of little or no significance.

It is only a fraction of 1 percent of the $17,981,000,000 appropriated for our military forces ($13,487,000,000 for the Army and $4,494,000,000 for the Navy) in the fiscal year that ended last June. And the comparable sum for this fiscal year is already $17,000,000,000.

The appropriation for military pay in the fiscal year we're in now (1942) is $1,208,000,000. A $10-a-month raise for every soldier would only make it $1,381,000,000, and a $20-a-month raise would only send it up to $1,554,000,000.

SOME COMPARISONS

This year's appropriation for clothing the Army, $175,000,000, is more than the sum required to give the men $10 a month more, and the 1942 appropriation for spare engines and spare parts for bombers is vastly more—$245,000,000.

If the soldiers' pay were raised only as they became better soldiers—at the end of a year's training, say—it would be even less of a drain on the Treasury. There is talk of an Army of 3,000,000 or 4,000,000 men as the defense program continues, but it is estimated that only about three-fifths of them would be eligible at any one time for raises taking effect at the end of the first year's training.

About 120,000 men will be released this year at the end of a year of service because they have reached 28 or for other special reasons.

NO OUTCRIES IN CONGRESS

When the selectees' service recently was extended from a year to 2½ years, Congress included a $10-a-month increase in the men's pay with scarcely any hesitation. Even the legislators who yell most loudly for economy kept silent.

Some newspapers and commentators instantly pointed out, however, that it was going to cost the Government more money. Those were the newspapers and commentators that worry more about what's happening to the Budget than they do about what's happening to the country.

They rarely point out that Government financing is not like private financing. When an individual goes in debt, he has to make sacrifices in the future to pay that debt. When a government goes in debt, it goes in debt to its people, and when it repays that debt later it repays it to the very people whom it taxes to raise the money to repay them.

The American people have not been afraid to go in debt to themselves to pull this country out of an economic slump and build up its ramparts against fascism.

POOR MORALE IN ARMY LAID TO COOLIE WAGES OF SOLDIERS

(By Joseph Cummiskey)

The way I figure it, the United States Army takes care of a draftee to the extent of $81 to $90 a month. That is made up of the pay they give him in cash after he gets the equivalent of $20 worth of shelter, $30 worth of food, and $10 worth of clothing at New York prices each month.

I went over to Fort Dix with the idea of finding out whether today's soldier is paid too little, enough, or too much. I found out—and fast.

He's vastly underpaid if he wants—and they all do want—to live anywhere near the scale they did before they were tapped for the national emergency and tossed into the front line of national defense.

Without exception, the men I talked to were counting the days until they'd be returned to civilian life. These fellows in the blue fatigue clothes were Uncle Sam's first-line Army. There are men who not many months ago were holding jobs that sometimes paid up to twice as much in 1 week what they get now for 1 month.

Before I break down their positions on the basis of dollars and cents, I want to make it clear that the talk from these men was sincere and in no way could their answers be construed as unpatriotic.

They were quick to say that they have no complaints about how they are treated.

None of them beefed about being overworked. While I was talking to one draftee another one pulled a very bad pun which escapes me. When I said "Owww," he made a crack that really sums up the whole situation. Said he:

"What do you expect for $21 a month—a Broadway production?"

If one thing is certain in their minds, it's this: $21 a month (pay for the first 4 months) is almost nothing. And $30 a month (pay after that period) is more of the same. And $40 a month (pay after 1 year, just voted by Congress) will be an improvement but not much.

They are given shelter, food, and clothing. I figure these three items plus salary breakdown over 30 days something like this:

Shelter (bed, barrack room, bathroom)	$20
Food (average about $1 a day)	30
Clothing (about $120 worth a year)	10
Salary (paid in cash once a month)	30
Total	90

In other words, a soldier getting $30 a month is about as well off as $90 cash without board, room, and clothing.

That's what they get. But beyond there, here's where that $30 a month is used. How far it will go you'll see for yourself. This is a kind of composite estimate drawn from talks with scores of soldiers:

Smoking (pipe or cigarettes), about 20 cents daily	$6.00
Shoe polish (a can a week)	.40
Stamps (they haven't much else to do, so soldiers write a lot)	.84
Pressing (coat, 25 cents; pants, 20 cents) once weekly	1.80
Laundry (flat rate per month)	2.10
Haircut (every 10 days) at 30 cents	.90
Razor blades (issued 3, must buy rest)	.35
Tooth paste (depending on brands)	.25
Shave cream (ditto)	.40
Mirror (buy it once)	.35
Shave brush (buy it once)	1.00
Shoe brush (buy once, use plenty)	.50
Button board (to keep polish off clothes)	1.00
Housewife kit (buttons, needles, thread, scissors, safety pins)	1.75
Blitz powder (to clean metal)	.50
Face soap	.30
Candy, sweet cakes, soft drinks, gum (big items, buddy, particularly the sweets)	5.00

Let's add up what we have right here before we even start thinking of getting the soldier out of camp for a night, even once a month.

The total right now is $23.44.

Subtract $5 for the items he has to buy only once, and to allow for savings, through skimping, and it still comes to about $18.

We haven't got him paying for a bus ride to, say, Trenton, the closest city. When he gets there, or anywhere away from camp, he might want a beer. At 10 cents a glass. Or see a movie at 24 cents.

He has 8 days off a month—Saturday and Sunday four times—and there are also those Friday nights after 5:30 retreat. What's he going to use for money if he wants to go places?

We haven't even mentioned newspapers, books, and magazines. They cost him just what they cost you.

I followed hundreds of them into Trenton the other night. This was a midweek night, not Friday when they didn't have to be back. They were walking the streets by the hundreds.

One group of five, about midnight, approached a cab driver at South Warren and State Streets and tried to bargain for a ride back to camp. Cost, $2.50. They couldn't raise the dough, 9 days after pay day.

An hour later I stopped three soldiers at random and started to talk to them about the Army.

"Don't ask us what we think of it, Buddy, because we can't tell you," they said.

"Never mind that," I said, "how much money have you got right now?"

Among them, they had exactly one nickel. They had been given a lift into Trenton by a buddy with a car. They got the ride because they promised to buy him gas next pay day. What could they do with a nickel? I asked.

"What are you trying to do, be funny, Bud?"

No. I wasn't trying to be funny. I asked them how far their monthly pay checks went. They said:

"Just this far."

I asked them about dates. They said it's tough to get dates because you have to spend money—even if it's just a few beers and a show. You just can't ask a girl to go for a walk. And besides (which is more down-to-earth), the girls won't go walking.

That's what got me thinking about where they were before they were in the Army. How they were making enough to get married. To live the way they want to live. And I thought the Army certainly hasn't sold them a bill of goods that the Army life is a fine way of life. I thought these fellows think their lives are at a standstill, that this Army business is just a phase which will pass away—and the sooner the better.

I know you can't buy patriotism. But I think we can give these soldiers of ours a better break. Now—when they need it. We'll be damn glad to give them everything we have when the blue chips are down and they're out in front protecting this democracy from the chiselers.

I'm certain that the question of morale—which can't be good this way—is tightly bound up with the question of money. And I think there are few things wrong with this man's Army that a good, sizable pay boost won't help.

Service Extension Act of 1941

EXTENSION OF REMARKS

OF

HON. HAROLD H. BURTON

OF OHIO

IN THE SENATE OF THE UNITED STATES

Tuesday, August 19, 1941

RADIO INTERVIEW WITH HON. HAROLD H. BURTON, OF OHIO

Mr. BURTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio interview which I recently gave on the Service Extension Act of 1941.

There being no objection, the interview was ordered to be printed in the RECORD, as follows:

Question. Senator BURTON, there is much interest in the Service Extension Act that recently passed the Senate by a vote of 45 to 30 and the House of Representatives by 203 to 202. Would you be willing to answer questions about it?

Answer. Yes; it is important that the country understand it fully.

Question. First, Senator, did you vote for the bill?

Answer. Yes; in its amended form. As introduced it provided for additional service beyond the original 12 months, limited only by the discretion of the President or of Congress. I moved to amend it by reducing this additional period to 12 months, but this was defeated. I then supported the committee amendment to reduce the unlimited service to 18 months. This was agreed to.

Question. What is the general effect of the bill?

Answer. Briefly, it permits the retention in the military service for longer than 12 months of such men as are needed. It applies to selectees, National Guard men, Reserve officers, and Regular Army men. It also authorizes an additional $10 per month for each enlisted man for active service beyond his original 12 months until the end of the present emergency.

Question. Are there limitations on this additional service?

Answer. Yes. There shall be released from service at any time all "whose retention in active military service would, in the judgment of the Secretary of War, subject them or their wives or other dependents to undue hardship." Second, under another act just passed, provision is made for the release of selectees requesting it and who had become 28 years old before July 1, 1941, and had become 28 before they were inducted into the service. Third, the additional service itself shall not exceed 18 months beyond the original 12, except that if Congress again declares that it is in the interest of national defense to extend such period of service, the President may then do so. Fourth, the President may limit the extra service to less than 18 months. Fifth, the authority of the President to extend service may be revoked at any time by a concurrent resolution of Congress.

Question. What about the statement that this extra service is a breach of a contract?

Answer. That is not correct. The contract of the Government is clearly set forth in the only place it could be, that is in the law itself. Many boys whom I knew said when they entered the service, that they were afraid that they were going in for more than a year but they hoped that it might be over in 1 year. The law was written with that hope. It, however, was written also with an appreciation of the seriousness of the international situation and with the realization that the serious peril might continue for more than 12 months. Accordingly, in the same sentence that provided for the 12 months of service, it also provided for extension of that service.

Question. Just how does that sentence read?

Answer. I have it here, it reads: "Each man inducted * * * shall serve a training and service period of 12 consecutive months, unless sooner discharged, except that whenever the Congress has declared that the national interest is imperiled, such 12-month period may be extended by the President to such time as may be necessary in the interest of national defense." The act also provides that in any event when a selectee is released from active service he remains subject to call for additional training or service at any time during the next 10 years or until he is 45 years old, whichever occurs first.

Question. Why is there this need for additional period of service?

Answer. Because those whom we have charged with responsibility for our Army have shown that it is now a necessary and vital part of any real defense program in which our Army is made up of civilian soldiers. Today only the strong can be safe. America is united on a program to make whatever sacrifice is necessary for the defense of America's security and that of our possessions and of the Western Hemisphere, which for more than 100 years, has been a part of our responsibility under the Monroe Doctrine. However willing our men may be, they cannot familiarize themselves with specialized modern equipment, they cannot become trained in modern tactical requirements, they cannot distribute themselves over our defense bases throughout the world or familiarize

themselves with the needs of service in those places and they cannot obtain training in large-scale troop movements of all appropriate branches of the service unless some men outside the Regular Army serve more than 1 year on active duty and unless their release from service be upon some flexible basis which can be related to the needs of the special units to which they may be assigned.

Question. Then you regard this extension of service as a natural and essential part of the defense program in which we are engaged?

Answer. That is exactly what it is. It is the express recommendation of the Chief of Staff of the Army, made in his regular biennial report on the strictly military needs of the country. It is just as much his recommendation as is the amount and kind of ammunition that is needed. As for contracts and obligations, the people at large and the men in the service have placed upon their elected officials a clear obligation to provide a plan to protect the safety of this Nation. The people have a right to expect that the leaders of the Army and the Members of Congress will make sure that an adequate plan of defense is authorized and maintained. The extension of service is just as vital a part of our present plan of preparedness as are the appropriations, the airplanes, the rifles, the ammunition, the new factories, the ships, and the training camps. To provide all this, but fail to provide the trained manpower to use it, would double the tragedy and might later inflict great penalties in the loss of life, if not in the ultimate loss of freedom itself. We must not gamble with such stakes.

Question. What does General Marshall say about the necessity for this?

Answer. Among other things, he points out that 2 years ago we had an Army of only 175,000 men. Now it is 9 or 10 times that size. The original men are needed in many services, and they must have some help in training new men. They also need new men to fill up new units, and these new units also need the leadership of men with at least 1 year's recent active training. In fairness to General Marshall, it also should be recalled that before the Draft Act was passed he recommended that the normal training period be set at 18 instead of 12 months.

Question. How many men are there now in the Regular Army?

Answer. There are now about 500,000. Many of these, of course, are comparatively new recruits. This is about one-third of the total Army today. There are 270,000 men in the National Guard, most of whom have had some previous training, and there are about 630,000 selectees. If the Service Extension Act had not been passed, the National Guard men, selectees, and Reserve officers were all subject to the 1-year limitation. This meant that about 60 percent of the enlisted men and about 85 percent of the officers would be subject to release at the end of their first year of service now rapidly approaching. General Marshall said to permit this would mean the disintegration of the Army.

Question. How are these men assigned?

Answer. In Alaska and Newfoundland; in our harbor defenses; in operating 550 posts, stations, supply depots, and ports of embarkation; in the Air Corps; and in the specialized armed force, 536,000. It is obvious that in such work there must be many trained men familiar with special duties required. If only Regular Army men were used here, there would not be quite enough then leaving not a single one for the combat divisions. The rest of the Army is divided as follows: In the Field Artillery, Antiaircraft Artillery, Engineer Corps, Signal Corps, and other specialized combat units and in the 29 divisions of combat troops, 758,000. In the basic preliminary 13-week training course for new men, 200,000. General Marshall shows that it is not possible, to say nothing of efficient, to handle the requirements of this comparatively small Army of about 1,500,000 men, containing about 900,000 1-year men, if the 1-year limitation were to be strictly observed. It needs a flexible system adapted to the actual needs of the respective units of the service.

Question. Did General Marshall give any examples of the difficulties which the 1-year rule had presented to him?

Answer. He gave many. I quote from one in which he said: "I had to authorize the sending of a National Guard antiaircraft regiment to Hawaii. * * * Relief must be provided for that regiment, sailing from San Francisco by August 1 in order to start the other on its way home by August 15. That will allow it 10 days or 2 weeks for the complicated procedure of demobilization in accordance with the terms of present law. We have a further complication in that the National Guard regiment has in its ranks selectees who have a longer period of service. Just what is to be done with them if the guard unit is demobilized, I cannot tell you at the moment. * * * It is probable that the selectees will be left in Hawaii and assigned to other units, but they will have to be brought home 3 or 4 months later." This is just a small sample of the self-imposed hardship that tends to make the whole Army unstable.

Question. In authorizing the extension of service under the Draft Act, Congress declared that the national interest is imperiled. Do you agree with that statement?

Answer. Yes; there can be no question whatever that the national interest is imperiled. Otherwise we would not be in the midst of a national-defense program exceeding anything heretofore done or imagined in the history of the Nation. It is not necessary for Congress to find that the national interest is more imperiled now than it was last September, when the Draft Act was passed, although, personally, it seems clear that the need for our national defense is greater now than then. It certainly is as great as it was then, and we are here merely carrying out the national-defense program then ordered and started on its way. If the war in Europe had ended and the national interest had ceased to be imperiled, then there might well be reason for limiting our defense program and for letting most of the men go home. On the other hand, if the national peril which brought about the enactment of the Draft Act and which is the basis for our tremendous appropriations and defense activity has not substantially diminished, then Congress owes it to the country to recognize that fact and to take whatever steps are necessary, in the judgment of the trusted leaders of our Army and our Navy, to make effective the program of defense upon which this Nation relies for its safety. We cannot change our program with every day's news from the front. The aggressor nations of the world already are fully armed and trained by years of service. We owe it to America to prepare for all possibilities, including instigated uprisings within the Western Hemisphere. Many people do not realize how important the relation is between our defense organization and conditions in Central and South America. The 20 countries south of us, which make up the Pan-American Union, are, all of them, under governments now friendly with the United States. They, however, are directly interested in exports and imports and in the control of the seas, which for the past generation has been in the hands of Britain and the United States. If it seemed likely that the Axis Powers were to gain control of the seas, or if we were to demonstrate our inability to carry out our announced program of defense, we might quickly find that in 8 or 10 of the countries south of us trouble would arise. This would come from the strong opposition parties which are friendly to Nazi control and which, if successful in taking control of their local governments, would put the "new order" of Europe in control of territory and of important air bases and air lines within our own hemisphere.

We must not hesitate to go the full length of our own training program. We must demonstrate the capacity of a self-governing people to mobilize themselves and to accept the discipline and leadership of their own military officials who are entrusted with the defense program upon which the safety of the Nation depends. Our peace and our security depend upon our strength of purpose. America's example of determined effectiveness should continue to be her best defensive weapon.

America's Duty To Remain American and Lead the Way to Peace

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 18, 1941

RADIO ADDRESS OF HON. LOUIS LUDLOW, OF INDIANA

Mr. LUDLOW. Mr. Speaker, by unanimous consent of the House I present for printing in the CONGRESSIONAL RECORD the following address, delivered by me over the red network of the National Broadcasting Co., Saturday evening, August 16, 1941:

I am proud to speak tonight under auspices of the Citizens' Peace Petition Committee, which is doing such noble work for humanity.

It is time for us to reexamine our status in world affairs in the light of our traditional policy of freedom and independence. How vitally important this may be, is evident from the fact that with an overwhelming proportion of our people unalterably and inflexibly opposed to our participation in alien quarrels and foreign conflicts we have, nevertheless, been edged closer and closer to war and unless something is done to prevent it a few more shoves will put us in. Then we will be in danger of losing our freedom and independence, forever. How close we are to the chasm of war was frankly stated on the floor of the Senate just recently by Senator PEPPER, who often claims to speak for the Government, when he said that our men now in the camps "will be in the Army for at least 5 years and maybe 10 and maybe a generation."

Before we go farther on the dangerous road toward intervention we should reread American history and allow our thoughts to dwell once more on the travail in which this Nation was born out of the oppressions of the Old World and the tears and suffering out of which came the establishment of the greatest institution of freedom ever known in the history of the world—the Government of the United States. We should try to visualize Valley Forge and the ragged soldiers making bloody imprints with their shoeless feet and Washington's agonized prayer on bended knees in the snow. We should review again the train of events by which the hard-fought victories won by the patriots of the Revolution ripened into fruition in the Constitution of the United States and its Bill of Rights—described by Gladstone as "the most wonderful work ever struck off at a given time by the brain and purpose of man."

And then we should ask ourselves whether we are willing to risk this sacred and priceless heritage of liberty on an intervention gamble.

If we re-examine the genesis of America and seek by rereading history to grasp the spirit and purpose of our being as a nation, we will conclude, I think, that we have wandered far from base in projecting ourselves into affairs all around the world and that we need to retrace our steps to sounder and safer ground. We certainly have departed from the teachings of Washington, who did so much to win our freedom. The Father of our Country did not believe in isolation from the world. Oh, no. He wanted America to be a good neighbor to all of the world, but he did believe in isolation from the eternal wars of Europe and with the infallible wisdom for which he was noted he pointed out how America was protected by Nature from invasion by vast expanses of ocean, adding:

"Why forego the advantages of so peculiar a situation? Why quit our own to stand upon foreign ground?"

Today 95 percent of Americans are isolationists in the sense that Washington was an isolationist. If Washington's immortal soul is looking down upon us from the Valhalla of fame I wonder what he thinks about our perilous adventures all around the globe; about the inclination of our State Department to try to regulate things 10,000 miles away, from Timbuctoo to Singapore. If he is conscious of what is going on, I will venture to say he is the saddest soul in the Valhalla.

For nearly a century and a half America functioned in its orbit of complete independence, and in that time it became known as the most prosperous, the strongest, the most respected, and the best Nation on the globe. The oppressed of all countries thronged to our gates, regarding America as heaven on earth. That was before our statesmen became inoculated with the messianic idea that it is America's duty to regulate the world. Those in positions of authority were extremely careful in their speeches and state papers not to offend other governments and peoples. They construed it as their paramount duty "to cultivate friendly relations with all nations; entangling alliances with none." They, of course, read about many unconscionable and inhuman acts committed by foreign rulers as, for instance, by Napoleon and the bloody Czars of Russia, but they never conceived it to be our duty to equip and send over armies to wipe up Napoleon and the Czars. They conceded that job to the Almighty who, in the long run, applied the rule of justice fairly well.

This reminds me of an incident of my boyhood. When I was a lad trying to eke out a living as a reporter on an Indianapolis newspaper, I supplemented my meager salary by serving as Indianapolis correspondent of the New York World. One day a telegram came from the World instructing me to interview Benjamin Harrison in reference to some imbroglio on the other side of the ocean. The particular question I was directed to ask the ex-President was whether he thought America should intervene.

General Harrison read the telegram and then gave me an answer that will ring in my ears until I die. His answer was:

"We have no commission from God to police the world."

I have always believed, and still do believe, that that statement of 10 words ranks with Washington's Farewell Address as an utterance of inspired patriotism.

I would like to ask two questions: First, if we plunge into the World War, what will lie before us? Second what will we leave behind? The weakness of words prevents me from answering either question adequately, but I will tackle the last one first.

We certainly will leave behind the America we have known and to which all generations of Americans have clung with hope and love up until this time. Inevitably a dictatorship will take charge and the precious guaranties of the Bill of Rights—freedom of speech, freedom of the press, trial by jury, freedom to worship God according to one's conscience—will be subordinate to the will of the dictator, whoever he may be. Personal liberty will survive only to the extent that it is the dictator's will it shall survive.

What will lie before us? God only knows. Perhaps Senator PEPPER was not far wrong when he said that men in the camps may be in the Army for a generation. It is not necessary for me to depict the horrors, the surprises, the cruelties the "fifth column" devilries of modern war. All of us are only too familiar with them. I have sworn to high heaven that I will not vote to subject any American boy to these savage brutalities unless America is attacked, and God helping me, I never will. If America is attacked, our manpower will arise en masse in defense. There is no doubt about that. If we are drawn in, we will virtually take over a war we had no part in starting and our pitifully equipped forces will be pitted against the most highly trained and equipped mechanized armies in the world. Is it any wonder that Senator PEPPER sees our men in uniform for a generation?

I am thinking now not only of death in awful forms for our precious young men, but I am thinking also of the living death of our civilian population at home who will have to bear the awful griefs and burdens and costs of war.

Do you know that, without a shot having been fired, at a time when we are supposed to be at peace with the entire world, we have appropriated $52,900,000,000 for national defense last year and this, or the equivalent of more than one-sixth of the total wealth of our country? The latest statistics on wealth are contained in a report of the National Industrial Conference Board, which places the total national wealth at $294,481,000,000.

It is an astounding fact that the astronomical national-defense appropriations already made, without a declaration of war and without a shot being fired, exceed by more that a billion dollars the total combined wealth of 27 States of the American Union, as follows:

Nevada	$651,000,000
Delaware	662,000,000
New Mexico	698,000,000
Wyoming	833,000,000
Vermont	858,000,000
Arizona	975,000,000
Utah	1,152,000,000
New Hampshire	1,197,000,000
Idaho	1,273,000,000
Mississippi	1,478,000,000
North Dakota	1,539,000,000
Arkansas	1,558,000,000
South Dakota	1,711,000,000
Rhode Island	1,903,000,000
Maine	1,981,000,000
Florida	2,052,000,000
Colorado	2,093,000,000
South Carolina	2,166,000,000
District of Columbia	2,552,000,000
Oregon	2,627,000,000
Louisiana	2,659,000,000
West Virginia	2,811,000,000
Alabama	2,831,000,000
Georgia	2,962,000,000
Montana	2,988,000,000
Nebraska	3,089,000,000
Kentucky	3,454,000,000
Total	51,723,000,000

The $52,900,000,000 appropriated to date does not include another estimated $10,000,000,000 lease-lend appropriation which is just around the corner, and which will equal the total wealth of several more American States.
